3. The process of forming ethanol comprising absorbing ethylene in sulfuric acid to produce an ethylated sulfuric acid in concentrated form containing diethyl sulfate, adding said ethylated acid progressively to water and simultaneously heating the mixture to distill over the ethanol as it is formed by the hydrolysis while accumulating sulfuric acid in said water with progressively increasing concentration.

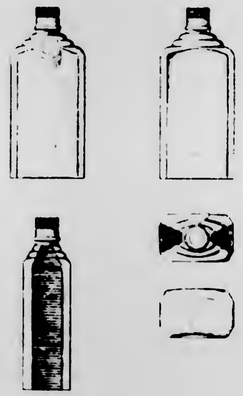
2,004,085
MANUFACTURE OF RUBBER THREADS
Kenneth R. Shaw, Easthampton, Mass., assignor to Easthampton Rubber Thread Co., Easthampton, Mass., a corporation of Massachusetts
Application May 25, 1933, Serial No. 672,858
7 Claims. (Cl. 164—60)

1. In a machine for cutting a web of rubber to produce rubber threads, two sets of cutting disks, two parallel shafts on which said sets of disks, respectively, are supported with the individual disks of one set in overlapping relationship to and interleaved between those of the other set, the opposite sides of each disk of one set being in contact with the sides of two disks of the other set, mechanism for revolving said shafts to rotate the two sets of disks in opposite directions, means bearing against the overlapping portions of said disks to press said portions laterally together and thereby to hold the edges of said disks in shearing relationship to each other, means for guiding a web of sheet rubber between said disks to cause them to cut said web longitudinally into threads, and a reed having members projecting between adjacent disks of the two sets to strip the threads from the disks.

2,004,086
SAFETY RAZOR AND BLADE
Nicholas Testi, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application July 14, 1934, Serial No. 735,180
16 Claims. (Cl. 30—12)

3. A safety razor having movable cap sections for flexing and clamping a blade in shaving position, and an operating train of mechanism for forcibly closing said sections including the blade as an element thereof.

2,004,087
SAFETY RAZOR
Nicholas Testi, New York, N. Y., assignor to Gillette Safety Razor Company, Boston, Mass., a corporation of Delaware
Application July 27, 1934, Serial No. 737,264
3 Claims. (Cl. 30—12)



1. A safety razor comprising a sharp blade, clamping members for positioning the blade and having regularly spaced portions extending beyond the blade edges and designed to tension the skin outwardly in advance of the blade edge, and a plurality of more widely spaced guarding elements setting off separate sections in the edge and acting to tension the skin in a direction substantially parallel to the cutting edge when the razor is moved in such direction.

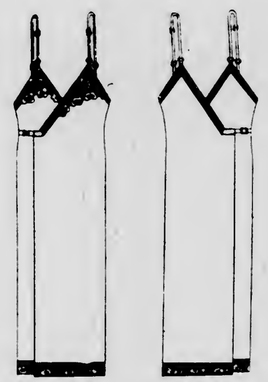
DESIGNS

JUNE 4, 1935

95,787
DESIGN FOR A BOTTLE
Clyde W. Ahrens, New York, N. Y., assignor to Mission Dry Corporation, New York, N. Y., a corporation of Delaware
Application May 18, 1934, Serial No. 51,830
Term of patent 3½ years

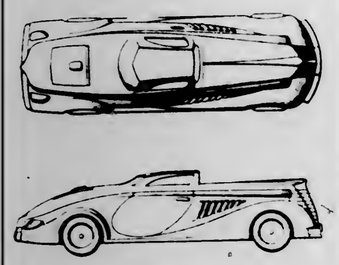
The ornamental design for a bottle, as shown.

95,788
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Lorenzo Audino, East Elmhurst, N. Y.
Application April 10, 1935, Serial No. No. 56,304
Term of patent 3½ years



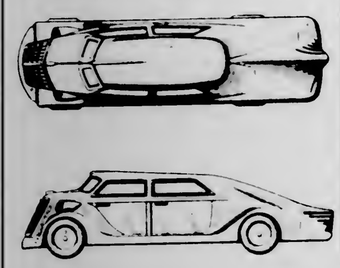
The ornamental design for a shoe or similar article, as shown.

95,789
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Lorenzo Audino, East Elmhurst, N. Y.
Application April 10, 1935, Serial No. 56,308
Term of patent 3½ years



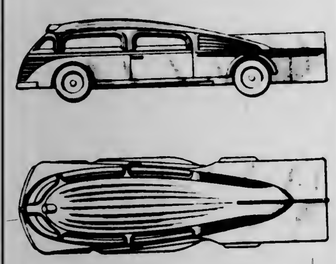
The ornamental design for a shoe or similar article, as shown.

95,790
DESIGN FOR A TWO-PIECE SLIP
Michael E. Awamy, New York, N. Y.
Application April 26, 1935, Serial No. 56,580
Term of patent 3½ years



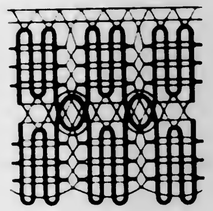
The ornamental design for a two-piece slip, substantially as shown and described.

95,791
DESIGN FOR A TOY VEHICLE OR THE LIKE
Walter Baets, New York, N. Y.
Application April 25, 1935, Serial No. 56,544
Term of patent 7 years



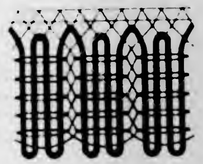
The ornamental design for a toy vehicle or the like as shown.

95,792
DESIGN FOR A TOY VEHICLE OR THE LIKE
Walter Baetz, New York, N. Y.
Application April 25, 1935, Serial No. 56,545
Term of patent 7 years



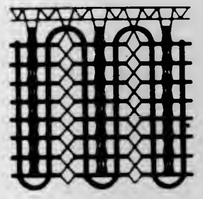
The ornamental design for a toy vehicle or the like as shown.

95,793
DESIGN FOR A TOY VEHICLE OR THE LIKE
Walter Baets, New York, N. Y.
Application April 25, 1935, Serial No. 56,546
Term of patent 7 years



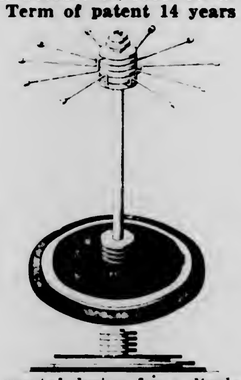
The ornamental design for a toy vehicle or the like as shown.

95,794
DESIGN FOR LACE
Harry B. Barnum, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn.
Application March 13, 1935, Serial No. 55,857
Term of patent 7 years



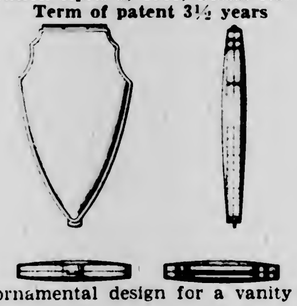
The ornamental design for lace, substantially as shown.

95,795
DESIGN FOR LACE
Harry B. Barnum, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn.
Application March 13, 1935, Serial No. 55,858
Term of patent 7 years



The ornamental design for lace, substantially as shown.

95,796
DESIGN FOR LACE
Harry B. Barnum, Stratford, Conn., assignor to The American Fabrics Company, Bridgeport, Conn.
Application March 13, 1935, Serial No. 55,859
Term of patent 7 years

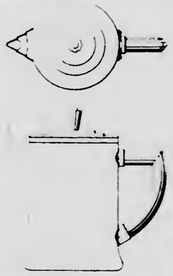


The ornamental design for lace, substantially as shown.

95,797
DESIGN FOR A DISPLAY STAND FOR HOSIERY OR THE LIKE
Emil J. Berger, Hatfield, Pa., assignor to Dexdale Hosiery Mills, Lansdale, Pa., a corporation of Pennsylvania
Application October 26, 1934, Serial No. 53,768
Term of patent 14 years

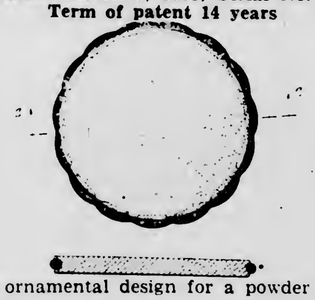
The ornamental design for a display stand for hosiery or the like, as shown and described.

95,798
DESIGN FOR A VANITY CASE
Harry L. Berinstein, Elmira, N. Y.
Application April 2, 1935, Serial No. 56,183
Term of patent 3½ years



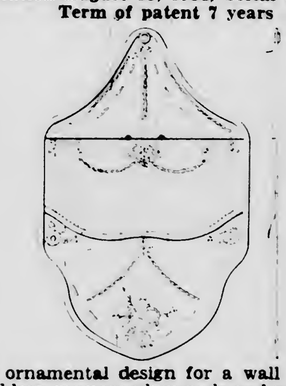
The ornamental design for a vanity case, as shown.

95,799
DESIGN FOR A DRIP COFFEEPOT
Anetta Brenneman, Factoryville, Pa., assignor to The Aluminum Cooking Utensil Company, New Kensington, Pa., a corporation of Pennsylvania
Application March 26, 1935, Serial No. 56,054
Term of patent 7 years



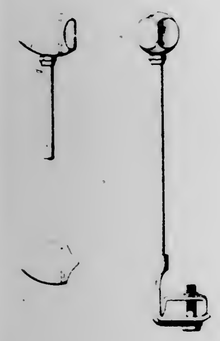
The ornamental design for a drip coffee pot as shown.

95,800
DESIGN FOR A COFFEEPOT
Anetta Brenneman, Factoryville, Pa., assignor to The Aluminum Cooking Utensil Company, New Kensington, Pa., a corporation of Pennsylvania
Application March 26, 1935, Serial No. 56,055
Term of patent 7 years



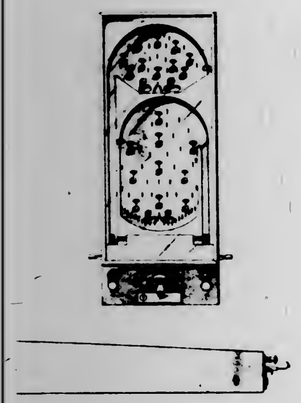
The ornamental design for a coffee pot as shown.

95,801
DESIGN FOR A POWDER PUFF
Evangeline Burkhart, New York, N. Y.
Application March 5, 1935, Serial No. 55,734
Term of patent 14 years



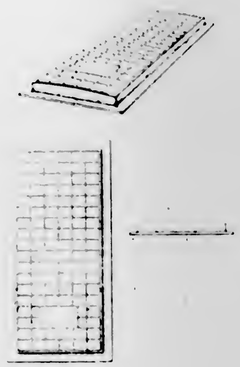
The ornamental design for a powder puff as shown.

95,802
DESIGN FOR A WALL POCKET FOR POT HOLDERS, MEMORANDUM PADS, AND PENCILS
Moses Caplan, Boston, Mass.
Application August 18, 1934, Serial No. 52,985
Term of patent 7 years



The ornamental design for a wall pocket for pot-holders, memorandum pads and pencils, substantially as shown.

95,803
DESIGN FOR A FENDER GUIDE
Joseph H. Cohen, Bridgeport, Conn.
Application March 21, 1934, Serial No. 51,126
Term of patent 3½ years

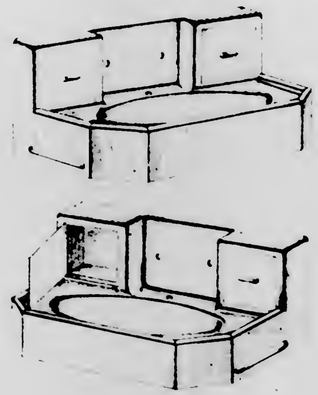


The ornamental design for a fender guide, as shown.

95,804
DESIGN FOR A GAME APPARATUS
Henry P. Compton and Louis Solomon, Abilene, Tex.
Application March 8, 1935, Serial No. 55,793
Term of patent 3½ years

The ornamental design for a game apparatus as shown.

95,805
DESIGN FOR A MEMORIAL MARKER
Irwin W. Cox, Denver, Colo.
Application November 22, 1933, Serial No. 49,822
Term of patent 14 years



The ornamental design for a memorial marker, as shown.

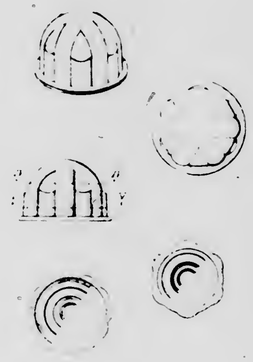
95,806
DESIGN FOR A DISHWASHING MACHINE
Orin K. Cox, Los Angeles, Calif.
Application March 20, 1935, Serial No. 55,958
Term of patent 7 years

The ornamental design for a dishwashing machine, as shown.

95,807
DESIGN FOR A LAVATORY
Harlow N. Davock, Birmingham, Mich.
Application March 14, 1935, Serial No. 55,878
Term of patent 14 years

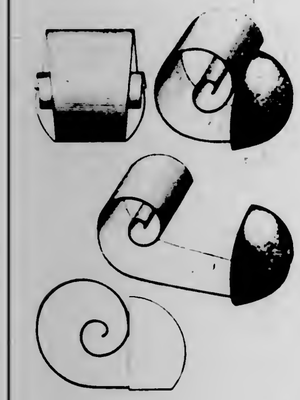
The ornamental design for a lavatory as shown.

95,808
DESIGN FOR AN ASH RECEIVER
Rudolph F. De Boer, Grand Rapids, Mich.
Application April 10, 1935, Serial No. 56,286
Term of patent 7 years



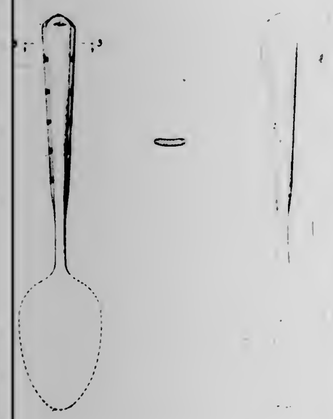
The ornamental design for an ash receiver as shown.

95,809
DESIGN FOR A SHOE
Vincent De Liso, Astoria, N. Y.
Application April 16, 1935, Serial No. 56,410
Term of patent 3½ years



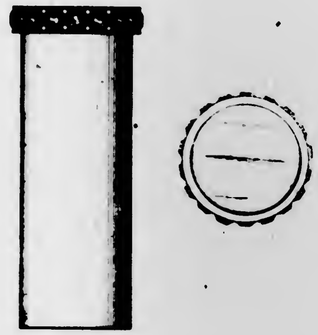
The ornamental design for a shoe, as shown.

95,810
DESIGN FOR A VEHICLE LAMP GLOBE OR SIMILAR ARTICLE
Harold B. Donley, Columbus, Ohio, assignor to Columbus Metal Products Inc., Columbus, Ohio, a corporation of Ohio
Application April 1, 1935, Serial No. 56,146
Term of patent 7 years



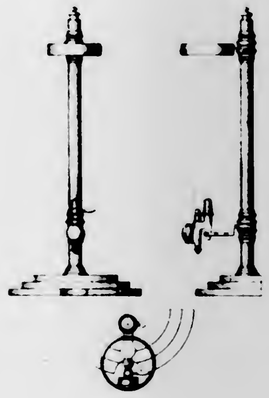
The ornamental design for a vehicle lamp globe or similar article, as shown.

95,811
DESIGN FOR A BOOK END
Fred D. Farr, Mamaroneck, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
Application January 11, 1935, Serial No. 54,815
Term of patent 14 years



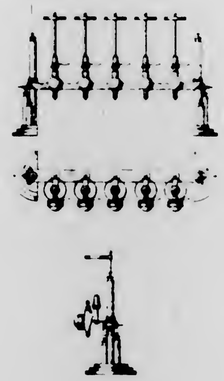
The ornamental design for a book end, substantially as shown and described.

95,812
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
George A. Feinauer, Providence, R. I., assignor to Gorham Manufacturing Company, Providence, R. I., a corporation of Rhode Island
Application April 10, 1935, Serial No. 56,294
Term of patent 14 years



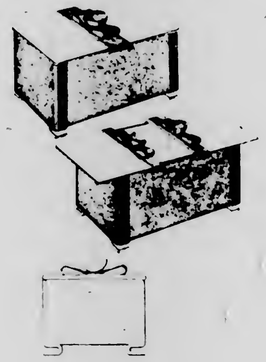
The ornamental design for a spoon or other article of flatware substantially as shown.

95,813
DESIGN FOR A LIP STICK CONTAINER
Paul H. Ganz, New York, N. Y.
Application January 16, 1935, Serial No. 54,884
Term of patent 14 years



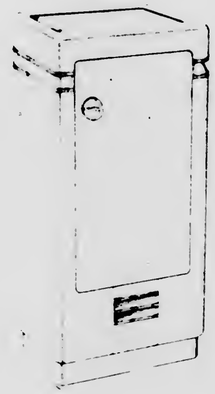
The ornamental design for a lipstick container as shown.

95,814
DESIGN FOR A LIQUID DISPENSING RACK
James Garvey, New York, N. Y., assignor to Optic Liquid Measures Inc., Norfolk, Va., a corporation of Virginia
Application February 28, 1935, Serial No. 55,654
Term of patent 14 years



The ornamental design for a liquid dispensing rack, substantially as shown.

95,815
DESIGN FOR A LIQUID DISPENSING RACK
James Garvey, New York, N. Y., assignor to Optic Liquid Measures Inc., Norfolk, Va., a corporation of Virginia
Application February 28, 1935, Serial No. 55,655
Term of patent 14 years

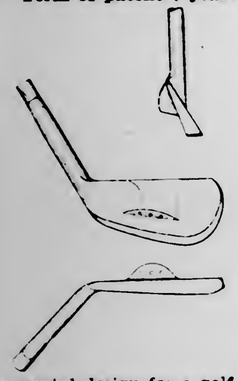


The ornamental design for a liquid dispensing rack, substantially as shown.

95,816
DESIGN FOR A BOX
Norman Bel Geddes, New York, N. Y., assignor to Revere Copper and Brass Incorporated, Rome, N. Y., a corporation of Maryland
Application February 13, 1935, Serial No. 55,389
Term of patent 7 years

The ornamental design for a box, substantially as shown.

95,817
DESIGN FOR A REFRIGERATOR CABINET
Norman Bel Geddes, New York, and William I. Hamby, Great Neck, N. Y., assignors to Servel, Inc., New York, N. Y., a corporation of Delaware
Application February 23, 1935, Serial No. 55,590
Term of patent 14 years



The ornamental design for a refrigerator cabinet as shown.

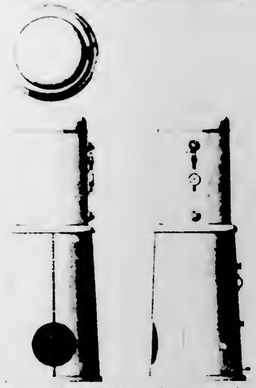
95,818
DESIGN FOR A SHOE
Julius A. Goldberg, Highland Park, Ill.
Application April 15, 1935, Serial No. 56,388
Term of patent 3½ years

The ornamental design for a shoe substantially as shown.

95,819
DESIGN FOR A GOLF CLUB HEAD
James Gourlay, Glencoe, Ill.
Application March 9, 1935, Serial No. 55,796
Term of patent 7 years

The ornamental design for a golf club head as shown.

95,820
DESIGN FOR A POCKET LIGHTER
Martin Grünstein, Elgersburg, Germany, assignor to the firm Müller & Grünstein, Elgersburger Feuerzeugfabrik, Elgersburg, Germany
Application May 5, 1933, Serial No. 48,018
In Germany February 8, 1933
Term of patent 3½ years



The ornamental design for a pocket lighter, as shown.

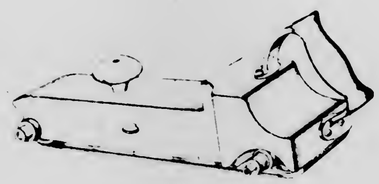
95,821
DESIGN FOR A BOTTLE
William Guyer, New York, N. Y., assignor to Joseph E. Seagram & Sons, Inc., Lawrenceburg, Ind., a corporation of Indiana
Application April 2, 1935, Serial No. 56,177
Term of patent 14 years

The ornamental design for a bottle as shown.

95,822
DESIGN FOR AN AIR COMPRESSOR UNIT
Alfred Hallett, Los Angeles, Calif.
Application September 24, 1934, Serial No. 53,382
Term of patent 14 years

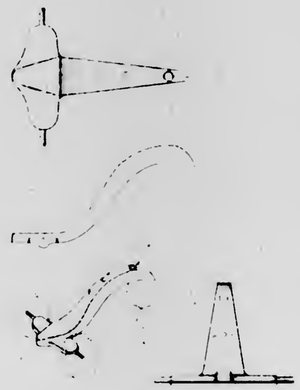
The ornamental design for an air compressor unit as shown.

95,823
DESIGN FOR A SHOWER HEAD
Chester W. Hathaway and Ernest Krumsiek, Decatur, Ill., assignors to Mueller Co., Decatur, Ill., a corporation of Illinois
Application April 1, 1935, Serial No. 56,176
Term of patent 14 years



The ornamental design for a shower head substantially as shown.

95,824
DESIGN FOR A TEXTILE FABRIC
William R. Haywood, New York, N. Y.
Application April 17, 1935, Serial No. 56,425
Term of patent 3½ years



The ornamental design for a textile fabric, substantially as shown.

95,825
DESIGN FOR A SANDING MACHINE
Theron L. Hedgpeth, Oak Park, Ill., assignor to Duro Metal Products Company, Chicago, Ill., a corporation of Illinois
Application March 6, 1935, Serial No. 55,754
Term of patent 14 years

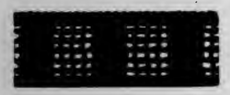
The ornamental design for a sanding machine as shown.

95,826
DESIGN FOR A VELOCIPEDE
Knute W. Hedstrom, Gardner, Mass., assignor to Hedstrom-Union Company, Gardner, Mass., a corporation of Massachusetts
Application March 30, 1935, Serial No. 56,127
Term of patent 7 years

The ornamental design for a velocipede as shown.

95,827
DESIGN FOR A WRAP
Charles Hoffman, New York, N. Y.
Application April 24, 1935, Serial No. 56,534
Term of patent 3½ years

The ornamental design for a wrap, substantially as shown and described.



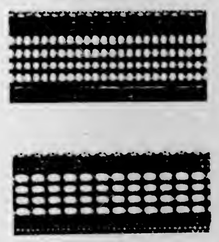
95,828
DESIGN FOR ELASTIC LACE BRAID
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application December 17, 1934, Serial No. 54,449
Term of patent 7 years

The ornamental design for elastic lace braid as shown and described.

95,829
DESIGN FOR ELASTIC LACE BRAID
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application April 1, 1935, Serial No. 56,148
Term of patent 14 years

The ornamental design for elastic lace braid as shown and described.

95,830
DESIGN FOR ELASTIC LACE BRAID
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application April 1, 1935, Serial No. 56,149
Term of patent 14 years

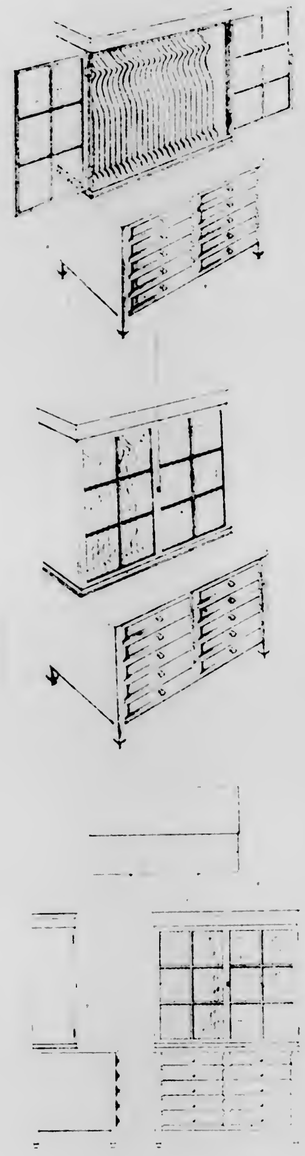


The ornamental design for elastic lace braid as shown and described.

95,831
DESIGN FOR ELASTIC LACE BRAID
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application April 1, 1935, Serial No. 56,150
Term of patent 14 years

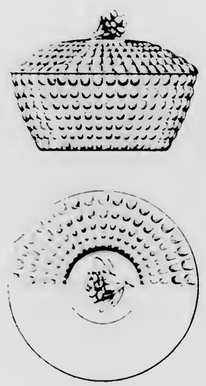
The ornamental design for elastic lace braid as shown and described.

95,832
DESIGN FOR ELASTIC LACE BRAID
Otto Eugene Huber, Reading, Pa., assignor to The Narrow Fabric Company, West Reading, Pa., a corporation of Pennsylvania
Application April 1, 1935, Serial No. 56,151
Term of patent 14 years



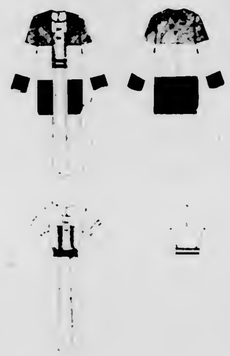
The ornamental design for elastic lace braid as shown and described.

95,833
DESIGN FOR A COAT GARMENT
Samuel A. Jamieson, Des Moines, Iowa
Application January 7, 1935, Serial No. 54,766
Term of patent 7 years



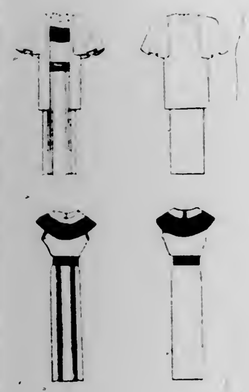
The ornamental design for a coat garment substantially as shown.

95,834
DESIGN FOR A STOCKING DISPLAY CABINET
Henry Janssen, Wyomissing, Pa., assignor to Berkshire Knitting Mills, Wyomissing, Pa., a corporation of Pennsylvania
Application February 13, 1935, Serial No. 55,386
Term of patent 14 years



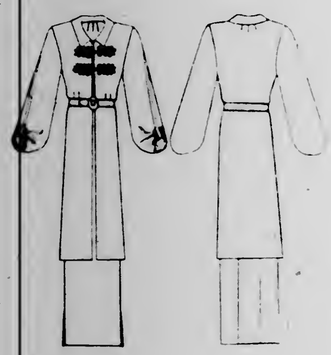
The ornamental design for a stocking display cabinet as shown and described.

95,835
DESIGN FOR A MARMALADE JAR
Charles Kaiser, Great Neck, N. Y., assignor to Morimura Bros. Inc., New York, N. Y., a corporation of Japan
Application September 1, 1934, Serial No. 53,153
Term of patent 7 years



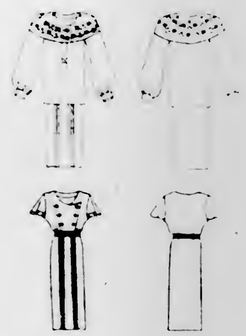
The ornamental design for a marmalade jar, as shown and described.

95,836
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 8, 1935, Serial No. 56,274
Term of patent 3½ years



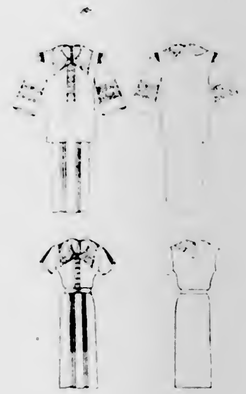
The ornamental design for an ensemble dress, substantially as shown and described.

95,837
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 8, 1935, Serial No 56,275
Term of patent 3½ years



The ornamental design for an ensemble dress, substantially as shown and described.

95,838
DESIGN FOR A DRESS
Jack Kirschner, New York, N. Y.
Application April 10, 1935, Serial No. 56,315
Term of patent 3½ years



The ornamental design for a dress, substantially as shown and described.

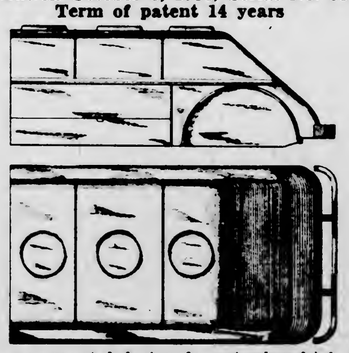
95,839
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 12, 1935, Serial No. 56,347
Term of patent 3½ years

The ornamental design for an ensemble dress, substantially as shown and described.

95,840
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 12, 1935, Serial No. 56,348
Term of patent 3½ years

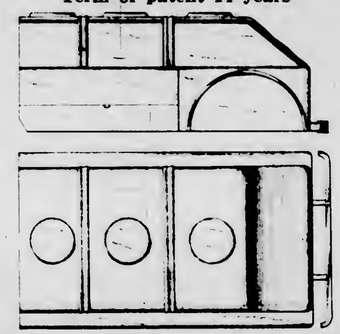
The ornamental design for an ensemble dress, substantially as shown and described.

95,841
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 15, 1935, Serial No. 56,374
Term of patent 3½ years



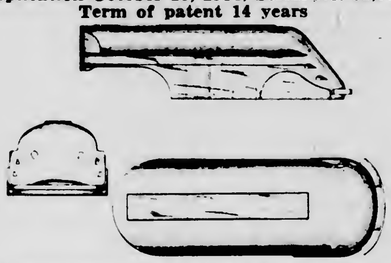
The ornamental design for an ensemble dress, substantially as shown and described.

95,842
DESIGN FOR AN ENSEMBLE DRESS
Jack Kirschner, New York, N. Y.
Application April 15, 1935, Serial No. 56,375
Term of patent 3½ years



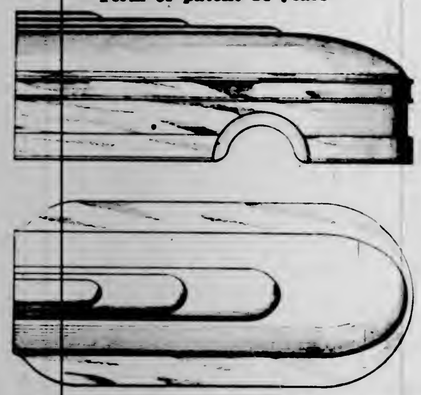
The ornamental design for an ensemble dress, substantially as shown and described.

95,843
DESIGN FOR A TANK VEHICLE BODY
Andrew A. Kramer, Kansas City, Mo.
Application October 8, 1934, Serial No. 53,521
Term of patent 14 years



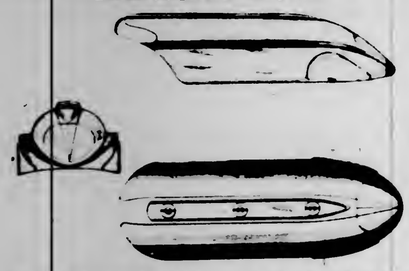
The ornamental design for a tank vehicle body substantially as shown.

95,844
DESIGN FOR A TANK VEHICLE BODY
Andrew A. Kramer, Kansas City, Mo.
Application October 8, 1934, Serial No. 53,522
Term of patent 14 years



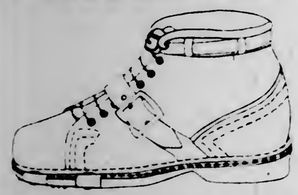
The ornamental design for a tank vehicle body substantially as shown.

95,845
DESIGN FOR A TANK VEHICLE BODY
Andrew A. Kramer and Joseph M. Kramer, Kansas City, Mo.; said Joseph M. Kramer assignor to said Andrew A. Kramer
Application October 18, 1934, Serial No. 53,680
Term of patent 14 years



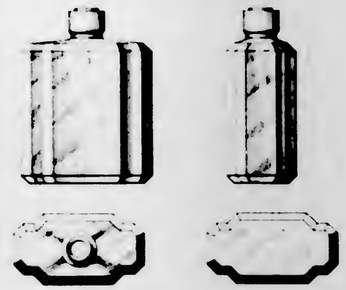
The ornamental design for a tank vehicle body substantially as shown.

95,846
DESIGN FOR A TANK VEHICLE BODY
Joseph M. Kramer, Kansas City, Mo., assignor to Andrew A. Kramer, Kansas City, Mo.
Application October 18, 1934, Serial No. 53,681
Term of patent 14 years



The ornamental design for a tank vehicle body substantially as shown.

95,847
DESIGN FOR A TANK VEHICLE BODY
Joseph M. Kramer, Kansas City, Mo., assignor to Andrew A. Kramer, Kansas City, Mo.
Application October 29, 1934, Serial No. 53,810
Term of patent 14 years

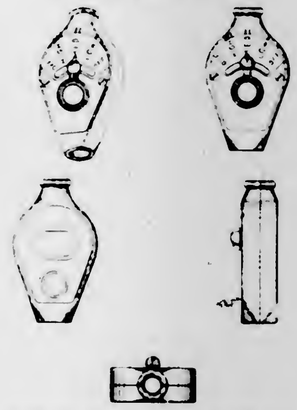


The ornamental design for a tank vehicle body substantially as shown.

95,848
DESIGN FOR A SKI BOOT
Josef Lanz, Salzburg, Austria, assignor to The Stetson Shoe Company, Inc., South Weymouth, Mass., a corporation of Massachusetts
Application March 16, 1935, Serial No. 55,893
Term of patent 7 years

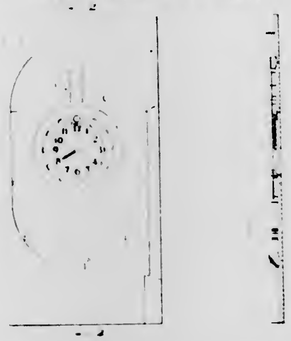
The ornamental design for a ski boot as shown and described.

95,849
DESIGN FOR A BOTTLE
Walter R. Leach, Baltimore, Md., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application March 29, 1935, Serial No. 56,107
Term of patent 14 years



The ornamental design for a bottle, as shown.

95,850
DESIGN FOR A NASAL INHALER
Frederick Lobl, Middleboro, Mass.
Application October 5, 1932, Serial No. 45,218
Term of patent 14 years



The ornamental design for a nasal inhaler as shown.

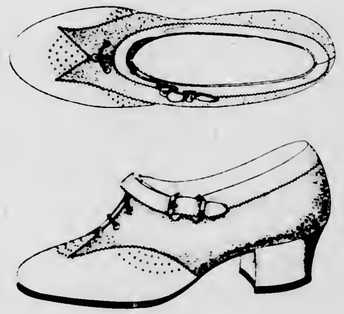
95,851
DESIGN FOR A SWITCH CASING
Frederick Lobl, Middleboro, Mass.
Application April 25, 1935, Serial No. 56,553
Term of patent 14 years

The ornamental design for a switch casing as shown.

95,852
DESIGN FOR AN AMUSEMENT GAME BOARD
Frank K. Maitland, Hermosa Beach, Calif., assignor to Fred C. McClellan, Chicago, Ill.
Application March 14, 1935, Serial No. 55,880
Term of patent 3½ years

The ornamental design for an amusement game board as shown.

95,853
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE
William H. Mayer, Jr., New York, N. Y.
Application March 25, 1935, Serial No. 56,045
Term of patent 7 years

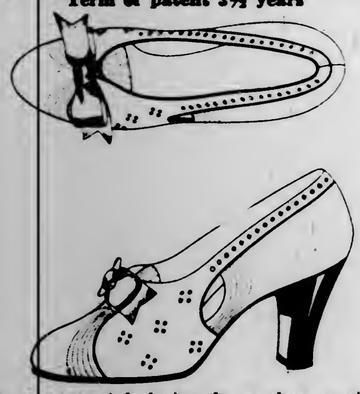


The ornamental design for a textile fabric or similar article as shown.

95,854
DESIGN FOR A BOTTLE
Frank McLaughlin, Chicago, Ill., assignor to Carr-Lowrey Glass Co., Baltimore, Md.
Application March 29, 1935, Serial No. 56,108
Term of patent 14 years

The ornamental design for a bottle, as shown.

95,855
DESIGN FOR A SHOE
Samuel Meyer, New York, N. Y.
Application April 15, 1935, Serial No. 56,389
Term of patent 3½ years



The ornamental design for a shoe, as shown.

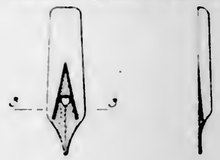
95,856
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Charles Miller, New York, N. Y.
Application April 10, 1935, Serial No. 56,309
Term of patent 3½ years

The ornamental design for a shoe or similar article, as shown.

95,857
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Charles Miller, New York, N. Y.
Application April 10, 1935, Serial No. 56,310
Term of patent 3½ years

The ornamental design for a shoe or similar article, as shown.

95,858
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Charles Miller, New York, N. Y.
Application April 10, 1935, Serial No. 56,311
Term of patent 3½ years



The ornamental design for a shoe or similar article, as shown.

95,859
DESIGN FOR A BROILER
Herbert H. Minard, Wichita, Kans.
Application March 25, 1935, Serial No. 56,032
Term of patent 3½ years

The ornamental design for a broiler as shown.

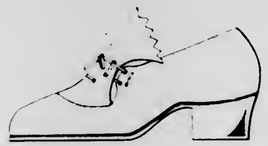
95,860
DESIGN FOR A PEN POINT
Max M. Neuhoff, New York, N. Y.
Application March 27, 1935, Serial No. 56,084
Term of patent 3½ years

The ornamental design for a pen point, as shown and described.

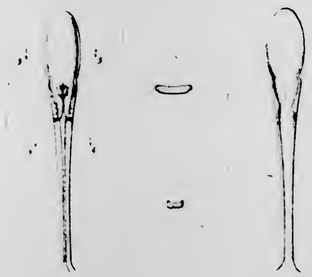
95,861
DESIGN FOR A SHOE
Andre Perugia, Paris, France
Application April 16, 1935, Serial No. 56,411
Term of patent 3½ years

The ornamental design for a shoe, as shown.

95,862
DESIGN FOR A SHOE
Flora Belle Polley, New York, N. Y.
Application February 25, 1935, Serial No. 55,610
Term of patent 3½ years



The ornamental design for a shoe, substantially as shown.

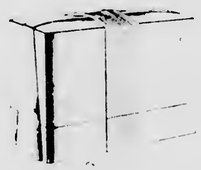


95,863
DESIGN FOR A SHOE
Flora Belle Polley, New York, N. Y.
Application February 25, 1935, Serial No. 55,611
Term of patent 3½ years

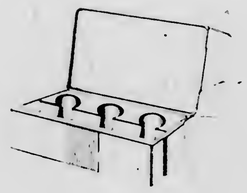
The ornamental design for a shoe, substantially as shown.

95,864
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
James Russell Price, Providence, R. I., assignor to The Alvin Corporation, Providence, R. I., a corporation of New York
Application April 1, 1935, Serial No. 56,161
Term of patent 14 years

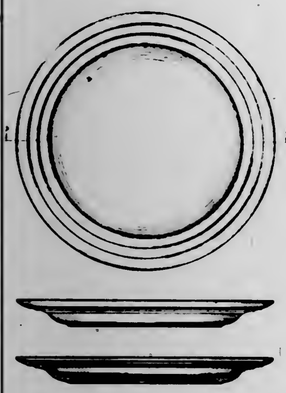
The ornamental design for a spoon or other article of flatware substantially as shown.



95,865
DESIGN FOR A BLOUSE
Hannah M. Raphael, New York, N. Y.
Application March 20, 1935, Serial No. 55,960
Term of patent 3½ years



The ornamental design for a blouse, substantially as shown and described.



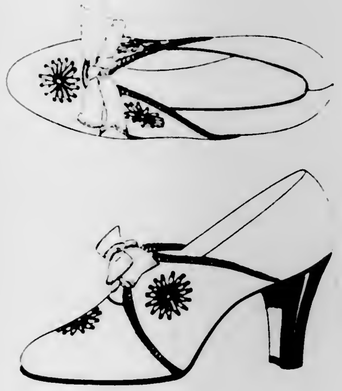
95,866
DESIGN FOR A CONTAINER FOR NAIL POLISH MANICURE SET
Maximilian Schnefel, East Orange, N. J.
Application February 7, 1935, Serial No. 55,296
Term of patent 7 years

The ornamental design for a container for nail polish manicure set as shown.

95,867
DESIGN FOR A PLATE OR SIMILAR ARTICLE
Charles L. Sebring, Sebring, Ohio, assignor to The Sebring Pottery Company, Sebring, Ohio, a corporation of Ohio
Application September 13, 1934, Serial No. 53,278
Term of patent 7 years

The ornamental design for a plate or similar article, as shown.

95,868
DESIGN FOR A SHOE
Robert Sederquist, Elgin, Ill.
Application April 24, 1935, Serial No. 56,536
Term of patent 3½ years

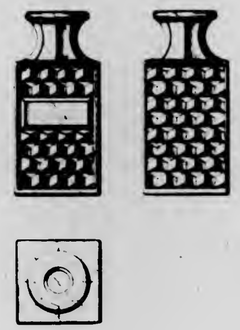


The ornamental design for a shoe, substantially as shown.

95,869
DESIGN FOR AN EYEGLASS BRIDGE
Fred H. Soden, Rochester, N. Y., assignor to Continental Optical Company, Inc., Rochester, N. Y., a corporation of Indiana
Application April 15, 1935, Serial No. 56,396
Term of patent 7 years

The ornamental design for an eyeglass bridge, as shown.

95,870
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Joseph Sofransky, New York, N. Y.
Application April 10, 1935, Serial No. 56,312
Term of patent 3½ years

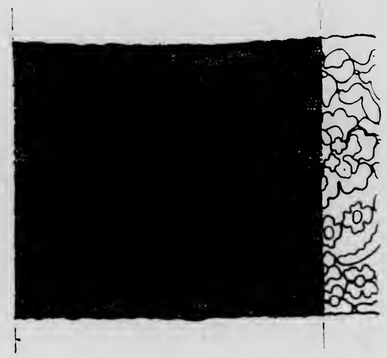


The ornamental design for a shoe, as shown.

95,871
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Joseph Sofransky, New York, N. Y.
Application April 10, 1935, Serial No. 56,313
Term of patent 3½ years

The ornamental design for a shoe, as shown.

95,872
DESIGN FOR A DECANTER OR SIMILAR ARTICLE
Eugene Stahl, Moundsville, W. Va., assignor to Fostoria Glass Company, Moundsville, W. Va., a corporation of West Virginia
Application April 13, 1935, Serial No. 56,362
Term of patent 7 years

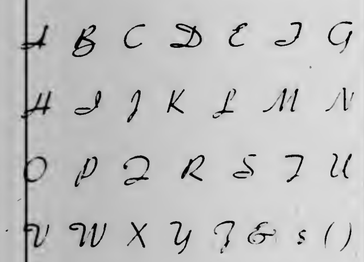


The ornamental design for a decanter or similar article, substantially as shown and described.

95,873
DESIGN FOR A BOTTLE OR SIMILAR ARTICLE
Joseph S. Stein, Chicago, Ill., assignor to Lucien Lelong, Inc., Chicago, Ill., a corporation of Illinois
Application February 25, 1935, Serial No. 55,604
Term of patent 7 years

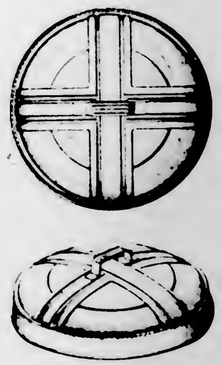
The ornamental design for a bottle or a similar article, as shown.

95,874
DESIGN FOR A LACE
Henry Stenson, Long Eaton, England, assignor to Gehring, Solomon & Birnbaum, Inc., New York, N. Y., a corporation of New York
Application April 16, 1935, Serial No. 56,418
Term of patent 3½ years



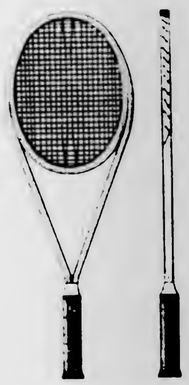
The ornamental design for a lace as shown and described.

95,875
DESIGN FOR A TEXTILE FABRIC
Juanita Todd, Yonkers, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a corporation of New York
Application April 13, 1935, Serial No. 56,355
Term of patent 3½ years



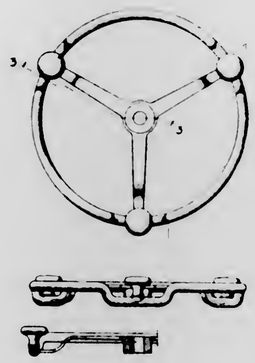
The ornamental design for a textile fabric substantially as shown.

95,876
DESIGN FOR PRINTING TYPE FONT
Howard Allen Trafton, New York, N. Y.
Application August 23, 1933, Serial No. 49,096
Term of patent 7 years



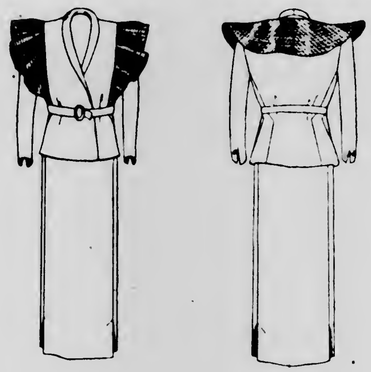
The ornamental design for printing type font as shown.

95,877
DESIGN FOR A CLOSURE FOR CONTAINERS OR SIMILAR ARTICLE
Harold L. Van Doren and Charles K. Ellsworth, Toledo, Ohio, assignors to Wheeling Steel Corporation, Wheeling, W. Va., a corporation of Delaware
Application February 23, 1935, Serial No. 55,589
Term of patent 14 years



The ornamental design for a closure for containers or similar article substantially as shown.

95,878
DESIGN FOR A TENNIS RACKET OR SIMILAR ARTICLE
Martial Van Schelle, Brussels, Belgium, and James Allen, London, England
Application December 6, 1934, Serial No. 54,324
In Belgium October 26, 1934
Term of patent 14 years

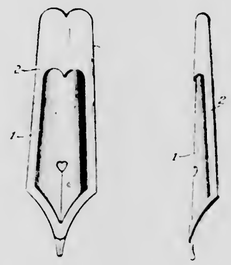


The ornamental design for a tennis racket or similar article as shown.

95,879
DESIGN FOR A STEERING WHEEL
John D. Villas, Minneapolis, Minn.
Application March 23, 1935, Serial No. 56,026
Term of patent 14 years

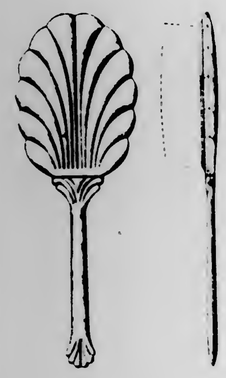
The ornamental design for a steering wheel, substantially as shown and described.

95,880
DESIGN FOR A LADY'S SUIT
Sidney Vlock, New York, N. Y.
Application February 21, 1935, Serial No. 55,553
Term of patent 3½ years



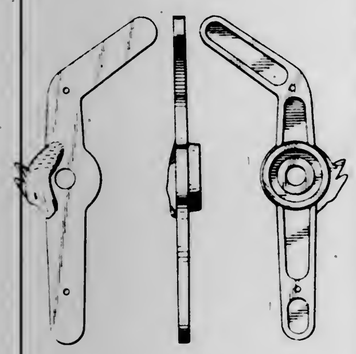
The ornamental design for a lady's suit, substantially as shown.

95,881
DESIGN FOR A LAMP-POST OR SIMILAR ARTICLE
Ralph Waggoner, Los Angeles, Calif., assignor to Marbelite Corporation of America, Ltd., Los Angeles, Calif., a corporation of Delaware
Application March 18, 1935, Serial No. 55,911
Term of patent 14 years



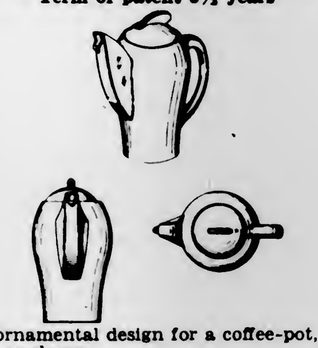
The ornamental design for a lamp-post or similar article, as shown.

95,882
DESIGN FOR A FOUNTAIN PEN NIB
Norman E. Weigel, Short Hills, N. J.
Application November 15, 1934, Serial No. 54,033
Term of patent 14 years



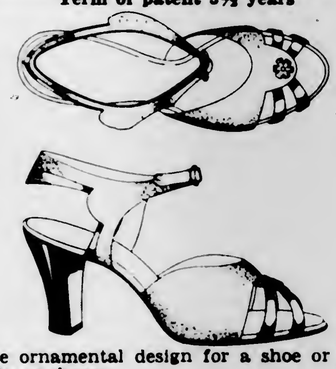
The ornamental design for a fountain pen nib, as shown and described.

95,883
DESIGN FOR A BRUSH OR SIMILAR ARTICLE
Albert Wewetser, Elgin, Ill., assignor to Illinois Watch Case Company, Elgin, Ill., a corporation of Illinois
Application April 4, 1935, Serial No. 56,211
Term of patent 14 years



The ornamental design for a brush or similar article, as shown and described.

95,884
DESIGN FOR A LEVER
Harry Wolff, Lincoln, Nebr.
Application March 12, 1935, Serial No. 55,841
Term of patent 3½ years



The ornamental design for a lever, as shown.

95,885
DESIGN FOR A COFFEEPOT OR LIKE ARTICLE
Harry Francis Wood, Burnlem, England
Application February 23, 1935, Serial No. 55,566
Term of patent 3½ years

The ornamental design for a coffee-pot, or like article, as shown.

95,886
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Schuyler A. Wood, Dolgeville, N. Y.
Application April 15, 1935, Serial No. 56,385
Term of patent 3½ years

The ornamental design for a shoe or similar article, as shown.

95,887
DESIGN FOR A SHOE OR SIMILAR ARTICLE
Schuyler A. Wood, Dolgeville, N. Y.
Application April 15, 1935, Serial No. 56,386
Term of patent 3½ years

The ornamental design for a shoe or similar article as shown.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office

Vol. 455—No. 2 TUESDAY, JUNE 11, 1935 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices

U. S. PATENT OFFICE, *Washington, May 9, 1935.*

James H. Dalbey, his assigns or legal representatives, take notice:

An interference has been declared by this Office between an application for patent filed by James H. Dalbey, c/o Hotel McAlpin, 10th and Chestnut Streets, Philadelphia, Pennsylvania, and an application for patent filed by Charles Henderson, 19 West Plumstead Avenue, Lansdowne, Pennsylvania. The attorney for Dalbey states that he is unable to locate said Dalbey. Notice is hereby given that unless said Dalbey, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, May 22, 1935.*

Merrin A. Hunt, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of Joseph William Simoneau, Nashua, New Hampshire, for registration of a trade-mark, and trade-mark registered October 29, 1929, No. 263,099, to Allison Drug Stores, Incorporated, 109 West 64th Street, New York, N. Y. The records of this Office show that Mervin A. Hunt, New York, N. Y., is the assignee of said registrant. A notice of such proceeding sent by registered mail to said Mervin A. Hunt at the said address, having been returned by the Post Office as undeliverable, notice is hereby given that unless said Mervin A. Hunt, his assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order, the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Notice of Cancellation

U. S. PATENT OFFICE, *Washington, May 10, 1935.*

Geo. B. Clemmer, his assigns or legal representatives take notice:

A cancellation proceeding has been instituted by this Office upon the application of Ray Day Piston Corporation of Detroit, 6656 Walton Avenue, Detroit, Michigan, to effect the cancellation of trade-mark registration No. 181,877, issued March 25, 1924, to Geo. B. Clemmer, 114 Mount Royal Avenue, Baltimore, Maryland, James A. Hughes, 311 Second Highland Avenue, Baltimore, Maryland, having been joined with said Geo. B. Clemmer as respondent. The notice of such proceeding sent to said Geo. B. Clemmer by registered mail at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Geo. B. Clemmer, his assigns or legal representatives, shall enter an appearance therein within thirty days from the first publication of this order the cancellation will be proceeded with as in the case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,875,859. P. H. Dowling, Electrical relay system, decided May 15, 1935, claims 5, 7, 8, 9, and 10.

Pat. 1,894,557. G. H. Fassett, Refrigerating apparatus, decided May 17, 1935, claim 1.

Pat. 1,899,856. G. de Montmollin, J. Danuser, G. Bonhôte and H. Johner, Unsulphonated diacylated diamines and process of making same, decided May 18, 1935, claims 1, 2, 5, 7, and 10.

Pat. 1,927,532. B. A. Wallace, Telephone system, decided May 13, 1935, claims 1 and 2.

Pat. 1,949,765. J. D. Sequy, Hydrocarbon oil conversion, decided May 11, 1935, claim 4.

Condition of Applications Under Examination at Close of Business May 25, 1935

DECISIONS IN PATENT AND TRADE-MARK CASES

U. S. Court of Customs and Patent Appeals

IN RE FAUNCE

No. 3,415. Decided February 4, 1935

[75 F.(2d) 211]

PATENTABILITY—DENTIFRICE AND PROCESS OF MAKING THE SAME.

Claims for a dentifrice which specify as an element sterilized glyceride of bile admixed substantially of equal proportion of glycerine and bile, and for the process of making the same *Held* patentable over the prior art.

APPEAL from the Patent Office. Modified.

Mr. Royal R. Rommel for Faunce.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

Benjamin Rice Faunce, the appellant, filed an application in the United States Patent Office for a patent upon certain improvements in pharmaceutical preparations and dentifrices.

The application and specification disclose that the product which the appellant has made consists of the combination and treatment of animal bile and glycerine for use, preferably, in a dentifrice form. In his process the appellant takes equal quantities of bile and glycerine, mixes them together and puts them into a container wherein fermentation may take place. This mixture is permitted to stand for a period of approximately three months at a temperature of from 70° to 80° F., "until the apparent fermentation has ended." The appellant discloses that during this period bacteria have been produced, by means of which the apparent fermentation has been stopped, and discloses further that if this reaction had not taken place, the use of the material in medicine might have harmful effects.

Further, the specification discloses that the use of 50 per centum glycerine in the mixture is material and essential. After the seasoning period, the glyceride of bile liquid is filtered through talc, and again through any approved type of bacterial filter, by which process the live and dead bacterial cells are removed. Thereupon the glyceride of bile is sterilized by heat at approximately a temperature of 220° F.

This glyceride of bile may be used as a prophylactic, anticongestive or analgesic, but it is preferably used as a dentifrice. In the preparation of dentifrice, substantially 8 fluid ounces of the glyceride of bile is combined with 24 fluid ounces of glycerine, and then with some excipient or massing agent to give the dentifrice the proper consistence. Precipitated chalk or other base vehicle is used to give a paste form, to which flavoring matter may be added to give the proper flavor.

The specification further recites that this dentifrice, due to the glyceride of bile composition, will reduce congestion, act as a prophylactic, prevent the formation of tartar, prevent bleeding gums, cure halitosis, and keep toothbrushes clean and sanitary.

In support of this application, the appellant presented his affidavit in which he shows that the proportion of glycerine to be added to the bile is material and critical. For instance he says:

• • • Deponent has made extensive experiments which conclusively demonstrate that the bile constituent will lose its identity, as such, by decomposition and putrefaction if a proportion of less than 30% of glycerine is utilized with the bile. Deponent states, on the other hand, that if the proportion of glycerine very appreciably overbalances the bile constituent the said glycerine will act as a preservative for the toxins and other poisons which should be destroyed by bacterial process, so that a safe pharmaceutical preparation could never be produced.

Attached to said affidavit, as exhibits, are the statements of several dental surgeons who state the valuable results which have followed the use of the appellant's dentifrice, in pyorrhea, infected gums, and diseased mouth conditions, and to which is also attached certain clinical records of Dr. George C. Speirs and Dr. Oliver B. Campbell, both of Philadelphia, Pennsylvania, which clinical records fairly demonstrate, we believe, that the dentifrice of the appellant, as used by these dental surgeons, had a useful medicinal effect.

The Board of Appeals rejected all the claims, 1 to 18, inclusive. Claims 4, 9, and 14 are typical, and are as follows:

4. The process of preparing a remedial medicine which consists in mixing fresh bile with glycerine, permitting the same to stand for a period of fermentation, subsequently removing therefrom cellular and foreign pathogenic matter, and sterilizing the glyceride of bile by subjection to heat treatment.

9. As an article of manufacture a dentifrice comprising an excipient, a cleansing and polishing agent, and glyceride of bile admixed therewith.

14. The process of manufacturing a toothpaste which consists in mixing fresh ox-gall and glycerine in substantially equal proportions, permitting the same to stand at a temperature of from 70° F. to 80° F. until the period of fermentation has substantially ended, filtering and removing cellular and pathogenic bacterial matter, adding to the residue glyceride of bile an amount of glycerine substantially three times the amount by weight of the glyceride of bile, and adding suitable flavoring and a polishing agent.

The claims originally rejected were numbered 1 to 18, inclusive. Attached to appellant's brief is a motion to dismiss the appeal as to claims 1, 2, 3, 12, 16, and 18. In addition to this, upon the hearing here, counsel for appellant moved to dismiss claim 5. These motions are allowed and the appeal will be accordingly dismissed as to said claims 1, 2, 3, 5, 12, 16, and 18. This leaves for consideration claims 4, 6, 7, 8, 9, 10, 11, 13, 14, 15, and 17.

The Board of Appeals cited the following references: Nichols, 249,478, November 15, 1881; Deikman, 307,748, November 11, 1884; Altwegg, 1,483,152, February 12, 1924; Baron, 1,621,186, March 15, 1927; Hiss & Ebert, New Standard Formulary, 1920, page 199, U. S. Dispensatory, 21st edition, pages 526–27, article on Glycerita; Textbook of Bacteriology by Hans Zinsser, 1930, pages 133, 118.

Without going into the details, the Board of Appeals affirmed the action of the Examiner in rejecting said claims for the reasons stated by him, which reasons, as stated by the Board, were as follows:

The Examiner rejected claims 3, 4, 6–8 and 12–16 as disclosing a process obvious to one skilled in the art and he calls attention to the step of filtering bacteria disclosed on page 118 of the Textbook of Bacteriology.

Claims 2, 8, 9 and 10–18 are rejected on the ground that there is no invention in using appellant's preparation of

glycerine and bile as a dentifrice. We agree with this holding of the Examiner.

The final rejection by the Examiner of claims 2, 9, 10, 11, 17 and 18 as covering an aggregation of substances since there is no coaction or interdependence between the chalk, flavoring matter and other ingredients specified, is also well taken. See *Ex parte Walker*, 313 O. G. 231.

The references disclose the following:

The patentee Nichols shows an improved soft soap which he makes by compounding ox gall with glycerine and nine other substances, including such substances as alcohol, sal-soda, and cantharides.

The patent to Deikman is for a liniment which contains a large number of constituents, two of which are beef's gall and glycerine.

The patent to Altwegg shows an improved method of producing a solution of volatile oils. In the specification of this patent it is stated:

"All these solutions combine the properties of the bile salts of dissolving pus, mucus, and lipoid matter with the antiseptic effect of the volatile oils."

The patent to Baren is for an improved bowel evacuant or rectal injection in which the constituent elements are glycerine, ox gall, water, and gelatine. The specification discloses a preferred combination in which the glycerine element is 94 per cent, the ox gall 2 per cent, water 2 per cent, and gelatine 2 per cent. The ox gall element, it is stated, may vary between 15 per cent and 2 per cent, and the glycerine from 50 per cent to 94 per cent.

The Zinsser reference shows a bacteria filter of the hollow candle type, and also discloses a bile medium recommended for blood cultures, composed of ox bile 900 cc., glycerine 100 cc., and peptone 20 Gms.

Hiss & Ebert, New Standard Formulary, discloses a glyceride of ox gall used chiefly in rectal injections, in which the constituents are inspissated ox gall, glycerine, salicylic acid, and water.

The reference to U. S. Dispensatory discloses the use of glycerine in medicine for its

"preservative influence, which often protects against oxidation, and, by a destructive agency upon all of the lowest forms of vegetable and animal life, prevents the various fermentative processes so destructive to organic bodies."

The Examiner begins his discussion of the claims by stating that the step of filtering bacteria is a common practice, and we think this is fairly shown by the reference Zinsser. In addition, the Examiner states that sterilization with heat is old and well known, and that it is well known that heavy deposits will settle out on standing. These latter propositions are not controverted by appellant.

It seems quite evident, from a consideration of the references, that the prior art does not suggest in any way the use or availability for use of glyceride of bile as a medicinal composition or in a dentifrice. There is nothing in the cited art which suggests that it might be useful for this purpose. The Altwegg patent does disclose that bile salts are useful in dissolving pus and mucus, but nowhere have we found reference to the fact that the glyceride of bile will have the same useful effect. It does not follow that because one element of the combination, namely, bile, will have a destructive effect upon pus or mucus, that it will do so when combined with glycerine. Again, the prior art does not show any combination of glycerine and bile without other added elements, nor does it show a combination of 50 per centum bile and 50 per centum glycerine. In addition, if it was known in the art that such a combination of equal quantities of bile and glycerine would permit fermentation and produce the destruction of toxic agents and dangerous bacteria, it has not been disclosed here, except in appellant's application, specification, and affidavit. We think it has been fairly established from said specification and affidavit that the proportions of bile and glycerine that are used are critical in their nature, and that the appellant has invented a combination of chemical elements with new and useful properties.

Even if it be conceded that the filtering of his glyceride of bile and its following sterilization are old in the art, the product itself is not so shown to be. Certainly it can hardly be contended that a preparation of soft soap, or liniment, or bowel evacuant, or a rectal injection, especially when a large number of other materials, whose exact reaction is not disclosed, is used, are anticipatory of the disclosure made by the appellant here. In addition, the patent to Altwegg, which the office seems to think is most in point, has to do with a combination of gall acids and volatile oils, which, of course, would not include glycerine, although it is erroneously stated by the Examiner that this patent shows "glyceride of bile as a pus solvent."

Claims 8, 9, 10, 11, and 17 were further rejected as covering an aggregation of substances, and, as authority for this action, *Ex parte Walker*, 1923 C. D. 39, 313 O. G. 231, is cited. The cited decision is that of the Commissioner of Patents, affirming the decision of the Examiners in Chief in rejecting a claim for an alleged new hair treating or food compound for hair. The Commissioner stated in his decision that all the ingredients of the compound had theretofore been used in compounds for this same purpose, except palm oil, and that olive oil, which was the equivalent of palm oil, had been used in this same relation. Therefore the Commissioner was of opinion that the claimed combination was simply an aggregation. A similar case was *In re Trattner*, 58 App. D. C. 355, 30 F.(2d) 879, 383 O. G. 4.

We are unable to agree that the said claims were properly rejected on this authority. So far as the art discloses, glyceride of bile had never been used for the purpose suggested by appellant, namely, as a dentifrice, or for any similar purpose. Appellant's dentifrice, therefore, cannot be said to be simply an aggregation. It is, rather, a combination containing an element new to the art, and, although it may also contain chalk and other materials heretofore well known in dentifrices, because of the glyceride of bile element, it appears to be inventive.

We are of opinion that claims 6, 7, 8, 11, 13, 14, 15, and 17 were improperly rejected.

Claims 4, 9, and 10, however, are sufficiently broad to read upon the prior art. In these claims, the proportion of bile which are mixed with glycerine are not stated. The court is, therefore, of the opinion that these claims were properly rejected.

In this connection, reference is hereby made to *In re Faunce*, 22 C. C. P. A. (Patents) ———, ——— F.(2d) ———, where a somewhat analogous question is involved.

The appeal is dismissed as to claims 1, 2, 3, 5, 12, 16, and 18. The decision of the Board of Appeals is affirmed as to claims 4, 9, and 10, and reversed as to claims 6, 7, 8, 11, 13, 14, 15, and 17.

IN RE MCCABE

No. 3,875. Decided January 28, 1935

[74 F.(2d) 76]

PATENTABILITY—ELECTRIC IGNITION DEVICE.

Claims for an electric ignition device *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Langdon Moore, Jr., James Atkins, and *Mr. Arthur J. Hudson* for McCabe.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 1, 2, 3, 6, and 7 in appellant's application for a patent for an alleged invention relating to improvements in an electrical ignition device for fluid fuel burners.

Claim 2 is illustrative. It reads:

2. An electrical ignition device adapted to be connected to a source of electricity, including a transformer and a resistance element connected in the secondary circuit of the transformer, and means within the transformer whereby irrespective of variations in voltage in the primary, a secondary constant current is induced.

The references are: Van Slyck, 678,069, July 9, 1901; Darrah, 1,365,305, Jan. 11, 1921; Swiss patent, 94,935, June 1, 1922; Warrick, 1,648,924, Nov. 15, 1927; Booth, 1,694,053, Dec. 4, 1928; Montsinger, 1,756,875, Apr. 29, 1930.

The alleged invention relates to an ignition device for oil burners involving an incandescent wire, as distinguished from so-called "jump-spark" igniters.

It appears from appellant's specification that—

A piece of resistance material heated to incandescency by the passage of the current therethrough was one of the simplest ignition devices employed but was soon replaced by the jump spark device, very similar to the spark plug of the automobile, because of the variation in the voltage of the commercial line. The commercial current for house-lighting is generally presumed to be 110 volts, yet in different localities and under different conditions it varies from 70 volts to 140 volts. This variation in the commercial voltage made it impracticable to construct and adjust at the factory an incandescent resistance ignition device which would operate under such a large range of different voltages. If the voltage in the locality was lower than that for which the device was adjusted, the device would not become incandescent and would therefore be inoperative, and if the voltage was greater than the adjustment then the device would be burned up by the excessive heat produced and likewise become inoperative.

In order to overcome the difficulties referred to in the quoted excerpt, appellant placed a constant current transformer in a secondary circuit in the electrical ignition system.

It appears from the record that appealed claim 2, hereinbefore quoted, was in Interference No. 61,687, involving the following applications: Appellant, Serial No. 331,542, filed January 10, 1929; Lee S. Chadwick et al., Serial No. 478,140, filed August 27, 1930; Reginald W. Beckett, Serial No. 474,523, filed August 11, 1930; Elliot D. Harrington, Serial No. 393,028, filed September 16, 1929; and that the parties Chadwick et al. and Harrington moved to dissolve the interference on the ground that the count there involved was not patentable over the prior art.

The motion to dissolve the interference was sustained by the Examiner of Interferences, and, on appeal, the Board of Appeals affirmed the decision of the examiner on the ground that it did not involve invention, in view of the patents to Warrick, Darrah, Montsinger, Van Slyck, and the Swiss patent, supra, to provide a constant current transformer in an electrical ignition system for use in fluid fuel burners. In its decision, the board, among other things, said:

It is urged by McCabe that no reference discloses the use of a constant current transformer in an ignition system and that it has great advantage in this use since the voltage of the alternating current lines varies widely in different localities. When a constant current transformer is used, the current in the secondary circuit remains substantially constant in value notwithstanding such fluctuations in voltage in the primary circuit and consequently the ignition coil is always properly heated and at the same time protected from excessive currents which would cause it to burn out. It is McCabe's view that since no one prior to the applicants of the instant proceeding thought of the use of a constant current transformer for this purpose, such use was unobvious and amounted to invention.

On the other hand it is the position of the Examiner and of the party Chadwick et al. that the very purpose of using a constant current transformer in any system is to insure substantially constant current in the secondary current notwithstanding variations in voltage in the primary. The filament, for instance, of Darrah's lamp 9 corresponds quite closely to the ignition coil 11 in Warrick. If the current in the secondary 8 is permitted to fluctuate to a considerable extent, it may become so low as to improperly heat the filament for its intended purpose or it may become so high as to cause the filament to burn out. We believe the substitution of a constant current transformer for Warrick's transformer 13 amounts to no more than an obvious selection of the desired type of transformer with its known advantages.

Subsequent to the dissolution of the involved interference, the appealed claims were prosecuted *ex parte* by appellant. Claims 1, 2, and 3 were rejected by the Primary Examiner for the reasons assigned by the Board of Appeals in its decision in the interference proceeding, in which claim 2 was held unpatentable over the prior art cited. Appealed claims 6 and 7 were rejected for the same reasons, in view of the reference patent to Booth.

We deem it unnecessary to describe in detail the disclosures of the references. It is sufficient to say that they disclose the use of constant current transformers of the type employed by appellant; for example, as stated in the patent to Darrah,

"a distributing system by means of which a direct-current circuit that is subject to a wide range of voltage fluctuations, such as a trolley circuit, may be utilized to furnish an electromotive force of constant value to a lighting circuit comprising incandescent lamps."

Therefore, the real issue in the case is whether the use of a constant current transformer in an electrical ignition device, of the type claimed by appellant, involves invention, in view of the fact that it was old to use such transformers in the electrical art in order to secure an electric current of constant value in the secondary circuit, regardless of fluctuations in the voltage in the primary circuit.

It may be conceded that appellant's device is a meritorious one, and that it is commercially successful. Nevertheless, there is absolutely nothing in the

record to indicate that the use of a constant current transformer in an electrical ignition device, of the type claimed by appellant, was not obvious to one skilled in the art.

Had the record disclosed that the problem, if it may be so denominated, confronting appellant and those skilled in the art had *actually remained unsolved* over a protracted period of time, it might be argued with some plausibility that the use of a constant current transformer in an electrical ignition device for fluid fuel burners, for the purposes set forth in appellant's specification, involved invention. However, under the facts of record, we are unable to hold that the tribunals of the Patent Office reached the wrong conclusion. Accordingly, the decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE BRASHARES

No. 3,365. Decided January 28, 1935

[74 F.(2d) 751]

PATENTABILITY—ESTOPPEL.

Where, during the pendency of the B. application, an application of his co-assignor was involved in interference with an application of P. but no motion was made to have an interference declared between the application of B. and the application of P. *Held* that B. is estopped to make claims copied from the patent to P. issued after the termination of the interference.

APPEAL from the Patent Office. Affirmed.

Mr. Richard Eyre, Mr. A. L. Vencill, and *Mr. R. H. Wood* for Brashares.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.:*

This is an appeal from a decision of the Board of Appeals of the United States Patent Office affirming a decision of the Examiner holding appellant to be estopped, because of non-compliance with Patent Office Rule 109, from making certain claims inserted in his application for the purpose of bringing about an interference proceeding between it and a patent, No. 1,854,602 issued April 19, 1932, to Charles W. Prescott, assignor to General Railway Signal Company (hereinafter referred to as the General Company) upon an application filed April 16, 1925.

The application of appellant was filed March 3, 1924. Subsequently it was assigned to the Union Switch & Signal Company (hereinafter referred to as the Union Company), the assignment being recorded in the Patent Office, according to the Examiner's statement, October 17, 1927. The claims here at issue were inserted in the application on August 12, 1932.

The subject matter relates to the control of a railway siding switch. In view of the limited issue before us, it is unnecessary to describe the device in detail. There are three claims, No. 50 being the one copied literally from the Prescott patent where it appeared as claim 23. It reads:

50. In combination with a power operated switch machine, manually actuable means for setting the switch machine in one position, and means for automatically returning the switch machine to the other position requiring the occupancy and the subsequent vacancy of a given section of trackway, and manually operable release means for permitting the automatic return of the switch machine to the other position regardless of occupancy and vacancy of the section of trackway.

Claims 51 and 52 contain certain limitations and are stated to be generally similar to Prescott's claim No. 16. It is agreed that all the claims, so far as the issue before us is concerned, are in the same category.

The statement of the Examiner contains the following recital of facts:

The Prescott patent above referred to was during its pendency in the Patent Office as an application (Serial No. 23,543), involved in Interference No. 57784, *Shaver* v. *Prescott* v. *Padmore*, declared January 19, 1929. That interference also involved an application of Bertram R. Padmore, Serial No. 658,540, which had been assigned to the Union Switch and Signal Company by an assignment recorded August 29, 1925. The present Brashares' application, now before your Honors, was also owned by the Union Switch and Signal Company, by reason of mesne assignments, recorded October 17, 1927. Thus, during the motion period in Interference No. 57784, the assignee of the present Brashares' application had access to the Prescott application and could have moved to have an interference declared between Prescott and Brashares. The very claim upon which interference is now sought was then standing allowed in the Prescott application as claim 29 (Paper No. 5 of the Prescott patent file; the claim was later renumbered 23 in the patent).

However, the common assignee failed to bring such a motion, and on May 8, 1930, the interference was dissolved on the ground that the single count thereof was unpatentable over prior art. Subsequently, the Prescott application matured into patent, No. 1,854,602, granted April 19, 1932.

Following the foregoing recital, the Examiner cited authorities in support of the application of the doctrine of estoppel.

In its discussion of the case, the Board of Appeals said, *inter alia:*

• • • Appellant in effect urges that a holding of estoppel is discretionary with the officials of this Office and that, when there is sufficient reason to excuse the failure to bring a motion under Rule 109, it is proper to permit the declaration of another interference. Appellant states that companies owning large numbers of applications relating to the same general subject matter find it almost impossible to be sure that matters are not overlooked during interference proceedings and that therefore it is unreasonable for the Office to insist on a hard and fast rule in all cases.

• • • • • •

It is our opinion, to accept the excuse of ignorance as a reason for declaring a second interference would practically nullify the rule which has been followed and which it is believed is very essential to a proper interference practice. We appreciate the great difficulties that must exist under the conditions referred to by appellant but we do not consider that that justifies the breaking down of a necessary rule.

The pertinent portions of rule 109 read as follows:

An applicant involved in an interference may, at any time within thirty days after the preliminary statements (referred to in rule 110) of the parties have been received and approved, on motion duly made, as provided by rule 133, file an amendment to his application containing any claims which in his opinion should be made the basis of interference between himself and any of the other parties. Such motion must be accompanied by the proposed amendment, and when in proper form will be set for hearing before the law examiner. Where a party opposes the admission of such an amendment in view of prior patents or publications, full notice of such patents or publications must be given at least five days prior to the date of hearing. On the admission of such amendment and the adoption of the claims by the other parties within a time specified by the law examiner the primary examiner shall redeclare the interference or shall declare such other interferences as may be necessary to include the said claims.

• • • • • •

Any party to an interference may bring a motion to put in interference any claims already in his application or patent which in his opinion should be made the basis of interference between himself and any of the other parties. Any party to an interference may bring a motion to substitute any other application owned by him, as to the existing issue, or to include an application or a patent owned by him, as to claims which he deems should be made the basis of interference between himself and any of the other parties. Such motions are subject to the same conditions, and the procedure in connection therewith is the same, as far as applicable, as hereinabove set forth for motions to amend.

Appellant has assigned numerous reasons of appeal, all of which are covered, in susbtance, by his contentions under two "Points of Argument," stated in the brief as follows:

I. Under the special circumstances of this case, Union Company should not be held to be estopped, because it is without fault, and because its adversary is not an innocent party that should be protected.

II. Estoppel cannot be created against an assignee on the ground of its failure to move under rule 109 to insert a claim for subject-matter which is not disclosed in said assignee's interfering application.

Upon what were deemed by this court to be apposite and controlling authorities, as well as upon reason, we have more than once affirmed proceedings of the Patent Office under rule 109, supra, thus indicating our belief in the validity of the rule itself, and of the reasonableness of its application under the facts which the cases then before us presented.

We first had occasion to pass upon it in the case of *In re Austin*, 17 C. C. P. A. (Patents) 1202, 40 F. (2d) 756, 399 O. G. 625. This case is quoted from in the statement of the Examiner.

The adjudication there actually made, having any pertinence here, was that the assignee of a sole application and a joint application (the sole application being in the name of one of the parties to the joint application) both of which disclosed subject matter, with claim therefor, involved in an interference declared only between the joint application and a third party, should have presented the pertinent subject matter of the sole application, under the rule, and that having failed so to do, the tribunals of the Patent Office were correct in holding that assignee was estopped, in an *ex parte* proceeding, from making such claims of the sole application as could have been presented for a determination of priority in the interference.

It is to be borne in mind that the two claims of the sole application to which the doctrine of estoppel was applied in that decision had been present in the sole application during the pendency of the interference. So, that case differed from the case at bar to the extent that the sole application there contained actual claims, while the Brashares application here involved contained only disclosures upon which claims might have been but were not drawn during the pendency of the interference.

The doctrine of the foregoing case was followed by us, but not extended in the cases of *In re Ellis et al.*, 18 C. C. P. A. (Patents) 1060, 47 F. (2d) 903, 409 O. G. 559; *In re Krauch et al.*, 19 C. C. P. A. (Patents) 1003, 56 F. (2d) 290, 419 O. G. 825, and *In re Louis Boudin*, 19 C. C. P. A. (Patents) 1187, 58 F. (2d) 448, 422 O. G. 610.

All the foregoing cases contain citations from decisions of other courts, particularly the Court of Appeals of the District of Columbia, our predecessor in patent jurisdiction.

In the case of *In re Shimer*, 21 C. C. P. A. (Patents) 979, 69 F. (2d) 556, 446 O. G. 5, the rule was applied under a somewhat different state of facts.

Of our findings there, the brief of appellant says:

• • • [those findings] have perhaps gone as far as this or any court has ever gone in approving the Patent Office in its applications of this doctrine of estoppel.

In that case the application involved was the same application which had been in an interference in which the party, Shimer, had seen applications of his opponents which disclosed, but, apparently, did not claim, the subject-matter of certain of the claims he was seeking to make in the *ex parte* proceeding. The tribunals of the Patent Office held that to allow such claims to be made would be to—

"provide grounds for a new interference involving an application with which the applicant has already been involved in interference,"

and this court affirmed that view.

A difference between the *Shimer* case, supra, and the case at bar is that the Brashares application, the only application belonging to the General Company in which the here involved claims could have been made, was never in interference with the Prescott application.

Careful consideration has been given to contentions made on behalf of appellant, and the authorities cited in support of same, but we are unable to discern any distinction in principle between the situation existing here and that which existed in the several cases above noted in which the application of the doctrine of estoppel by the tribunals of the Patent Office was sustained, nor do we think the facts of this case are analogous to those which existed in the case of *In re Chase*, 21 C. C. P. A. (Patents) 1183, 71 F. (2d) 178, 447 O. G. 997.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE MCCABE

No. 3,374. Decided January 28, 1935

[74 F.(2d) 758]

PATENTABILITY—ELECTRIC MERCURY TUBE SWITCH.

Certain claims for an electric mercury tube switch *Held* unpatentable in view of the prior art.

APPEAL from the Patent Office. Affirmed.

Mr. Langdon Moore and *Mr. James Atkins* for McCabe.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GARRETT, *J.:*

This is an appeal from a decision of the Board of Appeals of the United States Patent Office upon two claims of an application for patent relating to electric mercury tube switches.

As finally acted upon by the Examiner, the application contained four claims, numbered respectively, 6, 7, 8, and 9, and all were held by the Examiner to be unpatentable in view of prior art. Upon appeal the Board of Appeals reversed the Examiner's decision as to claims 6 and 8, but affirmed his rejection of claims 7 and 9. Appellant thereupon appealed to this court from so much of the Board's decision as affirmed the Examiner's rejection.

The rejected claims read as follows:

7. An electric mercury tube switch including a cylindrical container having a tipless closure at one end and having a projecting filling stem with electrodes projecting on each side thereof sealed in the other end with flexible lead wires attached to the projecting electrodes through

out the external portions thereof, the filling stem tipped in line with the termination of the respective electrodes, and means surrounding the electrodes with the attached flexible lead wires, interposed rigid filling stem and end of the tube seal to impart rigidity to the exterior portions of the electrodes to allow the flexing of the lead wires above the ends of the electrodes without exerting a strain on the electrodes.

9. An electric mercury tube switch including a cylindrical glass container formed with a normally integral closure at one end, a filling stem in the axis of the container and a plurality of leading in wires equidistant from the filling stem sealed in the material of the container at the other end, spaced apart electrodes secured to the respective spaced apart leading in wires, and a relatively heavy body of mercury in relation to the weight of the container adapted to flow within the container to make and break an electrical circuit between said electrodes, said leading in wires of relatively heavy material to carry current of high intensity and said filling stem tipped on the exterior of the sealed end closure.

Nine references were cited as follows: Piffard, 467,982, February 2, 1892; Whipple, 728,060, May 12, 1903; Housekeeper, 1,271,320, July 2, 1918; Phelan, 1,598,874, September 7, 1926; Walker, 1,607,582, November 16, 1926; Armstrong et al., 1,640,869, August 30, 1927; Laskey, 1,647,999, November 8, 1927; Walker, 1,721,757, July 23, 1929; Phelan et al., 1,826,570, October 6, 1931.

It is not deemed essential to set forth in detail the disclosures of the many references cited. Certain of them refer to mercury tube switches while others are in what is designated by the Board of Appeals as the "lamp art."

The specific structure upon which all of appellant's claims are based is that of a tube having a tipless closure at one end, and at the other end a projecting stem, through which the tube is filled with the desired elements, said filling stem located between two electrodes and having leading in wires (that is wires leading to the electrodes) on each of its sides, said leading in wires being sealed into that end of the tube through which the filling stem projects. There are also flexible lead wires attached to the aforesaid leading in wires, and, in one of the forms shown, bands of insulating material bind all the leads to the electrodes and to the rigid filling stem. By this arrangement, the Board says:

> • • • the lead wires may be flexed without imparting a strain upon the projecting electrodes.

In denying claims 7 and 9 the Board of Appeals correctly pointed out that the patents to Armstrong et al. and Phelan et al. both show means for supporting electrodes in position to cause the flexing of the conductor to occur beyond the joint of connection between electrode and conductor; that the patent to Piffard discloses a sheath for holding the filaments and the electrodes in position with respect to each other, but not with respect to the filling stem because the latter is located at the other end of the tube; that Laskey, whose patent relates to a switch board lamp tube, shows a tube tipless at one end and having a filling stem positioned between electrodes at the other end.

The Board then says:

> • • • While this is disclosed in the lamp art it shows the organization broadly and it is believed that claims such as 7 and 9 which merely recite the combination of the filling stem located between the electrodes *without using the stem to support the electrodes against flexing or bending due to pull on the conductors* does not amount to a patentable combination, especially since the organization is old in the lamp art as indicated generally by the Laskey and Piffard patents. [Italics ours.]

One argument presented on behalf of appellant is to the effect that there is no substantial distinction in principle between the allowed claims and those which were rejected, this being particularly urged as to appealed claim 7, supra. Appellant's brief quotes from the decision of the Board respecting the allowed claims as follows:

> Claims 6 and 8 are limited to means for connecting the flexible lead wires and electrodes to the filling stem and as limited in claim 8 to the lead wires surrounding the electrodes and filling the space between the electrodes and the filling stem so that the surrounding means serves to connect the leads and electrodes to the filling stem to thereby impart rigidity to the parts projecting from the sealed end of the tube. These two claims do not appear to be met in the patents or in any combination thereof and in our view are patentable over the references.

The brief then adds:

> It is submitted that the diction above quoted from the decision of the Board reads just as well upon claim 7 as upon the claims referred to therein by the Board.

It must be conceded, we think, that the distinction between the allowed claims and the rejected claims is not expressed by the Board with entire clearness, but, even were they identical in meaning, it would not necessarily follow that the rejected claims should, for that reason, be allowed. It might indeed be argued that if the rejected claims were properly rejected, then the others, if they are the same, should also have been rejected, but we are not concerned with the allowed claims.

However, we think the Board has indicated its idea of the distinction in the italicized clause of the quotation from its decision respecting the rejected claims, supra, that is, the feature of "using the stem to support the electrodes against flexing or bending due to pull on the conductors."

As we understand the Board's decision, it was held that such feature was present in the allowed claims, 6 and 8, and that, same not being shown by the prior art, they were properly allowable, but that not being present in the rejected claims and the other features thereof being anticipated, the latter were not patentable.

In other words, the Board seems to have made itself more clear as to the feature which rendered the allowed claims patentable by its negative statement in the discussion of the rejected claims than by its affirmative statement relating to those allowed.

It may be said, incidentally, that even if there be no distinction in fact, appellant would not suffer by a failure to have the rejected claims allowed, since his rights are protected by those which are allowed, and the rejection of the others would not constitute reversible error. *In re Randell*, 21 C. C. P. A. (Patents) 745, 67 F.(2d) 931, 439 O. G. 544.

We think the issue before us must be determined not by comparing the rejected claims with the allowed claims for points of similarity or dissimilarity, but by a comparison of them with the prior art cited.

When so compared, the several features of the combination seem to us to be shown in the prior art substantially as applicant combines them, as pointed out by the Board, and we are unable to concur in the contention made on behalf of appellant as to certain of these features being shown in a "nonanalogous" art. It is true that the features so referred to appeared, as the Board says, in the "lamp art," but they relate specifically to the location and sealing of elements designed for the conduction of electric current into glass tubes, or the like, and their functions and purposes in this respect in the art cited are practically identical with the functions and purposes of the like features involved in the appealed claims.

The decision of the Board of Appeals is affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

MARINE F. WRIGHT

No. 3,405. Decided February 4, 1935

[74 F.(2d) 996]

1. INTERFERENCE — PRIORITY — APPEAL — WHAT MAY BE CONSIDERED.

In an appeal to this Court from a decision on priority "we are not at liberty to inquire whether the interpretation given a count by the Patent Office renders the count unpatentable over the prior art."

2. SAME—SAME—RIGHT TO MAKE THE CLAIM.

Record reviewed and *Held* that W., the senior party, has a right to make the claim and no testimony having been presented, priority was properly awarded to him.

APPEAL from the Patent Office. Affirmed.

Mr. Richard M. Marine, pro se.

Mr. Charles M. Thomas, Mr. Francis D. Thomas, and *Mr. Marcus Lothrop* for Wright.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner of Interferences, awarding priority of invention to appellee in an interference proceeding between the parties hereto.

There is but one count involved, which reads as follows:

> In a vehicle construction in combination, a body post provided with a front face substantially in alignment with the driver's forward line of vision past said post, and a windshield end frame member having a front face normally in substantial alignment with the front face of said body post.

The interference arises between an application of appellant filed March 31, 1928, Serial No. 266,340, and an application of appellee filed March 1, 1926, Serial No. 91,322; appellee is therefore the senior party.

Originally there were additional parties to the interference, but apparently they were eliminated in proceedings not shown in the record before us, and the only parties now concerned in the interference are appellant and appellee.

The parties hereto filed preliminary statements, appellant alleging conception of the invention and disclosure to others in January, 1926. Appellee alleged conception of the invention on or about December 15, 1924, and disclosure to others on or about December 28, 1924.

No testimony was taken by either party, but appellant moved to dissolve the interference upon the ground that appellee had no right to make the claim corresponding to the count here involved, alleging that appellee's application failed to disclose the invention embraced in the count and further contending that if the count be construed to read upon appellee's disclosure, it is unpatentable over the prior art. This motion was denied. Appellant entered a motion for rehearing, which was denied in a decision by the Examiner again holding that appellee could make the claim corresponding to the count.

The case then went to final hearing upon the record. The Examiner of Interferences again held that appellee had the right to make the claim corresponding to the count here involved, and declined to consider the question of patentability of the claim with respect to the prior art. He therefore awarded priority of invention to appellee, he being the senior party.

Upon appeal, the Board of Appeals affirmed the decision of the Examiner of Interferences, expressly holding that appellee had the right to make a claim corresponding to the count. No mention is made in the Board's decision with respect to the patentability of the count over the prior art. Appellant's notice of appeal from the decision of the Examiner of Interferences to the Board of Appeals does not appear in the record, and therefore we cannot say whether the question of the refusal of the Examiner of Interferences to consider the patentability of the count as construed by him was assigned as one of appellant's reasons of appeal.

After the decision of the Board, appellant filed a motion for rehearing; said motion was denied, the Board again affirming the right of appellee to make the claim. Thereupon appellant filed notice of appeal to this court.

[1] There is only one question before us, viz., the right of appellee to make the claim corresponding to the count here in issue. While appellant in his reasons for appeal assigns error by the Board in refusing to consider prior art in determining the scope of the claim, that question can not be considered by us. It is well established that we are not at liberty in a proceeding of this character to inquire whether the interpretation given a count by the Patent Office tribunals renders the count unpatentable over the prior art. *Marshall and Levandosky* v. *Ledwinka*, 21 C. C. P. A. (Patents) 728, 67 F.(2d) 495, and cases therein cited.

As indicated by the count, the invention embraced therein relates to the special construction of a body post, or corner post, adjacent to the windshield of a closed automobile, the particular construction involved being the location of its front face with respect to the line of vision of the driver. Corner posts or pillars are provided having sufficient strength and rigidity to support the roof of the body without obscuring the vision of the driver. To accomplish this, the corner posts are elongated in cross section and positioned at an angle in the line of vision of the driver, thus eliminating "blind spots."

The count before us does not embrace the entire post, but only the front face thereof and the front face of the windshield end frame member.

The controverted question before us is, does the application of appellee disclose a body post or pillar provided with a front face substantially in alignment

with the driver's forward line of vision past said post, as called for by the count?

It is so well established as not to require citation of authority that concurring decisions of the Patent Office tribunals upon questions of fact will not be reversed by us unless manifestly wrong. One Examiner of Interferences, in two decisions, affirmed the right of appellee to make the claim. Another Examiner of Interferences, upon final hearing, affirmed appellee's right to make the claim, and the Board of Appeals in two decisions affirmed such right. We therefore have before us five decisions of Patent Office tribunals affirming appellee's right to make the claim and we would not be warranted in reversing such finding unless it is manifest that said tribunals were wrong.

Appellee's disclosure consists of his written specification and two drawings, Figures 1 and 2. Figure 1 is described as a plan view of the automobile with the vision lines indicated thereon. There is apparently no attempt to show structural details of the post in Figure 1. Figure 2 is described as showing the form of the front pillar or post and fragments of vision lines. This drawing shows the parts in detail and can readily be understood.

It is appellant's contention that the disclosure of Figure 2 is inconsistent with the disclosure of Figure 1; that, insofar as Figure 2 does disclose the invention here in issue it is due wholly to errors of the draftsman, and that the showing is accidental and not in accord with, but contrary to, the terms of the written specification.

There does seem to be some inconsistency between appellee's Figures 1 and 2 as indicated by the projected lines of vision. The Examiner of Interferences suggested that it probably was the intention to represent in the two figures two different types of posts. Appellant vigorously contests this suggestion and points to provisions in appellee's specification indicating he had only one form of structure in mind.

However, the tribunals of the Patent Office held that Figure 2, showing the detailed construction of the pillar or post, discloses a front face in substantial alignment with the driver's line of vision, that certain recitals in the specification support the disclosure of Figure 2, and that, considering Figure 2 in connection with such recitals, appellee's application discloses the invention here involved.

It would be difficult to describe intelligibly the particular features of appellee's Figures 1 and 2 which are in controversy without the reproduction of such drawings, and we do not deem it necessary to do so. Appellant's contention is based principally upon differences in the "geometrical" angles shown in the respective drawings and referred to in the specification.

Appellant has very ably and earnestly pressed his contention upon us, both in his brief and upon oral argument; but, upon a study of the drawings and recitals in the specification of appellee relating thereto, relied upon by the Patent Office tribunals, we are not convinced that said tribunals were manifestly wrong in their conclusions that appellee's application discloses the invention here involved. This being our conclusion, we deem it unnecessary to amplify this opinion.

[2] Certain it is that the applications of both parties hereto were directed to the solution of a single problem, and we are of the opinion that appellee's Figure 2 discloses substantially the same solution of the problem as is disclosed by appellant, so far as the front face of the post is concerned. The only way by which the force and effect of Figure 2 as disclosing the invention may be avoided is by holding that the figure does not represent appellee's inventive idea, but is the result of errors of the draftsman. In view of the unanimous holdings of the Patent Office tribunals that Figure 2 of appellee does properly disclose the invention here involved, taken in connection with recitals in the specification, we are unable to find error in the decision of the Board of Appeals.

We may add that the second element of the count, viz.,

"• • • a windshield end frame member having a front face normally in substantial alignment with the front face of said body post,"

is clearly disclosed by appellee.

For the reasons stated, the decision of the Board of Appeals is affirmed.

Affirmed.

T. M. 305,309, Paroglas Products, Polishing material for auto bodies, floors, etc., filed April 12, 1935, D. C., W. D. N. Y., Doc. 1966, *Paroglas Products, Inc.*, v. *W. H. Carpenter (Arrow Super-Glaze Products).*

Disclaimers

1,398,994.—*George H. Armitage*, Woonsocket, R. I. DELIVERY MECHANISM FOR VENDING-MACHINES. Patent Dated December 6, 1921. Disclaimer filed May 18, 1935, by the assignee, *General Register Corporation.*

Hereby enters this disclaimer to claims 6, 33, 34, 35, 37, 38, and 43, inclusive, in said specification, which are in the following words to wit:

"6. A vending machine having, in combination, means for delivering different quantities of articles therefrom including a rotary article feeding drum; a plurality of tripping devices for controlling the operations of the delivery means; and means whereby one or the other of said tripping devices may be brought into action so as to control the amount the machine will deliver."

"33. A vending machine having, in combination, means for supporting, guiding and delivering tickets or similar articles from a single strip, including a rotary drum and means for actuating said drum variable distances according to the number of tickets it is desired to have the machine deliver.

"34. A vending machine having, in combination, means for supporting, guiding and delivering articles therefrom including a rotary member normally held from rotation, means for actuating said member variable distances and means cooperating with the holding means for tripping the same into action to enable the said actuating means to cause the rotary means to make a delivery according to predetermination.

"35. A vending machine having, in combination, means for guiding and delivering articles from a single strip, including a rotary drum, means on the drum for cooperating with the strip, and means for variably driving the drum so as to deliver as many articles as may be required."

"37. A vending machine having, in combination, means for delivering articles from a continuous strip including a rotary member; means for moving said rotary member variable distances so as to deliver any desired number of articles; and means for severing the desired number of articles after the delivery operation.

"38. A vending machine having, in combination, means for delivering different quantities of articles therefrom, including a rotary drum; a plurality of tripping devices for controlling the operations of the delivery means; and means whereby one or the other of the tripping devices may be brought into action so as to control the amount of rotation imparted to the drum."

"43. A machine of the character described, having an exit for tickets from a strip, comprising, in combination, a rotatable drum provided with means adapted to engage the ticket strip for feeding the same through the exit; a knife for severing the issued tickets from the strip; means for actuating the knife; means for rotating the drum variable distances and adapted to set the knife-actuating means in operation; and means for returning the knife to its normal position."

1,875,859.—*Philip H. Dowling*, Swissvale, Pa. ELECTRICAL RELAY SYSTEM. Patent dated September 6, 1932. Disclaimer filed May 18, 1935, by the assignee, *The Union Switch & Signal Company.*

Hereby enters the following disclaimer, to wit:

Your petitioner hereby disclaims the subject matter of claims 5, 7, 8, 9, and 10.

1,905,251.—*Charles A. Styer*, Forest Hills, Pa. SELF COMPENSATING LIGHT CONTROL. Patent dated April 25, 1933. Disclaimer filed May 18, 1935, by the assignee, *Westinghouse Electric & Manufacturing Company.*

Hereby enters a disclaimer to the claims which are in the following words:

"Apparatus for producing radiant energy comprising a source of radiations, means for energizing said source, and means responsive to the variations in said energizing means for limiting the beam of radiant energy emitted from said source."

"Apparatus for producing radiant energy comprising a source of radiations, means for energizing said source, and means responsive to the variations in said energizing means for regulating the intensity of said radiant energy projected on a predetermined plane."

Trade-Mark Registrations Canceled

For Saponaceous Compounds for Cleaning the Hands, Shaving Cream, Shaving Sticks, Shaving Powder, Out-Fit Packages Containing Soap and Towel, Soap Powder for Bathing, Washing, and Cleaning Purposes, Laundry Soaps, Soap Flakes, Hand Soaps, and Toilet Soaps.
Claims use since Feb. 27, 1935.

Ser. No. 362,922. RED CROSS PHARMACY, INC., Cleveland, Ohio. Filed Mar. 23, 1935.

The signature is that of Dr. Erwin H. Bolgar, president of applicant corporation.
For Milk Soap.
Claims use since 1904

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 359,233. KUNZE & BEVERSDORF, Milwaukee, Wis. Filed Dec. 12, 1934.

THEO BROMIDE

The term "Bromide" is disclaimed apart from the mark.
For Preparation Used as a Vasodilator and Sedative.
Claims use since Aug. 1, 1930.

Ser. No. 362,226. THE HALEY M-O COMPANY, Geneva, N. Y. Filed Mar. 7, 1935.

HALEY'S

M-O

For Pharmaceutical Preparations Containing Milk of Magnesia and Mineral Oil
Claims use since Apr. 15, 1924.

Ser. No. 362,669. CLARITE LABORATORIES, INC., New York, N. Y., assignor to Clark-Wright, Inc., Boston, Mass. Filed Mar. 18, 1935.

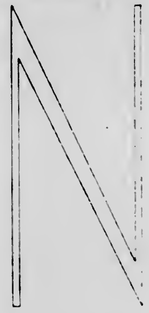
THYMO-PED

For Foot Creams.
Claims use since Jan. 5, 1935.

Ser. No. 362,678. W. J. GILMORE DRUG CO., Pittsburgh, Pa. Filed Mar. 18, 1935.

ATOP

For Nerve Tonic.
Claims use since Mar. 15, 1935.



Ser. No. 362,734. JOSEPH BREYER, doing business as Nanta Company, New York, N. Y. Filed Mar. 19, 1935.

NANTA

For Eliminant Treatment Based Mainly on a Diminished Intake of Fats and Carbohydrates Coupled with Increased Elimination for Checking Excess Weight.
Claims use since Mar. 15, 1935.

Ser. No. 362,920. MCLAUGHLIN GWEN COMPANY, Chicago, Ill. Filed Mar. 23, 1935.

Nourol

For Shampoo, Wave Set, Hair Tonic, Rinse.
Claims use since Feb. 6, 1934

Ser. No. 362,939. BRUNSWIG DRUG CO., doing business as Reliance Laboratories, Los Angeles, Calif. Filed Mar. 25, 1935

PURITY RELIANCE UNIFORMITY

No claim is made to the words "Purity" and/or "Uniformity" apart from the mark shown.
For Antacid Powder, Antiseptic Mouth Wash, Ant Powder, Ant Poison, Aromatic Astringent Mouth Wash, Aspirin Tablets, Beef, Iron and Wine, Cascara Sagrada Tablets, Fly Spray, Glycerin Suppositories, Hygienic Medicated Powder for Vaginal Douche, Larkspur Lotion, Laxative Hepatic Salts, Malt Extract and Cod Liver Oil, Milk of Magnesia, Mineral Oil for Medicinal Purposes Only, Nasal Drops, Petroleum Emulsion with Agar, Rubbing Alcohol Compound and Vapor Balm.

Ser. No. 363,755. WILLIAM F. GILROY, doing business as Der-Mo-Topic Laboratories, Pittston, Pa. Filed Apr. 15, 1935.

Applicant disclaims the representation of the label per se, and all notations apart from the mark as shown except the words "Der-Mo-Topic" and "Der-Mo-Topic Laboratories".
For Preparation for the Treatment of Psoriasis, Eczema, Alopecia, and Other Dermal Conditions.
Claims use since Jan. 7, 1925.

Ser. No. 363,768. SIROIL LABORATORIES, INC., Detroit, Mich. Filed Apr. 15, 1935.

EXOIL

For Preparation for the Treatment of Psoriasis and Similar Skin Affections.
Claims use since December, 1934.

CLASS 7

Cordage

Ser. No. 364,050. COLUMBIAN ROPE COMPANY, Auburn, N. Y. Filed Apr. 22, 1935.

No claim is made to the word "Manila".
For Rope, Cord, and Twine of Vegetable Fiber.
Claims use since Feb. 7, 1928.

CLASS 11

Inks and Inking Materials

Ser. No. 364,145. THE MILLER-BRYANT-PIERCE COMPANY, Aurora, Ill. Filed Apr. 24, 1935.

Madame Butterfly

For Typewriter Ribbons.
Claims use since Apr. 6, 1935.

CLASS 12

Construction Materials

Ser. No. 334,105. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Jan. 19, 1933.

LATCH THATCH SHINGLE

Applicant disclaims the word "Shingle" apart from the mark shown.
For Prepared Roofing Shingles Having a Waterproof Felted Base.
Claims use since June 19, 1931.

Ser. No. 362,575. HUTTIG SASH & DOOR COMPANY, St. Louis, Mo. Filed Mar. 15, 1935.

All wording except "Airflo" and "Satin" is disclaimed apart from the mark as shown.
For Millwork Such as Sash and Doors, Particularly Doors of Hollow Panel Type.
Claims use since Feb. 25, 1935.

Ser. No. 363,369. THE C. A. MAUK LUMBER COMPANY, Toledo, Ohio. Filed Apr. 3, 1935.

The drawing is lined to indicate silver.
For Shingles.
Claims use since Mar. 25, 1935.

Ser. No. 364,194. REILLY TAR & CHEMICAL CORPORATION, Indianapolis, Ind. Filed Apr. 25, 1935.

PLASTUVIA

For Bituminous Material Intended for Crack Fillers.
Claims use since Mar. 20, 1935.

Ser. No. 364,326. BIRD & SON, INC., East Walpole, Mass. Filed Apr. 29, 1935.

WEATHER-TEX

For Slate-Surfaced Asphalt Siding and Shingles.
Claims use since Apr. 16, 1935.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 363,256. AMERICAN SHEET AND TIN PLATE COMPANY, Pittsburgh, Pa. Filed Apr. 1, 1935.

MAN-TEN

For Rolled Ferrous Metal Sheets and Plates.
Claims use since Mar. 13, 1934.

Ser. No. 363,356. AMERICAN SHEET AND TIN PLATE COMPANY, Pittsburgh, Pa. Filed Apr. 1, 1935.

COR-TEN

For Rolled Ferrous Metal Sheets and Plates.
Claims use since Mar. 8, 1934.

Ser. No. 363,938. THE NATIONAL FOUNDRY & FURNACE COMPANY, Dayton, Ohio. Filed Apr. 18, 1935.

CHRONAT

For Alloy Iron.
Claims use since Apr. 9, 1935.

CLASS 15

Oils and Greases

Ser. No. 359,276. MARATHON OIL COMPANY, Tulsa, Okla. Filed Dec. 13, 1934.

MARATHON

Endurance
MOTOR OIL

No claim is made to the words "Products", "Best In The Long Run" and "Motor Oil" apart from the mark as shown.
For Lubricating Motor Oils.
Claims use since May 3, 1931.

Ser. No. 363,028. THE ATLANTIC REFINING COMPANY, Philadelphia, Pa. Filed Mar. 27, 1935.

ULTROL

For Petroleum Products, Particularly Petroleum Oils for Various Uses in Industrial Arts.
Claims use since Mar. 1, 1935.

Ser. No. 363,909. SHELTHORN & HILL, INC., Elsmere, Del. Filed Apr. 17, 1935.

DELOLENE

For Gasoline and Lubricating Oils.
Claims use since October, 1931.

Ser. No. 363,920. THE HOUSE OF GURNEY, INC., Yankton, S. Dak. Filed Apr. 18, 1935.

AGRO

For Gasoline.
Claims use since Feb. 1, 1935.

Ser. No. 363,986. SHELL OIL COMPANY, San Francisco, Calif. Filed Apr. 19, 1935.

AEROSHELL

For Lubricating Oil.
Claims use since Mar. 29, 1935.

Ser. No. 364,447. PUROL, INC., Trenton, N. J. Filed May 1, 1935.

MOR-LUB

For Lubricating Oils and Greases.
Claims use since Apr. 12, 1935.

Ser. No. 364,482. WILLIAM W. PELTON, doing business as Atlantic Blending Co., Quincy, Mass. Filed May 2, 1935.

MOREVS

For Lubricating Oil.
Claims use since Jan. 10, 1935.

CLASS 17

Tobacco Products

Ser. No. 362,357. FINCK CIGAR COMPANY, San Antonio, Tex. Filed Mar. 25, 1935.

KONTAK

For Cigars.
Claims use since Mar. 14, 1935.

Ser. No. 363,815. PHILIP MORRIS & CO. LTD INCORPORATED, New York, N. Y. Filed Apr. 16, 1935.

PM 80

For Cigarettes.
Claims use since 1883.

Ser. No. 364,379. CONTINENTAL CIGAR CORPORATION, Scranton, Pa. Filed Apr. 30, 1935.

STATESMAN

For Cigars.
Claims use since Nov. 12, 1931.

CLASS 19

Vehicles, Not Including Engines

Ser. No. 364,412. DEWEY AND ALMY CHEMICAL COMPANY, Cambridge, Mass. Filed May 1, 1935.

Tailored

For Automobiles and Structural Parts Thereof Specifically, Brake Cables Including Cable Casings and Attachment Fittings Therefor.
Claims use since Apr. 16, 1935.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 356,883. PHONE APPLIANCE CORPORATION, New York, N. Y. Filed Oct. 8, 1934.

HYGEN-O-PHONE

No claim is made to the word "Phone" apart from the mark shown.
For Sanitary Mouth Piece for Telephones.
Claims use since Sept. 6, 1934.

Ser. No. 358,283. DEUTSCHE EDELSTAHLWERKE AKTIENGESELLSCHAFT, Krefeld, Germany. Filed Nov. 16, 1934.

Oerstit

For Magnets.
Claims use since Jan. 21, 1933.

Ser. No. 363,823. CHARLES S. REED, Los Angeles, Calif. Filed Apr. 16, 1935.

"TECK-LITE"

For Switch Plates or Covers for Electrical Switches.
Claims use since Dec. 16, 1933.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 363,043. SAML. GABRIEL SONS & COMPANY, New York, N. Y. Filed Mar. 27, 1935.

PLAN-A-GARDEN

For Toys for a Construction Game Played With Building Pieces.
Claims use since Jan. 1, 1935.

Ser. No. 363,992. S. L. ALLEN & CO., INC., Philadelphia, Pa. Filed Apr. 20, 1935.

SUPER STEERING

No claim is made to the word "Steering" apart from its association with the word "Super".
For Sleds.
Claims use since May 29, 1934.

Ser. No. 364,260. UNITED STATES WHIP CO., doing business as U. S. Line Co., Westfield, Mass. Filed Apr. 26, 1935.

LEVEL BEST

No claim is made to the word "Best" apart from the association shown.
For Fishing Line.
Claims use since Dec. 14, 1928.

Ser. No. 364,401. THE UNITED STATES PLAYING CARD COMPANY, East Norwood, Cincinnati, Ohio. Filed Apr. 30, 1935.

SWEEPSTAKES

For Playing Cards.
Claims use since Apr. 15, 1935.

Ser. No. 364,413. THE EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed May 1, 1935.

THEY'RE OFF

For Coin Controlled Amusement Apparatus.
Claims use since Apr. 1, 1935.

Ser. No. 364,414. THE EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed May 1, 1935.

Pathfinder

For Coin Controlled Amusement Apparatus.
Claims use since Mar. 1, 1935.

Ser. No. 364,415. THE EXHIBIT SUPPLY COMPANY, Chicago, Ill. Filed May 1, 1935.

GATE-WAY

For Coin Controlled Amusement Apparatus.
Claims use since Apr. 1, 1935.

Ser. No. 364,438. PATENT ENGINEERING CO., Chicago, Ill. Filed May 1, 1935.

Re-Kop

For Card and Board Game.
Claims use since Oct. 18, 1934.

CLASS 23

Cutlery, Machinery, and Tools, and Parts Thereof

Ser. No. 333,696. AIR-WAY ELECTRIC APPLIANCE CORPORATION, Toledo, Ohio. Filed Jan. 6, 1933

Air-Way

For Insecticide Dusting Attachments for Vacuum Cleaners, and Foldable Open Mouth Bag Fumigating Chambers for Enveloping Articles to Be Fumigated, Vacuum Cleaning Machines and Parts Thereof, and Feather Renovating Machines.
Claims use since January, 1928.

Ser. No. 358,471. CHICAGO FLEXIBLE SHAFT COMPANY, Chicago, Ill. Filed Nov. 21, 1934.

MIXMASTER

For Food Mixers, Fruit Juice Extractors, Mayonnaise Makers, Drink Mixers, Meat Grinders and Food Choppers, Food Slicers and Shredders, Ice Crushers, Potato Peelers, Can Openers, Mechanically Operated Colanders, Coffee Grinders, Pea Shellers, and Attachments for Operating Ice Cream Freezers.

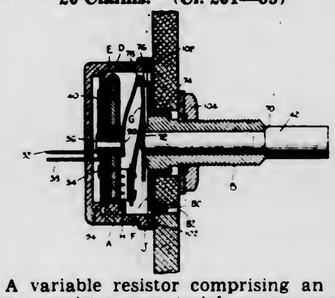
REISSUES

JUNE 11, 1935

19,603
DAM CONSTRUCTION
William H. Bailey, Pueblo, Colo., assignor to The Colorado Fuel and Iron Company, Denver, Colo.
Original No. 1,900,393, dated March 7, 1933, Serial No. 514,492, February 9, 1931. Application for reissue August 7, 1933, Serial No. 684,103
17 Claims. (Cl. 61—30)

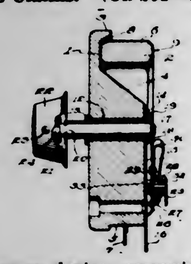


1. A metallic facing for a dam having a flat upstream face consisting of a series of channels each having a flat web and outwardly flared flanges, said channels being arranged to lie side by side with the edges of the flanges of adjacent channels in contact whereby to leave expansion spaces substantially triangular in cross section, said channels having their webs lying throughout against said upstream face and extending substantially vertically thereof.

19,604
ELECTRICAL CONDENSER
Louis Edenburg, Antwerp, Belgium, assignor to Nova Electric Corporation, New York, N. Y., a corporation of New York
Original No. 1,924,711, dated August 29, 1933, Serial No. 249,276, January 25, 1928. Application for reissue February 9, 1934, Serial No. 710,512
14 Claims. (Cl. 175—315)

1. An electric condenser comprising a pair of strips of aluminum foil to be of opposite polarity, isolated conductive strips between the first named strips, and insulation comprising one or more strips of fibrous material to separate the conductive strips from one another, such strips and insulation being rolled into form, impregnated with a liquid consisting of borax and glycerin, and evacuated of air between the strips.

19,605
VARIABLE RESISTOR
Joseph A. Flanzer, Brooklyn, N. Y., Lester L. Jones, Oradell, N. J., and Emil Reisman, Upper Darby, Pa., assignors to Technidyne Corporation, New York, N. Y., a corporation of New York
Original No. 1,959,097, dated May 15, 1934, Serial No. 485,854, October 2, 1930. Application for reissue November 30, 1934, Serial No. 755,442
20 Claims. (Cl. 201—55)



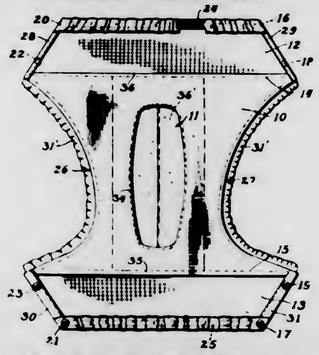
17. A variable resistor comprising an insulation base, resistance material on one surface of said base, a movable contact arranged for movement over said resistance material, painted conductive terminals extending from the resistance material around an edge of the base to a surface different from the surfaces receiving the resistance material, and soldering lugs bearing against said terminals.

19,606
INDUSTRIAL TRUCK
Robert T. Romine, Mount Clemens, Mich., assignor to Material Handling, Inc., Wilmington, Del., a corporation of Delaware
Original No. 1,709,741, dated April 16, 1929, Serial No. 172,165, March 2, 1927. Application for reissue July 20, 1929, Serial No. 379,859
42 Claims. (Cl. 180—22)

1. In an industrial lift truck having a frame comprising a main portion and power driven wheels at one end and a load supporting frame portion extending forwardly adjacent the ground, a lift platform surmounting said frame portion, longitudinally spaced pairs of dirigible load wheels of relatively small diameter and wide tread beneath said platform, a rocking sub-frame, means having a fixed connection with said frame portion for mounting said sub-frame to rock about a transverse axis, said sub-frame comprising an intermediate member and transverse axle members joined intermediate their ends by said intermediate member and having portions extending beyond opposite sides of said frame portion and being free to move vertically, a steering pivot mounted at the end of each axle member interiorly of the load wheel for supporting the wheel to move vertically with the axle member and for permitting the wheel to turn about an independent vertical axis.

19,607
RHEOSTAT POTENTIOMETER AND METHOD OF CONSTRUCTING THE SAME
David T. Siegel, Chicago, Ill.
Original No. 1,942,495, dated January 9, 1934, Serial No. 596,787, March 4, 1932. Application for reissue November 7, 1934, Serial No. 751,917
5 Claims. (Cl. 201—56)

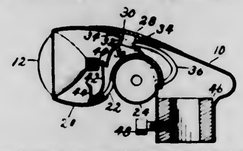
4. A resistance device, comprising, in combination, a core of arcuate outline, said core being composed of ceramic material, a resistance wire wound on said core, a ceramic base having a seat, and a baked, fusible ceramic material covering said core and seat whereby said core and base are permanently joined by the fusion of said material, and said resistance wire is embedded in the fused material, a limited portion of the top surface of said wire on said core being free of said coating to provide an extended contact surface and a movable contact arm for engagement with said top surface of wire.



19,608
PROCESS FOR THE PRODUCTION OF ANESTHETIC SOLUTIONS
Max Woelm, Spangenberg, near Kassel, Germany, assignor, by mesne assignments, to Novocol Chemical Mfg. Co. Inc., Brooklyn, N. Y., a corporation of New York
No Drawing. Original No. 1,916,089, dated June 27, 1933, Serial No. 294,931, July 23, 1928. Application for reissue April 3, 1935, Serial No. 14,445. In Germany May 2, 1927
5 Claims. (Cl. 167—52)

1. In the process for the production of non-irritating anesthetic solutions stable for a sufficient length of time to permit of their use for injection, the step which consists in adding to an anesthetic solution containing epinephrine, an amount of disodium phosphate sufficient to impart a slightly alkaline character to the solution.

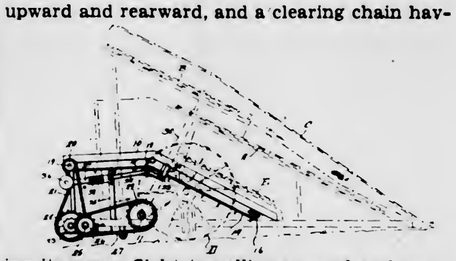
PATENTS



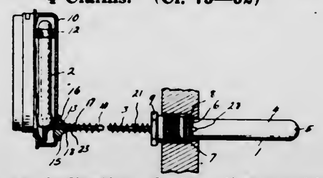
GRANTED JUNE 11, 1935

2,004,088
HOLDER
Bertha S. Alsop, Scarsdale, N. Y.
Application January 14, 1932, Serial No. 586,528
2 Claims. (Cl. 128—284)

1. A holder of the character described comprising a main inner layer member provided with a central opening and having front and rear edges constituting parts of an elastic waistband portion and having curved sides constituting leg gripping portions, a waterproof pocket having a central opening whose edges are secured around the edges of the opening at the rear of the main body portion, extension portions formed of foraminous material and disposed between the central opening and the edges of the body portion, and means for securing the ends of the pocket to the outside of the body portion, said pocket being longer and wider than said opening to form a pad-holding recess, the edges of the opening serving to overlap the edges of a pad in the pocket.



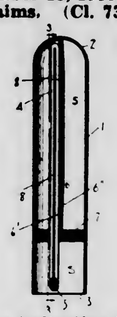
2,004,089
HANDLE BAR
Bert J. Anderson, Hammond, Ind.
Application February 5, 1934, Serial No. 709,805
19 Claims. (Cl. 208—115)



1. A pressed metal vehicle handle bar containing lights, means contained within the handle bar for operating said lights, said means including a switch operating member slidably positioned on the upper central surface of the handle bar and secured to the interior surface thereof, and means for securing said handle bar to a vehicle.

2,004,090
CORN BINDER
Thomas C. Askland, Reeder, N. Dak.
Application December 13, 1934, Serial No. 757,349
4 Claims. (Cl. 56—466)

1. In a corn binder, a butt chute extending upward and rearward, and a clearing chain having its upper flight travelling upward and rearward along said chute and having lugs.

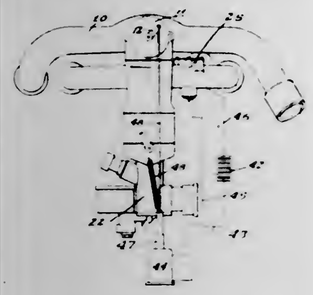


2,004,091
HEAT INDICATOR
Leonard Boddy, Ann Arbor, Mich., assignor to King-Seeley Corporation, Ann Arbor, Mich., a corporation of Michigan
Application July 6, 1931, Serial No. 549,074
4 Claims. (Cl. 73—52)

1. In an indicating device, the combination with a glass tube, of a metal tube member having an end portion extending within and hermetically sealed directly to said glass tube by fusing and welding, said tube member having such wall thickness that the material forming the tube will yield to avoid breaking the seal upon contraction of the glass tube during cooling, and said glass tube and metal tube member adapted to contain an indicating liquid.

2,004,092
DEVICE FOR INDICATING THE TEMPERATURE OF LIQUIDS
John L. Chaney, Springfield, Ohio
Application December 15, 1933, Serial No. 702,557
6 Claims. (Cl. 73—52)

2. In a device for indicating the temperature of liquids, a transparent tube closed at one end and



open at the other, means at a point removed from the open end of the tube to seal the closed end of the tube against the passage thereto of liquid, a thermometer stem extending through said sealing means with a liquid-tight fit, with the major portion of said stem located in said tube between the sealing means and the closed end thereof and the minor portion thereof located in the tube between the sealing means and the open end thereof, that portion of the tube between the sealing means and the open end thereof being adapted to have a portion at least of the air therein displaced by liquid when the tube is immersed therein to cause that portion of the tube to act as a weight to maintain the tube upright in said liquid.

2,004,093

THERMOSTATICALLY AND SUCTION CONTROLLED MIXTURE TEMPERATURE DEVICE

Edward E. Dean and Otto Carter Berry, Flint, Mich., assignors to Marvel Carbureter Company, Flint, Mich., a corporation of Illinois

Application September 25, 1930, Serial No. 484,335
6 Claims. (Cl. 123—122)

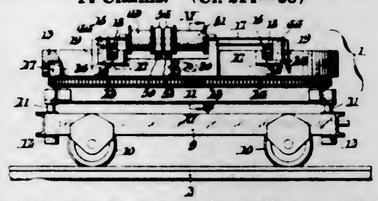
1. An intake manifold heating system for internal combustion engines, comprising a heating jacket enveloping part of said manifold, a control valve governing the supply of heat to said heating jacket, a solenoid for operating said control valve, and means for energizing said solenoid including a temperature responsive element, and means incorporated therewith and subject to the suction in the manifold for decreasing the temperature range with an increasing drop in the suction in said manifold.

2,004,094

HYDROCARBON OIL AND METHOD OF MAKING THE SAME

Herbert G. M. Fischer, Westfield, and Clifford E. Gustafson, Elizabeth, N. J., assignors to Standard Oil Development Company, a corporation of Delaware

No Drawing. Application September 21, 1928, Serial No. 307,545
12 Claims. (Cl. 44—9)



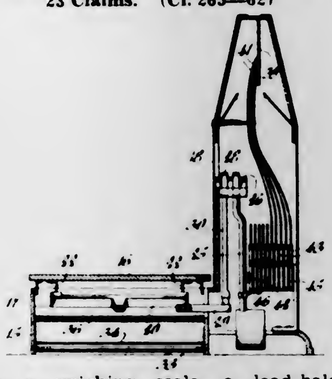
1. A composition of matter comprising a low boiling hydrocarbon oil containing unsaturated constituents of the type normally tending to form gum and produced by pyrolysis of heavy hydrocarbons, to which has been added an alpha-naphthylamine having one hydrogen of the amino group substituted by a benzene hydrocarbon radical, in quantity sufficient to retard such deterioration.

2,004,095

CONTAINER TRANSFER APPARATUS

Frederick W. Hankins, Philadelphia, and Frederick K. Fildes, Altoona, Pa.

Application August 17, 1933, Serial No. 685,522
14 Claims. (Cl. 214—38)



1. Transfer apparatus for railway containers comprising a movable frame, a revolvable turntable mounted on said frame and having a trackway formed thereon, a skid movable on said turntable and adapted to be extended outwardly thereof to provide rails in continuation of said trackway, and a container supporting carriage mounted for movement on said trackway and skid.

2,004,096

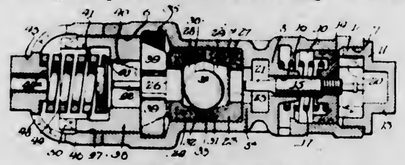
WEIGHING SCALE

Erik Gustaf Hedman, Buffalo, N. Y.

Application November 12, 1931, Serial No. 574,573
23 Claims. (Cl. 265—62)

7. In a weighing scale, a load-balancing pendulum, and an automatic indicating device comprising a dial having weight-graduations thereon, a plurality of individually pivoted pointers movable over the dial, and means controlled by said pendulum for selectively actuating said pointers in accordance with the movement of the pendulum.

2,004,097



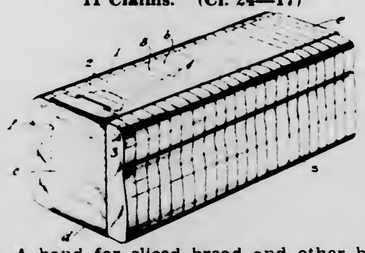
AUTOMATIC CYLINDER COCK WITH RELIEF VALVE

Arthur G. Hollingshead and Curtis W. Ploen, Chicago, Ill., assignors to the Okadee Company, Inc., Chicago, Ill., a corporation of Illinois

Application June 22, 1931, Serial No. 545,955
1 Claim. (Cl. 121—134)

In a cylinder drain cock, in combination, a casing having a connection to a cylinder and an outlet to atmosphere, a pair of valve seat members removably supported in said casing between said outlet and said connection, a valve member responsive to fluid pressure in said casing and adapted to engage one of said valve seats to close said outlet, said casing having an internally

threaded opening between said connection and said valve, an externally threaded closure member for said opening having an aperture, a valve seat formed in said closure member, a bonnet member internally threaded and adapted to be carried by said closure member, said bonnet member being adapted to abut said casing to act as a



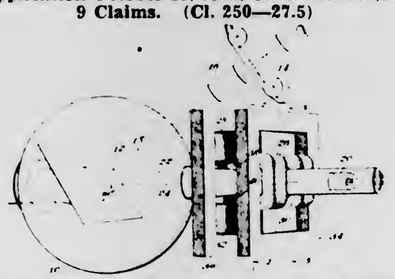
lock nut on said closure member, and a spring interposed between said valve member and said bonnet member within said closure member for holding said valve member in closed position but said spring calibrated to permit opening of said second valve upon predetermined pressure being established in said casing.

2,004,098

DEVICE FOR PACKAGING BAKERY PRODUCTS

Oliver B. Andrews, Chattanooga, Tenn.

Application August 31, 1932, Serial No. 631,139
11 Claims. (Cl. 24—17)



1. A band for sliced bread and other bakery products comprising, a strip of paperboard having a plurality of paired converging cuts at one end thereof defining securing means therebetween, and a hook device at the other end of said band adapted to selectively engage said securing means.

2,004,099

CATHODE RAY APPARATUS

Alda V. Bedford, Collingswood, N. J., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware

Application October 15, 1932, Serial No. 637,879
9 Claims. (Cl. 250—27.5)

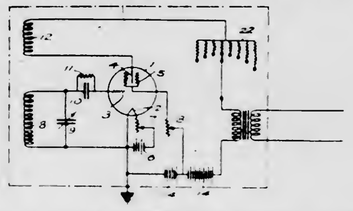
1. Cathode ray apparatus comprising screen structure and an electron gun for developing a ray of electrons and directing the same at said structure, the axis of said gun being disposed at an acute angle to said structure, and means for deflecting said ray to cause the same to scan a keystone area over a plane perpendicular to said axis whereby the ray is caused to scan said structure over a substantially rectangular area, said ray-deflecting means including magnetic pole pieces disposed respectively on opposite sides of said axis and shaped and arranged to cause the magnetic lines of force to diverge substantially uniformly from one edge of the area traversed by the ray to the opposite edge of such area.

2,004,100

BRUSH AND STUBBLE CUTTER

Loran Everett Carter, Merrimac, Mass.

Application May 25, 1934, Serial No. 727,575
2 Claims. (Cl. 30—11)

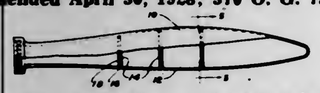


1. In a brush and stubble cutter, the combination of a short handle, a relatively short blade disposed at an angle of approximately 45 degrees to the handle, the handle having a recessed portion at its lower end, the blade having its shank bent to overlap the recessed portion of the handle, and the handle having its shank bent to overlap the outer edge of the blade to more securely fasten the blade and handle together.

2,004,101

VACUUM TUBE OSCILLATOR

Ralph I. Cohn, Oceanport, N. J.; now by judicial change of name Ralph Cole



Application February 11, 1932, Serial No. 592,287
4 Claims. (Cl. 250—36)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. An oscillating modulating system, comprising an electron tube; grid and anode circuits operatively associated therewith and adapted to cause said tube to function as an oscillator primary tuning means for the grid circuit; means in the grid circuit to cause a grid blocking action at an audio rate; means in the anode circuit acting independently of said primary tuning means comprising a uniformly and positively controllable

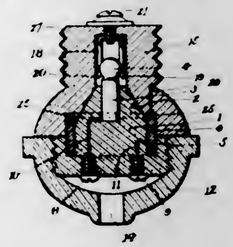
variable impedance element, and a load impedance external thereto which responds to the control of said element and automatically increases in absolute value with increase in frequency between predetermined limits, to cause step-by-step increase in the total anode impedance, and reacting on the grid circuit to effect a corresponding step-by-step control of the grid blocking action.

2,004,102
HOLLOW STEEL PROPELLER CONSTRUCTION
Daniel A. Dickey, Dayton, Ohio
Application February 24, 1932, Serial No. 594,935
9 Claims. (Cl. 170—159)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

1. A propeller blade comprising, a shell having a relatively thin wall cross-section and an open framework, said shell and framework being continuously consolidated at all points of contact to provide a cellular structure substantially throughout the width and length of a portion of said blade, the areas of consolidation between said shell and framework being such that substantially the entire load on the shell area of each cell is imposed upon its corresponding framework.

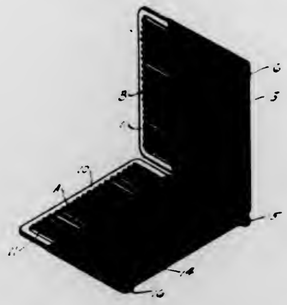
2,004,103
STOCK QUOTATION PROJECTING MACHINE
August D. Eitsen, Rockville Centre, N. Y., assignor to News Projection Corporation, New York, N. Y., a corporation of New York
Application July 1, 1932, Serial No. 620,347
Renewed September 11, 1934
12 Claims. (Cl. 88—24)

1. In a stock ticker projection machine, a ticker adapted to discharge marked tape, a projecting device including a common source of light for downwardly directing a beam of light and a pair of parallel outlet apertures for receiving said downwardly directed beam of light and dividing it into two subordinate light beams, a pair of oppositely facing front projection screens, means for drawing the tape successively across said apertures so that the tape is moving in opposite directions across said apertures, and means for projecting the light beam from each of said apertures onto one of said screens to produce uninverted images of said tape-markings upon said screens, respectively; said last named means comprising an objective lens and a single mirror for each light beam.



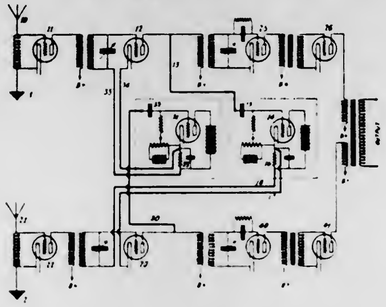
2,004,104
CONTAINER
George Clinton Erb, Forest Hills West, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application July 30, 1932, Serial No. 626,338
2 Claims. (Cl. 220—54)

1. In a tearing strip container, a tearing strip set off by a score line and adapted to be removed by a slotted key to open the container, said tearing strip terminating in an abbreviated tongue, said tongue being just long enough to permit the mounting upon it for the opening operation of said key by threading the tongue through the slot



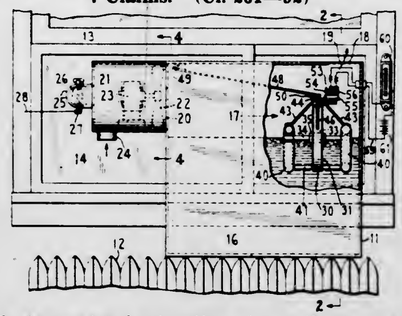
of the key, without bending said tongue to hold said key, said tongue having an abrupt shoulder near its extremity for engagement by said key in opening the container, the engagement of said key with said shoulder preventing said key from slipping off the abbreviated tongue.

2,004,105
ELECTRICAL CONNECTER
Robert E. Farish, Jr., Columbus, Ga.
Application November 23, 1932, Serial No. 644,097
2 Claims. (Cl. 173—343)



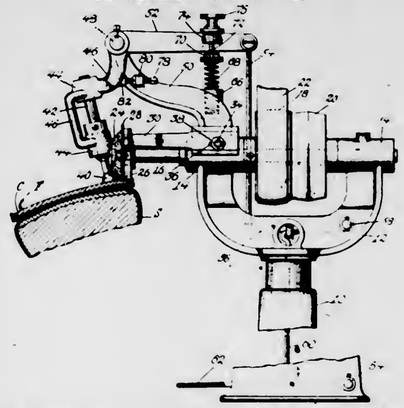
1. In an electrical connection, a plug member of insulating material, concentric axial and annular contact members projecting therefrom in an axial direction, the axial contact member projecting farther than the annular member, a socket member of insulating material having an unobstructed socket formed therein, said socket being of gradually decreasing cross section from the outer toward the inner end thereof, the outer end of said socket being of greater diameter than the annular contact member projecting from said plug member, and the inner end of said socket merging with an axially extending axial recess formed at such inner end, said socket member having an annular groove formed in the wall of said socket and extending from such wall in a direction parallel to the axis of the plug, said groove being of a diameter to receive said annular contact member on the plug member but of such size as to exclude the axial contact member, an axial contact member disposed entirely within said axial recess and adapted to receive and make contact with said axial contact member on the plug member, and an annular contact member disposed entirely within said axially extending annular groove and adapted to receive and make contact with said annular contact member on the plug member.

2,004,106
SEAT OR CUSHION
George H. Gaston, Houston, Tex.
Application November 17, 1932, Serial No. 642,985
2 Claims. (Cl. 155—182)



2. A portable cushion comprising, a flexible frame adapted to yield when sat upon, a plurality of horizontally extending coil springs disposed within and across said frame, the said coil springs being closely spaced in side by side relation so as to form a continuous seating surface, said springs being of such diameters as to project above and below the frame to support the latter above the surface on which the cushion is rested and also whereby said frame and springs may be inverted, the coil springs being connected at their ends to the sides of the frame and being free from connection intermediate their ends, whereby each coil spring may roll independently of the other springs, and a removable fabric casing covering the frame and coil springs.

2,004,107
RADIO RECEIVING SYSTEM
Alfred N. Goldsmith, New York, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application February 20, 1928, Serial No. 255,608
20 Claims. (Cl. 250—20)



1. A radio receiving system comprising, in combination, a first receiver and a second receiver, means for operating each of said receivers at the same frequency for simultaneously receiving the desired signal wave, a sensitivity control unit in circuit with said first receiver for governing the sensitivity of said second receiver, and a sensitivity control unit in circuit with said second receiver for governing the sensitivity of said first receiver.

2,004,108
GAS TREATING APPARATUS
Charles B. Grady, West Orange, N. J.
Application August 24, 1932, Serial No. 630,175
7 Claims. (Cl. 261—92)

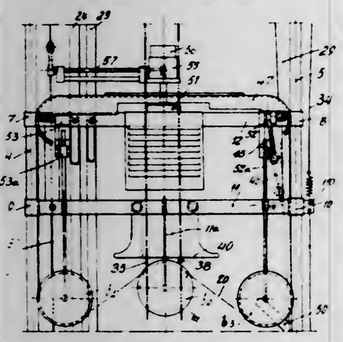
1. Apparatus for treating air or other gases by water or other liquids, of the kind comprising a walled enclosure with a liquid vessel in its lower part, a gas passage in its upper part, above the liquid, and a device or fan for maintaining gas flow into, through and from the gas passage, such apparatus characterized by the combination with said elements of a partially immersed circular screen or disk of pervious construction, a pontoon floating in such vessel and upon which such screen is rotarily mounted and which maintains it in its partially immersed position with changes of liquid level, means for causing rotation of such screen so that each part of its surface is alternately dipped into the liquid and elevated to accupy the gas passage and compel the gas to flow through it, and a movable wall closing the gas passage space above the rotary screen and adjustable with changes of level of the pontoon.

2,004,109
ABRADING MACHINE
John B. Hadaway, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application October 18, 1932, Serial No. 638,281
13 Claims. (Cl. 69—1)

1. A machine for scouring channels and channel flaps formed upon shoe parts, comprising a shaft, a substantially cylindrical scouring tool on said shaft for scouring channels, and a conical scouring tool on said shaft adjacent to said cylindrical tool for scouring channel flaps.

2,004,110
POROUS RUBBERIZED FABRIC AND METHOD OF PRODUCING SAME

Percy Herbert Head, Attenborough, England, assignor to Xetal Products Limited, Long Eaton, near Nottingham, England



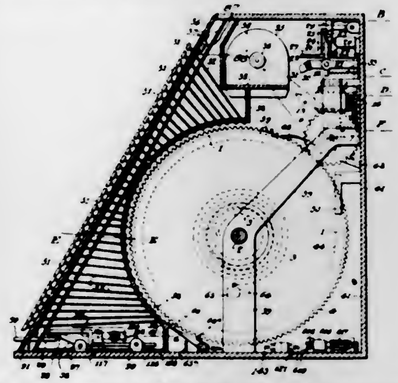
No Drawing. Application February 14, 1934, Serial No. 711,279. In Great Britain September 14, 1933
3 Claims. (Cl. 154—40)

1. The herein described method of producing a porous laminated fabric, which consists in applying to a surface of a textile fabric, which is stretchable under tension to a much greater extent in one direction than it is in a direction transverse thereto, a rubber latex in the form of a fine spray, allowing said latex to set while the fabric is under tension and stretched in the direction of its greatest extensibility, but to an extent less than its permissible stretch, superposing the same upon another piece of stretchable fabric with the latex between them, and finally pressing the said pieces together, the latex serving to unite them and maintain the fabric stretched as described, without substantially reducing the porosity of the laminated fabric produced, such finished fabric being stretchable in dual directions and having exposed textile surfaces and rubber interior.

2,004,111
APPARATUS FOR PRESENTING ADVERTISEMENT-PICTURES AND OTHERS

Henri Heaulme, Paris, France

Application March 31, 1934, Serial No. 718,346
In France April 4, 1933
6 Claims. (Cl. 88—24)

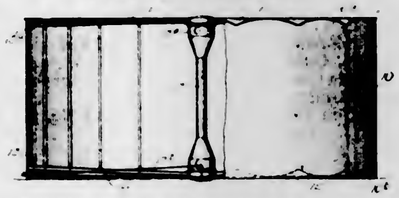


1. An apparatus for the projection of advertising and other images on a screen provided at the top of a box, which comprises in combination, a frame, a plurality of uprights in said frame, a carriage movable vertically along at least some of these uprights, a projector carried by this carriage, motive means for driving said carriage upwardly and controlling the downward movement thereof under the action of its weight, means operatively connected with said motive means for constantly focussing said projector on said screen, a stationary projector focussed on said screen carried by at least one of these uprights, an electric circuit, means operatively connected with said motive means for successively connecting one of these projectors with said circuit and simultaneously disconnecting the other one from said circuit, a band of pictures carried by said carriage and adapted to be moved in front of the first mentioned projector, and means for moving said band forwards in accordance with the up and down movements of said carriage.

2,004,112
TELETICKET SYSTEM

Edwin Hopkins, New York, N. Y.

Application October 26, 1929, Serial No. 402,714
25 Claims. (Cl. 178—4)

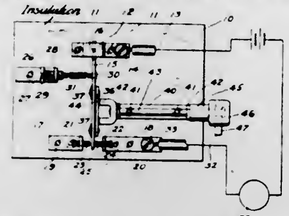


1. In a printing telegraph system a transmitter adapted to send to line groups of alternating signals, each group derived from one of a plurality of transmitting units, means for driving such units, manual means for permitting the first unit to start and automatic means adapted to transfer each of the next succeeding units to line upon the completion of the signals of the prior unit.

2,004,113
TANK

George T. Horton, Chicago, Ill.

Application October 5, 1933, Serial No. 692,336
3 Claims. (Cl. 220—1)



1. A sheet metal tank including a substantially cylindrical shell with a generally flat lower head formed of radially arranged sector-shaped sheet metal sections, said sections being circumferentially convexed, whereby the differences in pressure between the inside and the outside of the tank will impose tensional stresses on said sections, the lower edge of said shell extending substantially below the lowest point of the sections in the lower head to serve as a retaining wall for the foundation under the tank between the lower portions of the sections.

2,004,114
MAGNET CONTROLLED SWITCH

Harvey Hubbell, Jr., Bridgeport, Conn.

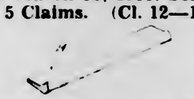
Application July 29, 1932, Serial No. 625,607
14 Claims. (Cl. 200—87)

1. In combination, a movable member, means to shift said member in one direction, an armature connected with said member, means to shift said member in the opposite direction comprising a magnet having a pole movable adjacent said armature to vary its effect thereon, said magnet movable about an axis extending substantially parallel with said pole, and means for

shifting the magnet about said axis to operate said member.

2,004,115
LEVULINIC ACID ESTERS AND THEIR PREPARATION

Emmette F. Izard, Elsmere, and Paul L. Salzberg, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware



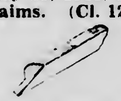
No Drawing. Application May 7, 1932, Serial No. 609,976
12 Claims. (Cl. 260—106)

6. A levulinic ester of a modified polyhydric alcohol, said modified polyhydric alcohol containing at least one free hydroxyl group and consisting of a polyhydric alcohol of which the hydrogen atom of at least one hydroxyl group has been replaced by an organic radical.

2,004,116
WELTING AND METHOD OF PRODUCING IT

George Hollis Jennings, Elmwood, East Bridgewater, Mass.

Application March 30, 1933, Serial No. 663,531
5 Claims. (Cl. 12—146)

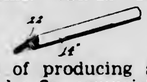


1. The method of producing a leather welting strip having a calking edge and a fin, comprising the cutting of a stock strip; splitting the stock strip obliquely into two intermediate strips, each having one edge a little less in thickness than the stock strip, and each having appreciable thickness at its thinner edge; and applying molding pressure to the mid-portion of the tapering body of each said intermediate strip reducing it to a thickness approximating that of the thinner edge thereof.

2,004,117
WELTING AND METHOD OF PRODUCING WELTING

George Hollis Jennings, Elmwood, East Bridgewater, Mass.

Application May 29, 1933, Serial No. 673,413
8 Claims. (Cl. 12—146)

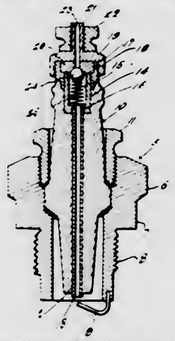


1. The method of producing a welting strip having a bead and a fin, comprising the removing of part of the substance of the strip from one edge of a leather strip at a place at or near the face of the strip, thereby reducing the thickness of leather in the strip at that edge; and slitting the intact body of leather adjacent to the place where the said removal of substance occurred; followed by the eliminating of the slit by spreading it open, and, by pressure, molding the slit open to a shape wherein the material which constituted its walls becomes, on each side, approximately in alignment with the surface of that material which was left by the said removal of substance.

2,004,118
WELTING AND METHOD OF PRODUCING WELTING

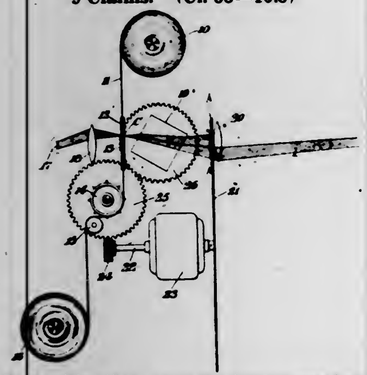
Everett E. Kent, Newton, Mass., assignor to V. & F. W. Filoon Company, Brockton, Mass., a corporation of Massachusetts

Application May 29, 1933, Serial No. 673,336
8 Claims. (Cl. 12—146)



1. The method of producing a welting strip having a bead and a fin, comprising the cutting, from a piece of leather, of a strip having two parallel faces in off-set relation to each other and having side edges of which portions extend obliquely in approximate parallelism; followed by the compressive molding of substance of the leather at one said face into shape for the welting bead; and of substance at the other face, and the between-substance, into shape for the welting fin.

2,004,119
SPARK PLUG

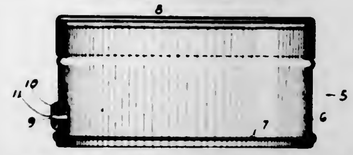


William E. Letterman, Seattle, Wash.

Application July 6, 1932, Serial No. 621,117
9 Claims. (Cl. 123—169)

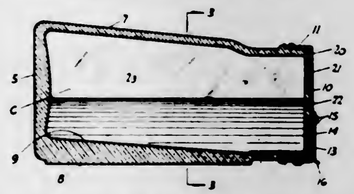
1. In a ventilated spark plug an insulated core having a relatively small bore, said bore having its outward end portion considerably increased in diameter and defining a chamber having a shoulder, an electrode in said bore, said electrode comprising a conductive tube received in said bore and having the inner end portion extending beyond the inner end of said core, said electrode further comprising a conductive cage located within said chamber and having its inner end seated on said shoulder, said inner end of the cage having an opening in which the outer end of said tube is inserted and secured, an annular valve seat abutting the open outer end of said cage and seated in the outer end of said chamber, a cap connected with the outer end portion of said core and abutting said valve seat and the outer end of said core thereby holding said cage and valve seat in place, a ball check yieldably engaged and seated with said valve seat, and a helical spring having one end engaged with the inner end of said cage and the opposite end engaged with said ball check.

2,004,120
OPTICAL COMPENSATOR
Jacob F. Leventhal, New York, N. Y., assignor, by mesne assignments, to Leventhal Patents, Incorporated, a corporation of Delaware
Application June 7, 1930, Serial No. 459,660
Renewed July 14, 1934
9 Claims. (Cl. 88—16.8)



1. In combination, an optical compensator comprising a light source, rotatable plane-parallel refracting means, means to feed a film between said light source and refracting means, means to rotate said refracting means at uniform speed and to feed said film in synchronism therewith, optical means to direct a light beam through said film and refracting means, a rotatable screen arranged to intercept said beam in a plane removed from the film plane, said screen being provided with a substantially annular aperture tapered at each end and having its ends offset, and means to rotate said screen in timed relation to a picture cycle.

2,004,121
PEST EXTERMINATOR
Robert B. Loibl, Jr., Los Angeles, Calif.
Application October 23, 1933, Serial No. 694,784
6 Claims. (Cl. 43—131)

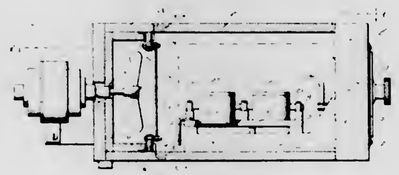


1. In a device of the kind described, a casing having a reservoir to contain liquid poison, said reservoir having a liquid delivery passage, a wick extending through said passage to retard flow of the liquid therethrough, a portion of said wick projecting externally of said passage, and a shield overlying one side only of the projecting portion of said wick, there being a space at the opposite side of said wick to afford insects access thereto.

2,004,122
PEST EXTERMINATOR
Robert B. Loibl, Jr., Los Angeles, Calif.
Application October 23, 1933, Serial No. 694,785
3 Claims. (Cl. 299—20)

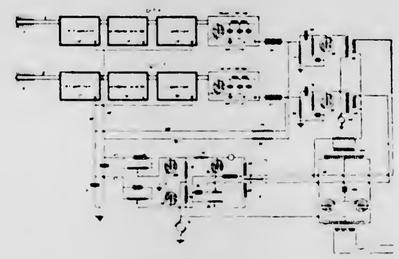
1. In a device of the kind described, a container for holding a liquid insecticide having a combined filling and dispensing opening in one of the walls thereof, in combination with a squeeze plug comprising a body having a midgirth groove, the opposite sides of said groove lying in the same plane and being normally parallel, the walls of said container adjacent said opening being adapted to be engaged within said groove, there being an ooze-hole extending thru said plug surrounded by said groove, and a wick extending axially thru said ooze-hole to dispense the poisonous contents of said container, the thickness of said wick being greater than the normal diameter of said ooze-hole whereby to distort the walls of said groove into substantially liquid tight engagement with the walls of said container.

2,004,123
PEST EXTERMINATOR
Robert B. Loibl, Jr., Los Angeles, Calif.
Application February 15, 1934, Serial No. 711,339
5 Claims. (Cl. 43—131)



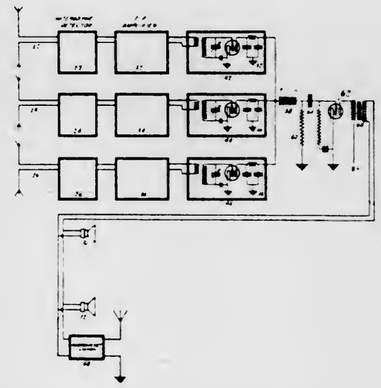
1. In a device of the kind described, an elongated container having a delivery end, a detachable closure cap for such end, a dispensing opening through said cap spaced inwardly from the periphery thereof, a closure for said opening movably fastened to said cap to move to and from an open position, and means under said cap to form a liquid tight peripheral seal, said means including a highly porous portion underlying said dispensing opening.

2,004,124
TREATMENT OF TOBACCO FOR INSECTICIDAL PURPOSES
Robert Graham Mewborne, Albuquerque, N. Mex., assignor to Niagara Sprayer and Chemical Co., Inc., Middleport, N. Y., a corporation
No Drawing. Application May 6, 1930, Serial No. 450,316
7 Claims. (Cl. 167—34)



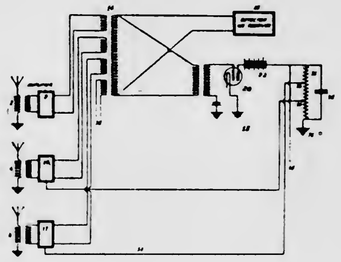
1. The method of preparing an insecticidal product from tobacco plant material which comprises stopping the life process of the tobacco plant, upon reaching an equalized acidity calculated in hydrogen ions, of about 5.75 to 5.70, developing the optimum nicotine content by storage, and then heating to dehydrate the same.

2,004,125
TEMPERATURE CONTROLLED CABINET FOR ELECTROMECHANICAL OSCILLATORS
Raymond B. Meyer, Washington, D. C.
Application August 20, 1931, Serial No. 558,407
5 Claims. (Cl. 219—19)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



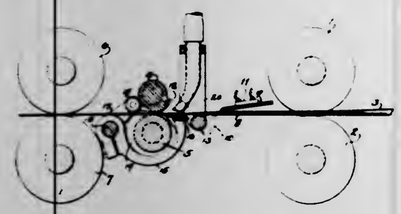
1. A temperature controlled cabinet comprising a housing open at its ends, a removable panel closing one end of said housing, a frame for supporting electromechanical vibrators secured to said panel and adapted to be slid into and out of the housing as the panel is moved into and out of place, temperature responsive means mounted on said frame for controlling the temperature within said housing, a removable closure for the other end of said housing, means carried by the removable closure for heating the air in the housing and circulating the air to maintain the electromechanical vibrators at uniform temperature and baffle means mounted on said frame between the actuating portion of said temperature responsive means and the air circulating means for shielding the temperature responsive means from the direct flow of air from the air circulating means.

2,004,126
ANTENNA SELECTOR
John B. Moore, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 16, 1928, Serial No. 319,768
12 Claims. (Cl. 250—20)



1. The method of reception which includes collecting signal energy on three geographically spaced antennas, separately rectifying the collected signal energies, comparing the rectified energies obtained from two of the antennas and selecting the greater, comparing the rectified energies obtained from another two of the antennas and selecting the greater, comparing the rectified energies from the remaining two and using them to select the greater of the selected energies, and utilizing the finally selected energy.

2,004,127
ANTENNA REGULATOR FOR DIVERSITY RECEPTION
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 16, 1928, Serial No. 319,938
16 Claims. (Cl. 250—20)



1. The method of reception which includes collecting signal energy on a plurality of antennas, rectifying the signal energies, using the rectified energy from each of the antennas for reducing the strength of signal from the other of the antennas in such a manner that the weaker signals are further weakened more than proportionally, combining the rectified energies, and feeding the combined rectified energy to utilizing means.

2,004,128
SUCCESSIVE ANTENNA SELECTOR
Harold O. Peterson, Riverhead, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application November 16, 1928, Serial No. 319,939
Renewed April 12, 1933
30 Claims. (Cl. 250—20)

1. The method of controlling the volume of radio signals which includes collecting signal energy on a plurality of antennas, and automatically feeding in response to collected signal energy the collected energy to a receiver from only so many of the antennas as may be necessary to keep the energy supplied to the receiver at a predetermined desirable value.

2,004,129
APPARATUS FOR HANDLING STRIP MATERIAL
Adolph Potdevin, Garden City, N. Y., assignor to Potdevin Machine Company, Brooklyn, N. Y., a corporation of New York
Application January 8, 1932, Serial No. 585,519
8 Claims. (Cl. 271—2.2)

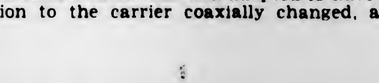
1. In apparatus of the class described, the combination of feed rollers for continuously advancing a flexible web or strip, pinch rolls in the path of the advancing strip having a peripheral speed lower than that of the feed rollers to produce a slack in the material, and means to apply an air blast to one face of the material during the slack-forming operation.

2,004,130
CYANIDE PROCESS AND THE PRODUCT
Edward J. Pranke, Great Barrington, Mass., assignor to E. I. du Pont de Nemours & Company, Inc., a corporation of Delaware
No Drawing. Application July 16, 1932, Serial No. 623,026
16 Claims. (Cl. 23—79)

2. The process of producing cyanide which consists in bringing into a reaction zone heated above 1350° C. materials substantially free from chlorids and capable of generating elementary calcium, carbon, sodium and nitrogen, said materials being provided in such proportion as to generate the said elements in the proportion of one atom of calcium, four of carbon, two of sodium and four of nitrogen, bringing all portions of the solid and liquid substances into contact with the gases present until substantial completion of the reactions forming cyanide, and rapidly cooling the fused product.

6. The process of producing sodium cyanide which consists in rapidly heating to substantially 1,400° C. a mixture of crude calcium cyanamid and sodium cyanide to form calcium sodium cyanide, rapidly cooling the same, mixing with liquid anhydrous ammonia, separating the solution from the insolubles, separating the contained sodium cyanide from the solvent, evaporating the ammonia from the insolubles and converting the calcium cyanide therein to sodium cyanide by suitable means and recovering the latter from solution.

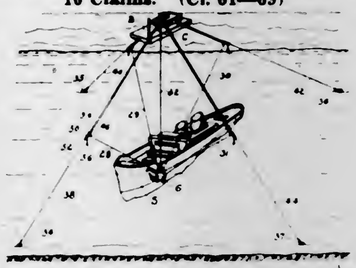
12. The process of producing sodium cyanide which consists in forming calcium sodium cyanide, adding sodium carbonate and water to form a solution of sodium cyanide, rapidly removing the water from the said cyanide by applying the solution to the surface of a rotating heated drum and removing the solid residue of sodium cyanide therefrom.



15. As a new composition of matter, a cyanide product containing calcium, sodium, carbon and nitrogen combined in the proportions of one atom of calcium, two of sodium, four of carbon and four of nitrogen, and substantially free from water soluble materials other than cyanides.

2,004,131
PROCESS OF SEPARATING ALCOHOLS
Ebenezer E. Reid, Baltimore, Md., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application April 25, 1933, Serial No. 667,862
21 Claims. (Cl. 260—156)

1. A process of separating an unsaturated alcohol from a mixture essentially comprising said alcohol and a saturated alcohol of approximately at least the same number of carbon atoms, which comprises extracting the unsaturated alcohol from the mixture by means of an extraction medium essentially comprising liquid sulfur dioxide at a temperature below about 10 C.



2,004,132
PHENYL CARBAMATES OF AMINOPROPANEDIOLS
Theodore H. Rider, Cincinnati, Ohio
No Drawing. Application August 10, 1931, Serial No. 556,331
11 Claims. (Cl. 260—43)

1. The hydrochloride of a gamma dialkylamino propanediol ester of an aromatic carbamic acid possessing the general structure

in which R′ and R″ represent alkyl radicals, and in which Ar represents a radical of the benzene series.

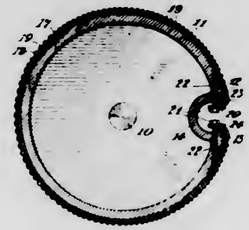
2,004,133
MANEUVERING MEANS FOR UNDERWATER SALVAGE EQUIPMENT
Eugene J. Romano, Seattle, Wash.
Application March 27, 1933, Serial No. 663,030
10 Claims. (Cl. 61—69)

1. In maneuvering means for a submarine vessel, the combination with a float and anchoring means therefor, of a submarine vessel-support and a vessel rotatable in said support, maneuvering lines attached to the vessel-support and guides on the anchoring means for said lines, means on the float for controlling the various lengths of said lines, and means for revolving the vessel with relation to its support.

2,004,134
PNEUMATIC CARRIER
George H. Ross, Brooklyn, N. Y.
Application November 16, 1933, Serial No. 698,248
16 Claims. (Cl. 243—35)

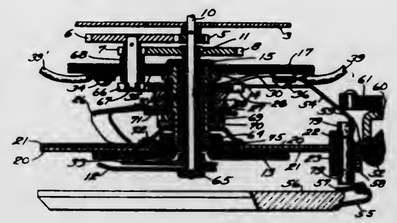
1. A device including an open ended carrier for pneumatic systems, said carrier having a rotary piston coaxial therewith and adapted to have its relation to the carrier coaxially changed, and

means movable laterally to the carrier for holding an article in the carrier, said means being con-



trolled by said piston and being retained by the latter in different lateral positions.

2,004,135
PRODUCTION OF POLYHYDRIC ALCOHOLS
Henry S. Rothrock, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 23, 1932, Serial No. 648,588
12 Claims. (Cl. 260—156.5)



1. In the process of producing lower polyhydric alcohols from a polyhydric alcohol having a greater number of hydroxyl groups comprising catalytically hydrogenating the latter alcohol at high pressures and at a temperature sufficiently high to effect splitting of the carbon-carbon bond, the step which comprises passing the said alcohol together with hydrogen in contact with a hydrogenation catalyst in the presence of a weakly alkaline compound.

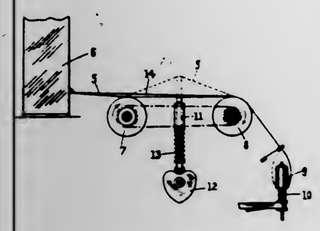
2,004,136
PRINTING CYLINDER
Oswald R. Schultz, New York, N. Y.
Application March 3, 1931, Serial No. 519,713
7 Claims. (Cl. 101—415.1)

7. Apparatus for multi-color printing including in combination, a plurality of cylinders, a printing form adapted to print a color part associated with each of said cylinders, each of said printing forms comprising a cellulosic layer having toned printing impressions embossed thereon immutably secured to a non-stretchable backing sheet, said layer extending substantially coextensive with said backing sheet and means directly abutting the cellulosic layer for clamping the backing sheet to the associated cylinder so as to retain the embossed impressions and the cellulosic layer fixed and immovable, insuring absolute registry of the color parts on the finished printed work.

2,004,137
PLURAL SET TIME SWITCH
Raymond D. Smith, Pleasantville, N. Y.
Application November 23, 1931, Serial No. 576,804
15 Claims. (Cl. 2.00—36)

2. Time setting means for a casing enclosed timing device, including in combination with the casing, a time setting means protruding from a front wall of the casing for manipulation by one hand of the user, and another time setting means co-operating with said first means and designed for simultaneous manipulation therewith by the other hand of the user and extending from a lateral wall of the casing to avoid interference by one hand of the user with the other hand of the user when said means are simultaneously manipulated.

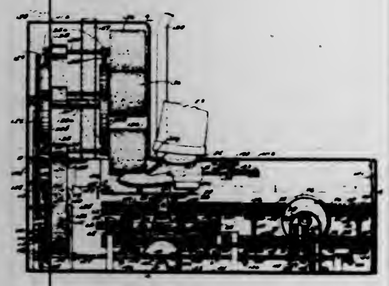
2,004,138
METHOD OF MAKING WROUGHT IRON PIPE
Edward B. Story, Dormont, and Charles E. Gross, Pittsburgh, Pa., assignors to A. M. Byers Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application November 30, 1932, Serial No. 645,088
4 Claims. (Cl. 29—156)



1. A method of making wrought iron pipe, comprising rolling a flat wrough iron shape, severing said shape to form a plurality of skelps having the slag fibers extending at an angle to their lengths, joining at least two of said skelps end to end, and forming a pipe out of said joined skelps.

2,004,139
TEXTILE MATERIAL AND PROCESS FOR ITS PRODUCTION
William Ivan Taylor, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application November 6, 1931, Serial No. 573,422
In Great Britain January 1, 1931
29 Claims. (Cl. 117—2)

12. Continuous filament threads of cellulose acetate containing at least one twisted component thread, having at intervals along its length portions which have been strained beyond the elastic limit.

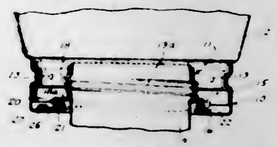


17. Process for the treatment of continuous filament threads, comprising stretching threads of cellulose acetate beyond their elastic limit and

localizing the applied stretch to intervals along the length of the threads by intermittently

lengthening and shortening the portion of the threads being stretched.

2,004,140
SHOE SHINING MACHINE
Mathew H. Thornton, St. Paul, Minn.
Application September 9, 1932, Serial No. 632,300
17 Claims. (Cl. 15—35)



1. A shoe shining machine having in combination, a brush adapted to engage and brush the shoe, means for moving said brush about a shoe, a guide means for moving said brush in a path in accordance with the shape of the shoe, and means for conforming said last mentioned means to the shape of the shoe.

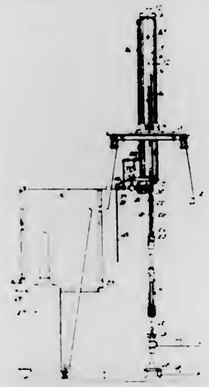
2,004,141
PROCESS FOR THE OXIDATION OF AMMONIA AND IMPROVED CATALYST THEREFOR
John N. Tilley, Woodbury, and Harold Whitehead, South Orange, N. J., assignors of one-half to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware, and one-half to Baker and Company, Inc., Newark, N. J., a corporation of New Jersey
No Drawing. Application July 22, 1933, Serial No. 681,756
13 Claims. (Cl. 23—162)

1. The process of oxidizing ammonia to oxides of nitrogen, which comprises passing a mixture of ammonia and a gas containing oxygen through a catalyst consisting of an alloy containing more than one metal of the platinum group, said alloy having a solid surface coating of pure platinum.

2,004,142
ADJUSTABLE NECK REFLECTOR
Charles Theodore Von Holtz, Bridgeport, Conn., assignor to Harvey Hubbell, Incorporated, Bridgeport, Conn., a corporation of Connecticut
Application November 25, 1933, Serial No. 699,767
6 Claims. (Cl. 240—142)

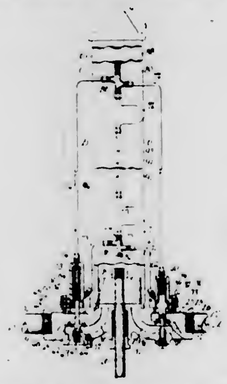
1. In combination, a reflector, an outer member rigid with the reflector, an inner member threaded for engagement with a socket shell, overlapping portions on said members, and spring means urging said portions into frictional engagement whereby the members are held against casual relative movement but may be turned relatively for adjustment of the reflector after the inner member is tightened on a socket shell.

2,004,143
ABSORBENT PAPER DISPENSING
Vanderveer Voorhees, Hammond, Ind.
Application July 30, 1932, Serial No. 626,792
7 Claims. (Cl. 92—68)



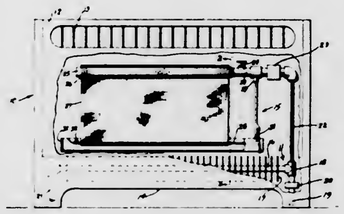
1. An absorbent paper towel which has been treated in a restricted area with a water resistant size to provide a grip which will retain its tensile strength when seized with wet hands.

2,004,144
PROCESS FOR PHOTOGRAPHICALLY PRODUCING PRINTING PLATES
William J. Wilkinson, Great Neck, N. Y., assignor of one-half to The Miehle Printing Press and Manufacturing Company, Chicago, Ill., a corporation of Illinois
No Drawing. Application November 19, 1931, Serial No. 576,014
6 Claims. (Cl. 95—5.1)



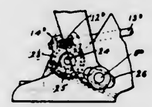
1. In the art of photographically producing printing plates, the process comprising making yellow, red, blue and black separation negatives, making positive overlays from the yellow and the blue separation negatives, making a corrected positive of the yellow separation negative by photographing through the yellow separation negative and the blue positive overlay, making two corrected positives by photographing through the red separation negative and the blue positive overlay, one corresponding to the red printing plate and the other corresponding to the pink printing plate, making two corrected positives by photographing through the blue separation negative and the yellow positive overlay, one corresponding to the blue printing plate and the other corresponding to the light blue printing plate, and making two positives from the black separation negative, one corresponding to the black printing plate and the other corresponding to the grey printing plate.

2,004,145
PUMPING MECHANISM
Wade H. Wineman, Michigan City, Ind., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application October 12, 1931, Serial No. 568,316
26 Claims. (Cl. 121—47)



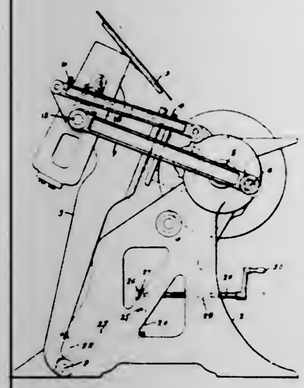
1. In combination, in a pumping system, a single-acting expansible fluid pumping motor having a piston, a fluid supply connection therefor, an exhaust, a valve controlling said fluid supply connection, and means operative on interruption of the fluid supply automatically to close said valve, said means including means normally tending to close said valve, means precluding valve closure and controlling means for said last mentioned means including a cylinder, a plunger therein having end seating engagement with said cylinder, means for transmitting the supply of pressure to said cylinder, and means controlled by said plunger for releasing said valve from the control of said means which precludes valve closure.

2,004,146
MOTOR FOR PUMPING MECHANISMS
Wade H. Wineman, Michigan City, Ind., assignor to Sullivan Machinery Company, a corporation of Massachusetts
Application May 20, 1932, Serial No. 612,538
48 Claims. (Cl. 121—126)



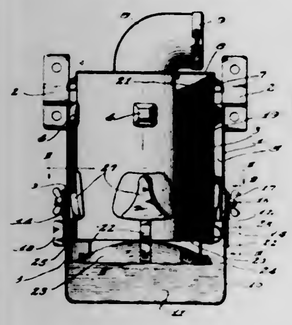
1. In a motor, in combination, a cylinder, a piston reciprocable therein, and valve mechanism for said motor including a valve and controlling means therefor having a plurality of pressure areas acting in the same direction and means for supplying pressure to said areas during one pass of the piston, from a space within said cylinder at the same side of said piston, in a predetermined order to cause said valve to perform one of its functions after both areas are supplied with pressure and venting the pressure from said areas in a reverse order during the opposite pass of the piston to cause reverse movement of the valve after venting of both areas.

2,004,147
HUMIDIFYING SYSTEM
Robert H. Worrall, Washington, D. C.
Application September 8, 1933, Serial No. 688,609
4 Claims. (Cl. 261—103)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



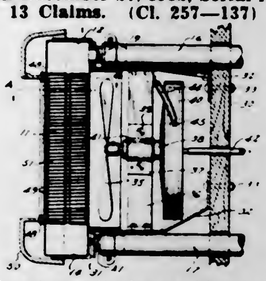
1. In combination with a heating unit, a humidifying device, said device comprising a source of moisture, means conducting moisture from said source above the heating unit, and means forming said moisture into a film and exposing said film to the air over said heating medium and below said moisture source, said conducting means comprising a perforated tube, a sleeve wick snugly encircling said perforated tube, said film forming means comprising a second wick tautly contacting with and depending from said sleeve wick.

2,004,148
PLATEN PRINTING PRESS
Edgar J. Young, Trowbridge, Wilts, England, assignor to The Chandler and Price Company, Cleveland, Ohio, a corporation of Ohio
Application October 15, 1931, Serial No. 568,931
3 Claims. (Cl. 101—298)



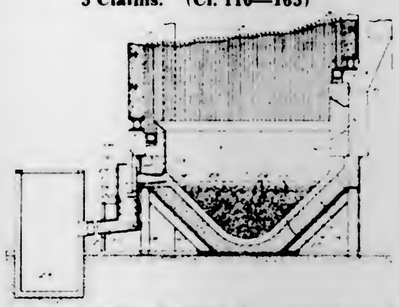
1. In a printing press, a platen, a movable form-carrying bed, a shaft below supporting said bed, and means in association with said shaft for regulating the parallelism of the bed with respect to the platen, said means including a variably-positionable carrier for said shaft and means for setting and retaining said carrier at any desired point in its range of positions.

2,004,149
PLATEN PRINTING PRESS
Hans Honigman, East Cleveland, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a corporation of Ohio
Application October 21, 1931, Serial No. 570,061
4 Claims. (Cl. 101—297)



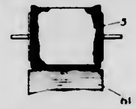
1. In a printing press of the Gordon type, a platen, an oscillatory form-carrying bed adapted to contact therewith, bushings rotatably mounted in said bed and provided with eccentric openings which form aligned bearings, a back-shaft journalled in said bushings, said back-shaft being oscillatory in said bushings to locate the bed for printing and throw-off positions respectively, and means for rotatively adjusting the bushings in their bearings within predetermined limits without rotating the back-shaft in said bushings so as to vary the position of the back-shaft to thereby regulate the impression of the form upon stock on the platen.

2,004,150
AIR CLEANER
Milton W. Zander, Chicago, Ill.; Leslie H. Whipp administrator of said Milton W. Zander, deceased
Application April 12, 1933, Serial No. 665,649
12 Claims. (Cl. 183—10)



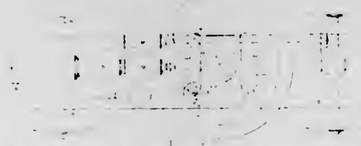
4. In an air cleaner, a casing having an inlet and an outlet spaced from said inlet, said casing having a liquid sump therein in the path of air traveling from said inlet to said outlet, and a plurality of air guiding members laterally spaced apart in the air path in advance of said liquid sump, said members each being shaped to direct the air in diverging streams and located in such relationship one to another that various air streams conflict with each other in the vicinity of the sump liquid and turbulate said liquid.

2,004,151
HEATER APPARATUS
Roger W. Angstman, Pontiac, Mich., assignor, by mesne assignments, to E. A. Laboratories, Inc., Brooklyn, N. Y., a corporation of New York
Application December 27, 1932, Serial No. 648,936
13 Claims. (Cl. 257—137)



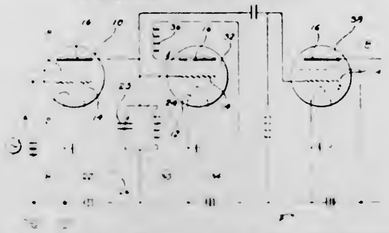
1. In a heating unit, the combination of a core having upper and lower tanks; fluid connections secured to said tanks; a front shell defining the margins of said core; a channel-shaped rubber cushioning member interposed between said front shell and said radiator unit; a shroud enclosing the back of said core having an opening therein for the passage of air; means for securing the shroud to said core; means for securing the shell to said tanks; and a fan for circulating air through said core.

2,004,152
SLAG BOTTOM FOR FURNACES
Phillips Badenhausen, Philadelphia, Pa., assignor to Badenhausen Corporation, Cornwells Heights, Pa., a corporation of Pennsylvania
Application May 25, 1931, Serial No. 539,833
5 Claims. (Cl. 110—165)



5. A combustion furnace for pulverized fuel comprising a closed furnace bottom lined with a material to which fused ash does not firmly adhere as it solidifies, said bottom having side walls sloping upwardly and outwardly in at least two directions at right angles to each other to permid solidified slag on said bottom to expand upon re-heating and slide upwardly on said walls without exerting substantial pressure horizontally, and means providing an opening in one side wall and spaced a substantial distance above the lowest point in said bottom through which fused ash may be withdrawn in liquid form.

2,004,153
APPARATUS FOR WINDING THREAD ON A BOBBIN
Seymour Wilson Brainard, Kenmore, N. Y., assignor to Du Pont Rayon Company, New York, N. Y., a corporation of Delaware
Application October 22, 1931, Serial No. 570,476
2 Claims. (Cl. 242—18)

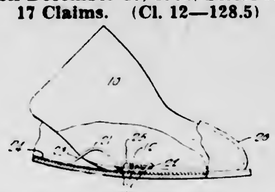


1. In the manufacture of rayon, a winding bobbin, and a roller having a soft and yieldable surface in driving contact with the material wound thereon.

2,004,154
ROAD PLANER
Wilfrid J. Beatty, Castroville, Calif.
Application May 21, 1934, Serial No. 726,636
6 Claims. (Cl. 37—108)

1. A road planer comprising a vehicle adapted to be advanced over a surface, a rotatable member supported on said vehicle and actuated during the advance thereof, and a plurality of surface-engaging cutting discs rotatably mounted in overlapping relationship on said member.

2,004,155
ELECTRICAL SYSTEM
Edward L. Bowles, Wellesley Farms, Mass.
Application October 12, 1927, Serial No. 225,678
14 Claims. (Cl. 179—171)



1. An electric system having, in combination, an input circuit, leads to the input circuit, an output circuit, leads to the output circuit, means for coupling the input circuit with the output circuit to create a tendency for the feed-back of energy from the output circuit to the input circuit, an electrode, means cooperating with the electrode for preventing the feed-back of energy from the output circuit to the input circuit, an impedance for producing a voltage drop, means connecting the impedance in the output circuit, a second input circuit, leads to the second input circuit, a second output circuit, leads to the second output circuit, means connecting the impedance in the second input circuit, and means for regeneratively coupling the second output circuit with the second input circuit to increase the effective impedance.

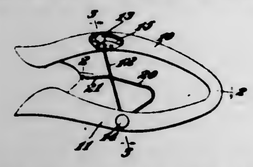
2,004,156
PRESERVATION OF LATEX
Wallace Ellwood Cake, Boenet, Asahan, Sumatra, Dutch East Indies, assignor to General Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application December 24, 1931, Serial No. 583,139
7 Claims. (Cl. 18—50)

7. Latex containing a preservative consisting of a small amount of phenol, soap and one or both of the following substances, ammonia and alkali metal hydroxide.

2,004,157
SHOE FORM
William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York
Application December 17, 1932, Serial No. 647,781
17 Claims. (Cl. 12—128.5)

1. A toe form having a prong movably secured thereto, the tip of which is adapted to penetrate the surface of the insole of the shoe in which the form is inserted, and means carried by the toe form independent of the prong for engaging it and yieldably holding the tip thereof in contact with the insole whereby the withdrawal of the form from the shoe is opposed.

2,004,158
SHOE FORM
William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York
Application July 10, 1934, Serial No. 734,479
6 Claims. (Cl. 12—128.5)

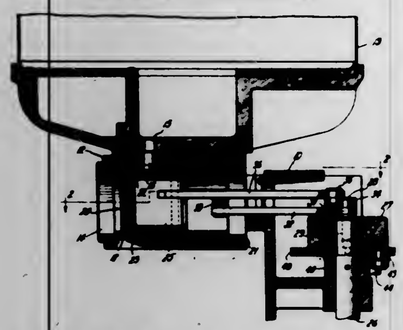


1. A toe form adapted to be inserted into a shoe and having side walls of inherently resilient material, provided with a cross brace connecting said side walls and a prong wire pivotally carried by said cross brace and terminating in a tip which, when the form is inserted in a shoe, is yieldably held by the cross brace in engagement with the inner sole of the shoe to resist the involuntary withdrawal of the form.

2,004,159
SHOE FORM
William J. De Witt, Auburn, N. Y., assignor to Shoe Form Co., Inc., Auburn, N. Y., a corporation of New York
Application July 10, 1934, Serial No. 734,480
4 Claims. (Cl. 12—128.4)

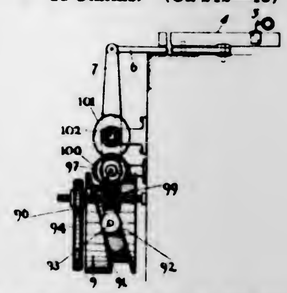
1. A toe form comprising flanged side walls of inherently resilient material, a cross brace span-

ning said side walls and movable relative thereto and means connected to said cross brace at one end thereof and movable thereby, said means terminating in a pointed tip and being in engage-



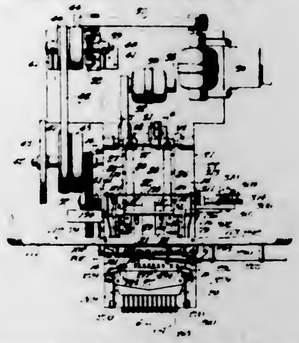
ment with a portion of the cross brace between the side walls whereby when the form is inserted in a shoe the tip is held by the cross brace in engagement with the inner sole thereof to resist the removal of the form from the shoe.

2,004,160
TETRA ALKYL LEAD
Frederick B. Downing, Alfred E. Parmelee, and Charles J. Pedersen, Carneys Point, N. J., and Joseph L. Stecher, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 9, 1932, Serial No. 597,800
19 Claims. (Cl. 202—57)



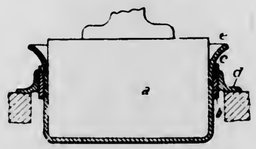
1. The method of recovering tetra alkyl lead from a lead sludge containing the same which comprises adding engine oil and thiocarbanilide to the lead sludge and then distilling off the tetra alkyl lead.

2,004,161
DISPENSING VALVE
Charles A. Fausel, Glenridge, N. J.
Application February 7, 1933, Serial No. 655,609
5 Claims. (Cl. 107—29)



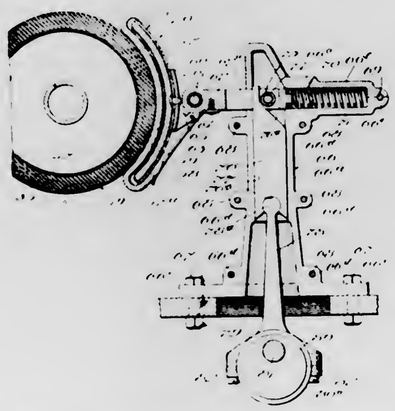
1. A dispensing valve comprising a casing formed with an intake port and a discharge port, a pair of pistons reciprocable in said casing to open and close said ports in alternation, the ports lying in planes spaced apart lengthwise of the casing to provide an idle transfer interval after each port is closed before the next port is opened, and mechanism for continuously driving the pistons in mutually timed relation such that the pistons will draw apart only when the intake port is open and will draw together only when the discharge port is open, the relative positions of the pistons remaining substantially constant during said transfer intervals with the pistons substantially in mutual contact during the transfer interval immediately following the closing of the discharge port.

2,004,162
BOBBIN TRAVERSE MOTION
Ernest K. Gladding and David F. Evans, Buffalo, N. Y., assignors to Du Pont Rayon Company, New York, N. Y., a corporation of Delaware
Application December 2, 1931, Serial No. 578,432
11 Claims. (Cl. 242—43)



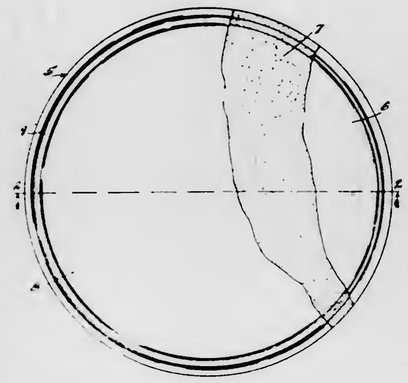
1. In a winding machine a rotating bobbin, a guide, reciprocating means for traversing the guide before the bobbin in a path less than the length thereof, eccentric means for shifting the path of the reciprocating means along the bobbin, and a non-circular gear operatively connected to the said means whereby the speed of the guide at the ends of its stroke will be regulated to produce a thread cake having substantially uniformly decreasing bevelled ends.

2,004,163
TICKET-STRINGING APPARATUS
Jacob F. Graeber, Norristown, Pa., assignor to The National Tag Manufacturing Corporation, New York, N. Y., a corporation of New York
Application December 10, 1929, Serial No. 412,978
20 Claims. (Cl. 93—91)



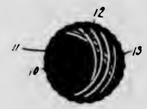
1. Apparatus for stringing a plurality of tickets of a strip of tickets comprising in combination, means for moving a strip of tickets to an operating position, needles for inserting strings in said tickets at operating position, means gripping said strings to said needles on downward movement to pull out strings from a source of supply, means for gripping the ends of said strings when inserted through said tickets, means including a swinging frame and ticket grippers for grasping said strip and pulling it away from said needles, means for actuating said frame to move it a maximum distance from said needles means for restoring tangs made in the tickets when the frame is in extreme off position, means for tying knots in said strings, said frame moving back to allow slack in said strings for said knotters, means to move said frame away again but a shorter distance to tighten said knots, means to sever said strings, and means to sweep said strip of tickets from said knotters and strip grippers onto a fixed rack.

2,004,164
MEANS FOR PRODUCING CONTAINERS
Otto Hofmann, Karlsbad, Czechoslovakia
Application October 24, 1932, Serial No. 639,320
In Czechoslovakia July 22, 1932
1 Claim. (Cl. 69—8)



A machine for forming seamless leather suitcases, bags and satchels, comprising a core member having the shape of a suitcase and provided with openings for the passage of air, the cross-section of said core member being the same throughout the height thereof, a ring which is substantially smaller in height than said core member and the suitcase to be drawn, said core member being adapted to be inserted within said ring, the distance between the exterior surfaces of said core member and the inner surfaces of said ring being smaller than the thickness of the leather to be drawn, re-inforcing members connected with said ring at the exterior surfaces of the latter and supporting said ring, and means for supporting said reinforcing members.

2,004,165
IRONING MACHINE
John T. Hume, Chicago, and Harold L. Hart, River Forest, Ill., assignors to Electric Household Utilities Corporation, Cicero, Ill., a corporation of Illinois
Application March 21, 1932, Serial No. 600,090
6 Claims. (Cl. 68—9)

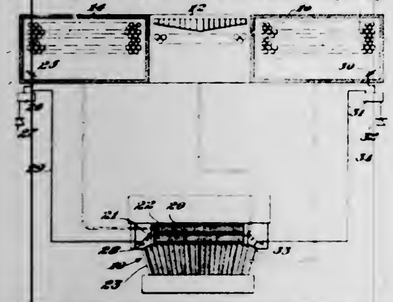


5. The combination in an ironing machine, of a rotatable roll, a shoe extending parallel to said roll, a slidably mounted member movable in a horizontal plane toward and from said roll, said shoe being mounted on said slidably mounted member, a roller carried by said member, a vertically slidable plunger having an inclined surface to coact with said roller, and power driven means for actuating said plunger.

2,004,166
COASTER
Stanley J. Low, Niles Center, Ill.
Application April 13, 1933, Serial No. 665,872
1 Claim. (Cl. 45—68.4)

In a coaster mat a pair of layers of absorbent cellulose material, a film of casein glue covering one side of each of said layers and adapted to bind said layer together and waterproof one layer from the other, the said coaster being provided with a peripheral bead comprising a ridge on one side of the mat and a channel on the other.

2,004,167
GOLF BALL
Norman Gibson Madge, Montclair, N. J., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
Application July 19, 1930, Serial No. 469,076
3 Claims. (Cl. 273—62)



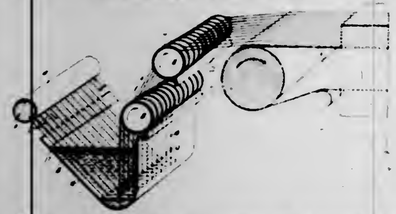
1. As an improved article of manufacture, a golf ball having a thread of rubber deposited directly from latex with smooth faces and rounded edges wound thereon under sufficient tension to result in a ball having a compression value of approximately nine percent.

2,004,168
PIPE ORGAN
Arthur H. Marks, New York, N. Y., assignor to Aeolian-Skinner Organ Company, Inc., Dorchester, Mass., a corporation of Massachusetts
Application May 22, 1933, Serial No. 672,100½
4 Claims. (Cl. 84—331)

1. A pipe organ comprising a group of stops which speak directly into an auditorium and a second group of stops which speak indirectly into

that auditorium, said second group of stops being acoustically insulated from the first group and

speaking indirectly into the auditorium through a loud speaker.



2,004,169

APPARATUS AND METHOD FOR CONVEYING THREADS

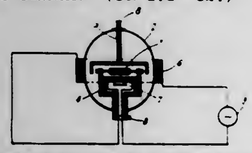
Frederic S. Mead, Cranston, R. I., assignor, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey

Application July 14, 1934, Serial No. 735,161

12 Claims. (Cl. 18—8)

1. In an apparatus for conveying a plurality of threads, a rotating pull-roll having on the surface thereof a plurality of spaced parallel circumferential ridges on which the threads ride and from the tops of which the threads are kept from falling into the channels therebetween by a liquid associated with the threads at least at the surface of the roll.

2,004,170



CRYSTAL HOLDER

Wilhelm Moser and Leopold Leng, Berlin, Germany, assignors to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

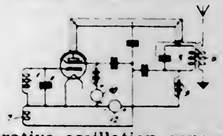
Application February 6, 1934, Serial No. 710,036

In Germany February 6, 1933

4 Claims. (Cl. 171—327)

4. A piezo electric crystal holder comprising an oscillation crystal disposed in a vacuum chamber, an upper electrode having a ring-like portion surrounding said crystal, a lower electrode having a ring-like portion surrounding said crystal, said lower electrode having an aperture which is brought outside of said chamber, a bimetallic strip within said aperture, and a heater winding located outside of said chamber at a position which surrounds said electrode so as to insure the heating of said electrode by means of eddy-current heating, said bimetallic strip having contacts for controlling the current supply circuit for said heater winding.

2,004,171



OSCILLATION GENERATOR

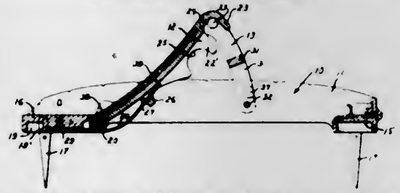
Herbert Muth and Wilhelm Runge, Berlin, Germany, assignors to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application May 2, 1933, Serial No. 668,957

In Germany April 23, 1932

3 Claims. (Cl. 250—36)

1. A regenerative oscillation generator circuit comprising an electron discharge device characterized by high internal resistance having a cathode, anode, control grid and screen grid, a tuned input circuit coupled between said control grid and cathode, a tuned output circuit connected between said anode and screen grid, a coil inductively coupled to said input circuit and having one terminal connected to the cathode and the other terminal connected to the screen grid end of said output circuit whereby the currents in said screen grid and anode circuits additively combine in said coil to affect regeneration.



2,004,172

STARTING BLOCK

Everett F. Niday, Altadena, Calif.

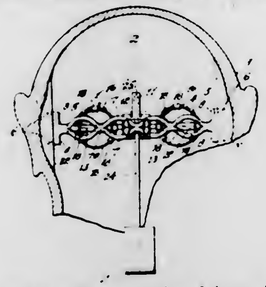
Application July 31, 1934, Serial No. 737,733

8 Claims. (Cl. 272—59)

1. In a starting block, a body comprising a rectangular frame, a brace pivoted to said body between the sides of said frame, a foot plate pivotally mounted on said body between the sides of said frame and means to adjustably connect one end of the foot plate to the brace.

2,004,173

EYE SET FOR DOLLS



Nicholas Popovich, Teaneck, N. J., assignor of one-third to Joseph A. Taferner and one-third to Leo J. Schlitzer, both of New York, N. Y.

Application May 22, 1933, Serial No. 672,116

14 Claims. (Cl. 46—40)

1. In an eye mounting a supporting member comprising a substantially straight flat strip of ductile metal having end sections formed with integral prongs to be embedded in opposite walls of a doll head, said end sections being connected by integral longitudinally extending sinuous rod-like portions spaced apart and lying in the plane

of the strip and capable of being partially straightened and extended by tension exerted on said end sections tending to separate them,

whereby said prongs can be driven into a doll head and will be held in position in the doll head by the inherent rigidity of the metal of the strip to secure the supporting member in the doll head.

2,004,174

HEAT TREATMENT OF SAWS, ETC.

Alfred M. Remington, Fitchburg, Mass., assignor to Simonds Saw and Steel Company, Fitchburg, Mass., a corporation of Massachusetts

Application December 30, 1931, Serial No. 583,819

3 Claims. (Cl. 219—11)

2. The method of heat treating an annular portion of a circular saw or like article, which comprises passing current through the portion, producing relative rotation between the path of the current and the article about the axis of the article, and continuing the rotation through a plurality of revolutions so that the annular portion is raised to a higher temperature during each revolution.

2,004,175

DISCHARGE TUBE

Walter Schottky, Berlin-Charlottenburg, Germany, assignor to Siemens & Halske Aktiengesellschaft, Siemensstadt, near Berlin, Germany, a corporation of Germany

Application April 6, 1932, Serial No. 603,584

In Germany September 25, 1930

2 Claims. (Cl. 176—122)

1. A glow discharge device comprising an elongated envelope of circular cross-section having a gaseous filling therein, electrode elements supported at opposite ends of said envelope between which glow discharge takes place, and a metallic body positioned in the space between said electrodes for forming a constriction such that the direction of maximum luminosity is positioned substantially at right angles to the direction of discharge in the constriction.

2,004,176

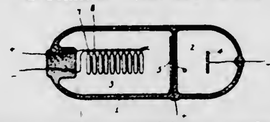


PHOTO-ELECTRIC TUBE

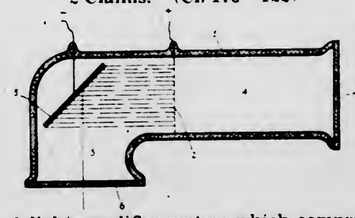
Fritz Schröter and Otto Schriever, Berlin, Germany, assignors to Telefunken Gesellschaft fur Drahtlose Telegraphie m. b. H., Berlin, Germany, a corporation of Germany

Application December 11, 1931, Serial No. 580,252

In Germany December 11, 1930

4 Claims. (Cl. 250—27.5)

1. A photo tube comprising a sealed envelope, a gas tight metal diaphragm permeable to high speed electrons and mounted in said envelope dividing it into two separate gas tight chambers, one of said chambers being highly evacuated and having a light transparent wall and the other chamber containing gas at low pressure, a photoelectric cathode mounted in said highly evacuated chamber, and a pair of cooperating electrodes mounted in the other chamber.



2,004,177

LIGHT AMPLIFIER

Otto Schriever, Berlin, Germany, assignor to Telefunken Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany

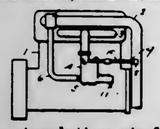
Application January 19, 1932, Serial No. 587,467. Renewed March 4, 1935. In Germany January 20, 1931

2 Claims. (Cl. 176—122)

1. A light amplifier system which comprises an envelope divided into a pair of chambers one of said chambers being a high vacuum chamber and the other of said chambers being a gas filled chamber, an electron permeable partition separating said chambers, a photoelectric element positioned in the chamber subjected to a high vacuum, and a voltage source for producing within the tube an electrical field to cause a flow of electrons from the high vacuum chamber to the gas filled chamber to cause the gaseous filling thereof to become ionized upon the passage of photoelectrons through said electron permeable partition whereby a magnified effect of the light initiating the photoelectron stream is obtained in said gas filled chamber.

2,004,178

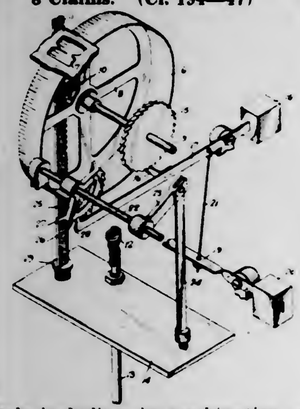
AUTOMATIC FUEL REGULATOR



Charles L. Stokes, Los Angeles, Calif., assignor, by mesne assignments, to Lynn A. Williams, Evanston, Ill., and Clifford C. Bradbury, Glencoe, Ill., as successor trustees

Application November 9, 1926, Serial No. 147,250

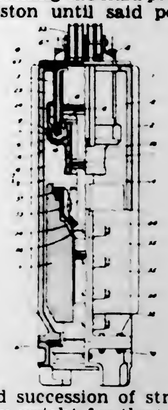
3 Claims. (Cl. 123—119)



1. A carburetor having an intake passage, a liquid fuel reservoir, a throttle in said passage,

a well between the reservoir and said passage and connected to each, and deflecting means in

said passage for circulating air from the passage through the well and past said throttle.



2,004,179
COIN CONTROLLED SCALE
Harold L. Walker, Brooklyn, N. Y., assignor to The Jacobs Bros. Co. Inc., Brooklyn, N. Y., a corporation of New York
Application May 17, 1933, Serial No. 671,439
8 Claims. (Cl. 194—47)

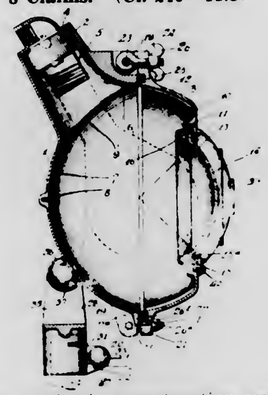
1. A scale including, in combination, a registering mechanism, a rotatable shaft forming a part of said mechanism, a member shiftably responsive to a weight associated with said scale, means whereby said shaft may rotate responsive to the degree of movement of said member, an annular ratchet secured to said shaft, a pawl engaging said ratchet, a lever mounting said pawl, means for supporting said lever in a position wherein said pawl is disengaged from said ratchet, a coin releasing mechanism for shifting said lever, said supporting means comprising a body connected to and shiftable in response to movements of said member, and a series of lever diverting elements associated with said body and acting to move the same to an unsupported position in response to movements of said member.

2,004,180
POWER HAMMER
Campbell V. Adams, Chicago, Ill.
Application February 4, 1931, Serial No. 513,269
7 Claims. (Cl. 121—30)

1. In a pile driving hammer, a cylinder, a piston operating in said cylinder, a ram driven by said piston, and valve means for supplying motive fluid at uniform pressure to said cylinder below said piston whereby the fluid will act to raise said ram and then at the proper time during the upward movement will be supplied to and remain in said cylinder above said piston substantially at the same and uniform pressure to cushion the upward movement and to assist in accelerating the descent of said ram said valve means releasing the fluid above said piston after said ram has travelled downwardly to the position of impact, maintaining the fluid pressure constant against said piston until said point of impact

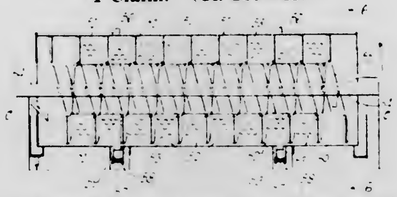
securing a rapid succession of strokes combined with a heavy ram weight for the total weight and striking energy employed.

2,004,181
SIGN
Samuel F. Arbuckle and Guy H. Coulter, Highland Park, Mich., assignors to S. F. Arbuckle Corp., a corporation of Delaware
Application May 28, 1930, Serial No. 456,786
12 Claims. (Cl. 40—136)



1. A sheet metal plate having indicia thereon, said indicia having a plurality of surfaces inclined to the plane of the plate for reflecting light at a plurality of angles, said surfaces being arranged to reflect light at a greater angle in one plane than in a plane perpendicular thereto.

2,004,182
STRAP WITH ATTACHED WASHERS AND METHOD OF MAKING THE SAME
Fred C. Arey, Oak Park, Ill., assignor to Vulcan Soot Blower Corporation, a corporation of Pennsylvania
Application November 1, 1933, Serial No. 696,175
6 Claims. (Cl. 29—150)

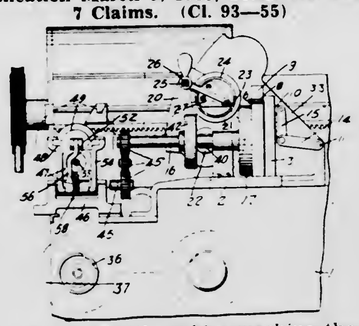


5. The method of securing together a metal strap and a washer and creating in the strap an opening registering with that in the washer, which consists in laying the strap flat upon the washer and then driving through the strap and into the hole in the washer a punch almost as large as the hole in the washer and shaped to rupture the metal of the strap and press it into the opening in the washer in the form of prongs of a length no greater than the thickness of the washer.

2,004,183
LIGHTING FIXTURE
Reuben B. Benjamin, Chicago, Ill., assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill., a corporation of Illinois
Application February 16, 1931, Serial No. 515,933
Renewed August 5, 1933
8 Claims. (Cl. 240—11.3)

1. A light projecting construction comprising a concave reflector, means for supporting an electric bulb with its light source between the center or centers of curvature and the focal points of the reflector whereby the reflected rays converge and cross each other, a zonal spherical reflector in front of said concave reflector having its center substantially at the light source whereby light from the zonal reflector will be reflected back onto the concave reflector and re-reflected as converging crossing rays, said zonal reflector having its rear edge adjacent the front edge of the concave reflector, and a protecting outwardly convex spherical glass cover in front of the bulb, said glass cover being substantially nearer the light source than is the zonal reflector, the outside diameter of said glass cover being materially less than the smaller diameter of the zonal reflector.

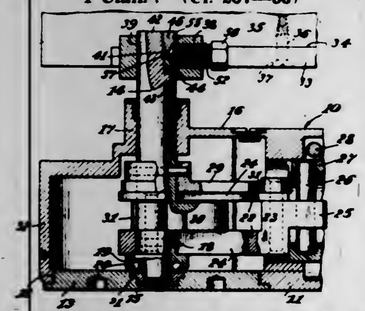
2,004,184
PROCESS FOR DIFFUSION
Julien Bergé, Tirlemont, Belgium, assignor to Raffinerie Tirlemontoise, Société Anonyme, Tirlemont, Belgium, a corporation
Application February 9, 1931, Serial No. 514,515
In Belgium February 11, 1930
1 Claim. (Cl. 127—45)



The process of extracting sugar from beet slices the cell walls of which have been preserved intact except for surface ruptures occurring in the slicing operation, which comprises providing a confined column of water in successively segregated masses, simultaneously and continuously moving said segregated masses of water along a substantially horizontal path; providing a mass of beet slices and simultaneously moving said beet slices in a similar column of segregated masses continuously and in a substantially coaxial sinuous path through said column of segregated masses of water in countercurrent relationship thereto at atmospheric pressure.

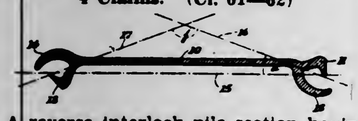
2,004,185
FRAME FOR BAGS, PURSES, AND THE LIKE
Benjamin Blacher, Providence, R. I., assignor to Blacher Brothers, Providence, R. I., a partnership consisting of Benjamin Blacher and Harry Blacher
Application February 17, 1934, Serial No. 711,763
3 Claims. (Cl. 150—29)

1. In a frame for bags, purses and the like, the combination of a pair of frame-members constructed of channeled strips bent to form top portions with legs extending at an angle thereto, means for pivotally connecting the ends of the legs to adapt the frame-members to swing into open and closed position, and an integral strip on the side wall of the top portion of each frame-member extending throughout substantially one-half its length and folded double across the top of the channel in said top member and then rearwardly therefrom with its end underlying the upper portion of the strip, said flanged strips being adapted to aline when the frame-members are closed together to provide a protecting shield extending across the top of the frame.



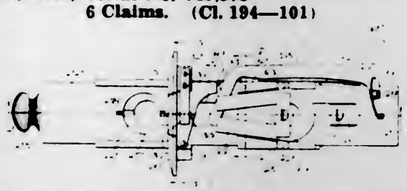
2,004,186
BOTTLE BOTTOM INSERTING AND SPINNING MECHANISM FOR PAPER BOTTLE MAKING MACHINES
Andrew Bodor, Newark, N. J., assignor to Reinforced Paper Bottle Corporation, New York, N. Y., a corporation of Delaware
Application March 9, 1933, Serial No. 660,088
7 Claims. (Cl. 93—55)

1. In a paper bottle making machine, the combination with a movable carrier for the open ended bottle bodies, a paper disc holder, means



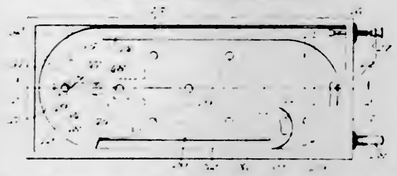
for feeding the discs to a position opposite the open end of the bottle, means for forcing the discs into the bottom end so as to fit within the bottle body, means for spinning the end edge of the bottle body and the upset portion of the disc inward, such means comprising a suitably driven shaft mounted in a stationary bearing member, a longitudinally movable bearing member mounted upon the stationary bearing member, a shaft journalled in the movable bearing member, a broad toothed gear secured to the shaft of the movable bearing member, a narrow toothed gear mounted upon a suitable driven shaft in mesh with the broad toothed gear, a spinning head secured to the longitudinally movable shaft, and cam means for forcing the movable bearing member longitudinally against the open end of the bottle when brought to the spinning position.

2,004,187
ADJUSTABLE DOOR SUPPORT AND COUPLING
Emil Bommer, Brooklyn, N. Y.
Original application January 11, 1932, Serial No. 585,832, now Patent No. 1,978,736. Divided and this application June 16, 1932, Serial No. 617,643
1 Claim. (Cl. 287—53)



In a door closing means in which a pintle is disposed in a vertical position and a door is provided with a fitting adjustably connected to said pintle, said connection comprising a hub portion on said fitting having a vertical bore to receive said pintle, said pintle having a recess at its upper end opening through the side thereof, said recess increasing in depth in an upward direction, said hub bore having a vertical recess at one side thereof opening into said bore, a tapered slip-block disposed in both of said recesses, said slip block having a circular recess, and a threaded locking element carried by the hub with its inner end disposed in said circular recess.

2,004,188
REVERSE ANGLE INTERLOCK PILING
Adolf Berberg, Short Hills, N. J., assignor to Dortmund Hoerder Huettenverein Aktiengesellschaft, Dortmund, Germany, a corporation of Germany
Application January 5, 1934, Serial No. 705,361
4 Claims. (Cl. 61—62)

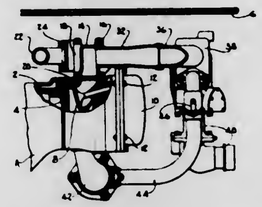


1. A reverse interlock pile section having unlike contoured interlock elements at its edges, and in which the axis of the interlock at each edge is disposed at an angle to the section axis and to the axis of the interlock at the other edge, whereby in a plurality of interlocked sections the angles of adjacent interlock axes to their appertaining section axes neutralize each other to form a straight wall when like contoured interlock edges are connected and are added to each other to form a curved wall when unlike contoured interlock edges are connected.

2,004,189
COIN SLIDE
Herbert G. Breitenstein, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Illinois
Original application September 7, 1933, Serial No. 688,428. Divided and this application October 23, 1934, Serial No. 749,573
6 Claims. (Cl. 194—101)

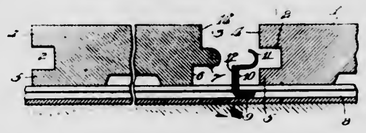
4. In a device of the character described, the combination of an elongated slide having a coin receiving aperture, a guide frame for the slide adapted to permit a full predetermined length of stroke when the slide aperture contains a coin, a magnet carried by the frame, said magnet being operative to take and hold a magnetic coin out of the aperture, lock means to prevent completion of the stroke under such circumstances, a spring to return the slide to its initial starting position, a forwardly extending spring pressed member pivotally carried adjacent the inner or rear end of the slide, said member having a hooked end normally spanning the slide below the magnet, and means to guide the hooked end laterally of the slide when it is moved inwardly and to permit the hooked end to disengage a magnetic coin from the magnet when the slide is returned forcibly to eject such coin from the slide.

2,004,190
PINBALL AMUSEMENT GAME
Herbert G. Breitenstein, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Ill.
Application January 16, 1935, Serial No. 2,078
7 Claims. (Cl. 273—121)



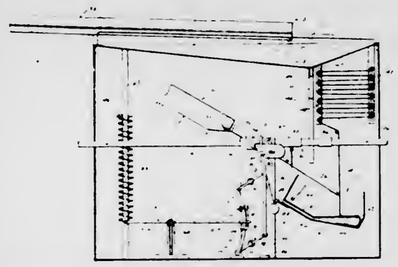
1. In a game of the class described having a play board inclined from the horizontal and provided with ball receiving holes, a projector for rolling balls onto the board, a movably mounted resilient member operatively associated with the board to be hit by projected balls so that they rebound therefrom for gravitation toward said holes, and means controlled by the projection of a ball to move said resilient member out of the path of movement of a subsequently projected ball to prevent such ball from rebounding therefrom.

2,004,191
ELECTRIC FUSE
Henry T. Bussmann, St. Louis, Mo.
Application August 20, 1932, Serial No. 629,577
8 Claims. (Cl. 200—135)



1. A fuse link having terminal portions, a relatively short fusing portion near each of said terminal portions, said fusing portions having substantially the same intrinsic current carrying capacity, a relatively long intermediate member between said fusing portions, a fusing section having an intrinsic current carrying capacity greater than said fusing portions within the length of said member, said fusing section being situated near the center of the link, said member having portions adjacent the fusing section of thickness greater than the terminal portions, to conduct heat from the fusing section whereby the temperature rise in the fusing section is temporarily retarded on the passage of an electric current through the link and the fusing section is enabled to carry currents heavy enough to fuse one of the fusing portions for a period of time long enough to permit one of said fusing portions to fuse.

2,004,192
MANIFOLD SYSTEM FOR INTERNAL COMBUSTION ENGINES
James F. Chapman, Upper Darby, and Frederick E. Dayes, Philadelphia, Pa., assignors to American Car and Foundry Motors Company, New York, N. Y., a corporation of Delaware
Application September 25, 1933, Serial No. 690,826
3 Claims. (Cl. 123—59)

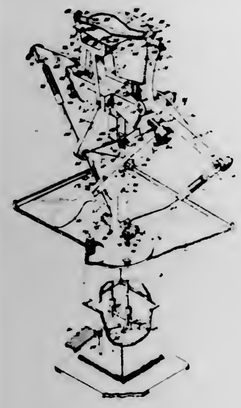


1. In an internal combustion engine of the horizontal type having a removable cylinder head, an intake manifold and exhaust manifold, said intake manifold being arranged above and discharging downwardly into the engine cylinders, branches leading from the intake manifold and extending substantially adjacent to the cylinders and terminating beyond the cylinder head, a carburetor arranged in a vertical plane, a header connecting the intake manifold branches and the carburetor, a hot box between the carburetor and the intake manifold enclosing a portion of the header, and a connection between the exhaust manifold and the hot box, said connection extending horizontally from the exhaust manifold to a position beyond the cylinder head and being bent upwardly in substantially vertical alignment with the carburetor and terminating in said hot box.

2,004,193
BOARD OF THE TONGUE AND GROOVE TYPE
Frank W. Cherry, Kenilworth, Ill., assignor to Lug-Lox Flooring Company, a corporation of Illinois
Application December 5, 1934, Serial No. 756,038
8 Claims. (Cl. 20—8)

1. A board of the tongue and groove type having on the under side of the tongue a rib or bead extending lengthwise of the tongue.

2,004,194
VALVE CONTROLLING SYSTEM
Patrick De Lacy-Mulhall, Los Angeles, Calif.
Application May 31, 1930, Serial No. 458,093
Renewed October 31, 1934
11 Claims. (Cl. 137—146)



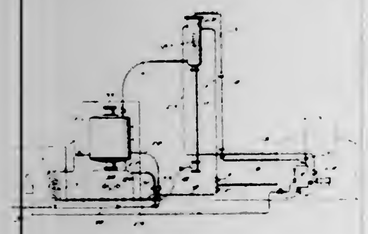
1. In combination with a conduit having a control valve, valve operating means for alternately opening and closing said control valve, said means including a valve operating shaft, a swinging weight arm mounted on said shaft, a weight carried by the weight arm, a swinging bucket-arm mounted on the shaft and extending oppositely to the weight arm, means for diverting fluid from the conduit into the bucket, and means for dissipating fluid from the bucket; releasable locking means adapted to hold said valve closed against said operating means; and temperature controlled means for operating said valve locking means to cause release of the valve.

2,004,195
PREWELT SHAPING MACHINE
Carl George Deubel, St. Louis, Mo., assignor to Progressive Service Company, St. Louis, Mo., a corporation of Missouri
Application March 29, 1933, Serial No. 663,314
21 Claims. (Cl. 12—7)

1. A pre-welt shaping machine comprising a support for a pre-welt shoe upper, shaping members for the side portions of the shoe upper at the welt, mechanism for operating said shaping members to shape the side portions of the shoe

upper at the welt, and flexible shaping means for shaping the curved end portions of the shoe upper at the welt between the portions of the shoe upper that are shaped by said shaping members.

2,004,196



PROCESS FOR TREATING PETROLEUM OIL

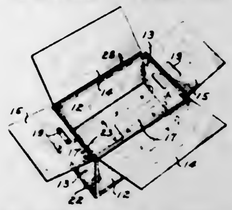
Carbon P. Dubbs, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota

Application July 31, 1922, Serial No. 578,704

Renewed July 11, 1934

4 Claims. (Cl. 196—48)

1. A continuous process for cracking hydrocarbon oil consisting in passing a constant volume of combined charging oil and reflux condensate through a heating zone wherein it is raised to a cracking temperature, in delivering the heated oil from said heating zone to a reaction zone wherein conversion occurs and from which no unvaporized oil is permitted to return to the heating zone, in passing evolved vapors to a dephlegmating zone wherein they are subjected to reflux condensation by passage in heat interchange relation with the incoming charging oil, in reducing the proportion of charging oil and increasing the proportion of reflux condensate in said constant volume of oil introduced to the heating zone by decreasing the amount of charging oil introduced to the dephlegmating zone and simultaneously returning to the dephlegmating zone an amount of the pressure distillate produced by the process sufficient to compensate for the decreased condensing effect due to the decrease in the amount of charging oil introduced to the dephlegmating zone.



2,004,197

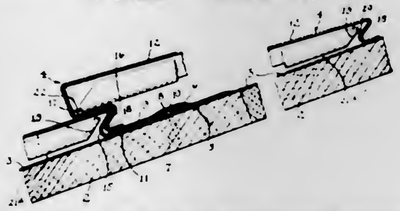
BOX STRUCTURE

Albert S. Ethridge, Milwaukee, Wis., assignor to Hummel & Downing Co., Milwaukee, Wis., a corporation of Wisconsin

Application May 24, 1933, Serial No. 672,553

10 Claims. (Cl. 229—52)

1. In a box structure, a continuous series of walls having a metallic reinforcing band secured to the top portion thereof, said band having local slots therein, and a cover having flanges insertible within said band and tongues insertible within said slots.



2,004,198

ROOF CONSTRUCTION

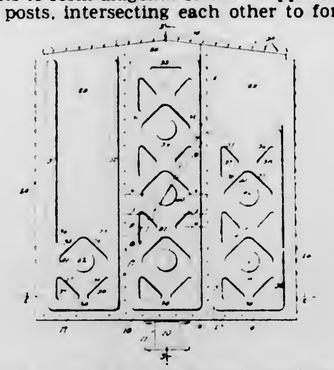
Joseph W. Fall, Evanston, Ill., assignor to Benjamin Electric Mfg. Company, Des Plaines, Ill., a corporation of Illinois

Application March 29, 1933, Serial No. 663,262

10 Claims. (Cl. 108—17)

1. A sheet metal shingle construction comprising upper and lower shingles, the lower end of the upper shingle having an inwardly returned portion overlying the upper edge of the lower shingle, said shingles having interengaging means adjacent said edges and underneath both said shingles when interengaged for holding the lower edge of the upper shingle down, and a nailing portion extending outwardly of said upper edge and located below said interengaging means.

2,004,199



PRESSED STEEL CAR END

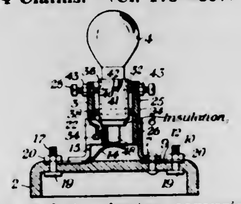
John P. Gallagher, Jersey City, N. J.

Application September 22, 1932, Serial No. 634,346

28 Claims. (Cl. 105—410)

1. An upright structural part of a car body adapted to resist loads imposed thereon in a horizontal direction, and which loads are usually localized at a point thereon intermediate its upper and lower edges, said structural part comprising a one-piece sheet of metal provided in spaced relation to its outlining edges with long corrugations, substantially U-shaped in cross section and forming vertical posts, other corrugations opening at their ends into and connecting the posts at top and bottom thereof to form horizontally extending struts and coacting with the posts to form a rectangular continuous reinforcing frame spaced inwardly from the outlining edges of the sheet, and certain other corrugations positioned between and extending at an angle to the posts to form diagonal struts at opposite ends of the posts, intersecting each other to form an X located in the frame in spaced relation to one end of the frame

2,004,200



LAMP SOCKET ADAPTER

Carl L. Goodlin, Wilkinsburg, and Thomas J. O'Meara, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

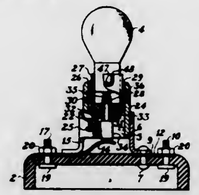
Application October 2, 1931, Serial No. 566,572

Renewed August 11, 1934

4 Claims. (Cl. 173—357)

2. A lamp socket adapter comprising an internally screw threaded metal cylinder, the lower portion of which is accurately machined to provide a snug sliding fit with a lamp socket, a lamp socket member extending into the upper end of said cylinder with considerable clearance, a ring like element secured to said socket member within said cylinder and provided on its outer surface with screw threads which cooperate loosely with the threads on said cylinder, whereby the socket member can be adjusted along and about the axis of said cylinder and can also be tilted a certain amount in any direction within said cylinder, and screws screwed through said cylinder and cooperating at their inner ends with said socket member for tilting said socket member.

2,004,201



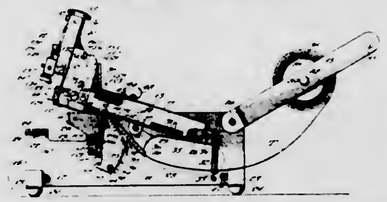
LAMP SOCKET ADAPTER

Carl L. Goodlin, Wilkinsburg, and Thomas J. O'Meara, Pittsburgh, Pa., assignors to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania

Original application October 2, 1931, Serial No. 566,572. Divided and this application August 8, 1934, Serial No. 739,000

1 Claim. (Cl. 173—357)

A lamp socket adapter comprising a cylindrical base member provided at its upper end with an inwardly projecting flange, a lamp socket member extending into said base member and having a relatively tight fit at the flange and clearance below the flange, a plurality of screws screwed through the base member in angular spaced relation a predetermined distance below said flange and cooperating at their inner ends with said socket member to provide tilting adjustment of the socket member relative to the axis of the base member, the members being autogenically joined together in their adjusted positions.



2,004,202

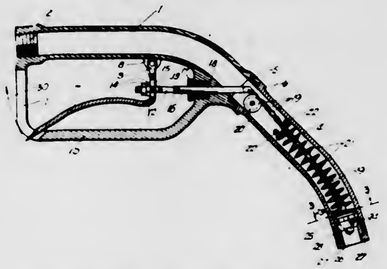
TAG PRINTING AND STAPLING MACHINE

Albert F. Horton, Cranston, R. I., assignor to Boston Wire Stitcher Company, Portland, Maine, a corporation of Maine

Application November 2, 1928, Serial No. 316,836

19 Claims. (Cl. 93—88)

1. In a stapling-machine, the combination of a work-support, means for feeding tags or the like into position to be stapled to the work held on the support, an arm movable with respect to the work-support, stapling-means carried on the arm and operative to insert the staples to attach the tags to the work, and printing-means operated from the stapling-means to print the tags as they are attached to the work.



2,004,203

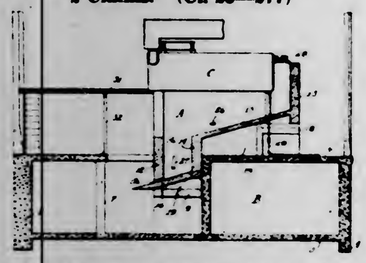
SPOUT FOR HOSE NOZZLES

James W. Howell, Chickasha, Okla.

Application March 25, 1935, Serial No. 12,939

2 Claims. (Cl. 221—84)

1. In a device of the class described, in combination, a frame for connecting a hose to a spout, a spout having an arcuate section intermediate its ends, said spout being threaded into said frame, a lever hinged to said frame and pro-

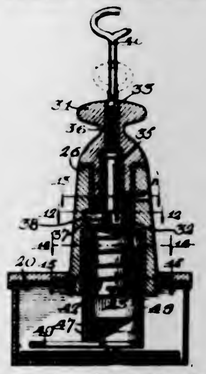


tected by a guard having a slot for directing the movement of the free end of the said lever in one plane, an adjustable bolt and hinge plate means for connecting said lever with a pull rod extending through a packing nut in the said frame and into the upper end of the said spout, a chain attached to the inner end of the said pull rod and riding over a pulley located within the upper end of the said spout, said chain being threaded through a coiled compression spring within the arcuate section of the said spout, pins through the said spout forming a stop for the said spring, the lower end of the said chain being attached to a valve stem supporting a spider guide which forms the lower stop for the said spring, and a valve for seating in a valve seat bushing screwed into the lower end of the said spout, the said bushing having a knurled outer surface to facilitate its removal by hand.

2,004,204
REENFORCEMENT FOR MATS
Oscar W. Jackson, Rockville Centre, N. Y.
Application April 24, 1934, Serial No. 722,143
3 Claims. (Cl. 154—49)

1. An edging for mats comprising bottom and top plates respectively secured on the lower and upper surfaces of a mat at an end thereof, both of said plates having outer portions extending a substantial distance beyond said mat end and the outer portion of the top plate being bent downwardly to meet the outer edge of the bottom plate to provide an inclined approach extending from the floor level.

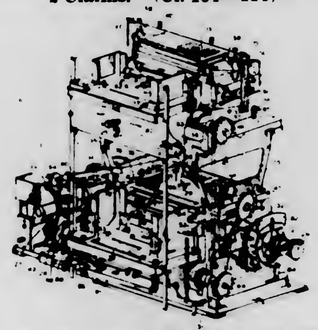
2,004,205
SMELTING FURNACE FOR BLACK LIQUOR
Alfred G. Kernin, Mosinee, Wis., assignor to Mosinee Paper Mills Company, Mosinee, Wis., a corporation of Wisconsin
Application January 9, 1932, Serial No. 585,656
2 Claims. (Cl. 23—277)



2. A furnace for the regeneration of black liquor having a two-part bottom, each part being located at a different level to thereby provide an upper combustion zone and a lower reduction zone, the bottom of the upper zone extending upwardly and rearwardly from the reduction zone, a tuyere for introducing a mixture of black liquor and air to the combustion zone, said tuyere extending to the rear of said combustion zone to direct said stream away from said reduction zone and ducts for introducing air to the lower combustion zone.

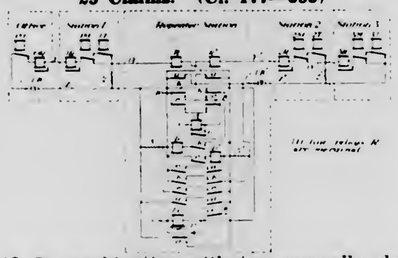
2,004,206
EXTENDIBLE CLASP OR CONNECTING DEVICE FOR STRAPS, BANDS, AND BRACELETS
Charles H. Kestenman, Providence, R. I., assignor to Kestenman Bros. Mfg. Co., Providence, R. I., a corporation of Rhode Island
Application February 20, 1932, Serial No. 594,265
8 Claims. (Cl. 24—71)

1. In an extension buckle, a plurality of sections hinged together to fold one on the other, one of said sections comprising two relatively slidable members, interengaging means on said slidable members for holding said members in at least three different positions of longitudinal adjustment, and a finger-piece operatively connected to the interengaging means on one of the slidable members to release said means whereby adjustment of the members may be had, said finger-piece being positioned to be engaged when the sections are in folded relationship.



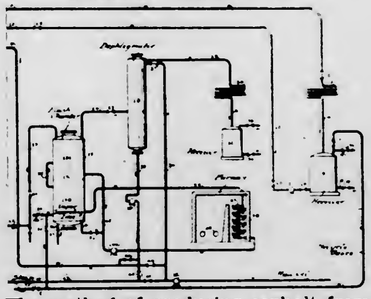
2,004,207
SWITCH
Ovide Lapiante, Riviere Du Loup Centre, Quebec, Canada
Application June 11, 1934, Serial No. 730,049
In Canada April 9, 1934
4 Claims. (Cl. 200—44)

1. A switch of the character described comprising a housing, fixed contact means in the housing connected with the terminals of an electric circuit, a movable blade operable to assume circuit closing engagement with the fixed contact means, a rotary blade supporting member, means



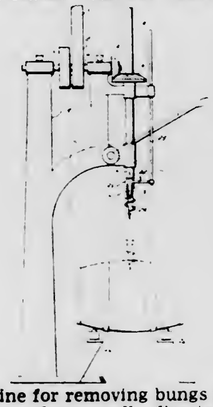
rigidly connecting one end of the blade with the bottom of the said member, a casing attached to the housing, a rotary plunger axially movable in the casing, the said plunger engaging the casing so as to be non-rotatable when retracted and rotatable when extended, means connecting the plunger with the blade supporting member so that the latter is rotated with the plunger, and means for immovably locking the plunger in the casing.

2,004,208
PUNCHING MACHINE
William W. Lasker, Brooklyn, N. Y., assignor to Remington Rand Inc., Buffalo, N. Y., a corporation of Delaware
Application June 13, 1932, Serial No. 616,926
2 Claims. (Cl. 164—114)



1. In a machine of the class described, the combination of a field of record sensing means, a corresponding gag-field controlled thereby for rendering corresponding punches active, means operable in accordance with the presence or absence of a record for enabling or disabling the sensing means control, and means including a key controlled bail for retaining the activity of the punches notwithstanding the disablement of the sensing means.

2,004,209
REMOTE CONTROL SYSTEM
Alfred B. Miller, Edgewood, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a corporation of Pennsylvania
Application September 15, 1932, Serial No. 633,308
25 Claims. (Cl. 177—353)

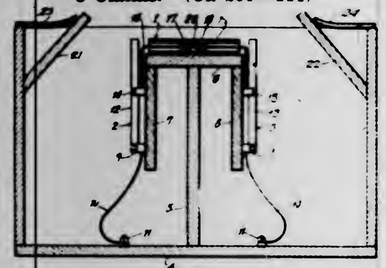


13. In combination with two normally closed line circuits each including a plurality of line relays, a transmitting contact and a normally closed contact controlled by one of the line relays of the other circuit, detector means for each circuit responsive to the opening of a transmitting contact and the consequent release of the line relays of both circuits for detecting when potential is again applied to such circuit, and means controlled by the detector means for each circuit for restoring the other line circuit to its normally closed condition when potential is applied to both line circuits.

2,004,210
METHOD OF PRODUCING ASPHALT
Jacque C. Morrell, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application November 25, 1929, Serial No. 409,434
2 Claims. (Cl. 196—74)

1. The method of producing asphalt from the unvaporized oil formed in the pressure zone of an oil cracking system which comprises removing said unvaporized oil from the pressure zone and passing the same without substantial heat loss to a zone of pressure reduction wherein vaporization takes place by the latent heat of said oil, separately removing vapors and residuum from said zone of pressure reduction, circulating said residuum in a cycle through a heating zone and an independent vapor separating zone, and continuing such circulation of said residuum between the heating zone and the independent vapor separating zone until the same has been reduced to an asphaltic condition.

2,004,211
BUNG WITHDRAWAL MACHINERY
Albert M. Munzinger, Janesville, Wis.
Application October 14, 1933, Serial No. 693,549
1 Claim. (Cl. 217—112)



In a machine for removing bungs from barrels, a drill having a downwardly directed bit for engagement with the bung of a barrel, a track below the bit and a pair of bung aligning members projecting to levels above the tracks and having

arcuately recessed upper surfaces for the reception of the rounded surface portions of barrels, said arcuately recessed upper surfaces of the members having sockets therein, and spherical elements mounted in said sockets for universal movement and projecting above the immediately surrounding surfaces of the said members to form rests supporting the barrel for free longitudinal tilting and rotation to align the bung of the barrel with said bit.

2,004,212
HIGH TENSION FUSE SWITCH

Thomas E. Murray, Jr., Brooklyn, N. Y., assignor to Metropolitan Device Corporation, a corporation of New York

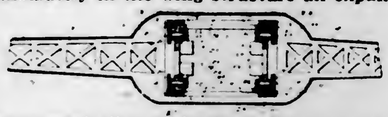
Application February 5, 1930, Serial No. 425,949
8 Claims. (Cl. 200—114)

1. Apparatus of the type described comprising a switch movable to open position, a fuse in series with said switch, and a member driven by said fuse upon blowing to move said switch to open position.

2,004,213
HITCH CONNECTION

Talbert W. Paul, Kansas City, Kans., assignor to Deere & Company, Moline, Ill., a corporation of Illinois

Application November 18, 1932, Serial No. 643,181
8 Claims. (Cl. 280—33.44)



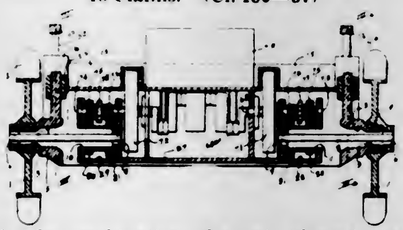
5. In the combination of a tractor, and a mower attached to said tractor and having a cutter bar adapted for swinging rearwardly relative to the tractor, a hitch device comprising a frame having its forward end pivotally connected with said tractor, and means connected with the rear end of said frame and contacting the ground for supporting said frame in spaced relation to the ground, said means permitting said bar to pass thereunder when said bar is swung relatively to the tractor.

2,004,214
VARIABLE INCIDENCE PLANE

Adolphe C. Peterson, Minneapolis, Minn.

Application July 20, 1932, Serial No. 623,674
4 Claims. (Cl. 244—12)

1. In an aeroplane, a longitudinal structure bearing control aerofoils, a wing bearing structure incorporated in the longitudinal structure and forming an arcuate bearing guide in the upper part of the wing bearing structure and an arcuate bearing guide in the lower part of the wing bearing structure, a wing structure bearing wing surfaces and having integrally formed intermediately in the wing structure an expand-



ed frame vertically and horizontally sized transversely of the longitudinal structure to approximate the transverse section of the longitudinal structure, and means for partial rotation of the wing structure on the wing bearing structure to vary the angle of incidence.

2,004,215
UNIT ASSEMBLY ENGINE AND DRIVE MEANS

Adolphe C. Peterson, Minneapolis, Minn.

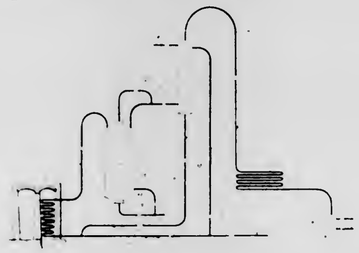
Application June 16, 1933, Serial No. 676,157
18 Claims. (Cl. 180—57)

1. The combination of a pair of road wheels, a pair of transverse members extending between the road wheels, means whereby the road wheels are guidably and yieldably supported one at each end of the transverse members, an engine supported by the transverse members and means for transmitting propulsive effort from the engine to the road wheels comprising a pair of fluid clutches each having a correlated driving element and variable transmission means in cooperation with a correlated one of the road wheels.

2,004,216
FULL FASHIONED KNIT STOCKING

Reginald Pike, Philadelphia, Pa.

Application January 19, 1933, Serial No. 652,476
7 Claims. (Cl. 66—184)



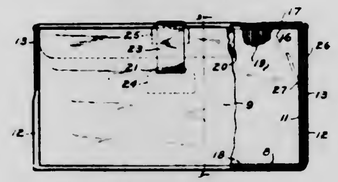
1. A full fashioned knitted stocking having a tapered toe portion, said toe portion being

fashioned of two corresponding bottom parts seamed to each other, each of said bottom parts having all its wales parallel, and an intermediate tapered part knitted directly to said bottom parts, said intermediate tapered part having all its wales parallel and being formed of substantially heavier and more compact material than that of said bottom parts, and the intermedite heavy part extending over the top, around the sides, and into the bottom of the toe portion.

2,004,217
OIL CRACKING APPARATUS

Frederic M. Pyzel, Piedmont, Calif., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota

Application August 11, 1928, Serial No. 298,900
Renewed September 16, 1932
2 Claims. (Cl. 196—107)

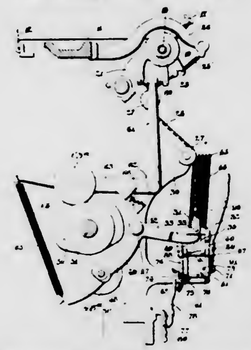


1. An apparatus for hydrocarbon oil conversion, comprising in combination a heating tube mounted in a heating zone, an enlarged drum in communication with the outlet of said tube, a liquid draw-off in cooperative communication with the lower portion of said drum and a vapor draw-off from said drum having an extension projecting for a substantial distance into said drum, and a valve controlled by-pass establishing communication between the upper portion of said drum and that portion of the vapor draw-off disposed outside the drum.

2,004,218
CONTAINER

Arthur Ratcliff, Milwaukee, Wis., assignor to Hummel & Downing Co., Milwaukee, Wis., a corporation of Wisconsin

Application March 25, 1933, Serial No. 662,693
2 Claims. (Cl. 229—45)



1. In a container, a cover and walls cooperable to provide an enclosure, a sealing device releasable without destruction only from within said enclosure, some of said walls having handle openings therein, and means within the container for preventing access to said sealing means from within the enclosure.

2,004,219
AUTOMATICALLY VARIABLE TENSIONING DEVICE FOR DRAW-OFF REELS

Max Richter, West Reading, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania

Application November 25, 1931, Serial No. 577,204
18 Claims. (Cl. 66—149)

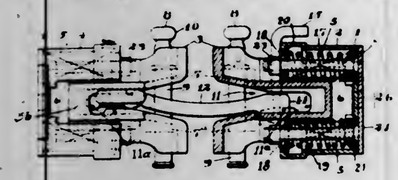
1. In a knitting machine including mechanism for laying and preselecting the laying of thread courses, a fabric draw-off reel, means associated with said reel for applying tension thereto, and mechanism responsive to operation of said course-selector mechanism in accordance with a selection thereof for causing said tensioning means to apply different degrees of tension to said reel during the knitting of different portions, respectively, of said fabric.

2,004,220
LADY'S HAND BAG

Max Sachs, Far Rockaway, N. Y.

Application March 3, 1934, Serial No. 713,859
1 Claim. (Cl. 150—29)

In a lady's hand bag, a frame comprising a channel member facing outwardly, a U-shaped clamping strip having a width substantially equal to the width of the inner wall of the channel member, and solder interposed between substantially the full width of the confronting surfaces of said clamping strip and the inner wall of said channel member to rigidly attach one leg of said clamping strip to said channel member, the opposite leg of said clamping strip being free.



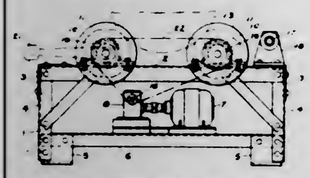
2,004,221
CAR COUPLER

Alfred C. Schmohl, Beaver Falls, and Halfdan N. D. Asper, Koppel, Pa., assignors, by mesne assignments, to Koppel Industrial Car and Equipment Company, McKees Rocks, Pa., a corporation of Pennsylvania

Application April 29, 1931, Serial No. 533,600
11 Claims. (Cl. 213—9)

1. In a car coupler in combination, a housing, a drawhead, said housing comprising a portion for mounting upon a car body and a plurality of supports for the drawhead, said drawhead compris-

ing a buffing face, a butt portion for the reception of the coupling link, and a plurality of lugs on



said butt portion inwardly of the buffing face and adapted to engage the supports on said housing.

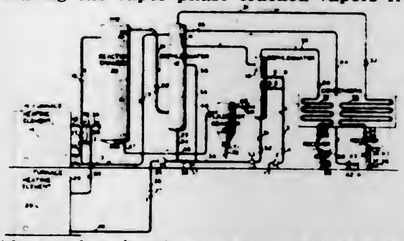
2,004,222

CYLINDRICAL DRUM TUMBLER USED IN THE PROCESS OF MIXING PAINT

Alfred C. Schmohl, Beaver Falls, Pa., assignor to Koppel Industrial Car and Equipment Company, Koppel, Pa., a corporation of Pennsylvania

Application October 26, 1932, Serial No. 639,665
2 Claims. (Cl. 259—81)

1. In a mechanism of the character described, a pair of spaced driving shafts, agitating members secured in spaced relation adjacent each end of each shaft and adapted to support a cylindrical container, each of said agitating members being provided with a generally circular outer surface having radially spaced indentures to impart spaced impacts to the container and each shaft having its agitating members mounted to present a peripheral and indented surface simultaneously to opposite ends of the container and means imparting rotary movement to each shaft.



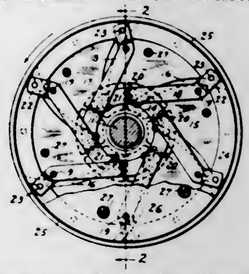
2,004,223

PROCESS FOR THE CONVERSION OR CRACKING OF HIGH BOILING HYDROCARBON OILS INTO LOW BOILING HYDROCARBON OILS

Jean Delattre Seguy, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota

Application July 24, 1930, Serial No. 470,342
Renewed February 8, 1934
5 Claims. (Cl. 196—49)

1. A hydrocarbon oil cracking process which comprises passing the oil in a restricted stream through a primary heating zone and heating the same therein to cracking temperature under sufficient pressure to maintain a substantial portion thereof in the liquid phase, discharging the heated oil into a vapor separating zone and separating the same therein into vapors and unvaporized oil, separately removing the vapors and unvaporized oil and flash distilling the latter by lowering the pressure thereon, dephlegmating the flashed vapors and the vapors removed from said separating zone and combining the resultant reflux condensates, passing the thus combined reflux condensates to a secondary heating zone and cracking the same therein in the vapor phase at higher temperature than that to which the oil is heated in said primary heating zone, and introducing the vapor phase cracked vapors from



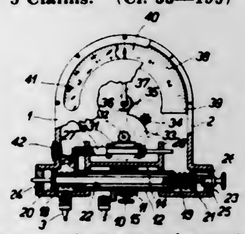
said secondary heating zone into said separating zone.

2,004,224

DRIVING MEANS FOR ELECTRIC GENERATORS

Tj. Silber, Omaha, Nebr., assignor of one-fourth to J. D. Goodrich, one-fourth to D. B. Marshall, and one-fourth to Ray Sorenson, all of Omaha, Nebr.

Application January 15, 1934, Serial No. 706,747
9 Claims. (Cl. 74—242.22)



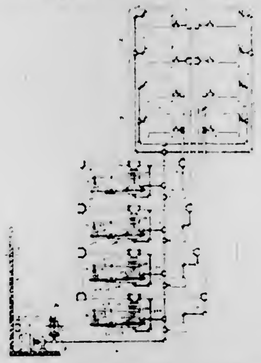
1. In a structure of the class described, a centrifugally expansible pulley comprising a hub-member, parallel disks carried thereby, a series of belt engaging members disposed movably between said disks and normally adjacent to the hub-member, a series of arms connected pivotally with said disks and with the respective belt-engaging members and constraining centrifugal expansive movements of the latter to arcuate paths about the pivotal axes of the respective arms, and master-rings connecting the series of arms and controlling the pivotal movements thereof.

2,004,225

INSTRUMENT FOR TESTING THE PITCH OF THREADS

Adolf Steinle, Jena, Germany, assignor to firm Carl Zeiss, Jena, Germany

Application August 1, 1930, Serial No. 472,450
In Germany August 10, 1929
5 Claims. (Cl. 33—199)



1. An instrument for testing the pitch of threads, comprising a casing, a feeler rigidly connected to the casing, a second feeler connected to and movable relatively to the casing, and a third feeler adjustably connected to the casing and being outside the line connecting the two other feelers, the said second feeler being rotatable about an axis at right angles to a plane determined by the said three feelers.

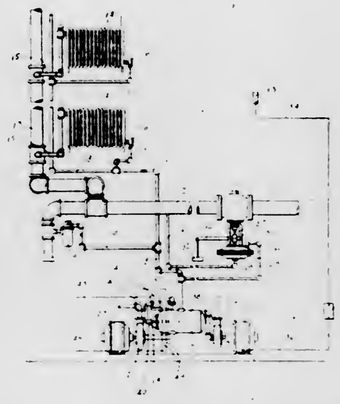
2,004,226

STEAM HEATING SYSTEM

John B. Stickle, Indianapolis, Ind.

Application July 13, 1929, Serial No. 378,128
5 Claims. (Cl. 237—9)

1. A steam heating system including a steam supply main, a radiator, a secondary pipe line for supplying steam from said main to said radiator, a regulating valve interposed between said secondary pipe line and said steam supply main, a steam trap receiving condensate from said radiator, a vacuum pump, a condensate removal pipe line connecting said steam trap and said vacuum pump, connections between said secondary pipe line, said condensate removal pipe line and said regulating valve for operating said regulating valve to maintain a substantially constant pressure difference between said pipe lines, a regulator associated with the condensate removal pipe line and controlling the operation of said pump to maintain a substantially constant condensate removal pressure when heating requirements are relatively severe, and other means operating in response to decrease in heating requirements for controlling said pump to maintain a lower condensate removal pressure.



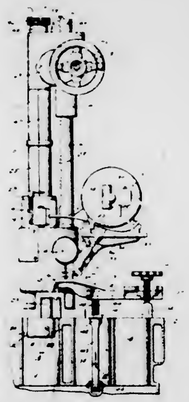
2,004,227

STEAM HEATING APPARATUS

John B. Stickle, Indianapolis, Ind.

Application January 24, 1930, Serial No. 423,007
6 Claims. (Cl. 237—9)

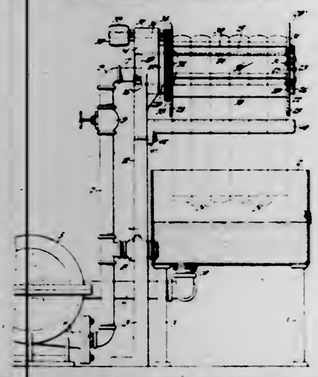
1. A steam heating apparatus including a heat radiator, a steam supply pipe for supplying steam to said radiator, a return line receiving condensate drained from said radiator, a vacuum producing device connected to said return line, a thermostat located in a region whose temperature is indicative of the heating requirements of the system, means controlled by said thermostat and operating said vacuum producing device to increase the vacuum in said return line in response to a temperature increase at said thermostat and to decrease said vacuum in response to a temperature decrease at said thermostat, a valve in said steam supply line, and a differential controller connected to said steam supply pipe and to said return line and operating said valve to throttle steam flow in said steam supply pipe in response to an increase of vacuum in



said return line and to increase said steam flow in response to a decrease of vacuum in said return pipe.

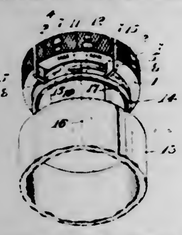
2,004,228

BORING MACHINE



Adolph Storm and Thor Thorsen, Minneapolis, Minn., assignors to Storm Manufacturing Co. Inc., Minneapolis, Minn., a corporation of Minnesota

Application November 7, 1932, Serial No. 641,513
8 Claims. (Cl. 77—2)



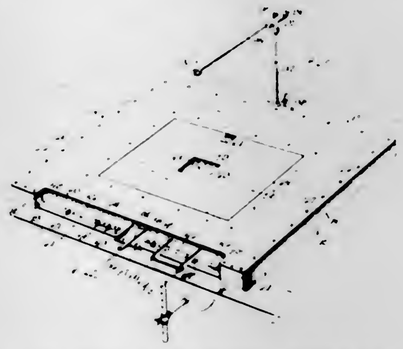
1. In a machine of the class described, a base, a bearing rotatably mounted on the base, an upright boring spindle rotatably mounted in the bearing, means for rotating the bearing, feeding means for moving the bearing downwardly, a contractible and expansible drag ring through which the bearing extends axially, said ring being frictionally clamped onto the bearing, and a member held against axial movement with respect to the bearing and having a tapered seat for the drag ring, the taper of the seat being arranged to contract the drag ring during the feeding movement of the bearing.

2,004,229
APPARATUS FOR PROCESSING TEXTILES AND LIKE MATERIALS
William A. Traver, Providence, R. I., assignor to Franklin Process Company, Providence, R. I., a corporation of Rhode Island
Application April 11, 1933, Serial No. 665,546
11 Claims. (Cl. 8—19)

1. In an apparatus for treating textiles and other materials with fluids, a rotatable reel for supporting the material, said reel having a barrel provided with a series of circumferentially disposed compartments open on the periphery of the barrel, and means for admitting fluid under pressure successively into the compartments one at a time as the reel is rotated.

2,004,230
MEASURING DEVICE
Louis A. Von Till, Brooklyn, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application September 19, 1930, Serial No. 482,946
13 Claims. (Cl. 33—199)

1. In a measuring device of the class described, the combination of an annular member adapted to engage the rim of a container, said annular member having slots therein, a plurality of members adapted to fit in said slots and to engage the threads on a container, and means for rigidly securing said members in said slots.

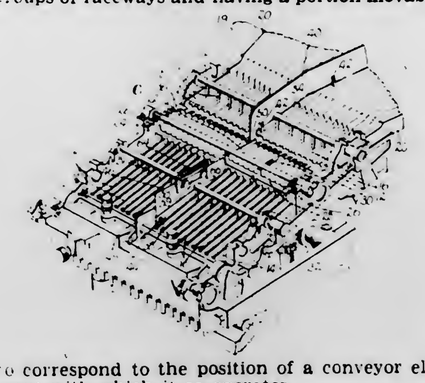


2,004,231
CLIP
George G. Wasson, Kansas City, Mo.
Application May 18, 1934, Serial No. 726,387
1 Claim. (Cl. 24—259)

A clip for fastening one article to another article comprising a U-shaped member including a pair of limbs and a bight part, one limb being formed of two parallel portions spaced apart, and a substantially U-shaped tongue having the extremity of one limb connected to that portion of the bight part of the first mentioned U-shaped member which extends between the two parallel members of said one limb of the first mentioned U-shaped member, the clip being formed of bendable material of slight resiliency with the

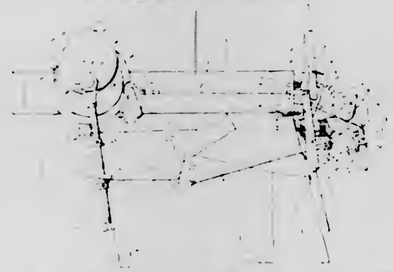
U-shaped member adapted to fit over one article and the U-shaped tongue being adapted to be pressed into clamping engagement with a part of another article to hold said other article between the tongue and the parallel members of said one limb of the U-shaped member.

2,004,232
X-RAY OR RADIOGRAPHIC APPARATUS
Walter A. Weed, Lakeland, Fla.
Application June 14, 1933, Serial No. 675,808
15 Claims. (Cl. 250—34)



1. An X-ray or radiographic apparatus, comprising a supporting structure having a top impervious to X-rays and provided in such top with a window through which the X-rays may pass, a cassette support bodily shiftable within the supporting structure, a handle secured to the cassette support to shift the same and embodying spaced elongated bars, guide devices secured to the supporting structure for slidably receiving the elongated bars, and transverse stop bars spaced longitudinally of the elongated bars and secured thereto and arranged for engagement with the guide devices.

2,004,233
NAIL-DISTRIBUTOR
Charles H. Balcom, Binghamton, N. Y., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 14, 1932, Serial No. 647,237
7 Claims. (Cl. 1—39)



1. In a nail-distributor, a nail-conveyor provided with groups of raceways extending adjacent

to one another, and a partition dividing the groups of raceways and having a portion movable

to correspond to the position of a conveyor element with which it co-operates.

2,004,234
AUTOMATIC DISCHARGE AND WATER CONTROL FOR CONCRETE PAVERS
George E. Blood, Nunda, N. Y., assignor to The Foote Company, Inc., Nunda, N. Y., a corporation of Delaware
Application September 3, 1931, Serial No. 561,073
20 Claims. (Cl. 83—73)

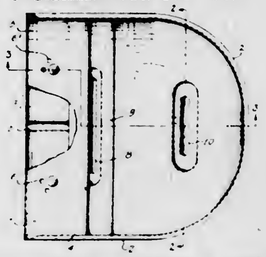
1. An automatic discharge and water control for concrete pavers, including a skip hoist control lever, an oscillatable shaft, and means for temporarily locking said control lever to the said oscillatable shaft, a timing shaft provided with a ratchet thereon, a pawl carried by the said oscillatable shaft, a blank space on said ratchet and the pawl normally resting on said blank space, a skip hoist rod connected to said lever, an arm mounted on said timing shaft, and extending to said rod, a starter pawl on said arm, whereby an initial movement of said lever will raise the ratchet wheel one tooth to be driven by the pawl on said oscillating shaft, to thereby move the timing shaft and the ratchet through one complete revolution.

2,004,235
TOY AIRPLANE
Heinrich Burkhard, Nuremberg, Germany, assignor to Tipp & Co., Nuremberg, Germany
Application March 16, 1934, Serial No. 715,990
In Germany December 13, 1933
9 Claims. (Cl. 46—50)

1. In a toy airplane, a body having wings, a motor, bombs supporting and releasing means under the wings including rods extending longitudinally of the wings and movable into and out of position to effect release of bombs, said rods being operatively connected with the motor and

continuously moved in a releasing direction during operation of the motor.

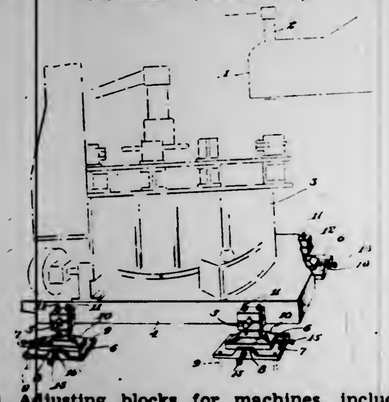
2,004,236
SHOE AND THE MANUFACTURE THEREOF
James Cavanagh, Cohasset, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 21, 1932, Serial No. 648,271
34 Claims. (Cl. 12—142)



1. That improvement in methods of manufacturing shoes which comprises cutting a shoe upper fuller than normal by a width substantially equal to the width of the normal lasting allowance of the upper, and turning the excess material back upon the lasting allowance and securing it thereto before the upper is assembled in a shoe, thereby reinforcing the marginal portion of the shoe upper.

13. A shoe having the overlasted marginal portion of its upper reinforced by material integral with the upper and turned back and secured to the overlasted marginal portion of the upper, thereby reinforcing the upper.

29. A multi-ply shoe upper, one of the layers of said upper being cut fuller than the outer layers and being turned back against the marginal portion of the outer layer of the upper and secured thereto by a plurality of rows of stitching which pass through the other layers of the upper, thereby reinforcing the marginal portion of the upper.

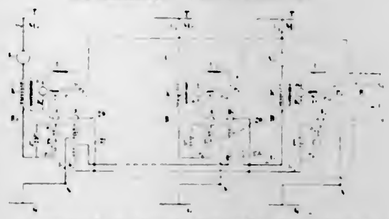


2,004,237
WINDOW SEAT
Joseph A. Costello, Cleveland, Ohio; Thomas A. Costello, executor of said Joseph A. Costello, deceased, assignor to Thomas A. Costello
Application January 2, 1934, Serial No. 705,002
9 Claims. (Cl. 304—24)

1. A window seat comprising a main flanged seat portion adapted to extend across the window

sill and to support the body of the user, and an inner portion adapted to engage about the inner edge of the window sill said inner portion comprising a flanged lower part adapted to be positioned below the sill strip and a plain intermediate part, said portions being integral with each other, and adjustable means associated with said inner portion and extending between said main portion and lower part for varying the effective dimensions of said inner portion so as to adapt the seat for use upon window sills of different dimensions.

2,004,238
LEVELING AND ADJUSTING BLOCK
Lon Fithian, Washington, Pa., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application January 25, 1934, Serial No. 708,303
3 Claims. (Cl. 248—23)



1. Adjusting blocks for machines, including base plates mounted on the floor below the machine, sub-base plates slidably mounted on the base plates, threaded rods carried by and projecting upwardly from the sub-base plates, clamping members loosely mounted on the threaded rods, nuts threaded on the rods, said nuts adapted to clamp the members about an axle or the like on the machine and to vertically adjust the members, and means for laterally adjusting the sub-base plates.

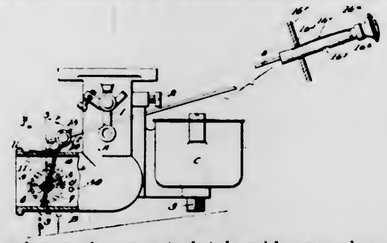
2,004,239
MEANS FOR HOLDING SHOE UPPERS IN LASTED POSITION
George Geddu, deceased, late of Winchester, Mass., by Isabelle W. Geddu, executrix, Winchester, Mass., assignor to The Littleway Process Company, Boston, Mass., a company of Massachusetts
Application May 17, 1932, Serial No. 611,900
37 Claims. (Cl. 12—107)

1. A device for holding an upper in lasted relation to a sole on a last, said device comprising an upper-holding portion formed to engage the upper over the margin of the sole, and another portion arranged to fulcrum on the sole to serve as a lever for pressing said upper-holding portion upon the upper toward the bottom of the last, said other portion being constructed for attachment to the shoe by fastening means penetrating the sole.

2,004,240
ELECTRIC TRACTION
Louis René Eugène Gratzmüller, Paris, France
Application September 18, 1931, Serial No. 563,622
In France September 27, 1930
24 Claims. (Cl. 172—179)

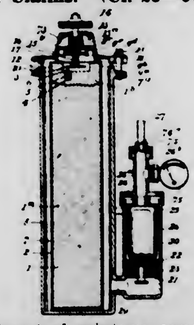
1. A method of simultaneously operating a plurality of compound dynamos in parallel with each other and a base compound dynamo, comprising applying to a field circuit of each of said compound dynamos a potential generated by a differential field through which the currents flowing through the respective dynamo armatures pass.

2,004,241
EDUCATIONAL MAP
Eugene B. Hamilton, Boston, Mass.
Application February 16, 1934, Serial No. 711,586
3 Claims. (Cl. 35—42)



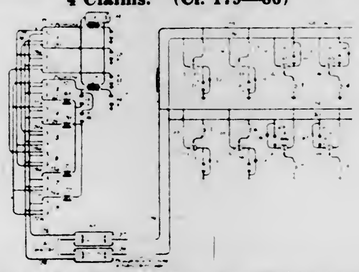
1. A device of the class described comprising a base having a map outlined thereon, protuberances rising from the map at spaced points, a sheet adapted to be mounted on the map and having openings there'n accommodating the protuberances, and a plurality of complemental, removable sections adapted to be positioned on the sheet, said sections having openings therein for the reception of the protuberances.

2,004,242
CARBURETOR
Frank H. Heitger, Flint, Mich.; Mattie G. Heitger, Flint, Mich., administratrix of said Frank H. Heitger, deceased, assignor to Bendix Products Corporation, South Bend, Ind., a corporation of Indiana
Application March 3, 1928, Serial No. 258,741
8 Claims. (Cl. 261—39)



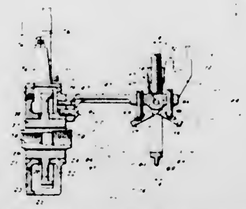
1. In a carburetor, an air intake, a valve arranged in the intake and so mounted as to open by suction, means comprising a thermostatic spring element adapted to oppose the opening of

the valve by suction, manual means cooperating with said thermostatic spring element to operate



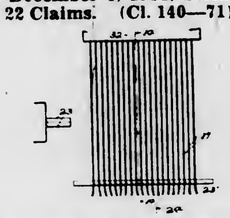
the valve, and means to latch said manual means in adjusted position.

2,004,243
METHOD OF AND MEANS FOR OPERATING BREATHING APPARATUS
Albert Hloch, Lichterfelde, near Berlin, Germany, assignor, by mesne assignments, to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a corporation of Germany
Application January 11, 1929, Serial No. 331,815
In Germany January 17, 1928
11 Claims. (Cl. 23—6)



3. A solid chemical mixture capable of giving off oxygen especially for breathing or inhaling purposes in an exothermic reaction which after initiation by application of heat progresses under the influence of the reaction heat, said mixture being combined with an alkaline hydroxide as heat absorbing substance.

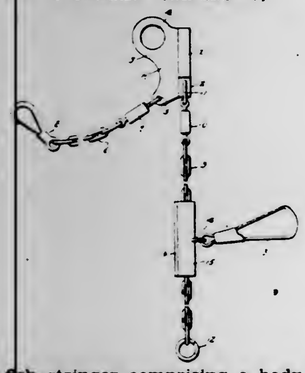
2,004,244
SELECTIVE SIGNALING SYSTEM
William Henry Towne Holden, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application December 14, 1934, Serial No. 757,517
4 Claims. (Cl. 179—86)



1. In a signaling system, the combination of a plurality of subscribers' stations, a ringer at each subscriber's station, a three-electrode gas-filled tube at each subscriber's station, each gas-filled tube having two electrodes which form a control gap and an anode which together with one of the electrodes forms a main gap in series with which the corresponding ringer is connected, a loop across which all of the subscribers' stations are connected, and means responsive to current received over said loop for simultaneously discharging the control gap and the main gap of the gas-filled tube at a selected subscriber's station to the exclusion of all other subscribers' stations so as to operate the ringer at said selected subscriber's station.

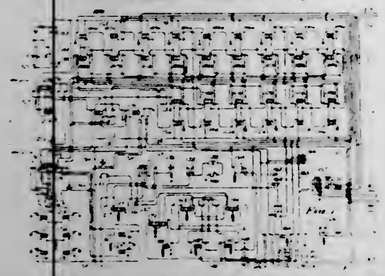
2,004,245
FREEZER POWER ATTACHMENT
Ivar Jeppsson, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 13, 1933, Serial No. 689,203
16 Claims. (Cl. 74—16)

1. A power attachment for ice cream freezers having, in combination, a reduction gear provided with an axial opening for the reception of the driving shaft of said freezer, a spindle for driving said gear, means for carrying the gear and spindle on a stationary part of the freezer, and means for positioning said last mentioned means to align the axial opening with the driving shaft.



2,004,246
METHOD OF PRODUCING RADIO TUBE GRIDS
Henry Kershaw, Newark, N. J., assignor to Soverign Machinery Company, Newark, N. J., a corporation of New Jersey
Application December 6, 1934, Serial No. 756,354
22 Claims. (Cl. 140—71)

1. In a method of producing radio tube grids, the steps of supporting spaced sets of spaced grid wires in such a manner that the corresponding wires in the sets are in substantial alignment, moving the sets of wires longitudinally as a unit, holding the side rods against movement in a



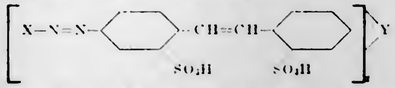
position between the sets of grid wires, and attaching the sets of grid wires to the opposite sides of the side rods.

2,004,247
FISH STRINGER
Benjamin V. McCaul, Fargo, N. Dak.
Application August 6, 1934, Serial No. 738,748
2 Claims. (Cl. 224—7)

1. A fish stringer comprising a body member having a handle part at one end adjacent one side, a chain connected to the other end adjacent the same side, the edge of the other side being enlarged, a second chain connected to the lower end of the body, a tubular member of split construction adapted to be slid over the enlargement and the second chain, means for attaching a fish to the tubular member, a detachable stop member at the lower end of the second chain, and means for connecting the first chain to a boat or the like.

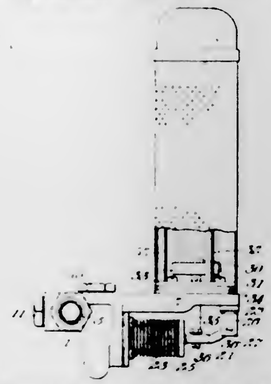
2,004,248
TIME ANNOUNCING SYSTEM
Charles Gideon Miller, Montclair, and Allen Rudolf Honsrden, Fanwood, N. J., assignors to American Telephone and Telegraph Company, a corporation of New York
Application December 22, 1933, Serial No. 703,654
14 Claims. (Cl. 179—6)

1. A system of relays including a plurality of relays adapted to be set in correspondence to elements of time, a source of isochronous pulses, connections from said source to said relays to progressively operate the relays, whereby the setting of the relays will periodically correspond to the time of day, a second system of relays similar in character to said first system of relays, and means for electrically comparing the settings of the first system with those of the second system.



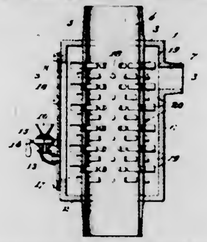
2,004,249
HAIR CURLING DEVICE
Rocco Perzella, Washington, D. C.
Application January 16, 1934, Serial No. 706,867
13 Claims. (Cl. 132—33)

1. A hair curling mandrel comprising a tubular sheath having a slot therein, a cam positioned wholly within the sheath adjacent the slot and rotatable with relation thereto and cooperating with the edge of the slot in the sheath to form hair clamping means.



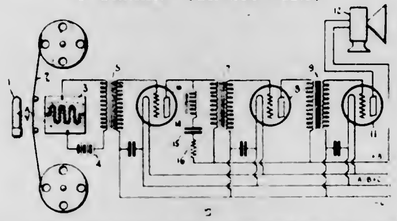
2,004,250
AZO-DYESTUFFS, AND PROCESS OF MAKING SAME
Hans Schindheim and Richard Gast, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application February 21, 1933, Serial No. 657,923. In Germany February 29, 1932
10 Claims. (Cl. 260—69)

1. The azo-dyestuffs of the general formula



wherein X stands for the radical of a coupling component free from azo groups in which an hydroxy group may be alkylated and Y stands for a bivalent group containing two nitrogen atoms, said dyestuffs being distinguished by an excellent affinity for vegetable fiber.

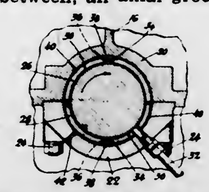
2,004,251
HUMIDITY CONTROLLED VALVE
Jerry H. Simpson, Winston-Salem, N. C., assignor to The Bahnson Company, Winston-Salem, N. C., a corporation of North Carolina
Application August 30, 1932, Serial No. 631,089
10 Claims. (Cl. 236—44)



1. In a humidity control valve, a valve casing having a flexible wall portion, a valve therein, a bracket extending laterally of said valve casing, a hygrostatic control element mounted on said bracket, and a lever connected to said control element and pivotally supported from said bracket, said lever extending through said flexible wall portion to actuate said valve.

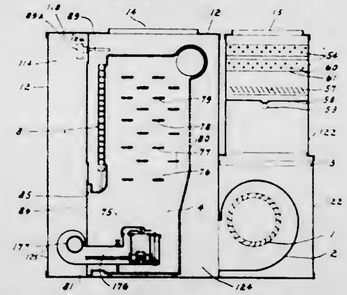
2,004,252
FUEL CONDITIONING DEVICE
Einar N. Sorensen, Fernandina, Fla.
Application March 8, 1935, Serial No. 10,065
6 Claims. (Cl. 257—232)

1. A conditioning device for distillates comprising a housing equipped with means for connecting the same to the intake manifold of an engine and to a carburetor, an exhaust gas duct extending therethrough, means on said duct for increasing the radiation thereof, and said housing being provided with removable sides, as and for the purpose specified.



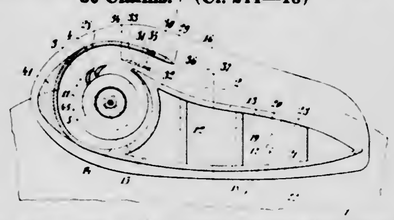
2,004,253
SIGNAL TRANSLATING AND CORRECTING SYSTEM
Homer G. Tasker, Douglaston, Long Island, N. Y., assignor to United Research Corporation, Long Island City, N. Y., a corporation of Delaware
Application April 20, 1932, Serial No. 606,337
9 Claims. (Cl. 250—41.5)

1. In combination, a light responsive cell, means for attenuating the low frequency response thereof to a value appropriate to the higher frequency response thereof, and auxiliary means for attenuating the middle frequency response to correspond to the high and low frequency response, said auxiliary means comprising a condenser, a reactance and a resistance connected in series.



2,004,254
CRANKSHAFT BEARING
Alex Taub, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application August 12, 1933, Serial No. 684,777
2 Claims. (Cl. 308—122)

2. A journal bearing comprising a bearing back and a bearing liner, said liner being provided on the inner face thereof with a circumferential oil groove and with an axial oil distributing groove communicating therewith, means for supplying oil to the circumferential groove, said liner and back being formed to provide a circumferential oil groove therebetween, an axial groove communi-

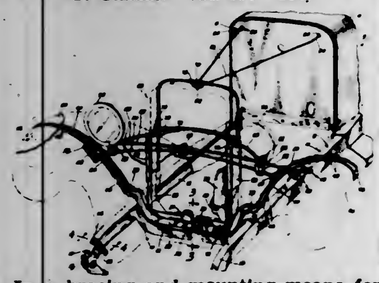


cating therewith, passages connecting the said axial grooves, and an oil discharge port leading from said last-named circumferential oil groove.

2,004,255
AIR CONDITIONING UNIT
Reuben N. Trane, La Crosse, Wis.
Application May 15, 1933, Serial No. 671,034
8 Claims. (Cl. 257—9)

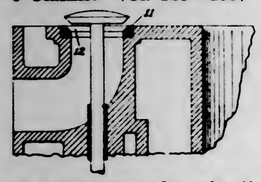
1. In an air conditioning unit, the combination of a casing having an air inlet and outlet, a blower producing a flow of air through said casing, a heat exchanger within said casing in the path of said air, a source of heat within said exchanger, a humidifier mounted on said exchanger, an air filter and a cooling coil comprising tubes with fins mounted thereon within said casing in the path of said air, a source of cold connected to said coil and means below said fins to catch the water of condensation on said fins, and means to control the supply of heat to said exchanger and of cold to said cooling coil.

2,004,256
AEROFOIL
Serge Trey and William Howard, College Point, and Alexander Chessin, Brooklyn, N. Y.
Application November 24, 1930, Serial No. 497,708
30 Claims. (Cl. 244—18)



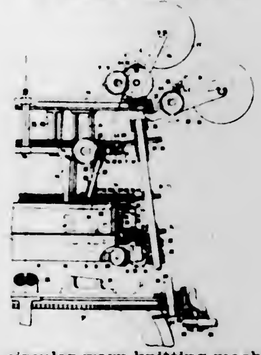
27. An aerofoil comprising means for creating a stream of air at the leading edge thereof, said air being admitted at the outer ends of said leading edge, and a hood over said leading edge for directing said stream over the top surface of said aerofoil.

2,004,257
PURIFICATION OF WATER BY ZEOLITES
Frederick Tschirner, Medford, N. J., assignor to Zeolite Chemical Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application April 7, 1931, Serial No. 528,463
11 Claims. (Cl. 210—24)



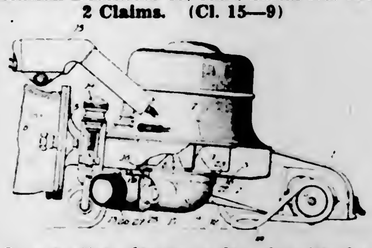
1. The method of treating a zeolite to improve it for conjointly removing hardness and colloids from water which comprises, indurating it by subjecting it to the action of a colloid to resist the action of acids and acid salts, treating it with a coagulant to cause the coagulant to be adsorbed thereon to render the bed of zeolite capable of removing colloids from the water, subsequently regenerating the zeolite to restore its softening and colloid-removing capacities as they become diminished or exhausted and treating it with potassium persulphate to remove excess deposits of colloids.

2,004,258
RADIATOR AND FRONT FENDER SUPPORT
Ronald J. Waterbury, Pleasant Ridge, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application December 7, 1931, Serial No. 579,395
17 Claims. (Cl. 280—152)



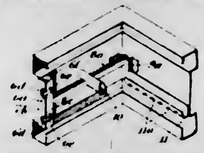
1. In a bracing and mounting means for the headlamps, radiator and front fenders of a vehicle having a chassis frame, a cross member between the side bars of the frame, a brace secured at its middle to said cross member, brace arms secured to the ends of said brace and extending under the fenders and secured thereto, a cross rod extending from fender to fender and secured to the fender brace arms, a clamp secured to the brace rod, means extending from the clamp to the radiator shell to brace the radiator, and a headlamp secured to the clamp.

2,004,259
VALVE SEAT
Joseph A. Weiger, Indianapolis, Ind., assignor to P. R. Mallory & Co., Incorporated, Indianapolis, Ind., a corporation of Indiana
Application October 22, 1931, Serial No. 570,339
6 Claims. (Cl. 123—188)



1. A valve seat for internal combustion engines, formed of a cemented metallic body comprising approximately four-fifths of a refractory metallic element chosen from the group and subgroup of Mendelejeff's periodic table of elements which includes tungsten, a metal of a lower melting point incorporated therewith, and a hardening agent present in an amount less than the combining weight thereof with the quantity of tungsten present.

2,004,260
KNITTING MACHINE
Sidney Arthur Welch, Albert Fairholme Guyler, John Thomas Ashby, and William Henry Boaler, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
Application February 9, 1934, Serial No. 710,434
In Great Britain February 20, 1933
5 Claims. (Cl. 66—8)

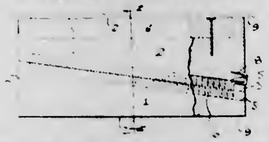


1. In a circular warp knitting machine, a circle of needles, a circle of sinkers adapted to move radially between said needles, guides for controlling warp threads knitted by said needles, and means for imparting to each of said guides a motion across the circle of needles, such motion being inclined to the radial motion of a sinker so as to lead a thread from a needle across the path of such sinker.

2,004,261
SUCTION CLEANER
Harry B. White, Canton, Ohio, assignor to The Hoover Company, North Canton, Ohio, a corporation of Ohio
Application December 11, 1933, Serial No. 701,816
2 Claims. (Cl. 15—9)

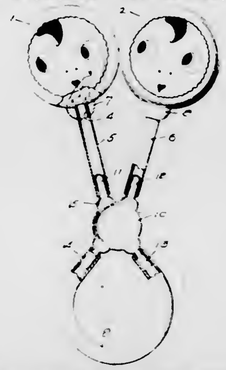
1. In a suction cleaner, a fan chamber having an eye, a dusting tool converter having a body formed with an opening and a conduit, said body being removably seated on said fan chamber with said opening alined with said eye, cooperating means on said chamber and body to aline said converter with said conduit extended in a particular direction, a resilient lug on said body at said opening overhanging the interior face of said fan chamber adjacent said eye and functioning to draw said body to said chamber, and cooperating latch means on said chamber and body spaced from said overhanging lug to retain said parts in operative relationship.

2,004,262
CURTAIN SUPPORTING ARRANGEMENT
Erwin R. Widman, Little Neck, N. Y.
Application November 13, 1933, Serial No. 697,748
10 Claims. (Cl. 156—13)



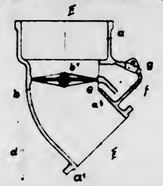
1. The combination with a cornice comprising a front section having end sections extending at right angles with respect thereto, of vertically disposed brackets terminally secured to the respective end sections, each of said brackets having faces meeting to form an angle, said faces being provided, respectively, with slots which merge into each other to form a passage for a shank-like supporting member.

2,004,263
COMPENSATOR
Clayton E. Wyrick, Wyandotte, Mich., assignor to Wyrick Engineering Company, Detroit, Mich., a corporation of Michigan
Application April 18, 1934, Serial No. 721,238
12 Claims. (Cl. 85—50)



1. A clearance regulator comprising two parts relatively movable with respect to a third part to take up clearance, means urging said two parts and said third part in a clearance take-up movement, and means including a ribbed surface formed on one of said members and a rib engaging pin carried by another of said members for automatically maintaining maximum and minimum limits of clearance established by said regulator.

2,004,264
CLEARANCE REGULATOR
Clayton E. Wyrick, Wyandotte, Mich., assignor to Wyrick Engineering Company, Detroit, Mich., a corporation of Michigan
Original application November 18, 1929, Serial No. 408,001. Patent No. 1,966,780, dated July 17, 1934. Divided and this application April 18, 1934, Serial No. 721,239
8 Claims. (Cl. 254—104)

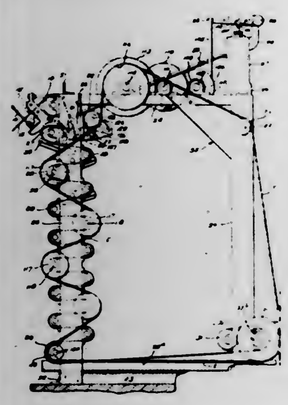


5. A compensator for wear and lost motion comprising a pair of blocks having adjacent inclined planar surfaces, and a resilient element co-acting with said members urging them directly apart and also urging them relatively along said faces in a direction to increase their joint thickness.

2,004,265
FLEXIBLE HANDLE FOR RATTLES
Arthur Zadek and Irwin E. Cohn, New York, N. Y.
Application December 1, 1934, Serial No. 755,545
2 Claims. (Cl. 46—46)

1. A rattle comprising a plurality of heads, a pin projecting from each head, a flexible tube held on each pin, a hollow ball-shaped union having nipples projecting from its upper half for the free ends of the tubes, another flexible tube, and two nipples projecting from the lower half of the union for the ends of the last mentioned flexible tubing.

2,004,266
LIQUID SEAL FOR COLLECTING MAINS OF DISTILLATION OVENS OR THE LIKE
Wilhelm Beimann, Bochum, Germany
Application October 11, 1933, Serial No. 693,109
In Germany July 2, 1932
6 Claims. (Cl. 137—69)

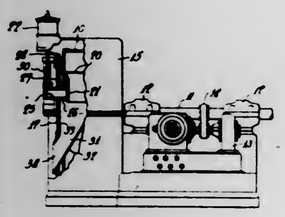


1. In apparatus of the character described, the combination with a pipe adapted to connect an ascension pipe to a gas collecting main and formed with a valve controlled passage for the downflow of gas and adapted to have liquid sprayed into its portion above said passage, and with a liquid sealed bypass about said passage connecting portions of said pipe respectively above and below the valve in the closed position of the latter and forming a liquid holding trap preventing gas flow therethrough, of a throttle valve in said pipe adapted when in its closed position to provide a leaky closure for said passage, whereby when more liquid is sprayed onto the said valve when in its closed position than can leak through said passage, the excess liquid may overflow through said bypass.

2,004,267
METHOD AND APPARATUS FOR IMPREGNATING BRAKE LININGS
Carl P. Brockway, Ridgewood, N. J., assignor to World Bestos Corporation, Paterson, N. J., a corporation of Delaware
Application December 29, 1930, Serial No. 505,253
8 Claims. (Cl. 91—32)

1. In apparatus of the class described, the combination of a trough, means for maintaining

liquid at a predetermined level in said trough, and means for guiding a continuous strip through said trough including a treatment roller mounted for free rotation with its lower part beneath said predetermined level and having in-



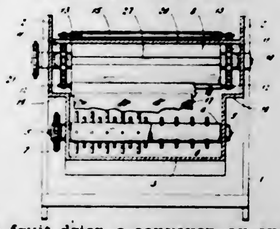
tersecting passages at its surface to provide communication between the body of liquid in the trough and the inner surface of the strip as it passes around the bottom of the roller, plural, approximately flat top, friction surfaces lying between said intersections.

2,004,268

CENTRIFUGAL MACHINE

Walter Buddeberg, Zurich, Switzerland, assignor to Albert T. Otto & Sons, New York, N. Y., a corporation of New York

Application December 1, 1933, Serial No. 700,383
In Germany August 1, 1932
4 Claims. (Cl. 233—46)



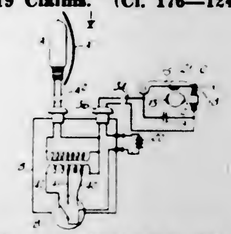
3. A centrifugal machine for separating solids from liquids, including a horizontal shaft, a separating drum mounted in overhanging relationship at one end of said shaft and open at the end thereof furthest from said shaft, a housing for said separating drum, and having an opening adjacent to the open end of said drum, a hinged door for said opening, a chute extending into the interior of said drum, a scraper connected to the upper end of said chute, guides connected to said door and along which said chute may move vertically, a fluid actuated motor, and connections between said motor and said chute for reciprocating said chute.

2,004,269

FRUIT DRIER

Fred S. Colvin, Yakima, and John V. Rogers, Wenatchee, Wash., assignors to Food Machinery Corporation, San Jose, Calif., a corporation of Delaware

Original application September 3, 1929, Serial No. 390,030. Divided and this application February 3, 1932, Serial No. 590,582
3 Claims. (Cl. 34—1)



1. In a fruit drier, a conveyor, an endless carrier means arranged above and longitudinally of the conveyor, a rod secured transversely of said carrier means, a dependent wiping member secured to said rod and adapted to contact with pieces of fruit on the conveyor, and a pair of wringer rollers between which the wiping member passes, one of said wringer rollers being provided with a corrugation for the reception of said rod.

2,004,270

STROBOSCOPIC APPARATUS AND METHOD

Peter Davey, Mount Vernon, N. Y., assignor to Vibroscope, Inc., New York, N. Y., a corporation of New York

Original application January 26, 1926, Serial No. 83,984. Divided and this application July 29, 1931, Serial No. 553,775
19 Claims. (Cl. 176—124)

1. In stroboscopic apparatus, the combination of a flash-illuminator, an induction apparatus for supplying lighting currents thereto, contacts to open and close the primary circuit of said induction apparatus to produce lighting currents, and means to change the time constant of said primary circuit.

2,004,271

PRODUCTION OF ARTIFICIAL FILAMENTS, THREADS, RIBBONS, FILMS, AND THE LIKE

Henry Dreyfus, London, England

No Drawing. Application October 28, 1930, Serial No. 491,816. In Great Britain November 5, 1929
10 Claims. (Cl. 18—54)

1. Process for the manufacture of filaments, threads, ribbons, films or other products from viscose, comprising spinning viscose into an aqueous coagulating bath containing a thiocyanate.

2,004,272

PRODUCTION OF ARTIFICIAL PRODUCTS

Henry Dreyfus, London, England

Application July 22, 1931, Serial No. 552,545
In Great Britain July 30, 1930
10 Claims. (Cl. 18—54)

1. Process for the manufacture of filaments, yarns, threads, ribbons, films and like extruded products from aqueous cellulosic solutions, comprising extruding the said solutions into liquids which are water-repellent, continuously removing the products from said liquid whilst they are still liquid and thereafter setting the said products.

2,004,273

PRODUCTION OF CELLULOSE DERIVATIVE PRODUCTS

Henry Dreyfus, London, England

No Drawing. Application July 22, 1931, Serial No. 552,546. In Great Britain July 30, 1930
8 Claims. (Cl. 18—54)

1. Process for the manufacture of filaments, yarns, threads, ribbons, films and like products from solutions of organic derivatives of cellulose, comprising extruding said solutions into a liquid which is a non-solvent for the organic derivative of cellulose and is substantially a non-solvent for the solvent in the organic derivative of cellulose solution, and then leading the products from said liquid whilst they are still substantially liquid, into a setting medium.

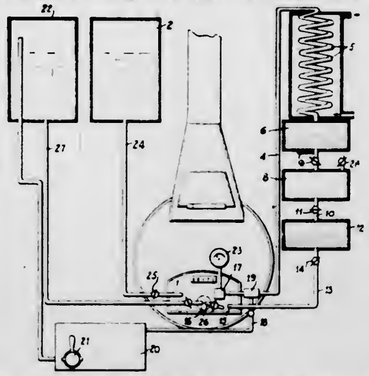
2,004,274

MANUFACTURE OR TREATMENT OF ARTIFICIAL MATERIALS

Henry Dreyfus, London, England

Application May 4, 1932, Serial No. 609,253
In Great Britain June 4, 1931
2 Claims. (Cl. 18—54)

1. Process of packaging set cellulose acetate yarn in a condition liable to produce contraction of the yarn after the same is wound on the package which comprises applying a liquid material to the yarn to assist said contraction and winding the yarn on a package support rotated at a peripheral speed slightly lower than the delivery of the yarn to the package, so that the yarn is wound on the package in such a manner that the yarn when contracted on the package is no longer slack and any tendency to strain the yarn is reduced.



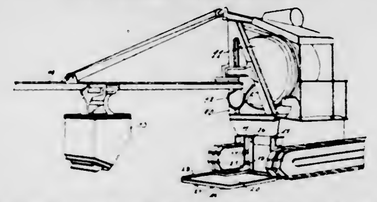
2,004,275

APPARATUS FOR BURNING HEAVY FUEL OILS

Enrique Juan Faccini and José Capra, Buenos Aires, Argentina

Application July 21, 1933, Serial No. 681,436
5 Claims. (Cl. 158—53)

1. Oil burning apparatus comprising a burner, a distillation coil disposed to be subjected to the heat of the burner, an oil supply line connected to one end of said coil, a condensing coil connected at one end to the other end of said distillation coil, said condensing coil being located above said distillation coil, means in the connection between said distillation coil and said condensing coil for the collection of unvaporized oil, a storage vessel connected to the other end of said condensing coil and located below the



latter coil and above the burner, a vaporizing coil connected at one end with said storage vessel and disposed to be subjected to the heat of the burner, and a connection between the other end of said vaporizing coil and the burner.

2,004,276

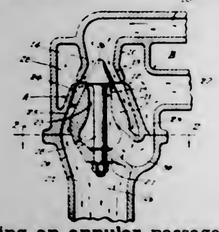
PAN FOR CEMENT MIXERS

Cesare Fanfarillo, Glassboro, N. J.

Application August 11, 1932, Serial No. 628,337
5 Claims. (Cl. 83—73)

1. In combination with a cement mixing machine including a delivery spout leading from a mixing drum and a conveyor bucket to be filled from said spout when the former is disposed beneath the latter, hangers attached to the machine and including inturned flanges through which suitable fastening means pass for securing the hangers in place and further provided with outwardly projecting flanges with rows of vertically spaced holes adjacent their lower ends, a pan having a wide body portion and a restricted neck for projection between the outwardly projecting flanges of the hangers, means passing through suitable portions of the rear end of the pan and through any of the holes in the outwardly projecting flanges for hingedly connecting the pan in any vertical adjustment to the hangers and set screws having threaded connection with the inturned flanges of the hangers and engaging the rear portion of the pan below the hinge points for tilting the pan into any desired position.

2,004,277



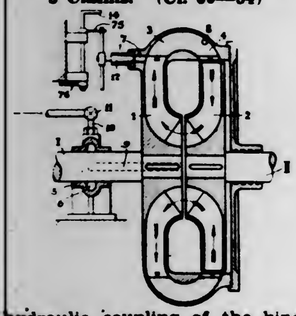
EJECTOR

James O. Fink, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia

Application September 12, 1932, Serial No. 632,647
2 Claims. (Cl. 103—262)

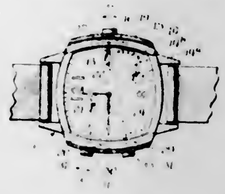
1. In an ejector, a nozzle having cooperating primary and secondary portions, said nozzle

having an inlet for a secondary fluid intermediate said nozzle portions, a casing about said secondary fluid inlet forming a chamber for a secondary fluid open to said inlet, a conduit spaced within said secondary nozzle portion, said conduit communicating with said chamber and discharging secondary fluid to said nozzle adjacent said inlet, said secondary nozzle



portion having an annular passage around said conduit extending generally axially of said primary nozzle portion; a nozzle projection within the discharge end of said primary nozzle portion, said projection providing an annular passage within said primary nozzle portion, and a stem carrying said projection and extending within said conduit.

2,004,278
BRAKE SHOE
Edward C. Folsom, Toledo, Ohio, assignor, by mesne assignments, to The American Brake Shoe and Foundry Company
Application March 17, 1934, Serial No. 716,086
7 Claims. (Cl. 188—258)

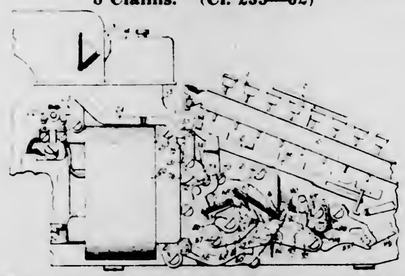


1. A brake shoe comprising a body, a sheet metal back, and a mounting lug, said back having a longitudinally extending depression for the major extent thereof, said depression extending past said lug and away from said lug in opposite directions, said depression having anchor openings through which the body protrudes to overlap the edges of said opening.

2,004,279
FLUID DRIVEN AND DRIVING APPARATUS
Hermann Föttinger, Berlin-Wilmersdorf, Germany
Application January 26, 1933, Serial No. 653,742
In Germany January 26, 1932
3 Claims. (Cl. 60—54)

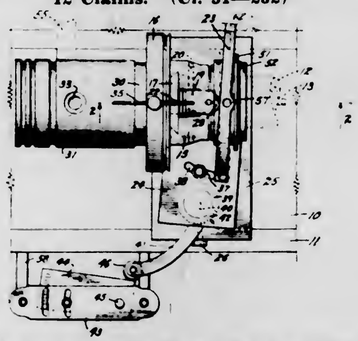
1. A hydraulic coupling of the kinetic type, including a pair of annular coaxial relatively rotatable members, one serving as a liquid driving member and the other as a liquid driven member, said members having passages for the circulation of a liquid therethrough in a closed working circuit, one of said members having the radially outermost portion of its passage substantially U-shaped, means for controlling at will the admission of liquid to said circuit, independent means for controlling at will the escape of liquid from said circuit, whereby transmission of power through the kinetic energy of the liquid may be varied in accordance with the amount of liquid in said circuit, and means to prevent air circulating through said U-shaped passage upon the discharge of operating fluid from said coupling.

2,004,280
WATERPROOF WATCH
William C. Handley, Chicago, Ill.
Application May 29, 1933, Serial No. 673,439
8 Claims. (Cl. 58—90)



2. In a watch having a casing with the parts thereof fitted together to form water-proof joints, a stem projecting from within the casing and reciprocable axially to wind the watch and a collapsible member connected to said stem and to the casing around the stem to form a water-proof seal preventing moisture from entering the casing around the stem.

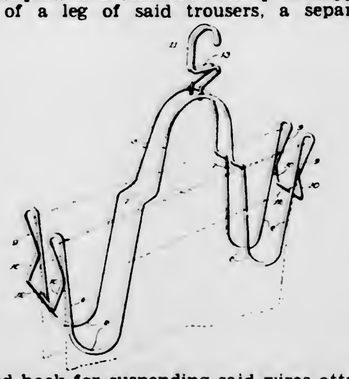
2,004,281
INJECTOR
Erich Henkel, Calumet City, Ill., Arthur Williams, Hammond, Ind., and Rudolf M. Ostermann, Kenilworth, Ill., assignors to The Superheater Company, New York, N. Y.
Application August 20, 1932, Serial No. 629,622
14 Claims. (Cl. 103—271)



1. In an injector, means providing a main steam nozzle, means providing a water nozzle of variable area arranged to deliver water for condensing steam from said main nozzle to establish a jet and means providing a secondary steam nozzle for supplying additional steam to be condensed by the jet of water and condensate established by the main nozzle and the water nozzle, said last mentioned means comprising a movable nozzle member for varying the area of said secondary nozzle in accordance with variations in the area of said water nozzle.

2,004,282
DRIVING MECHANISM FOR CALCULATING MACHINES
Allen A. Horton, Plymouth, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan
Application March 19, 1930, Serial No. 436,931
8 Claims. (Cl. 235—62)

8. In combination, a calculating machine subject to varying loads, an electric motor for driving the same, driving connections disposed between said motor and said calculating machine and including driving and driven elements and a yieldable driving member therebetween for transmitting the drive, and automatic means actuated upon yielding movements of said yielding member in response to variations in resistance to operation of said machine by said motor, for controlling said motor automatically to maintain a substantially constant effective driving effort on said calculating machine.

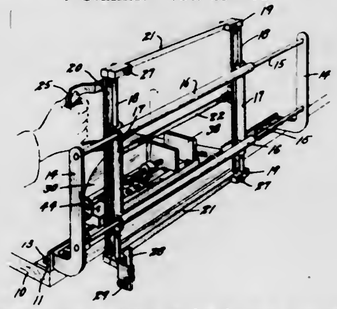


2,004,283
FIXTURE FOR TURNING OR GRINDING OVALS
Arthur J. Hurt, Denver, Colo.
Application February 27, 1934, Serial No. 713,074
12 Claims. (Cl. 51—232)

1. A combination with a rotary spindle of a grinding machine, of a fixture attached to said spindle; a head on said fixture for holding work to be ground; and means for moving said head laterally of said fixture during each revolution of said spindle; and means for causing said means for moving to have a relatively greater effect during a portion of the revolution of said spindle.

2,004,284
GARMENT HANGER
Carl Willard Kellerth, Rockford, Ill.
Application April 6, 1932, Serial No. 603,557
6 Claims. (Cl. 223—67)

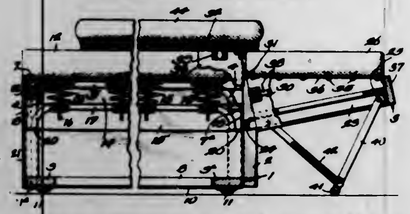
1. A hanger for trousers comprising a pair of similar W-shaped wires arranged side-by-side in spaced positions, downwardly opening spring clips formed from opposite ends of each wire and adapted to receive and clamp the opposite sides of a leg of said trousers, a separately



formed hook for suspending said wires attached to the wires intermediate their ends and forming a rigid connection between the two maintaining them in spaced relation.

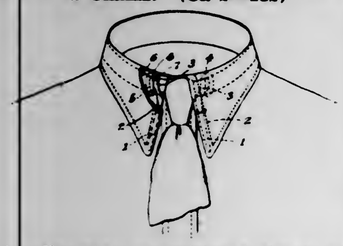
2,004,285
PAINT CAN ACCESSORY
James W. Kent, Brooklyn, and Elmer P. Peters, Richmond Hill, N. Y.
Application July 15, 1933, Serial No. 680,566
2 Claims. (Cl. 220—90)

1. An article as described comprising a bar adapted to be placed diametrically on top of an open can above the capacity contents of the can, said can having a bail secured in bail bearings, and means at the ends of asid bar adapted to engage the said bail bearings for securing the bar to the can.



2,004,286
HACK SAW FRAME AND GUIDE
William H. Ketner, Broomfield, Colo.
Application April 3, 1934, Serial No. 718,808
7 Claims. (Cl. 29—75)

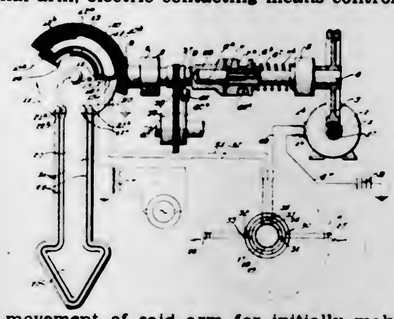
1. Means for guiding a hack saw comprising: a pair of horizontal guide rods; means for supporting said rods in a vertical plane; horizontal tubular members slidably mounted on said rods; vertical tubular members secured to said horizontal tubular members; vertical guide rods slid-



ably mounted in said tubular members; a saw frame for supporting said hack saw; and means for securing said saw frame to said vertical guide rods.

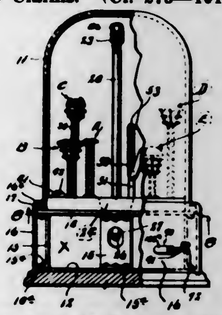
2,004,287
FURNITURE
Jules P. Kiesecker, New York, N. Y.
Application July 7, 1934, Serial No. 734,100
10 Claims. (Cl. 5—37)

1. A studio couch including a boxlike seat having a metallic frame and a cushion mattress resting upon springs supported upon said frame and an expansible back hinged to said frame having a cushion mattress secured along the upper edge of one of the expansible members in combination with means for supporting the upper surfaces of the said cushion mattresses in the same horizontal plane upon movement of the back in one direction and means upon movement of the back in the opposite direction to carry the end of the back mattress over the adjacent end of the seat mattress to overlap the top thereof and support the back mattress at an angle thereto with the back in a vertical position, wherein one member of the expansible back is hinged to the rear of the seat, below the top of the front, and wherein the other member of the expansible back is provided with angular sides supporting the back mattress.



2,004,288
COLLAR-STAY
Harold T. Krick, Hazleton, Pa.
Application September 2, 1933, Serial No. 687,926
2 Claims. (Cl. 2—132)

1. A collar-stay comprising a shank adapted to be attached to a collar point, said stay having an offset hooked portion adapted to engage the upper edge only of the tie band, and to lie between said tie band and the collar band, said offset being sufficient to accommodate the knot of the necktie, said hooked portion having a curved upper edge, all parts of the said collar-stay when not engaged to said necktie band normally lying substantially in the same plane.

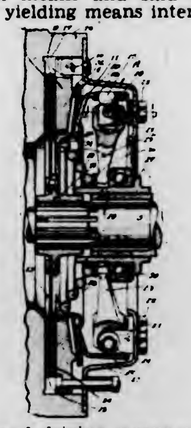


2,004,289
VEHICLE DIRECTION SIGNAL
Arcadio A. Martinez, San Diego, Calif.
Application February 4, 1930, Serial No. 425,746
2 Claims. (Cl. 177—327)

2. In a signal arm operating mechanism, a motor, electric connections therefor, a shaft, worm and gear means connecting said motor to said shaft, second shaft, clutch means connecting said shafts, a pivotally mounted signal arm means connecting said second shaft to said signal arm, electric contacting means controlled

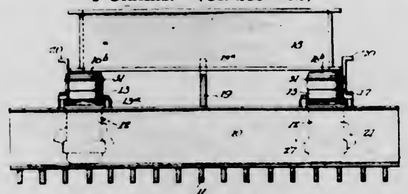
by movement of said arm for initially making and subsequently breaking the electrical connections of said motor on predetermined movement of said signal, said worm and gear means forming a frictional retaining means for holding said arm in adjusted position.

2,004,290
AMUSEMENT DEVICE
Paul J. McCullough and Alexander H. Sullivan, St. Louis County, Mo.
Application December 16, 1932, Serial No. 647,518
10 Claims. (Cl. 273—101)



1. An amusement device comprising an anvil having an impact face, said anvil being mounted for adjustment so as to vary the inclination of said impact face, a plurality of steel balls, a plurality of ball receivers spaced suitably from said anvil, and means for discharging said steel balls against said anvil from a point spaced therefrom whereby said balls are caused to rebound, the adjustment of said anvil being such as to cause said balls to rebound into any one of said ball receivers.

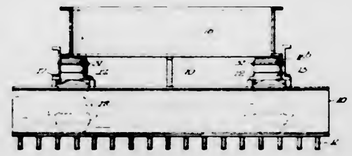
2,004,291
CLUTCH
Andre J. Meyer, Detroit, Mich., assignor to Continental Motors Corporation, Detroit, Mich., a corporation of Virginia
Application December 8, 1930, Serial No. 500,717
30 Claims. (Cl. 192—52)



1. In a clutch, the combination of driving and driven members, driving and driven means respectively connected in driving engagement with said driving and driven members, thrust means, lever means operatively connected with the

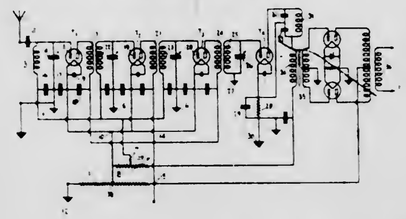
thrust means, primary yielding means acting between thrust means and said lever means, and secondary yielding means intermediate said

thrust means and driving means constructed to transmit the full load of said primary yielding means for effecting normal clutching engagement between said driving and driven means.



2,004,292
SHAKE-OUT APPARATUS FOR FOUNDRY FLASKS
Walter F. Piper, Oak Park, Ill., assignor to The Beardsley & Piper Company, Chicago, Ill., a corporation of Illinois
Application February 20, 1933, Serial No. 657,511
6 Claims. (Cl. 259—72)

1. In a flask shake-out apparatus of the character described, the combination of a supporting structure; a vibrating device mounted in an upstanding position on the structure and comprising a vertical cylinder with an open upper end, a hammer slidably mounted in the upper end of the cylinder and embodying at the top thereof an enlarged rounded head for supporting the flask directly thereon and so that it is tiltable relatively to the device, a piston in the lower end of the cylinder, and fluid pressure means for moving the piston up and down in rapid succession in order to impart blows to the hammer so as to transmit vibrations via the head directly to the flask; and bar means mounted on the supporting structure independently of the vibrating device for limiting tilting of the flask and holding it in place on the head.

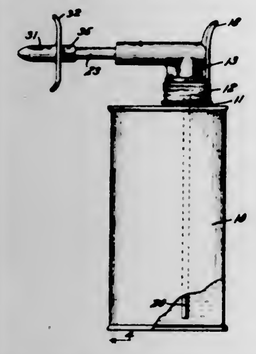


2,004,293
METHOD OF SHAKING OUT FLASKS
Walter F. Piper, Oak Park, Ill., assignor to The Beardsley & Piper Company, Chicago, Ill., a corporation of Illinois
Application January 20, 1934, Serial No. 707,482
3 Claims. (Cl. 22—190)

1. That improvement in shaking out flasks which consists in supporting a flask so its bottom is open to discharge sand and so that a portion of its wall contacts directly with the outer end of a hammer which has its inner end slidably mounted in a cylinder, and then actu-

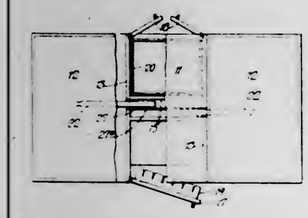
ating a piston in the lower part of the cylinder by fluid under pressure to impart, in rapid succession, blows to the hammer which will be transmitted directly to the flask to loosen the sand and discharge it from the flask.

2,004,294
AUTOMATIC VOLUME CONTROLS FOR RADIO RECEIVING SETS
Russell Mertes Planck, Jackson, Mich., assignor, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application August 15, 1931, Serial No. 557,311
2 Claims. (Cl. 250—20)



1. In a volume control for radio receiving sets, a direct current source of potential, a resistance connected to said source, a detector tube, a second resistance connected between a point on the first resistance and the output electrode of the detector, a third resistance connected between the cathode of the detector and a point in the first resistance negative to the first mentioned point, the grid of the detector being connected to a point in the third resistance negative to the first mentioned point, a radio frequency amplifier tube having its control electrode and cathode connected respectively to negative and positive points in the second resistance, and means to connect the output electrode of the radio frequency amplifier tube to the input electrode of the detector tube.

2,004,295
DISPENSING ATTACHMENT FOR CONTAINERS
Lester Rothchild and Russell T. Anderson, Denver, Colo.; said Anderson assignor to said Rothchild
Application March 9, 1934, Serial No. 714,804
3 Claims. (Cl. 299—97)

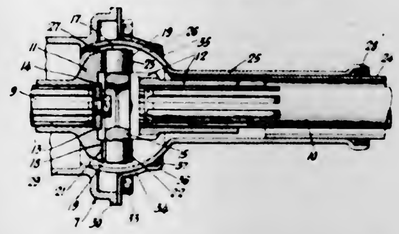


3. A liquid dispenser comprising: a relatively small can adapted to be held in the palm of the hand; a pump cylinder mounted on said can so as to be engaged by the thumb of the hand; a plunger projecting from said pump cylinder; oppositely extending ears projecting from said

plunger so as to be engaged by the forefingers of said hand; and a nozzle member extending

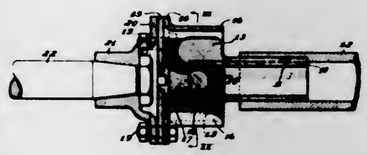
from said plunger so as to extend between said forefingers.

2,004,296
TABLE
Doris Royce, East Orange, N. J.
Application October 27, 1934, Serial No. 750,265
3 Claims. (Cl. 312—164)



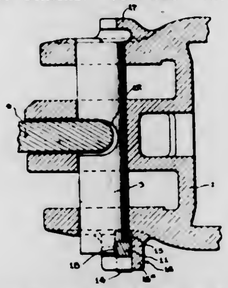
1. A dining table comprising a central portion and drop leaves hinged at opposite ends thereof, the leaves when extended having their top faces flush with that of the central portion and being of sufficient length, width and height to accommodate diners sitting with their legs under the leaves, the central portion comprising a pair of cupboards arranged back-to-back, open at opposite sides of the table, each having a separate back wall, the top of the central portion forming an integral top for the two cupboards and said cupboards being united to each other at their lower portions also so as to provide a unitary stiff supporting structure with a space between the backs of the cupboards, slides in said space for supporting the leaves, which slides are adapted to be drawn out of said space to support said leaves when raised and to be retracted into the space between the cupboards when not in use, the top of the central portion having its side edges substantially flush with the sides of the cupboards so that when the leaves are dropped they lie close against the sides of the cupboards and reduce the table to a small and compact structure, the leaves extending nearly down to the floor so as to be of sufficient size when raised for the serving of dinner to persons sitting up to the leaves as above described, and the central portion also having walls extending substantially to the floor and providing a stiff, strong central support for any loads to be carried on the top.

2,004,297
RESIN AND COATING OR PLASTIC COMPOSITION CONTAINING THE SAME
George W. Seymour and Blanche B. White, Cumberland, Md., assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application April 26, 1932, Serial No. 607,661
9 Claims. (Cl. 260—8)



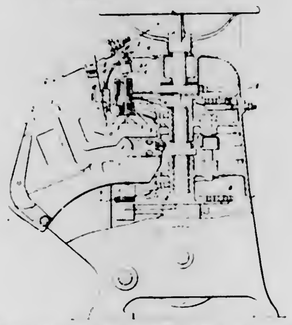
1. Method of preparing a synthetic resin comprising reacting a partial acetic acid ester of a polyhydric alcohol with a resin acid.

2,004,298
UNIVERSAL JOINT
Hervy B. Shoemaker, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application June 28, 1934, Serial No. 732,746
7 Claims. (Cl. 64—89)



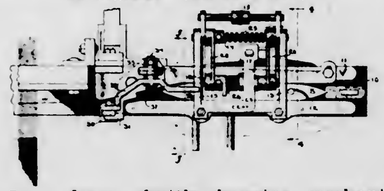
1. In a universal joint assembly having two yokes attached to the ends of the shafts and a spider for connecting the two, openings in the yokes to receive the ends of the spider arms, bushings in said openings, a two piece casing for surrounding the joint, one of the sections of said casing having two pockets on an axis in the plane of rotation of the spider, whereby the two opposite bushings may be moved into said pockets to facilitate disassembly of the joint.

2,004,299
UNIVERSAL JOINT
Jacob Rush Snyder, Pittsburgh, Pa.
Application January 23, 1933, Serial No. 652,993
8 Claims. (Cl. 64—96)



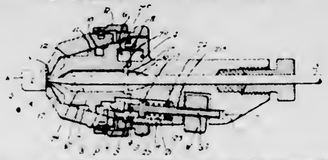
1. A universal joint comprising a member having portions extending substantially radially therefrom and formed with an axial cavity, a second member having substantially radial portions constructed to extend between the radial portions of said first-named member and having an axial centralizing portion constructed to extend into the cavity of said first-named member, and a one-piece rubber filling disposed between the radial portions of said members and in the cavity of said first-named member between said centralizing portion and the radially extending portions of said members where it encircles the centralizing portion and spaces it from said first-named member.

2,004,300
PIN RETAINING MEANS
Harry W. Stertzbach, John S. McPherson, and Arthur H. Filander, Columbus, Ohio, assignors to The Buckeye Steel Castings Company, Columbus, Ohio
Application June 18, 1931, Serial No. 545,324
10 Claims. (Cl. 213—72)



1. In combination, a coupler shank, a draft member, a pivot pin connecting the coupler and member and having a notch at its lower end, integral means on the member engageable with the top of the pivot pin for limiting its upward movement, a bracket depending from the bottom of the member and provided with oppositely disposed slotted lugs, and a pin retainer extending through the slots of the lugs and having a side surface engageable with the notch of the pin for limiting downward movement of the pin and preventing the pin from turning, said retainer being prevented from removal from said slots so long as the pin is in its lowermost position, and said integral means being normally spaced from the head of the pin a sufficient distance to allow the pin to be elevated to a certain height to permit removal of the retainer from said slots.

2,004,301
FRUIT PITTING DEVICE WITH VIBRATORY PITTING MEANS
Albert R. Thompson, San Jose, Calif., assignor to Pacific Machinery Company, San Francisco, Calif., a corporation of California
Application January 28, 1933, Serial No. 654,003
7 Claims. (Cl. 146—28)



1. In a fruit pitting machine, the combination of a pitting knife having oppositely extending shanks, means for rotatably supporting the shanks of the pitting knife, means for rotating the pitting knife relative to said supports, and means for reciprocating the said pitting knife with reference to said supports in the direction of its longitudinal axis as said pitting knife is rotated.

2,004,302
CLAMPING DEVICE FOR WEFT REPLENISHING LOOMS
Richard Greenleaf Turner, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application March 22, 1932, Serial No. 600,468
15 Claims. (Cl. 139—256)

1. In a loom, shuttle-changing mechanism, means to clamp the out-going weft thread at a point between the out-going shuttle and the adjacent cloth selvage during ejection of said shuttle, and actuating devices for said clamping means, operable in timed relation to the movement of the shuttle-changing mechanism.

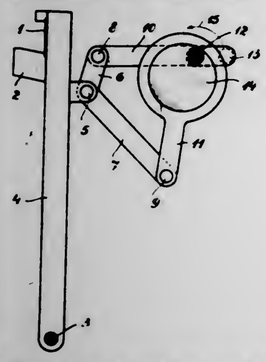
2,004,303
SPRAY GUN
Fritz Wahlin, Chicago, Ill., assignor to Binks Manufacturing Company, Chicago, Ill., a corporation of Delaware
Application September 4, 1934, Serial No. 742,543
14 Claims. (Cl. 299—140.1)

14. In a spray appliance, a body member provided with a liquid passage and an air supply passage; a liquid nozzle abutting rearwardly against the body member and having a bore into which the said liquid passage opens; and an air nozzle clamped rearwardly against the liquid nozzle and formed for affording two air discharge passages presenting forwardly converging outlet portions; the body member and the liquid nozzle having their abutting portions formed to afford an annular air chamber between them, to which chamber the air supply passage leads; the liquid nozzle having an air-passageway presenting a rearwardly open inlet to the said air chamber and leading to both of the said air discharge outlet portions; and a valve member supported solely by, and projecting forwardly beyond the body member; the valve member being movable toward and away from the said inlet of the air-passageway for controlling the said inlet.

2,004,304
STORAGE BATTERY SEPARATOR
Leland E. Wells, Cleveland Heights, Ohio, assignor to Willard Storage Battery Company, Cleveland, Ohio, a corporation of West Virginia
Application August 1, 1933, Serial No. 683,149
3 Claims. (Cl. 136—145)

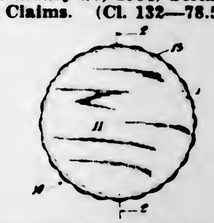
1. A substantially flat separator for use between flat battery plates comprising two corrugated porous sheets arranged in face-to-face relation and connected together along their outer

upright edges and along spaced vertical lines between their outer upright edges, each sheet having between adjacent lines of jointure a series of corrugations forming a series of grooves and



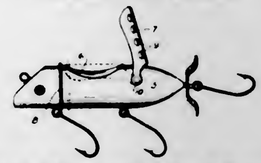
ridges with the ridges and grooves of one sheet opposite respectively the ridges and grooves of the other sheet thereby forming a plurality of circulation spaces between the lines of jointure both on the inner and outer sides of the sheets.

2,004,305
SHOULDER STRAP HOLDER
Angela Bopea, Peekskill, N. Y.
Application July 11, 1934, Serial No. 734,616
5 Claims. (Cl. 24—73)



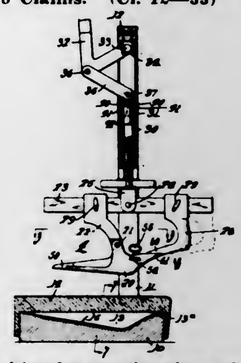
1. A fastener for the shoulder straps of undergarments, comprising fastener elements mounted inside of a dress and upon the topside of a shoulder seam thereof, a fastener for engagement beneath said shoulder seam and having complementary spear-like snap fastener elements adapted to pierce the material of the shoulder seam and engage said snap fastener elements for permanent attachment of the shoulder strap fastener upon the dress.

2,004,306
MECHANISM FOR ACTUATING THE SLAY OF WEAVING LOOMS
Paul Breddin and Otto Wittmers, Cologne-on-the-Rhine, Germany
Application April 8, 1933, Serial No. 665,213
In Germany June 10, 1932
8 Claims. (Cl. 139—190)



1. In a device for actuating the slay carrying the shuttle race and the reed in mechanical looms, in combination with each of the two slay swords which support the slay pivotal about a horizontal axis; a bell crank lever having unequal arms pivotal about a horizontal pin, a horizontal crank-shaft carrying a pair of mutually adjacent cranks and two connecting rods which join these cranks to pins arranged at the ends of the bell-crank lever.

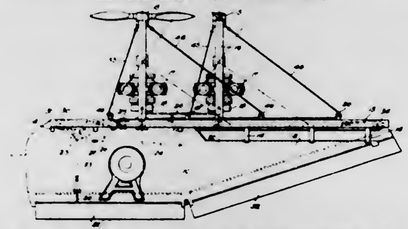
2,004,307
POWDER PUFF AND METHOD OF MAKING THE SAME
Evangeline Burkhart, New York, N. Y.
Application January 27, 1934, Serial No. 708,595
3 Claims. (Cl. 132—78.5)



1. A powder puff having the puff members placed back to back, an edging of skin non-irritant material surrounding the peripheral edges of the puff members and positioned partially therebetween, and a sinuous line of stitching, passing through said puff-members and said edging and intersecting the circumferential edges of the puff members at equally spaced intervals to define a continuous series of scallops surrounding the edge of powder puff.

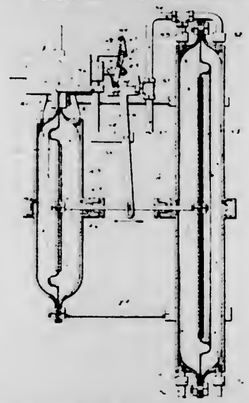
2,004,308
ARTIFICIAL BAIT
Jules Catarau, Seattle, Wash.
Original application September 10, 1934, Serial No. 743,403. Divided and this application February 12, 1935, Serial No. 6,212
1 Claim. (Cl. 43—46)

A lure-body having on its surface intermediate its ends a recessed portion to receive scent material, a plate-member mounted on said lure-body to fit over the recessed portion and enclose the scent material, and a ring, or the like, freely mounted on the lure-body to slide over the plate-member and retain the same over the scent material.



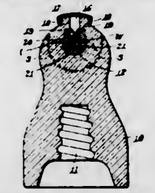
2,004,309
MACHINE FOR PRESSING SHOE SOLES
Avedis Y. Chavoor, Worcester, Mass.
Application May 17, 1933, Serial No. 671,551
8 Claims. (Cl. 12—33)

1. In a machine for pressing shoe soles, in combination, a frame having a top member, a rod



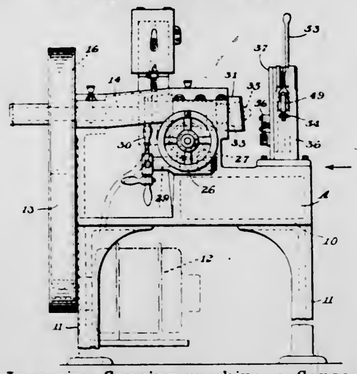
fixed in said top member and extending downward therefrom, a sleeve vertically slidable on said rod, means to move said sleeve vertically and to lock said sleeve in lowered position, a cross bar pivotally connected to the lower end of said sleeve, front and back shoe supports slidable on said cross bar, means to secure said supports in adjusted position on said cross bar, and a cushioned form to receive the downward pressure of the shoe mounted on said supports.

2,004,310
HELICOPTER
Thorvald T. Clausen, Seattle, Wash.
Application June 27, 1933, Serial No. 677,899
11 Claims. (Cl. 244—19)



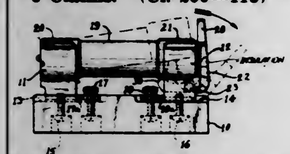
7. In a helicopter, a propeller having a propeller shaft, means for varying the angle of thrust of the propeller by tilting the propeller shaft while maintaining the lower end thereof in a horizontal plane, and means for preventing fore and aft movement of the propeller itself as the angle of thrust is varied.

2,004,311
APPARATUS FOR DILUTING GAS
Harry Cleevely, Rankin, Pa.
Application August 9, 1930, Serial No. 474,273
3 Claims. (Cl. 48—184)



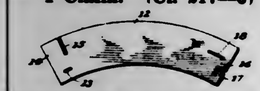
1. A mechanism for forcing a gaseous diluent into a gas stream under pressure and fixedly proportioning the diluent to the gas including a rigid casing having a reciprocable diaphragm therein acting to divide the casing into two chambers, a valve chamber connected to the source of gas under pressure, a discharge pipe, a single valve in the valve chamber in one position connecting one of said chambers with gas under pressure and connecting the other chamber with said discharge pipe, and in the other position connecting the last-named chamber with the gas under pressure and the first-named chamber with the discharge pipe, a second rigid casing having therein a reciprocable diaphragm dividing the casing into two chambers, an operative connection between said piston-like elements, each chamber of the second named casing having an inlet port connected with a source of gas diluent, a valve for said port, an outlet valve, the outlet valve communicating with the discharge pipe from the first named valve chamber, and means operated by the first named piston-like element for alternately shifting said last named outlet valve in one direction or the other, including a lever, a pivoted arm connected to the last named valve, and means for causing a sudden movement of the last named valve to its full position in one direction or the other after the lever has been shifted a predetermined distance.

2,004,312
DEVICE FOR HOLDING WIRES TAUT
Melburn A. Comeau, Haverhill, Mass.
Application May 2, 1934, Serial No. 723,587
10 Claims. (Cl. 173—313)



1. The combination of a support provided with a transverse tapered bore and a radial slot extending therefrom to receive a wire; and wire-gripping means fitted to said bore and movable endwise therein to grip the wire when moved in one direction and release same when moved in the opposite direction, said gripping means being separated opposite said slot sufficiently to receive a wire.

2,004,313
PIPE FLANGING MACHINE
William Barnes Crockett, Notre Dame de Grace, Quebec, Canada
Application September 13, 1933, Serial No. 689,333
4 Claims. (Cl. 153—81)



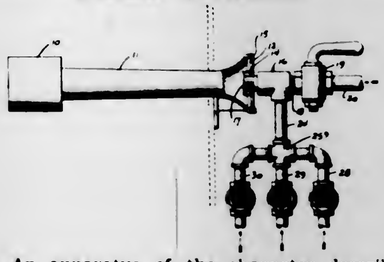
1. In a pipe flanging machine, a flange forming unit including a head and flange forming member mountable therein, said head being bored at an angle to its axis to provide a mounting cavity, a ball race tightly fitted in said cavity and a shank on said forming member freely insertable within said ball race, said forming member when mounted being disposed with its axis at an angle to the axis of the head.

2,004,314
CARTRIDGE FUSE EXTRACTOR
Joseph John Dante, Bantam, Conn., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass., a corporation of Massachusetts
Application October 29, 1931, Serial No. 571,705
6 Claims. (Cl. 200—113)

1. A holder for a conventional cartridge fuse, comprising a pair of spaced clips adapted to receive and clamp respective end caps of a fuse, each said clip consisting of a strip of resilient metal bent to an approximate U-shape, the arms of the U having their upper portions outwardly bowed to receive and fit against a cylindrical end cap of a fuse, and an ejecting member mounted on the lower portions of the arms of one of said clips to rock on an axis directly under the fuse cap mounted in said clip.

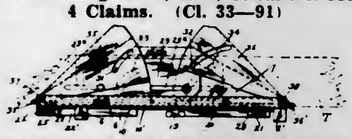
2,004,315
PACKING LINER
William Fean, Columbus, Ohio, assignor to Thomas R. McDonald, Columbus, Ohio
Application August 29, 1932, Serial No. 630,917
1 Claim. (Cl. 217—3)

A liner for a basket comprising a strip of material bent to dispose its end portions in overlapped relation to each other and form an open ended liner of a diameter to fit within a basket in close proximity to walls thereof, one end portion of said strip being formed with a longitudinally extending slot adjacent its lower edge, the said end portion of the strip being slit downwardly from its upper edge in spaced relation to the adjacent end edge of the strip to form a tongue located above the slot, the other end portion of the strip being formed with a longitudinally extending slot spaced from the upper edge of the strip a distance corresponding to the depth of said tongue, the lower portion of the last mentioned end portion of the strip being slit longitudinally from the end edge of the strip and then downwardly to form a tongue having its attached lower end spaced from the lower edge of the strip a distance corresponding to the distance between the first slot and the lower edge of the strip, the tongue of the second mentioned end portion of the strip being passed inwardly and upwardly through the slot of the first mentioned end portion of the strip and the tongue of the first mentioned end portion of the strip being passed outwardly and upwardly through the slot of the second mentioned end portion of the strip.



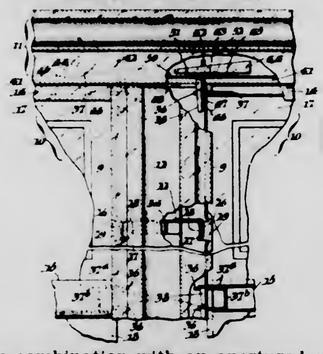
2,004,316
FISHHOOK
Wayland I. Foote, Griffin, Ga.
Application July 9, 1934, Serial No. 734,343
1 Claim. (Cl. 43—36)

A fish hook comprising a strip spring member, a small fish hook attached to one end of the spring member, a large fish hook attached to the other end of the spring member, said spring member having an attaching eye nearer to the small hook, and a sleeve on each hook having a fin-like projection, said projections overlapping each other



when the parts are folded thereby holding the parts in folded position by the tension of the strip spring and permitting the hooks to spring apart when the large hook is struck by a fish.

2,004,317
GAS BURNER
Thomas I. Forster, Berkeley, Calif.
Application March 14, 1934, Serial No. 715,464
2 Claims. (Cl. 158—11)

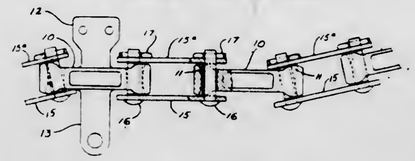


2. An apparatus of the character described, including a gas burner head, a Venturi tube connected at its outlet end to the said head, the intake end of said Venturi tube being formed with primary air ports, an injector head connected to said inlet end of the Venturi tube centrally thereof, an orifice fitting carried by said injector head and having an orifice formed therethrough for delivering gas into the venturi, said injector head having a passageway formed therethrough for delivering gas to the orifice fitting, said injector head having a chamber formed therein and separated from the gas passageway, and means for separately delivering air under pressure, steam or fuel oil to said chamber and said injector head having a series of orifices adjacent to said orifice fitting whereby fluid under pressure in said chamber will discharge into the venturi at high velocity.

2,004,318
RAFTER MARKING APPARATUS
Robert L. Greve, Pasadena, Calif., assignor of one-half to Norman A. Greve, Wilmar, Calif.
Application August 25, 1931, Serial No. 559,213
4 Claims. (Cl. 33—91)

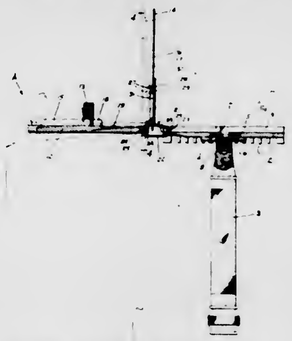
1. A rafter marking apparatus including a body member having a fixed supporting part in a plane at right angles thereto, a plurality of marking members pivotally connected to said body member and said supporting part to move in planes at right angles to each other about different centers, connecting means between said marking members and operable to move them relative to each other and to said body member in different planes, and graduation means for determining different positions of adjustments of said marking members.

2,004,319
WALL AND POST CONSTRUCTION
Conrad T. Hansen, Bywood, Pa., assignor, by mesne assignments, to The E. F. Hauserman Company, a corporation of Ohio
Application July 13, 1931, Serial No. 550,437
2 Claims. (Cl. 189—34)



1. The combination with an apertured cornice and a subjacent post and horizontal, of an apertured ear projecting upward from the post through the cornice, an apertured ear projecting endwise from the horizontal through said post and its ear, and keys through said ears, securing the horizontal to the post and the post to the cornice.

2,004,320
PAINT BRUSH PROTECTOR
Gustaf Sigfrid Hanson, Montclair, N. J.
Application July 3, 1933, Serial No. 678,809
4 Claims. (206—15.1)

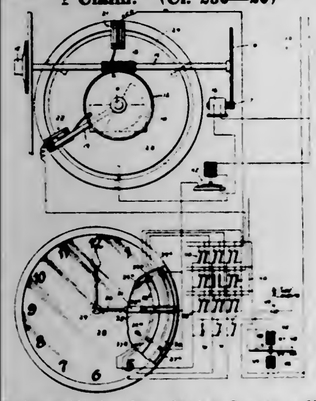


3. A paint brush protector made from a single blank of metal comprising a rear wall provided with inwardly extending marginal flanges and a front wall integrally connected with said rear wall and provided with lugs adapted to snap over and have holding engagement with said flanges to removably secure said walls together, thereby providing a V-shaped paint brush receiving pocket, said front wall being spaced from the marginal flanges to enable the free circulation of liquid through the protector and around the paint brush positioned therein.

2,004,321
UNIVERSAL JOINT CHAIN
Walter Hay, Sandusky, Ohio
Application September 14, 1931, Serial No. 562,698
3 Claims. (Cl. 74—245)

1. In a universal joint chain, the combination of a plurality of links, universal knuckle joints articulately connecting said links, said knuckle joints comprising knuckles and knuckle boxes formed on adjacent ends of adjoining links and pintle pins extending through aligned apertures in said knuckles and knuckle boxes, means for non-rotatably securing said pintle pins in said knuckles, a convex surface on the wall of said pintle apertures in said knuckle boxes adjacent the end of the link, bearing members for said pintle pins having bearing surfaces conforming to the shape of the pintle pins positioned in said pintle apertures in said knuckle boxes adapted to rock on said convex surfaces, and means for non-rotatably securing said bearing members in said pintle apertures with reference to the axis of said pintle pins.

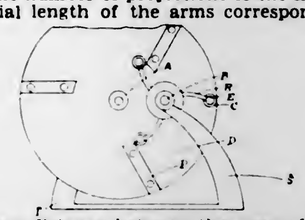
2,004,322
SAFETY RAZOR
John E. Hedlund, St. Paul, Minn., assignor of one-half to Emma S. Leighton, Minneapolis, Minn.
Application December 11, 1933, Serial No. 701,761
12 Claims. (Cl. 30—12)



3. In a safety razor, a fixed clamping member having a handle rotatably secured thereto, a movable clamping member adapted to be clampingly engaged with said fixed clamping member by rotation of said handle, thereby to secure a razor blade in position between said members, a blade retaining clip inseparably connecting together said clamping members and comprising complemental spring-actuated plate portions cooperating to receive and secure a razor blade therebetween, and whereby the blade is supported in angular relation to said clamping members, when the latter are in open, blade-releasing positions, and means whereby said spring actuated plate portions may be actuated to release the blade by manipulation of said clamping members.

2,004,323
CINDER CHROME BUILDING UNIT
Arvid Hede, Detroit, Mich., assignor to Cinder Chrome Company, Detroit, Mich., a corporation of Michigan
Application July 29, 1932, Serial No. 626,199
5 Claims. (Cl. 72—36)

1. A building unit adapted for wall construction, formed of a plurality of different grades of cement concrete portions assembled in consecutive layers, the outer layer being a fine sand concrete containing sodium silicate, boracic acid, casein and sal-ammoniac and is provided with an outside face glazing, said face glazing comprises a mixture of sodium silicate, boracic acid, casein and sal-ammoniac.

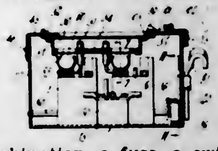


2,004,324
AUTOMATIC TUNING DEVICE
Reinhard L. Heeren, Brooklyn, N. Y.
Application February 25, 1931, Serial No. 518,140
1 Claim. (Cl. 250—20)

An automatic tuning device for a radio receiving set, comprising a tuning mechanism, a switch one side of which is electrically connected to one side of an incoming power circuit, a motor for operating said tuning mechanism, together with contacts operable by said motor and means for operating said switch under control of said contacts, a clock having a plurality of sets of contacts, each set including three contacts, and having a contactor operated by said clock mechanism for interconnecting the contacts of any one of said sets, a plurality of tuning switches, each of said tuning switches connecting one of said contacts to the other side of the incoming power circuit and connecting another contact of the same set of contacts to said first mentioned switch, the third contact of the same set of contacts being connected to said one side of the incoming power circuit through said motor.

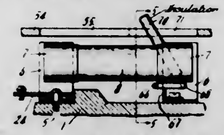
2,004,325
ELASTIC COUPLING TO SUBSTITUTE AN INTERNAL GEAR
Francisco Roig Ibañez, Mexico, D. F., Mexico
Application October 25, 1933, Serial No. 695,172
In Mexico July 6, 1933
2 Claims. (Cl. 74—415)

1. A mechanical movement including a disk mounted for rotation and provided with a plurality of substantially radial projections, a second disk mounted for rotation on an axis offset from the axis of the first disk and provided with a series of radiating arms corresponding in number to the number of projections of the first disk, the radial length of the arms corresponding to



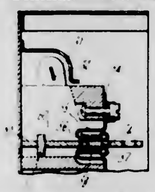
the linear distance between the axes of the respective disks, and rollers carried by the arms and moving, in the operation of the second disk, within the plane of movement of the projections, with the path of movement of the projections intersecting the path of movement of the rollers.

2,004,326
ARTICLE HOLDER
William H. Inman, Newark, N. Y., assignor to Bloomer Bros. Company, Newark, N. Y., a corporation of New York
Application July 5, 1932, Serial No. 620,757
Renewed May 17, 1933
18 Claims. (Cl. 229—29)



1. An article holder comprising a strip of sheet material formed to provide a bottom having an inclined cushioning portion with a substantially central longitudinal partition portion, and a transverse member secured to opposite sides of said bottom and having a plurality of tongues folded therefrom to extend upwardly above said member to form with said center partition portion a plurality of article receiving compartments.

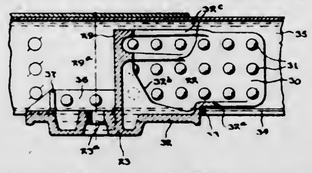
2,004,327
SWITCH AND FUSE MECHANISM
Ernest G. Johansson, Watertown, Mass., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass., a corporation of Massachusetts
Application December 26, 1930, Serial No. 504,762
Renewed April 13, 1935
13 Claims. (Cl. 200—50)



1. In combination, a fuse, a switch in circuit with said fuse and movable between open and closed positions, an enclosure for said switch and fuse of large size with respect to said fuse and accessible for free radiation of heat therefrom and having a restricted passage through which said fuse may be passed for insertion or removal and baffling access to said fuse when said fuse is within said enclosure, and means normally accessible only when said switch is open actuable to project a portion of said fuse outside of said enclosure to permit grasping and removing said fuse.

2,004,328
FUSE MECHANISM
Ernest G. Johansson, Watertown, Mass., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass., a corporation of Massachusetts
Original application December 26, 1930, Serial No. 504,762. Divided and this application September 11, 1931, Serial No. 562,311
10 Claims. (Cl. 200—113)

1. In combination, an enclosure defining a relatively large compartment and including an apertured wall, a fuse normally within said compartment opposite to said aperture and subject to free circulation of the air in said compartment therearound, said compartment being of sufficient size to permit free heat radiation from said fuse and said aperture being of sufficient size to permit said fuse to be passed therethrough but sufficiently small to cause said fuse to be inaccessible for removal by the fingers therethrough, and means actuable to project a portion of said fuse through said aperture to be accessible to the fingers for removal of said fuse.



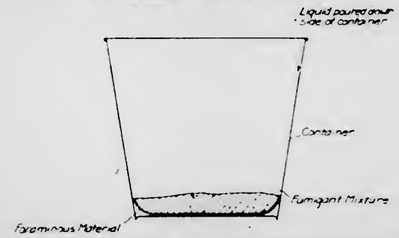
2,004,329
SWITCH FOR ELECTRIC METERS
Ernest G. Johansson, Watertown, Mass., assignor to The Palmer Electric & Manufacturing Co., Waltham, Mass., a corporation of Massachusetts
Application September 26, 1931, Serial No. 565,224
13 Claims. (Cl. 200—16)

10. In an electrical switch, a plate of insulating material having an aperture therethrough, self-aligning means mounted in said aperture and projecting beyond both faces of said plate to receive contact members, said projecting means including jaws disposed on each side of the plate to press resiliently on both opposite faces of the contact members received thereby, said means also including a conductor electrically connecting the contact members when received in said jaws.

2,004,330
CAR CONSTRUCTION
George T. Johnson, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application November 9, 1931, Serial No. 573,966
8 Claims. (Cl. 213—57)

1. In a car construction, a body bolster including a center casting having a center bearing plate provided with a king pin aperture, the center casting and plate forming a draft gear receiving pocket positioned above the plate, and oppositely extending arms integral with said plate and forming portions of the bottom of said bolster, the center casting having a vertical bearing wall and a tie plate, both arranged rearwardly of said aperture and being integral with

one another, the rear end of the tie plate being provided with an overhanging ledge adapted to overlap portions of the inner flanges of the car center sills.



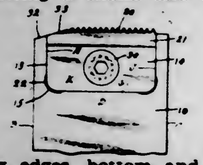
2,004,331
ALLOY STEELS
Joel Larsson, Hofors, Sweden, and Haakon Styri, Philadelphia, Pa., assignors, by mesne assignments, to S K F Industries, Inc., Philadelphia, Pa., a corporation of Delaware
No Drawing. Application December 2, 1932, Serial No. 645,412
5 Claims. (Cl. 308—242)

1. An alloy steel having analyses within the following percentage range:

Carbon	1.20– .85
Manganese	.80–3.00
Silicon	.50–1.50
Chromium	.90–2.50

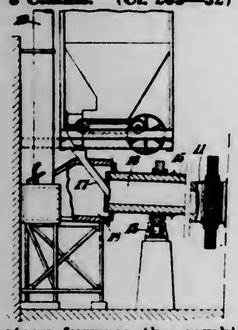
the rest being substantially iron, the sum of manganese, silicon and chromium being not less than 2½% nor more than 5%, a lower range of alloy content being present with the higher carbon, and a higher range of alloy content being present with the lower carbon.

2,004,332
TREATING SOLIDS WITH LIQUID
Paul La Frone Magill, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
Application October 17, 1932, Serial No. 638,183
9 Claims. (Cl. 23—151)



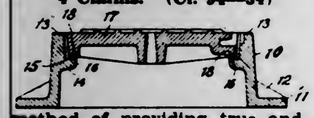
1. A process for generating hydrocyanic acid comprising introducing water over an extended area on the under side of a movable false bottom pervious to water and supporting a layer of solid material capable of reacting with water to generate hydrocyanic acid in such manner that the water is substantially entirely absorbed by said solid material.

2,004,333
CHASER HOLDER
Harry A. Maurer, Novelty, Ohio, assignor to The Oster Manufacturing Company
Application March 28, 1934, Serial No. 717,772
4 Claims. (Cl. 10—120)



1. A chaser and holder comprising: a holder body, recess edges therein parallel to the outer

edges thereof and extending along said holder a relatively short distance from one end thereof, said distance being short relative to the size of the chaser, a recess bottom transverse to said recess edges, said recess edges and bottom intersecting the face of said holder, and a recess back parallel to and spaced from the back of said holder, said recess back and recess edges intersecting an end of said holder and all of said recess surfaces jointly defining an open seating recess; and a chaser comprising a shank and a blade, said



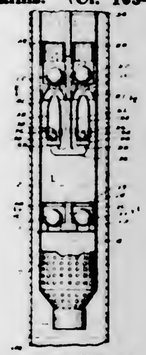
shank having edges, bottom and back closely fitting the corresponding recess surfaces and equal in thickness to the depth of said recess, said blade comprising a chamfer at the work entrance and cutting teeth adapted to project beyond the end of said holder when the shank is seated, and a chamfer on said holder end in prolongation of the blade chamfer; and holding means connecting said holder and chaser and disposed entirely within the holder body and the chaser shank.

2,004,334
ROTARY FURNACE
Alexander Grant McGregor, London, England
Application July 17, 1934, Serial No. 735,670
In Great Britain July 18, 1933
8 Claims. (Cl. 263—32)

1. In a rotary furnace the combination of a muffle chamber mounted to rotate about a non-vertical axis, a heating burner for the muffle chamber, admission valves for the admission of material to the muffle chamber, discharge valves for the withdrawal of the material therefrom, said valves being respectively located at opposite ends of the muffle and automatic means operated by the rotation of the muffle for actuating said valves.

2,004,335
MANHOLE FRAME AND COVER
Michael W. Merriman, Cleveland, Ohio
Application March 30, 1929, Serial No. 351,263
4 Claims. (Cl. 94—34)

2. A method of providing true and accurate engaging surfaces in an iron frame and cover, which consists in casting said frame and cover in sand molds containing chills with accurately formed surfaces complementary to the engaging surfaces of the castings.

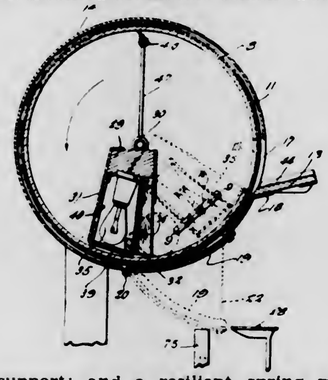


3. In combination, a frame comprising a cover seat of chilled iron, and a cover having a chilled iron surface formed for engagement with said seat, whereby true engaging surfaces may be provided without machining.

2,004,336
CLASP
Eugene Morehouse, Providence, R. I., assignor to B. A. Ballou & Co., Inc., a corporation of Rhode Island
Application December 24, 1932, Serial No. 648,745
10 Claims. (Cl. 24—237)

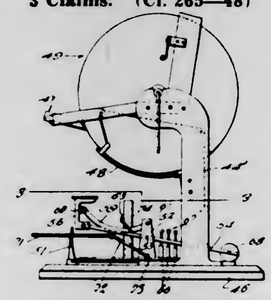
1. In a clasp, a body having a hook for separable engagement with a link or the like, an integral tongue for closing said hook, and attaching means comprising a strip of stock integral with the body having a free end and rolled to form an eye on an arc of sufficiently small curvature to be non-resilient for permanently securing the body to some desired part.

2,004,337
FLUID PUMP
Joseph W. Murphey, Monroe, La.
Application August 18, 1933, Serial No. 685,782
6 Claims. (Cl. 103—260)



1. A well pump comprising a flow pipe including an elongated shell, a fluid conducting means extending into the shell including an upwardly directed nozzle, a check valve means in the shell below the nozzle constituting a closure in the shell, a second check valve means including a ball in the shell above the nozzle, said second mentioned check valve means constituting also a closure means in the said shell, the said ball being located adjacent the opening of the nozzle whereby to flare a stream of fluid issuing from the the nozzle.

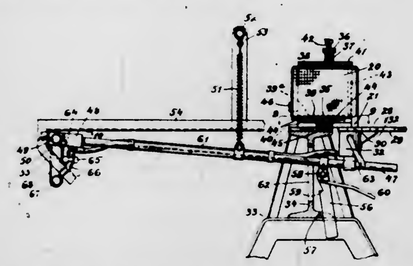
2,004,338
EGG CANDLER AND GRADER COMBINED
Otto Niederer, Titusville, N. J.
Application August 11, 1933, Serial No. 684,719
2 Claims. (Cl. 99—6)



1. In an egg candler, a fixed casing provided with egg inlet and discharge openings, a drum revolubly mounted in said casing and having a peripheral wall provided with egg intake and discharge openings, a combined egg stop and

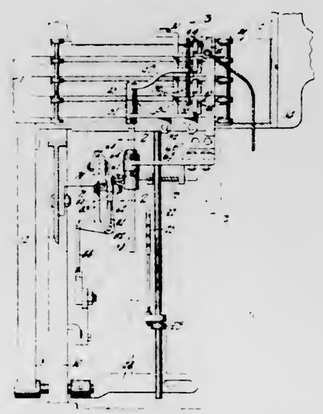
light support extending longitudinally of the drum and mounted to swing relative to the drum on an axis common to the drum, said combined stop and light support including a substantially hollow member provided on one side thereof with light emitting openings, and illuminating elements mounted within said combined stop and

light support; and a resilient spring member mounted on one end wall of the drum and movable therewith into frictional engagement with an adjacent end of the combined stop and light support for rotating the support with the drum for a fraction of a revolution of the drum, as and for the purpose specified.



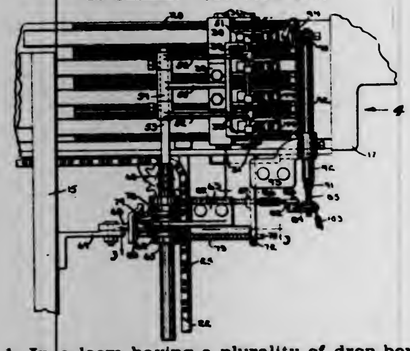
2,004,339
EGG GRADING SCALE
Otto Niederer, Titusville, N. J.
Original application August 11, 1933, Serial No. 684,719. Divided and this application May 28, 1934, Serial No. 728,009
3 Claims. (Cl. 265—48)

1. For use with an egg candling device a scale comprising a base having a vertical index rising therefrom, a plate pivotally mounted intermediate its ends on the base and provided at one end with a receiving plate, and a vertical scale plate rising from the pivoted plate and supporting the egg tray, said scale plate being provided with a vertical scale graduated in terms of ounces and against which the upper edge of the index is readable, and weights on the end of the pivoted plate remote from the egg tray.



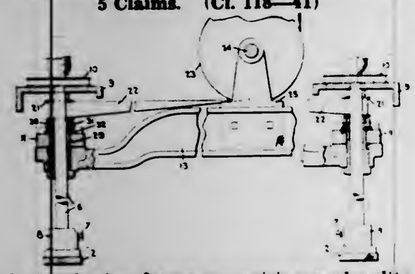
2,004,340
CASTING METHOD AND APPARATUS
Luther M. Patterson, New Philadelphia, Ohio
Application August 3, 1933, Serial No. 683,465
12 Claims. (Cl. 22—203)

1. A casting method which comprises preheating a ladle mold and dipping therewith from a pool of molten metal a body of said metal having the form of the casting to be made, bringing said body in the ladle mold from the pool and applying it from below onto a preformed metal article, fusing the two together by the heat of the molten body, and solidifying said body.



6. Casting apparatus comprising an upper holder for a preformed article, and a lower mold holder pivotally mounted to swing in a vertical plane upwardly into casting position and downwardly into mold-receiving position, said lower holder in its elevated position being separated from the upper holder by a space for accommodating a ladle mold carried by said lower holder.

2,004,341
WEFT DETECTING MECHANISM FOR DROP BOX LOOMS
Oscar V. Payne, Leicester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application May 31, 1932, Serial No. 614,393
Renewed January 3, 1935
3 Claims. (Cl. 139—233)



1. In a loom having a plurality of drop boxes, in combination, a separate side-slipping and normally inoperative weft detector permanently associated with each drop box, means to simultaneously withdraw all of said weft detectors from operative position for a major portion of the loom cycle, said means comprising a fixed cam block having raised and depressed portions and a cooperating cam follower mounted to swing with the lay and connected to withdraw said weft detectors, and additional means to vary the duration of the inoperative period for said detectors.

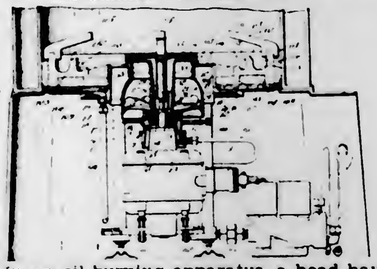
2,004,342
WEFT DETECTING MECHANISM FOR DROP BOX LOOMS
Oscar V. Payne, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Application July 16, 1934, Serial No. 735,317
15 Claims. (Cl. 139—233)

1. In a loom having a plurality of drop boxes, in combination, a plurality of weft detectors each permanently associated with a particular drop box, a stand for said detectors movable with said boxes, detector-withdrawing means to separately engage each of said detectors and to move each detector forward relatively to said stand to inoperative position during each loom cycle, means to release all of said detectors at a predetermined point in said loom cycle for independent rearward movement to detecting position, and means through which the detector associated with the shuttle about to be picked may complete an indication of substantial weft exhaustion.

2,004,343
SPINNING FRAME
Henry A. Owen, Lawrence, Mass., assignor to Davis & Furber Machine Company, North Andover, Mass., a corporation of Massachusetts
Application February 26, 1935, Serial No. 8,253
5 Claims. (Cl. 118—41)

1. A spinning frame comprising a plurality of vertical guide rods at each side of the frame, a plurality of transverse arches, a pair of ring rail sections one at each side of the frame, a pair of spindle rail sections one at each side of the frame, one pair of said rail sections being rigidly supported on the guide rods, the other pair of said rail sections being supported on the ends of the transverse arches, a bushing on each guide rod the bore of which has a sliding fit on said rod, one section of said bushing being concentric with the bore and journalled in the arch supported rail section and another section of said bushing being eccentric with the bore and journalled in the end of the transverse arch, and means for locking each bushing in rotary adjusted position whereby the arch supported rail sections may be accurately adjusted relatively to the arches to maintain the vertical alignment of the ring and spindle rail sections.

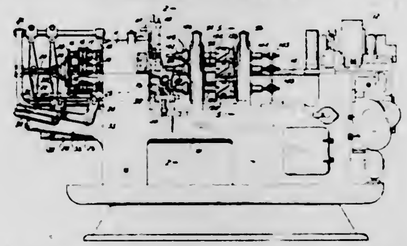
2,004,344
CORE COMPOUND
Herbert L. Quandt and Julius J. Horak, San Francisco, Calif., assignors, by mesne assignments, to Quandt Chemical Co., San Francisco, Calif., a corporation of California
No Drawing. Application November 7, 1930, Serial No. 494,187
9 Claims. (Cl. 22—188)



5. A binding agent for foundry sand cores comprising an emulsion containing water, China-wood oil, and an agent adapted to form amines with a portion of said oil.

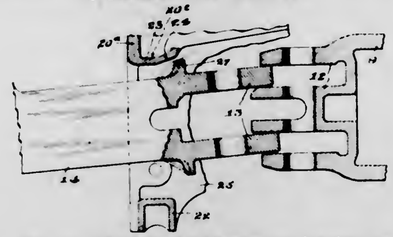
7. A sand core binder composed of an intimate mixture of China-wood oil, mineral lubricating oil and water, in combination with an agent causing solidification of the oil substantially without preceding increased fluidity upon the application of heat to the core.

2,004,345
CORE OIL COMPOUND
Herbert L. Quandt, deceased, late of San Francisco, Calif., by Carrie Anna Quandt, executrix, San Francisco, Calif., and Julius J. Horak, San Francisco, Calif., assignors to Quandt Chemical Co., San Francisco, Calif., a corporation of California
No Drawing. Original application November 7, 1930, Serial No. 494,187. Divided and this application July 5, 1934, Serial No. 733,880
5 Claims. (Cl. 22—188)



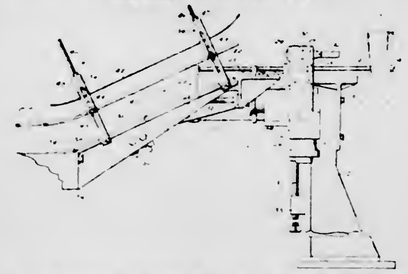
3. A sand core binder comprising a plurality of sand binding materials including China-wood oil all in the form of a substantially permanent water-miscible aqueous emulsion.

2,004,346
OIL BURNING APPARATUS
Hilmer F. Rodler, Woodcliff, N. J., assignor, by direct and mesne assignments, to Oil Equipment Laboratories, Inc., a corporation of New Jersey
Application November 1, 1932, Serial No. 640,596
2 Claims. (Cl. 158—77)



1. In an oil burning apparatus, a head having a plurality of vertical passages, a tubular member fixed to said head and having its upper end flanged, a plurality of spaced tubes supported by said flange and projecting from said member, a plate covering said member, said plate being spaced from said tubes, means connecting the plate and the head so they may be rotated in unison, a hood enclosing said tubular member, a fan within said hood to create an air stream about the member and tubes, a plate covering the lower part of the hood, the last mentioned plate being threadedly mounted to enable it to be adjusted to control the volume of air entering the hood, a hearth frame surrounding the hood and tubular member, said frame being spaced from the hood and member, and means to rotate the head and tubular member to cause oil to pass upwardly through said passages and tubular member and outwardly through the tubes.

2,004,347
MULTIPLE TURRET MACHINE TOOL
Harry W. Rupple, Shaker Heights, Ohio, assignor to The Cleveland Automatic Machine Company, Cleveland, Ohio, a corporation of Ohio
Application October 30, 1931, Serial No. 572,004
17 Claims. (Cl. 29—37)

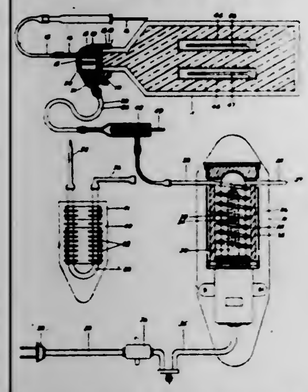


5. In a machine of the character described, the combination of a frame, means supported by said frame for rotatably supporting a work piece, a tool slide for supporting a tool supported by said frame, a tool carrier rotatably supported by said frame about an axis parallel to the axis of said means, means for automatically moving said tool slide toward and from said means at predetermined intervals, and means controlled by the movement of said tool slide for automatically moving said tool carrier in an opposite direction with reference to said means for supporting a work piece from that in which the tool slide is being moved.

2,004,348
RAILWAY DRAFT DEVICE
Eugene B. Schrock, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio
Application July 9, 1931, Serial No. 549,755
2 Claims. (Cl. 213—60)

1. In combination, a railway car having center sills, a swivel yoke positioned between said sills and having superposed forwardly projecting flanges, a carrier for the yoke connected to the sills, a striker casting arranged at one end of the sills and provided with an annular frame, a coupler shank extending through the frame and having rearwardly projecting flanges intercalated with said forwardly projecting flanges, the space between said forwardly projecting flanges being greater than the thickness of said rearwardly projecting flanges, means connecting the shank and yoke, a carrier iron detachably connected to the striker casting and normally supporting said shank in substantial alignment with the yoke, a shoulder projecting upwardly from said shank, the top portion of said frame having a rearwardly extending flange so arranged as to abut against said shoulder and prevent detachment of the shank from the yoke as long as the shank is in normal alignment with the yoke, the distance between the last mentioned flange and the front surface of the upper one of the flanges of the yoke being less than the distance between the front surface of the shoulder and the rear surface of the upper one of the flanges of the shank, the flange of the yoke which underlies said upper flange of the shank extending forwardly at least as far as said top flange of the yoke, said rearwardly extending flange of the top portion of the frame being of such shape as to provide clearance for said shoulder when the shank carrier iron and the connecting means are removed and the shank is moved forwardly and tipped downwardly, whereby the shank can be detached through said frame without removing the yoke.

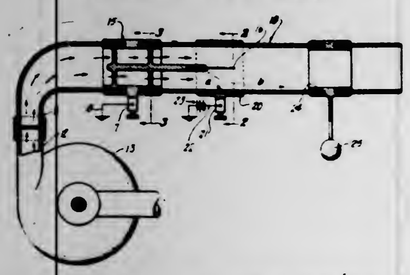
2,004,349
GLASS TRANSFER APPARATUS
John C. E. Schwab, Clarksburg, W. Va., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application June 13, 1933, Serial No. 675,614
2 Claims. (Cl. 198—24)



1. Transfer mechanism for glassware, including a continuously moving carrier, a table adjacent the carrier, inverting means associated with the table, a tiltable platform, a chute leading from the tiltable platform, means for sweeping ware in substantially a horizontal plane from the continuously moving carrier and across the table to the inverting means, means for operating the inverting means to invert the ware and deposit it upon said tiltable platform, and means for tilting the platform to deliver the ware to said chute.

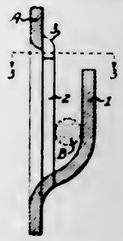
2,004,350
CONDENSATION OF ALCOHOLS
Norman D. Scott, Niagara Falls, N. Y., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 2, 1931, Serial No. 578,609
21 Claims. (Cl. 280—156)

1. The process for producing organic condensation products comprising heating an alcohol of the group consisting of aliphatic and alicyclic



alcohols having at least two hydrogen atoms on the alpha carbon atom to a temperature above about 150° C. in the liquid phase under a pressure above atmospheric in the presence of a dehydrogenating catalyst and a condensing catalyst comprising essentially an alkaline alkali metal compound.

2,004,351
STERILIZER APPARATUS
Martin C. Schwab, Chicago, Ill.
Application September 15, 1933, Serial No. 689,521
3 Claims. (Cl. 128—214)

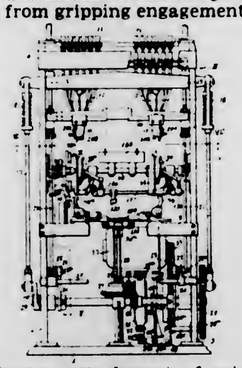


1. A device for giving sterile injections comprising a sealed container containing injection liquid, a removable connecting member attached to said container, a removable injecting member leading from said connecting member, said connecting member having a well and a passage way, a removable tubing connecting at one end with said passage way and leading to the atmosphere at its other end, and removable heating means connected to said tubing for superheating the air and destroying foreign bodies in the air passing into said tubing, said air passing through the well in the connecting member and then into said sealed container to break the vacuum in said container and permit the injection liquid to flow from said container through said well in the connecting member and thence into said injecting member.

2,004,352
ELECTROSTATIC GENERATOR
Alfred W. Simon, Eagle River, Wis.
Application July 5, 1933, Serial No. 679,074
6 Claims. (Cl. 171—329)

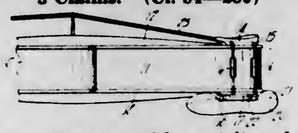
1. A double-sided electrostatic generator, each side of said generator including means providing a traveling electric-charge carrier, an inductor and an ionizing electrode adapted to charge said carrier, a collector adapted to take electric charge off said carrier at a point removed from said inductor in the direction of carrier movement, and a charge appropriating electrode adapted to take charge from the carrier at a point between the inductor and collector, and an electric conductor connected between the appropriating electrode of each side of the generator and the inductor of the other side of the generator.

2,004,353
CABLE SUPPORTING CLIP FOR CHASSIS AND BODY
Baldwin J. Sinnaeve, Detroit, Mich.
Application April 14, 1934, Serial No. 720,524
2 Claims. (Cl. 280—106)



1. An automobile chassis including as a side of the frame thereof, a flat panel member having an outwardly pressed area, and a cable supporting tongue struck out from the intermediate portion of the outwardly pressed area, the portions of the outwardly pressed area on opposite sides of the tongue spacing the cable from the face of the panel.

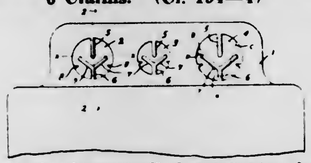
2,004,354
METHOD OF PREPARING APPLES FOR COLD PACKING
James S. Tierney, Upper Darby, Pa.
No Drawing. Application August 1, 1934, Serial No. 737,931
2 Claims. (Cl. 99—8)



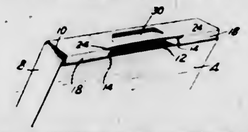
1. A method of preparing fresh apples for cold packing which includes the steps of immersing the apple pieces in a solution containing a major portion of sugar and citric acid and a minor portion of salt, and while so immersed subjecting the pieces to a vacuum, then breaking the vacuum, and packing and freezing the pieces.

2,004,355
BOX FRAMING MACHINE
Herbert E. Twomley, Riverside, Calif., assignor to Donald Parker and Citizens National Trust and Savings Bank of Riverside, administrators of George D. Parker, deceased
Application November 15, 1933, Serial No. 698,101
15 Claims. (Cl. 1—10)

1. In a machine for assembling boxes, a rotatable form comprising a pair of clamping members for supporting a box end, means for moving said clamping members into gripping engagement with a box end inserted therebetween, spring means for successively rotating said form through successive arcs to present different edges of said box end in a predetermined nailing plane, means for securing box sides to successive edges of said box end while said edges are in said predetermined plane, and means for releasing said clamping members from gripping engagement with said box end following attachment of said last box side to said box end.

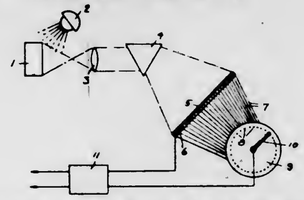


2,004,356
SHOULDER PAD
William W. Westman, South Bend, Ind., assignor to First National Institute of Violin, South Bend, Ind., a co-partnership consisting of Max H. Stryker, Fred A. Murrmann, and Margaret M. Schroff
Application July 20, 1932, Serial No. 623,638
3 Claims. (Cl. 84—280)



1. The combination with a violin, of an elongated curved shoulder pad, and means intermediate the length of said pad for securing said pad to the violin at one side of the longitudinal center of the violin to position the major portion of said pad within the outline of the violin with the curvature of said pad in opposed relation to the curvature of the adjacent edge of the violin and with the end portion of said pad adjacent the longitudinal center of the violin projecting beyond the edge of the violin to rest on the collar bone of a player to cooperate with the portion of the pad resting upon the shoulder of the player to provide a double support for the violin and insure positioning of the violin at a natural playing angle.

2,004,357
CHECK OPENING GUARD AND CHECK
Benjamin D. Weller, Cleveland Heights, Ohio
Application January 9, 1933, Serial No. 650,766
6 Claims. (Cl. 194—4)



1. In a check-controlled apparatus having a check receiving opening, means for preventing the insertion of unauthorized slugs in said opening, said means including an arm extending radially into said opening from a point on the periphery thereof, and a Y-shaped member extending into said opening from a point on the periphery substantially diametrically opposite said arm, the branches of said Y terminating in a line intersecting said arm.

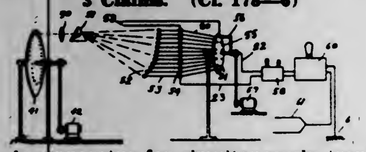
2,004,358
BOX
Elias Wolf, Elkins Park, Pa., assignor to Louis Wolf, Howard A. Wolf, and Elias Wolf, co-partners trading as National Metal Edge Box Company, Philadelphia, Pa.
Application September 28, 1932, Serial No. 635,133
2 Claims. (Cl. 229—52)

1. A box including two portions one of which overlaps the other to close the box, each of said portions having a flap, said flaps being arranged to assume overlapping relationship when the box is closed, a handle formed by part of one of the flaps, and means whereby the outer flap is locked at the base of the inner flap, said means including slots at the base of the inner flap and members carried by the outer flap engaging within the slots, said members comprising undercut flaps integral with the outer flap.

2,004,359
APPARATUS FOR TELEGRAPHICALLY TRANSMITTING COLORED PICTURES
Albert Alexander Ahronheim, Jackson, Mich., assignor of one-half to William Sparks, Jackson, Mich.
Original application August 7, 1930, Serial No. 473,661. Divided and this application February 17, 1932, Serial No. 593,518
1 Claim. (Cl. 178—5)

Apparatus for telegraphically transmitting and receiving colored pictures comprising, a rotatable drum carrier for supporting the picture to be transmitted, means for scanning said picture, means for decomposing the scanning light rays thus produced into their spectrum, a group of photo-electric elements arranged to receive the bands of said spectrum to produce current impulses, a contact disk having a contact connected in circuit with each of said photo-electric elements, a synchronously driven contact arm, means including said contact disk and said arm for successively transmitting said current impulses, means for receiving said current impulses including a rotatable drum carrier for supporting a recording paper, said drum carrier being adapted to be moved in synchronism with said drum carrier at the transmitter, a plurality of type bar actions corresponding in number with the number of photo-electric elements at the transmitter, an electromagnet for actuating each of said type bar actions, a second contact disk having a contact connected

in circuit with each of said electro-magnets, a second contact arm connected in circuit with said receiving means and driven synchronously with said first named arm for successively actuating said type bar actions in accordance with said received current impulses, a color container associated with each type bar action, each of said color containers having a reservoir and a constricted discharge duct adapted to be brought in contact with said record paper by its respective type bar action for depositing a color upon the record paper corresponding to the color point being transmitted.



2,004,360

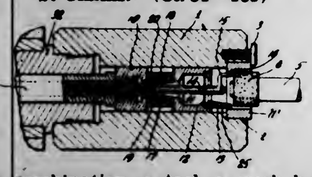
METHOD AND APPARATUS FOR TELEGRAPHICALLY TRANSMITTING COLORED MOVING PICTURES OR SCENES

Albert Alexander Ahrenheim, Jackson, Mich., assignor of one-half to William Sparks, Jackson, Mich.

Original application August 7, 1930, Serial No. 473,661. Divided and this application February 17, 1932, Serial No. 593,519

3 Claims. (Cl. 178—6)

1. An apparatus for simultaneously transmitting colored moving pictures or scenes and sound accompanying the same comprising means for scanning the picture or scene to be transmitted, means for decomposing the scanning rays thus produced into their spectrum, a group of photo-electric cells adapted to receive the bands of said spectrum to produce current impulses, an equal number of current relays in circuit with said photo-electric cells, a contact disk having a contact connected with each of said relays, a synchronously revoluble contact arm, a microphone in circuit with said contact disk for converting the accompanying sound into current impulses, and means including said contact disk and said arm for successively transmitting said picture and said sound current impulses.



2,004,361

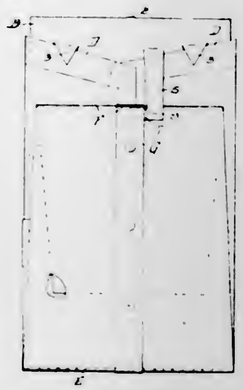
CALIPERING MECHANISM

Merton H. Arms and Joseph B. Johnson, Springfield, Vt., assignors to Bryant Chucking Grinder Company, Springfield, Vt., a corporation of Vermont

Application June 17, 1932, Serial No. 617,820

27 Claims. (Cl. 51—165)

20. In combination, a tool, a work holder, a rotary spindle carrying said work holder, a feeler carried by said spindle for engagement with work carried by said holder, a device carried by said spindle in proximity to a portion of said feeler, and means responsive to the relative positions of said feeler portion and device for indicating when the work has been cut by said tool to a predetermined size.



2,004,362

SHIRT BOARD

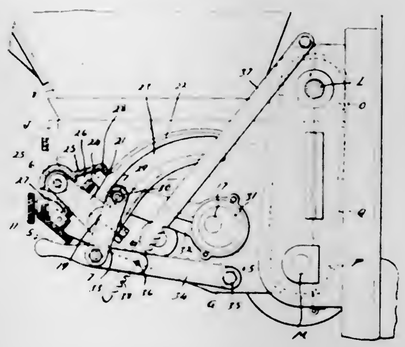
Louis D. Becht, St. Louis, Mo.

Application August 22, 1932, Serial No. 629,811

5 Claims. (Cl. 223—18.6)

1. A shirt board comprising a sheet of resiliently flexible paper stock around three edges of which a shirt is folded, flexible means integral with and longitudinally of the board for gripping the folded shoulder portions of the shirt and flexible hook shaped means integral with the board intermediate the first means for engaging a folded portion of the body of the shirt.

2,004,363



STOKER CONSTRUCTION

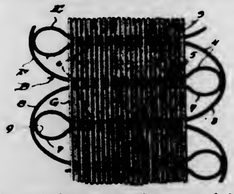
Royce L. Beers, Detroit, Mich., assignor to Detroit Stoker Company, Detroit, Mich., a corporation of Michigan

Application October 10, 1932, Serial No. 637,187

Renewed April 19, 1934

11 Claims. (Cl. 74—40)

1. In a stoker, a shaft, an arm fixed to and an arm free upon said shaft, means for actuating the free arm, and a separable driving connection between the arms including a latch carried by the fixed arm detachably engaging a part of the free arm, and adjustable means associated with the fixed arm for maintaining the latch in engagement with the part aforesaid of the free arm.



2,004,364

FINISHING STRIP

Frank A. Best, East Windsor, Ontario, Canada, assignor to Backstay Welt Company, Union City, Ind., a corporation of Indiana

Application January 6, 1933, Serial No. 650,493

3 Claims. (Cl. 139—425)

1. A fabric reinforcement comprising a pliable woven strip having warp threads formed of fibrous material and having woof threads formed of metal, the warp threads being close together and forming a tape, and the woof threads having portions arranged in pairs as spaced points longitudinally of the tape and having nested loop portions connecting the portions aforesaid and projecting laterally from but opening toward opposite longitudinal edges of said tape.

2,004,365

FLASH TESTER FOR HIGH TENSION ELECTRIC CURRENTS

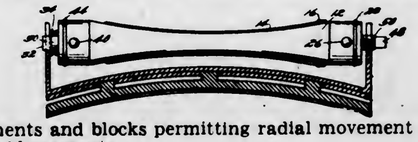
Edgar Bidwell, Wichita, Kans., assignor of one-half to Charles Basse, Wichita, Kans.

Application March 5, 1934, Serial No. 714,043

3 Claims. (Cl. 175—183)

1. In a flash tester of the kind described, a tube, said tube having an enlarged portion as a bulb on one end thereof, an electrode in said bulb, a metallic cap, said cap being fitted on and being rigidly and permanently attached to said bulb, and a metallic connection between said cap and said electrode, gas in said tube and bulb, said gas having the properties of becoming illuminated in varying colors when brought into the presence of varying amounts of a high tension electric current.

2,004,366



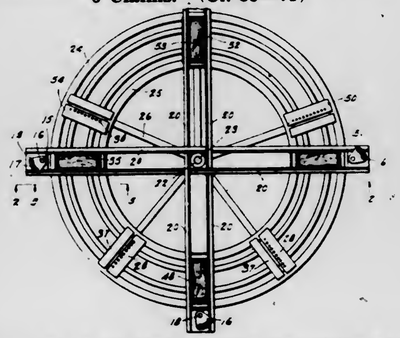
EXPANDING HAIR WAVER ROD

Fritz Binder, Kansas City, Mo.

Application May 7, 1934, Serial No. 724,256

7 Claims. (Cl. 132—33)

1. In hair waving apparatus, a spool comprising a plurality of segments combined to form a hollow spool; a bearing block closing each end of said spool; and means interconnecting said segments and blocks permitting radial movement of said segments.



2,004,367

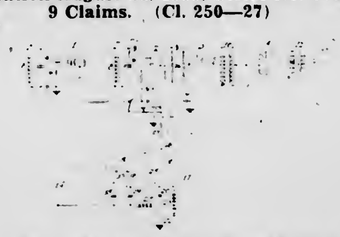
ROTARY WOOD CHIPPING MACHINE

Walter I. Brown, Oakland, Calif.

Application November 21, 1932, Serial No. 643,659

6 Claims. (Cl. 83—75)

1. A wood chipping machine comprising a supporting frame, a cutter wheel rotatively supported by said frame, said cutter wheel consisting of concentrically disposed ring-like members, means on said cutter wheel for supporting a series of slitting cutters arranged in a radial line with respect to the axis of rotation of the cutter wheel, support arms carried by the cutter wheel and arranged concentrically with respect to said ring-like members, a shearing knife mounted on the forward ends of said support arms in a position adjacent to said slitting cutters, means for rotating said cutter wheel, and one or more wood hoppers supported by said frame in position to feed wood to said slitting cutters and shearing knife.



2,004,368

RADIO POWER SUPPLY SYSTEM

Alfred Crossley, Chicago, Ill., assignor to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois

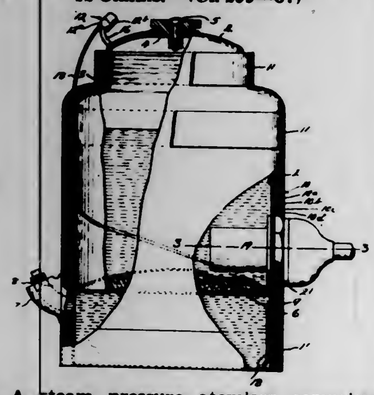
Application August 24, 1933, Serial No. 686,523

9 Claims. (Cl. 250—27)

1. A radio receiver including a detector and amplifying stages, a power output stage having substantially zero plate current with no audio-frequency input voltage, a circuit including a first rectifier element and a filter system for supplying plate voltage to said detector and amplifying

stages, and a second circuit containing a rectifier element and a condenser for supplying plate voltage to said power output stage.

2,004,369
RAILWAY TRACK STRUCTURE
Harry Etheridge, Zelienople Borough, Pa.
Application May 6, 1932, Serial No. 609,619
5 Claims. (Cl. 238—115)

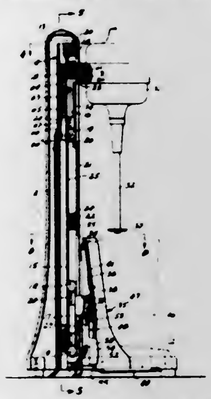


1. In a track support for railway rails, the combination of a supporting structure comprising superimposed strata of metal rings and oblong loops, a metal plate supported from beneath by said structure and secured thereto, the rail being supported by said plate, and a covering and filling of concrete for the rings and loops to form a rigid mass.

2,004,370
ADHESIVE
Mortimer T. Harvey, East Orange, N. J., assignor to The Harvel Corporation, a corporation of New Jersey
No Drawing. Application February 12, 1932, Serial No. 592,649
4 Claims. (Cl. 134—23.1)

4. An adhesive composition resulting from the mixture of cashew nut shell liquid and gelatin in which the proportions of these ingredients range from about nineteen parts by weight of the former and one part of the latter to about one part of the former and ten parts of the latter.

2,004,371
STEAM PRESSURE ATOMIZER
Albert Janesick, Detroit, Mich.
Application June 13, 1932, Serial No. 617,063
12 Claims. (Cl. 299—87)

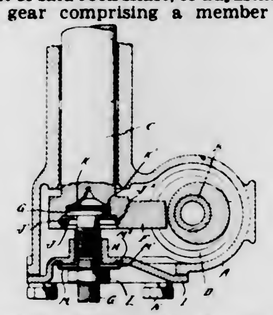


2. A steam pressure atomizer comprising a boiler for generating steam, a liquid receiver arranged beneath said boiler, means for holding said boiler and receiver in assembled relation, an atomizing head adjacent to the top of the boiler, a liquid discharge tube leading from the lower portion of said receiver to said atomizing head, and extending in a proximity to the boiler adapting the boiler to heat the discharging liquid, and a steam delivery connection to said atomizing head from the boiler.

2,004,372
SOLDER FOR ALUMINIUM AND ITS ALLOYS
Alexander Luschenowsky, Berlin, Germany, assignor to Küppers Metallwerke G. m. b. H., Bonn-on-the-Rhine, Germany, a company of Germany
No Drawing. Application March 31, 1934, Serial No. 718,511. In Germany March 31, 1931
1 Claim. (Cl. 75—1)

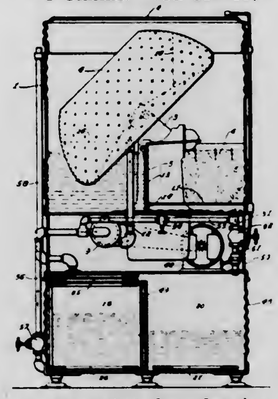
A method of manufacturing a solder for aluminium and its alloys, comprising melting a hard alloy containing from 50% to 70% tin, from 45% to 20% zinc and from 5% to 10% copper, melting a comparatively softer basic alloy containing from 80% to 95% tin and from 20% to 5% zinc, said alloys having substantially the same specific weight, due to the selection of the amounts of the components thereof, superheating the first-mentioned molten alloy, introducing the same in the superheated finely divided molten state into the second molten alloy and mechanically distributing the first-mentioned alloy in the second-mentioned alloy, whereby the first-mentioned alloy forms very fine crystals which remain solid during soldering.

2,004,373
DRINK MIXER
Arthur M. Lutes, Red Creek, N. Y.
Application September 14, 1932, Serial No. 633,143
13 Claims. (Cl. 259—108)



1. A drink mixer comprising a frame having a guide, upper and lower carriages movable along the guide, a stirrer and means for actuating it supported by the upper carriage, a cup support carried by the lower carriage, and motion transmitting and reversing means between the carriages comprising a pulley carried by the frame above the upper carriage and a cord fixed at spaced apart points to the carriages respectively and having the portion between the fixed points passing over the pulley.

2,004,374
STEERING GEAR
Henry Maries, Detroit, Mich., assignor to Gemmer Manufacturing Company, Detroit, Mich., a corporation of Michigan
Application June 25, 1934, Serial No. 732,374
6 Claims. (Cl. 74—500)

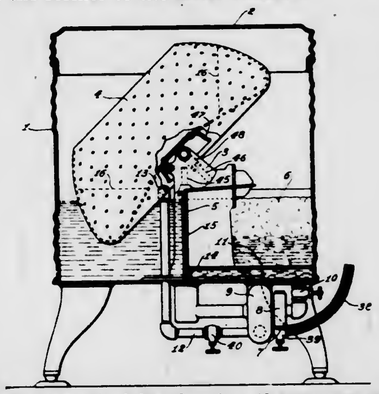


1. In a steering gear comprising a housing, a worm and rock shaft journaled therein with their transverse axes at a fixed distance from each

other and a worm gear on said rock shaft movable into and out of contact with said worm by an axial movement of said rock shaft, of adjustment means for said gear comprising a member having a

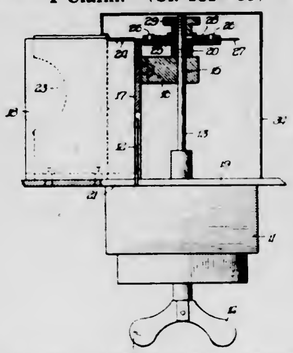
swivel opposite end thrust connecting engagement therewith and a screw-threaded engagement with said housing whereby rotation of said member will adjust said worm gear axially.

2,004,375
CLEANING METHOD AND APPARATUS
John E. Martin, St. Louis, Mo., assignor, by mesne assignments, to The Band Box Corporation, St. Louis, Mo., a corporation of Missouri
Application January 18, 1930, Serial No. 421,852
3 Claims. (Cl. 68—38)



1. In an apparatus for cleaning fabric articles, a clarifier, comprising an evaporating chamber, heating means therein, a condensing chamber, vapor condensing means in the upper portion of said condensing chamber, and liquid cooling means in the lower portion of said condensing chamber adapted to contact with the liquid therein.

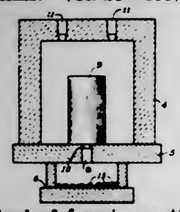
2,004,376
DRY CLEANING APPARATUS AND METHOD
John E. Martin, St. Louis, Mo., assignor, by mesne assignments, to The Band Box Corporation, St. Louis, Mo., a corporation of Missouri
Application January 18, 1930, Serial No. 421,853
18 Claims. (Cl. 68—38)



1. An apparatus for cleaning fabric articles, comprising, a cleaning chamber having agitating means therein, an evaporating chamber for the cleaning liquid adjacent said cleaning chamber, and a condensing chamber for the cleaning liquid embracing said cleaning chamber.

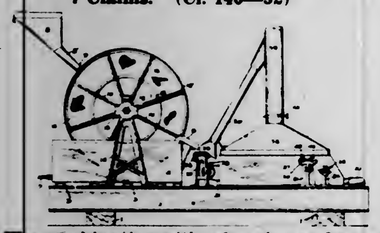
8. An apparatus for cleaning fabric articles, comprising, a tub having a transverse vertical partition providing a cleaning chamber and a filtering chamber, a filtering medium in said filtering chamber, and an article container mounted for rotation so as to dip into the cleaning liquid in said cleaning chamber and extending above said filtering chamber so as to carry liquid from the former to the latter chamber.

14. In the art of dry cleaning, the process comprising, agitating the batch to be cleaned in a bath of cleaning fluid at a temperature sufficiently below that of the surrounding atmosphere to substantially retard evaporation of the fluid.



2,004,377
PACKAGE OPENER
William P. Martin, Stickney, Ill., assignor of one-fourth to Joseph Lustfield, Cicero, Ill.
Application June 2, 1933, Serial No. 673,995
1 Claim. (Cl. 131—59)

In a cigarette package opener, the combination of a floor, an end and two side walls upstanding from said floor and unitedly forming a compartment with an open end adapted to receive and snugly accommodate a package of cigarettes advanced into said compartment by sliding through said open end on said floor, a spring-motor, a shaft rotated a half revolution only by each actuation of said motor, a member in said compartment in the path of insertion of said package and movable by the entering package to release said spring-motor whereby such motor revolves such shaft one-half revolution, a support on said shaft, and two sharp-edged blades mounted on said support and each extending beycnd the periphery of said support, each said blade occupying a position on said support ob-

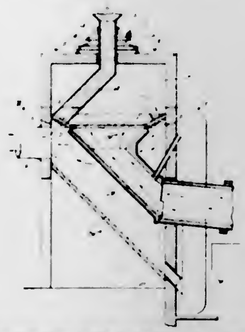


lique to the radius of the shaft through the center of the blade, whereby one of said blades during a half rotation of the shaft first engages and in a slicing manner cuts through the top portion of an upright corner of the stationary package resting on the floor of and confined by the walls of said compartment between the top ends of the cigarettes in the package and the adjacent inner surface of the corresponding top wall of the package and then completes the slit of the walls meeting at said corner and finally slits the wall opposite to one of said first package walls, said final cut being comparable to that of a pair of shears wherein the blade forms one cutting element of the shears and the end of one of said compartment walls constitutes the correlated cutting element of the shears.

2,004,378
METHOD OF MAKING REFRACTORY PRODUCTS AND THE LIKE
Charles McMullen, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application December 18, 1933, Serial No. 702,940
7 Claims. (Cl. 25—156)

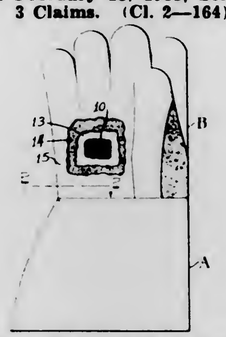
1. In the method of forming articles of nonmetallic refractory material, the steps which comprise casting said material in molten form into a mold and against a core of metal of high thermal conductivity having a melting point below that of the cast article, transferring heat from the casting to the core whereby the face of the casting in contact with the core becomes solidified and the core in turn thereafter becomes molten, and flowing the core from within the cast article.

2,004,379
PEA HUSKER
Charles A. Michels, Moscow, Idaho, assignor of one-half to Willis L. Crites, Moscow, Idaho
Application March 19, 1934, Serial No. 716,297
7 Claims. (Cl. 146—32)



1. The combination with a housing and an endless reticulated conveyer therein of a pair of husking rollers at one end of the conveyer, a pair of splitting rollers located above and adjacent the other end of said conveyer, a pair of oscillatable tapping-rollers located beneath the working flight of the conveyer, and means for oscillating said rollers for alternate impact with said working flight against said splitting rollers.

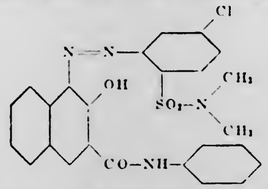
2,004,380
DIRECT ACTING SHOCK ABSORBER
John M. Nickelsen, Ann Arbor, Mich., assignor to Monroe Auto Equipment Company, Monroe, Mich., a corporation of Michigan
Application January 22, 1934, Serial No. 707,824
16 Claims. (Cl. 188—88)



1. In a hydraulic shock absorber of the class described, a pair of concentric spaced tubular members the inner of which forms a fluid pressure cylinder and the outer of which forms a fluid reserve chamber, a tubular member telescoping between said spaced tubular members, a piston carried with said last mentioned member and reciprocating in said pressure cylinder, and a seal between said outer tubular member and said last named tubular member, for the purpose set forth.

2,004,381
MANUFACTURE OF HYDRAULIC CEMENT AND THE LIKE
Kristian Middelboe, Frederiksberg, near Copenhagen, Denmark, assignor to F. L. Smidth & Co., New York, N. Y., a corporation of New Jersey
Application January 27, 1934, Serial No. 708,578
In Great Britain January 30, 1933
11 Claims. (Cl. 34—23)

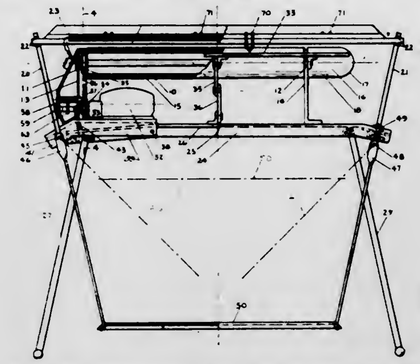
1. Apparatus for attempering cement material and the like, comprising a housing, a gas-permeable support within the housing, a movable feeding device within the housing to deposit on the support a layer of material to be attempered, and means to direct the attempering medium within the housing through said support and the material thereon, the housing being provided below said support with a conduit for the escape of said medium, and said support being so positioned between said means and said conduit that the medium passes down through the support.



2,004,382
WORK GLOVE
Robert C. Palicki, Toledo, Ohio
Application February 18, 1935, Serial No. 6,943
3 Claims. (Cl. 2—164)

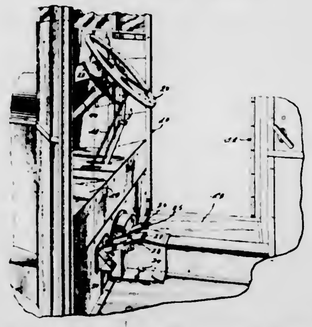
1. A work glove comprising a back and front having a pair of plies of textile material, a rubberized layer between and binding said plies together, the outer of said plies on the front having a fluffy, wool-like resilient surface, and a relatively thick leather ply on the front covering said wool-like surface, said wool-like surface providing an insulation between the outer ply and the remaining plies and also providing a padding for cushioning impact against the outer ply.

2,004,383
AZO-DYESTUFF AND FIBER DYED THEREWITH
Kurt Schimmelschmidt and Hans Thomae, Frankfort-on-the-Main, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 7, 1934, Serial No. 738,882. In Germany August 12, 1933
2 Claims. (Cl. 260—95)



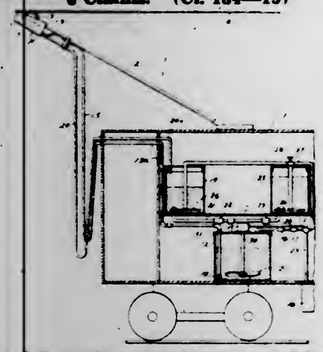
1. The azo-dyestuff of the following formula:

yielding, when produced on the fiber, a vivid golden-orange shade of good fastness properties, particularly of very good fastness to ironing and to light.



2,004,384
IRONING DEVICE
Solomon H. Seidman, New York, N. Y., and Arthur F. Routh, New Haven, Conn.
Application March 6, 1930, Serial No. 433,632
8 Claims. (Cl. 68—9)

5. In an ironing device the combination of an ironing member, means for heating same, a garment propelling roller and driving means therefor, means for disengaging said roller from said driving means and time controlled means actuated by said disengaging means for disconnecting the power supply for said heating means a predetermined time interval after disengagement of said roller from said driving means.

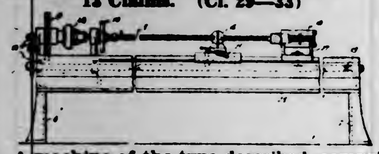


8. The combination with an ironing device of a guide element and means on said ironing device whereby the position of said guide element can be adjusted along the width of same.

2,004,385
DELIVERY VEHICLE
Horace T. Thomas, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a corporation of Michigan
Application January 9, 1933, Serial No. 650,920
2 Claims. (Cl. 180—77)

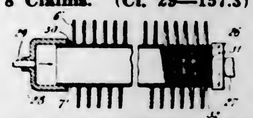
1. The combination of a delivery vehicle having a low level driving platform extending transversely therethrough and propelled by an internal combustion engine, clutch and transmission and including brake mechanism and vehicle control means, said control means comprising a steering wheel disposed forwardly of said driving platform, a throttle lever adjacent thereto and so positioned with respect to said steering wheel as to permit actuation of both by one hand of the operator while standing on said low level driving platform, a brake pedal, a combined clutch and brake pedal, a foot actuated two-way starting and stopping switch pedal for the engine and an accelerator pedal, all of said pedals being disposed in the forward portion of said driving platform adjacent to one another and accessible to the operator while standing on said driving platform.

2,004,286
APPARATUS FOR LUBRICATING TROLLEYS
Clarence G. Wehrly, Detroit, Mich.
Application March 23, 1931, Serial No. 524,636
6 Claims. (Cl. 184—15)



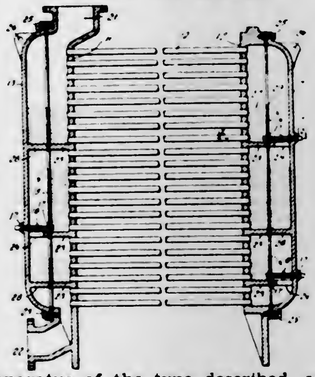
5. A lubricating apparatus comprising a current collector to engage a trolley wire, a spray gun having a passage therethrough, a support for the collector, means to mount the gun on the support in predetermined relation to the collector and wire, a receptacle for a fluid positioned at a distance from the gun, a conductor from the receptacle to the gun to conduct fluid thereto and means to supply air pressure to the receptacle to force the fluid material to and through the said passage and onto the wire.

2,004,387
MANUFACTURE OF FINNED TUBING
Edward A. Dewald, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application August 7, 1931, Serial No. 555,718
4 Claims. (Cl. 29—157.3)



4. The method of forming a finned tube which comprises displacing a portion of the metal at the outer surface of a metal tube to form a groove having raised edges, inserting a metal ribbon edgewise into said groove and crimping the edges of the groove to cause the same to grip the metal ribbon.

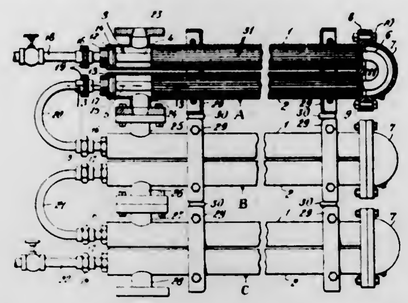
2,004,388
MANUFACTURE OF FINNED TUBING
Edward A. Dewald, Massillon, Ohio, assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application June 25, 1932, Serial No. 619,215
13 Claims. (Cl. 29—33)



1. A machine of the type described, comprising means for supporting a metal tube, a blunt scoring tool, means for rotating the tube with respect to the scoring tool, whereby a groove is formed in the tube, means for feeding a metal fin into the groove, and means for crimping the groove edges to cause the same to grip the fin.

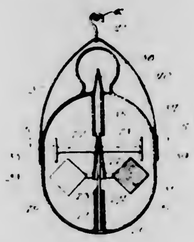
2,004,389
MANUFACTURE OF FINNED TUBING
Russell C. Jones, Bronxville, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application May 22, 1933, Serial No. 672,146
8 Claims. (Cl. 29—157.3)

1. The method of securing a helical fin on a metallic tube which comprises placing a helically coiled fin about the tube surface, fixing the fin against circumferential movement about the tube due to expansion of the tube and expanding the tube into gripping contact with the fin.



2,004,390
HEAT EXCHANGER
Julius Benzinger, Queens Village, N. Y., assignor to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application April 11, 1934, Serial No. 720,017
16 Claims. (Cl. 257—32)

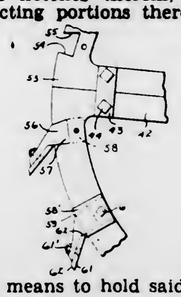
1. Apparatus of the type described, comprising a pair of headers, a plurality of tubes interconnecting said headers and providing cooling surface, means for supplying condensible vapor to said tubes, and means for controlling the flow of condensate through said tubes to subject the same to varying areas of cooling surface as it progresses, to maintain the temperature of the condensate substantially as low as that of the vapor in contact therewith.



2,004,391
HEAT EXCHANGER
Joseph Price, West New Brighton, and Russell C. Jones, Bronxville, N. Y., assignors to The Griscom-Russell Company, New York, N. Y., a corporation of Delaware
Application November 8, 1934, Serial No. 751,994
9 Claims. (Cl. 257—247)

1. Apparatus of the type described comprising a U-shaped tube, a pair of tubes separately enclosing each leg of said U-shaped tube whereby concentric fluid conduits are provided, the said pair of tubes having internal flanges at one pair of adjacent ends thereof, means for detachably connecting the ends of said U-shaped tube to said flanges and a member interconnecting the other

pair of adjacent ends of said pair of tubes and enclosing the bend of the U-shaped tube, said member being removable independently of said U-shaped tube whereby the same may be withdrawn as a unit from said pair of tubes after removing said member and disconnecting the ends of said U-shaped tube from said flanges.

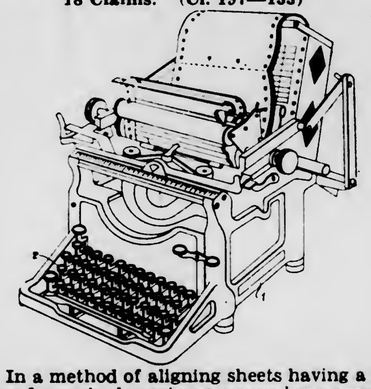


2,004,392
HIGH POTENTIAL OR CURRENT INDICATOR
Joseph Rah, Chicago, Ill., assignor to The Delta Star Electric Company, Chicago, Ill., a corporation of Illinois
Application February 17, 1930, Serial No. 428,994
5 Claims. (Cl. 177—311)

1. Means for indicating the de-energized condition of a power conductor comprising an envelope, radiant energy responsive means rotatably mounted in said envelope and continuously rotated by radiant energy, electrostatic responsive means including an electrode rotatable therewith, and means connected to said power conductor and including an electrode engaging the exterior of said envelope for restraining said electrostatic responsive means upon energization of said conductor.

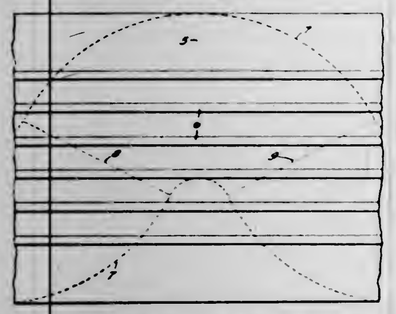
2,004,393
SOIL PULVERIZER
Joseph F. Rhodes, South Pasadena, Calif.
Application March 7, 1934, Serial No. 714,485
10 Claims. (Cl. 97—215)

1. In a soil pulverizer, a rotor comprising a pair of spaced disks, each of said disks having a series of peripheral notches therein, blade supports having projecting portions thereon fitting said



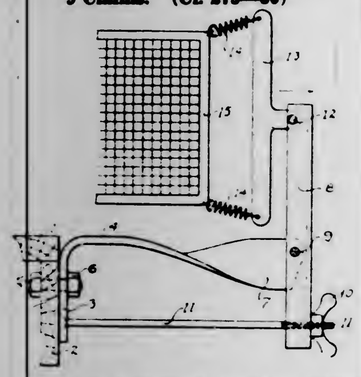
notches, and means to hold said blade supports in position.

2,004,394
SELF LIGHTING CIGARETTE
Victor C. Rowe, Roundup, Mont.
Application July 2, 1932, Serial No. 620,686
3 Claims. (Cl. 131—52)



1. The method of forming a self-lighting cigarette, which consists in dipping or otherwise impregnating the wrapping at one end of the cigarette and the tobacco exposed at that end into a water solution of acacia gum whereby to form a stiffened area at the end of the cigarette and a slightly hollow reinforcement across the tobacco, drying the gum solution, then placing in said hollow a body of fulminating substance to form a head which does not exceed in diameter the diameter of the stiffened end portion of the cigarette, and finally drying the fulminating substance.

2,004,395
PAPER HANDLING
John Q. Sherman, Dayton, Ohio
Application August 7, 1931, Serial No. 555,811
18 Claims. (Cl. 197—133)

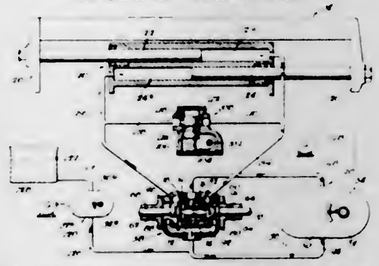


1. In a method of aligning sheets having a plurality of marginal apertures, arranging a group of said sheets in substantial alignment with one another, feeding said sheets as a group, separating said sheets into separate groups, aligning all of said sheets with reference to each other in the original group by separate means operating on the marginal apertures of each separate group.

2,004,396
METHOD OF MANUFACTURING HOT CAPS
Herbert R. Sage, Los Angeles, Calif.
Application May 28, 1934, Serial No. 727,847
3 Claims. (Cl. 93—1)

1. The method of making an article of the character described, which consists in: preparing a strip of sheet material from which the article is to be constructed; attaching a plurality of parallel spaced longitudinal reinforcing strips to a surface of said sheet material; cutting blanks from said prepared material through said reinforcing strips; and forming said blanks into hollow truncated cones with the reinforcing strips on the inside, and having overlapping longitudinal joints.

2,004,397
TABLE-NET BRACKET
Philip W. Sloan, Grosse Pointe Park, Mich.
Application April 6, 1933, Serial No. 664,761
Renewed June 8, 1934
9 Claims. (Cl. 273—30)



1. A table-net supporting structure comprising a horizontally-disposed stationary fulcrum member having a depending inner end attachable to table and platform sides, a vertically-disposed swingable tension-transmitting member pivotally attached to the outer end of said stationary fulcrum member, a tension rod anchored at one end in said depending portion of the horizontally-disposed stationary fulcrum member, said rod being threaded at the other end and passing loosely through an aperture in said vertically-disposed tension-transmitting member close to the lower end thereof, a thumb nut on said tension rod and contacting said swingable tension-transmitting member to move its lower end inwardly and its upper end outwardly when turned in clockwise direction to increase tension on net, a second vertically-disposed swingable member pivotally attached to the first mentioned swingable member and serving as an equalizing bar through which net tension stress is uniformly distributed, and coiled springs connecting the upper and lower ends of said equalizing bar to the correspondingly-positioned corners of the net, at each end thereof, thus providing a resilient type of support tending to prevent accidental tearing of net.

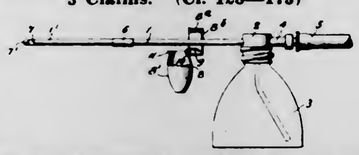
2,004,398
TIE ROD CONSTRUCTION
James H. Steenson, Plainfield, N. J., assignor to Breeze Corporations, Inc., Newark, N. J.
Application July 23, 1932, Serial No. 624,321
6 Claims. (Cl. 287—62)

1. A tie rod construction for aircraft use comprising, in combination, a rod of uniform cross section having a rounded head, a clevis having a threaded bore to receive the rod, an exteriorly threaded sleeve disposed around the rod to engage in the bore of the clevis, said sleeve having a bore of one diameter for a portion of its length and of a different diameter for another portion of its length, the walls of the different portions of the bore being parallel and a curved seat to receive the rounded head, and a locking means carried by the sleeve to engage the clevis to lock the clevis and sleeve together.

2,004,399
FLUID TRANSMISSION
Ernest J. Svenson, Rockford, Ill.
Application December 26, 1930, Serial No. 504,810
12 Claims. (Cl. 60—52)

1. In material working apparatus, a work support, a cutting tool, said work support and cutting tool being relatively movable, a hydraulic actuator for effecting relative movement between the work support and the cutting tool, a constant speed variable displacement gear pump connected in a closed circuit with said actuator, the pressure maintained at the gear pump exhaust being substantially the same as the pressure of the fluid which propels the actuator, pump means for maintaining pressure at the intake side of the gear pump, the pressure thus maintained counteracting the suction effect at the gear pump intake, a reservoir for supplying fluid to said pump means, and a valve mechanism for controlling the reversal of said actuator, said valve being operable in response to the shifting of said actuator.

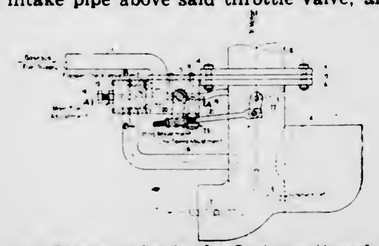
2,004,400
PROCESS FOR THE PREPARATION OF TALKING MACHINE PLATES
Alfred Otto Thomae, Berlin-Steglitz, Germany
No Drawing. Application January 10, 1930, Serial No. 420,023. In Germany January 11, 1929
2 Claims. (Cl. 18—48.3)



1. The method of producing sound records from gelatinized acetyl cellulose, consisting in drying such material at a temperature of from 40° C. to 80° C. for a period of substantially 24 hours for each one-tenth millimeter thickness of the record disc to be made therefrom, forming a record from such dried material in a heated press the temperature of which is from 60° C. to 90° C. and during such forming subjecting such record to a pressure of substantially 200 atmospheres.

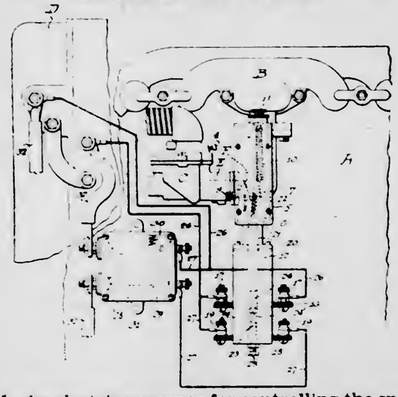
2,004,401
CARD HOLDER
Lloyd L. Wells, Honeoye Falls, N. Y.
Application March 22, 1934, Serial No. 716,852
3 Claims. (Cl. 248—33)

1. A card holder comprising a lead base, and a wire member including a card retaining coil portion, the ends of the wire member being arranged in spaced substantially parallel relationship and embedded in the base.



2,004,402
ATOMIZER
John Edward Conklin, Brooklyn, N. Y.
Application April 7, 1934, Serial No. 719,523
3 Claims. (Cl. 128—173)

1. In an atomizer, a nozzle, a pair of air and liquid discharge tubes carrying said nozzle and extending rearwardly therefrom in spaced relationship to a source of liquid and air supply, and a two-part nasal tip mounted on said tubes and comprising a body member adapted to fit over the nozzle and a slidable carrier member movable along said tubes and having a hinge-connection with said body member and a permanent slidable connection with said tubes.

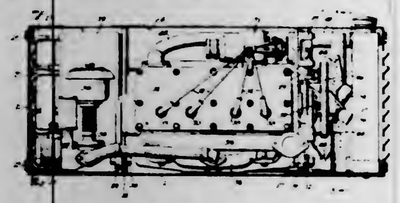


2,004,403
GAS FUEL FEED DEVICE
Delos W. Davisson, Ferdinand G. Welke, and Almy C. Maynard, San Francisco, Calif., assignors to Shell Development Company, San Francisco, Calif., a corporation of Delaware
Application February 16, 1932, Serial No. 593,304
2 Claims. (Cl. 48—180)

1. A gas fuel feed device for an internal combustion motor comprising: an intake pipe adapted to be attached to said motor, a throttle valve in said intake pipe, a gas valve attached to said intake pipe, a gas supply line connected to said gas valve, a conduit leading from the gas valve into the intake pipe below said throttle valve, a conduit leading from said gas supply line into the intake pipe above said throttle valve, and a

one way flapper valve in the first mentioned conduit whereby air is prevented from passing to the motor by way of said conduits.

2,004,404
SPEED GOVERNOR FOR GAS-ELECTRIC POWER UNITS
Harold D. Gumpper, Detroit, Mich.
Application July 11, 1934, Serial No. 734,629
12 Claims. (Cl. 290—40)

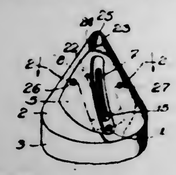


1. An electric governor for controlling the speed of a prime mover arranged to drive an electric generator connected with a main circuit, said governor including solenoids comprising coils and a movable core member, said coils being each connected in shunt across said main circuit, control means for varying the speed of said prime mover operatively connected to said core member, and electro-magnetic means for attracting said core and resisting movement of the same at low speeds of said prime mover and against the action of the energized coil, whereby limited variations in voltage at low speeds, will not effect a change in speed of said prime mover.

2,004,405
UNIT ELECTRIC POWER GENERATING PLANT
Harold D. Gumpper, Detroit, Mich.
Application July 11, 1934, Serial No. 734,630
10 Claims. (Cl. 290—1)

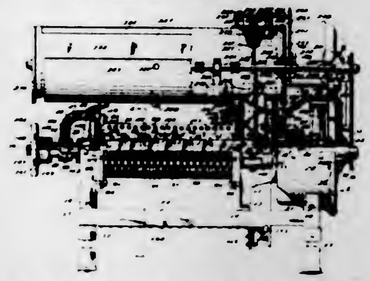
9. A unit power generator plant including a casing of dimensions adapting it for placement in the space occupied by the storage batteries of an industrial truck and including a frame, an electric-power plant enclosed within said casing and including an internal combustion engine secured to said frame in a laterally tilted position to bring

it wholly within the confines of said casing, and a generator within said casing driven by said en-



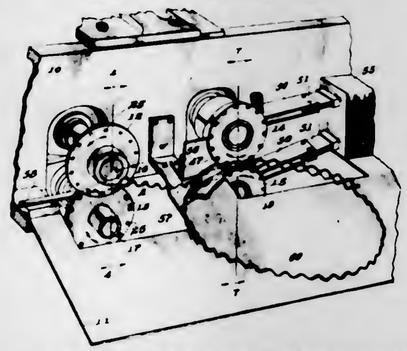
gine, and engine accessories necessary to make a complete operative power plant, mounted within said casing.

2,004,406
BUCKLE
Douglas J. Harvey, Nutley, N. J.
Application February 21, 1934, Serial No. 712,279
2 Claims. (Cl. 24—163)



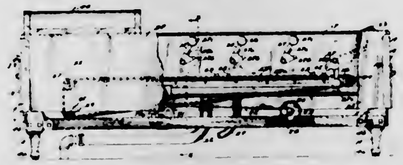
1. A buckle of the character described for use with belts and the like, comprising a channel shaped body providing a receiving recess for the free end portion of a belt and having means at one end thereof for attachably receiving the fixed end portion of the belt, a retaining bar fixed to the other end portion of said body in overlying relation to said recess for retaining the free end portion of the belt in assembled relation with the buckle, a stud projecting from said body within said recess, the height of said stud being less than the thickness of the belt used with the buckle for cooperating with sockets in the rear surface of the belt, a second and similar retaining bar spaced from said first named retaining bar, said second retaining bar being hingedly connected to said buckle body and arranged to cooperate with said first retaining bar to retain the belt within said recess and in engagement with said stud, said second retaining bar being turnable away from said recess to enable the disengagement of said belt from said stud as when varying the effective length of the belt, the unapertured portion of the belt extending between said retaining bars being exposed in use, thereby giving the buckle a highly attractive appearance.

2,004,407
CONTAINER CLOSURE
Harold B. Hemb, Wilmette, Ill.
Application February 23, 1934, Serial No. 712,601
14 Claims. (Cl. 221—62)



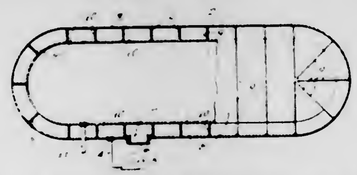
1. A dispensing closure for containers, comprising a conical body portion having a dispensing opening adjacent its apex, said body portion being formed of flexible material and having meeting portions that overlap and are slidably related to each other, each of said overlapping portions having an elongated slot, said slots each occupying a position at an angle to the other, and a pin extending through both of said slots, said slots and pin being so arranged that movement of the pin longitudinally in the slots will open and close the dispensing opening.

2,004,408
APPARATUS FOR EXPRESSING LIQUIDS
Stanley Hiller, Berkeley, Calif., assignor to Stanley Hiller, Incorporated, San Francisco, Calif., a corporation of California
Application November 22, 1929, Serial No. 409,125
12 Claims. (Cl. 100—48)



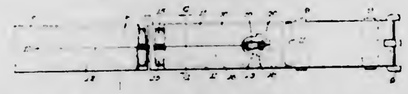
1. In an expressing press, a screen structure comprising a body for surrounding an expressing means, said body being formed of two mating sections, each section having two vertical flanges and a series of ribs united thereto, the ribs of each section forming a hollow semi-cylindrical shell; a plurality of trapezoidal bars rigidly united together at longitudinally spaced points to form a semi-cylinder for positioning within said shell, said bars having outwardly diverging slots; and means to detachably secure said set of bars to said semi-cylindrical shell.

2,004,409
APPARATUS AND METHOD FOR FORMING SCREEN FROM WIRE
Durward K. Hopkins, Peoria, Ill.
Application December 7, 1933, Serial No. 701,314
10 Claims. (Cl. 140—112)



1. A device of the class described having means for forming wire or the like into a series of undulated forms, in combination with means for continuously welding portions of said wire upon other portions thereof in a series of courses whereby a mesh structure is produced.

2,004,410
APPARATUS FOR HANDLING ARTICLES THROUGH TREATING LIQUIDS
John W. Houch and Glen M. Dye, Minneapolis, Minn., assignors to Pako Corporation, Minneapolis, Minn., a corporation of Delaware
Application March 9, 1931, Serial No. 521,277
27 Claims. (Cl. 95—89)



1. A machine for handling articles through treating liquids having in combination, a series of liquid holding vessels, a receptacle pervious to liquids in each of said vessels for supporting articles in the liquid therein, said receptacles being movable from their respective vessels into discharging position, means for so moving said receptacles, and means for agitating said liquid and articles.

2,004,411
AIRCRAFT
Harold F. Krug, Grosse Pointe Park, Mich.
Application March 31, 1934, Serial No. 718,445
2 Claims. (Cl. 244—3)

1. In a device of the character described, a non-expansible casing, an elastic bag within said casing, integral circumferentially extending ribs on said bag and engaging said casing to maintain the wall of the bag in spaced relation thereto, said ribs being adapted to maintain said bag in a distended position in the absence of abnormal fluid pressure in said bag, and said ribs being collapsible whereby to permit the wall of said bag to be moved nearer to said casing by abnormal fluid pressure in said bag.

2,004,412
BELT FOR PERSONAL WEAR
Morris Luftig, Chicago, Ill.
Application November 4, 1932, Serial No. 641,135
3 Claims. (Cl. 241—8)

1. In a belt of the class described, a strip having a buckle secured at one end thereof, a second strip of substantially the same width as the first mentioned strip, said strips being secured together along their longitudinal edges with the second strip on the inside of the belt, said second strip having a slit formed therein, and a separable fastener secured to said second strip adjacent said slit.

2,004,413
WEATHER STRIP
Daniel Todd Main, Westmount, Quebec, Canada, assignor to Best Weather Strip Company Limited, Hamilton, Ontario, Canada
Application March 1, 1933, Serial No. 659,028
3 Claims. (Cl. 20—69)

1. A weather strip comprising an outer casing of pliable sheet material encasing a flexible inner tube of slightly greater thickness and compressibility than the said outer casing, said outer casing having extended edges forming flanges of unequal length adapted to be securely held in the jaw portion of an irregular shaped metallic reinforcing member, said reinforcing member having a tail piece projecting therefrom having secured thereto a flat flexible rubber packing strip, holes punched in said tail piece at close intervals along its length, said holes adapted to receive the fastening means.

2,004,414
BOBBER
James W. Menefee, Fort Wayne, Ind.
Application November 20, 1933, Serial No. 698,743
1 Claim. (Cl. 43—49)

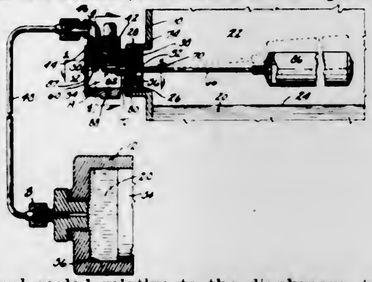
In a fish line bobber, a float, a tube secured in and extending axially through the float, each end thereof extending beyond the corresponding end of said float and having a stop located at its outer extremity, a plummet consisting of a shaft loosely disposed in said tube having longitudinal free guided movement therein limited by said stops, and a fish line connected to one end only of said tube and having a pendent portion provided with a hook, the other end of said tube being free respecting said line.

2,004,415
CONTAINER FOR SPECTACLE TEMPLES
George E. Nerney, Attleboro, Mass., assignor to Bay State Optical Company, Attleboro, Mass., a corporation of Maine
Application July 14, 1932, Serial No. 622,385
6 Claims. (Cl. 206—5)

1. A container for temples of spectacles comprising a flat oblong member, a pair of members

connected to opposite sides of said member and extending over one surface thereof, said members being connected to said first-mentioned member substantially along the center line and being cut away to expose portions of the surface of said first-mentioned member at the opposite ends

flaps at the opposite ends member adapted to fold said second-mentioned surface portions member may be tem-



TRACTORS to Min- Company, 722,107

1. A prising the fron the tra with the tor, said stationary posed tool bars connect frame and per ment of the tool mounted on the tool thereto, thereby p runner frame longit direction of travel, and a connecting the hopper and tube being flexible to allow for adjustments.

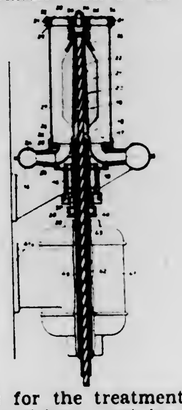
2. A planter attachment for a tractor ing a draft beam secured to and erally from one side of the tractor, spaced planting devices connected to the as to be propelled thereby, said beam comprising longitudinal sections detachably connected at their ends, and with one planting device connected with each of said beam sections.

2,004,417
AIR VOLUME CONTROLLING DEVICE FOR WATER STORAGE TANKS
Albert Penn, Des Moines, Iowa, assignor to Penn Electric Switch Co., a corporation of Iowa
Application May 13, 1929, Serial No. 362,620
4 Claims. (Cl. 251—31)

1. In a device of the class described, a fitting, an opening therethrough, a diaphragm across said opening, a pair of washers secured to said fitting, said diaphragm being positioned between the washers and the fitting, a control rod extending through the diaphragm and through the opening of the washers, said control rod being secured

to and sealed relative to the diaphragm, trunnions on said control rod positioned between said washers and retained thereby for allowing pivotal movement only of said trunnions.

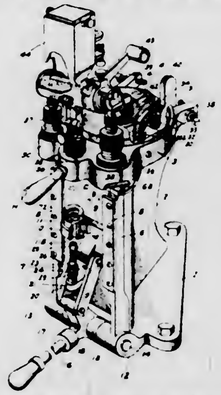
2,004,418
VENDING MACHINE
Bruno Radtke, Libertyville, Ill., assignor to Mills Novelty Company, Chicago, Ill., a corporation of Illinois
Application February 16, 1931, Serial No. 516,113
3 Claims. (Cl. 312—48)



and the com- of the pro-

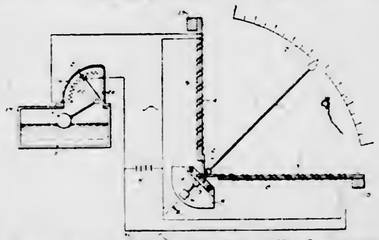
that the site po member of position while roll-discharging taneously oscil nately discharge a the other of said pa of the machine, said ally rotatable shaft, a with said shaft, a with said first gear wh affording operative connec ond wheel and the oscillating

ratio of said wheels being such as to produce a half revolution of the second wheel for each complete revolution of the first wheel, thereby producing one oscillation of said cup members for each complete revolution of said shaft.



2,004,419
DEVICE FOR THE WET TREATMENT, REMOVAL OF MOISTURE FROM, AND DRYING OF BALLS OF THREAD OR THE LIKE
Fritz Gottfried Schumacher, Basel, Switzerland
Application December 6, 1933, Serial No. 701,243
In Germany December 23, 1932
1 Claim. (Cl. 8—19)

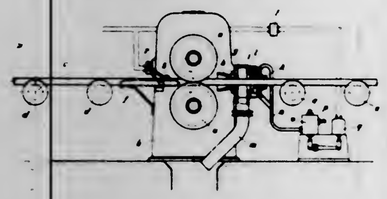
An apparatus for the treatment of yarn in balls or cops comprising a container divided into three superposed compartments, a plurality of dyeing, washing and drying members surrounding said container, means for fixing said members to the side of the container, said members radiating from said container, hollow shafts carried by said members, blade wheels carried by the upper ends of said hollow shafts, spiral casings enclosing said blade wheels, bobbin spindles fixed to the upper ends of said hollow shafts, separate motors mounted for rotating the hollow shafts and bobbin spindle, pipes connecting the compartments with the dyeing, washing and drying members for the conveyance of treatment media and a multiway valve connected with said pipes controlling the treatment media.



2,004,420
LOADING TOOL
Selmar R. Siebert and Lindsey King, San Diego, Calif.
Application November 13, 1934, Serial No. 752,851
5 Claims. (Cl. 86—23)

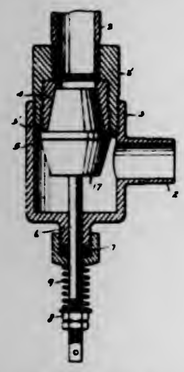
1. An upstanding frame having a vertically extending crotch, laterally spaced flanges disposed at the sides of said crotch, plates fastened to said flanges thereby forming guide-bars, a vertically reciprocating crosshead mounted between said guide-bars, said crosshead being provided with an offset support for interchangeably fastening shell holders therein, operating parts comprising an operating arm fulcrumed at the base of said frame, a toggle arm outwardly directed therefrom, and toggle links connecting said arm and crosshead; a stationary lateral extension de- from said frame in said crotch and pro- thru said links, a primer stem rigidly said extension, a swingable turret frame, spaced attachments carried whereby upon swinging it in a plane at a right angle to said stem said attachments vertically aline with said shell holder and stem, a shoulder on said stem, a spiral spring carried by said shoulder, said spring being adapted to yieldably support said operating parts, said stem having its free end diametrically reduced, a primer cup, and means to retractably support

said cup on the reduced portion of said stem, said shell holder being provided with shell gripping means, there being a bore extending thru said shell holder permitting its retractibility, said operating arm being manually liftable to operatively relate said shell holder and said attachments and gravitationally depressible to operatively relate said shell holder and said stem.



2,004,421
INDICATING APPARATUS
Theodore J. Smulski, Gary, Ind., assignor to The Anderson Company, Gary, Ind., a corporation of Indiana
Application October 4, 1930, Serial No. 486,417
7 Claims. (Cl. 177—351)

4. In a device of the class described, a movable indicating element pivotally mounted to oscillate about an axis, a pair of resilient elements each fixed at one end and at their free ends disposed for movement substantially at right angles to each other, a connection between the indicating element and the free ends of the resilient elements, the connection being positioned at a point spaced from the axis of the indicating element, the resilient elements each being resiliently stressed between the fixed end and the connection with the indicating element at the free end, and exerting opposing forces on the indicating element tending to move it in opposite directions, the indicating element taking up a position at a balance of the forces of the two resilient elements, and means associated with each resilient element to vary the forces exerted by said resilient elements, said means including an electric heater,

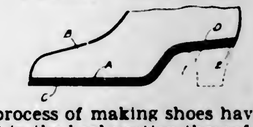


a thermally expansible element responsive thereto, and a circuit for supplying current to said heater.

2,004,422
PROCESS FOR SCALING TUBES
Rudolf Traut, Mulheim-Ruhr, Germany
Application November 22, 1933, Serial No. 699,147
In Germany January 14, 1933
3 Claims. (Cl. 29—81)

1. A process for removing scale from tubes and round bars of metal, consisting in cooling the work in air after the welding or rolling operation below a temperature of about 850° C., passing it through a measuring rolling mill and spraying it with liquid under pressure at an angle and in a direction opposed to its direction of movement for the removal of the scale by cooling action and by mechanical action.

2,004,423
FLOW CONTROLLING MECHANISM
Roy E. Warren, Houston, Tex.
Application February 1, 1932, Serial No. 590,179
1 Claim. (Cl. 251—134)

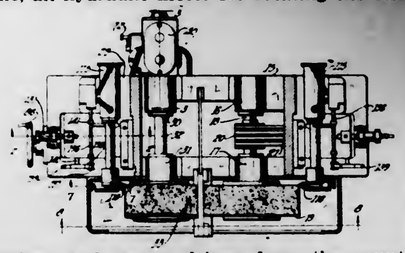


In flow controlling mechanism a valve casing having a valve chamber therein, a coupling threaded into one end of the casing and whose outer end is inwardly thickened forming a stop, a detachable outwardly converging valve seat threaded into the coupling into abutting relation with said stop, a flow line entering the side of the chamber and leading outwardly therefrom through said seat, a valve in said chamber having tapering ends, one of which is shaped to fit within said seat, said valve also having an annular external shoulder arranged to abut the opposing end of the seat when the valve is closed, a valve stem attached to the other end of the valve, a stuffing box carried by the casing through which said stem works and yieldable means normally tending to hold the valve open.

2,004,424
ONE HAND COMPACT
Charles Weeks, Des Moines, Iowa, assignor to The Armand Company, Des Moines, Iowa, a corporation of Iowa
Application January 24, 1934, Serial No. 708,061
4 Claims. (Cl. 132—83)

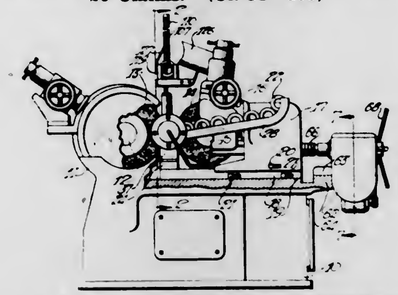
1. A compact adapted to be supported and operated by one hand comprising a relatively flat container having a top face provided with an opening, a bottom face, two ends and two sides, a closure element for said opening comprising a flexible element normally extending across said opening and across one of said ends, a slot in said bottom face and extending from end to end of said container and a projection on one end of said flexible element, extending through said slot and normally at the end thereof, adjacent the end across which said flexible element extends and adapted to be moved to the other end of said slot for withdrawing said flexible element from closing position with relation to said opening, guide elements inside of said flexible element and along said top face, pivot means inward of said guide elements, a mirror pivoted to said pivot means and spring means tending to swing said mirror outwardly through said opening between said guide elements.

2,004,425
SHOE AND PROCESS OF MAKING SAME
William H. Bain, Portsmouth, Ohio
Application April 5, 1933, Serial No. 664,559
3 Claims. (Cl. 12—142)



2. The process of making shoes having a cushioning pad in the heel portion thereof which consists in removing the inner surface of the heel portion of an insole to form an open seat that extends from side to side of said insole and to the heel end thereof, placing said insole on a last, interposing a metal member between said last and the seat in said heel portion of said insole, securing an upper to said seat of said last by tacks that are clinched by said metal member, removing said metal member from said seat and then inserting a cushioning member in said seat.

2,004,426
GRINDING MACHINE
Clement Booth and Frederick S. Haas, Cincinnati, Ohio, assignors to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application March 28, 1930, Serial No. 439,778
18 Claims. (Cl. 51—103)



1. In a centerless grinder the combination of a bed or support, a pair of opposed grinding and regulating members forming a grinding throat therebetween, means for supporting a work piece in the throat between the members, a counter shaft, a prime mover for rotating the counter shaft, transmission means extending from the

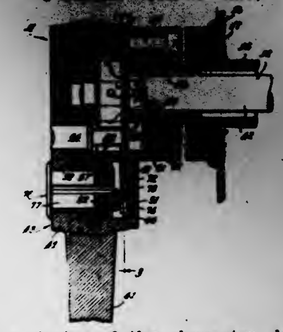
counter shaft to one of the members for rotating same, an hydraulic motor for rotating the other

member, and means driven from the counter shaft for effecting a rotation of the hydraulic motor.

2,004,427
GRINDING MACHINE
Clement Booth, Cincinnati, Ohio, assignor to Cincinnati Grinders Incorporated, Cincinnati, Ohio, a corporation of Ohio
Application July 3, 1931, Serial No. 548,610
26 Claims. (Cl. 51—103)

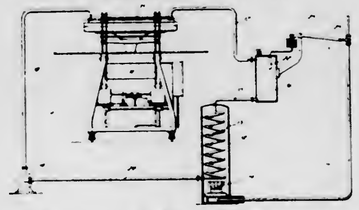
1. In a grinding machine the combination of a work support, a grinding wheel adjacent the support, hydraulically actuated means for positioning a work piece on the support, and additional hydraulically actuated means for removing the work piece from the support at the conclusion of the grinding operation thereon.

2,004,428
MASSAGE APPARATUS
John M. Davies, Denver, Colo.
Application April 26, 1932, Serial No. 607,523
3 Claims. (Cl. 128—51)



1. Massage apparatus comprising a support, a carrier mounted for vertical reciprocating movement thereon, springs yieldingly opposing move-

[illegible] in opposite directions, a mas[illegible], and means for manual

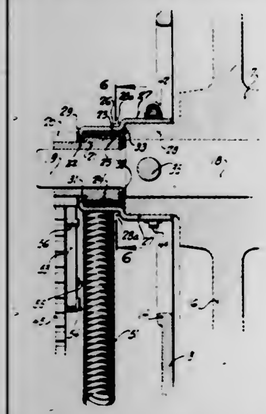


[illegible]

DOOR [illegible] OPERATING DEVICE
Wesley W. [illegible], and Columbus A. [illegible], Calif.
Application [illegible], Serial No. 632,942
3 Claims. (Cl. 70—136)

1. In a device of the character described, a member to be turned, a flange rigid with said member and having a notch in the periphery thereof, operating means freely revoluble on said member and having a hole therein the axis of which is substantially parallel to the axis of rotation of said operating means, said flange extending into one side of said hole, and a pin slidable within said hole optionally into or out of said notch said pin being supported within said hole upon both sides of said flange.

2,004,430
HEATER FOR LAUNDRY IRONERS
Nicholas L. Etten, Waterloo, Iowa, assignor, by mesne assignments, to Chamberlain Corporation, a corporation of Iowa
Application March 8, 1932, Serial No. 597,455
2 Claims. (Cl. 68—9)

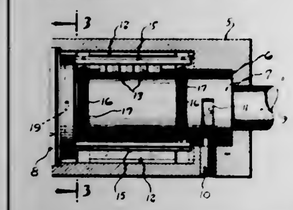


1. In an ironing machine, a member to be heated, said member having a fluid passageway therethrough, a heating coil, means for applying heat to the coil, pipes connecting the coil and the member to be heated to form an enclosed system, a liquid filling said member to be heated, the coil and the pipes, said liquid having a boiling point higher than the temperature to which it is desired to heat said member.

2,004,431
CLUTCH MECHANISM FOR ENGINE STARTERS
John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware
Application February 13, 1932, Serial No. 592,775
3 Claims. (Cl. 192—42)

1. A clutch device through which a rotatable shaft may be driven comprising a pinion having

a hub freely rotatably mounted on the outer end portion of the shaft and held against inward movement by an enlargement on the shaft, a cylindrical cup engaged over the hub with a part overlying the enlargement on the shaft, means engaging said part of the cup to secure the cup to the shaft, an instruck abutment on the outer

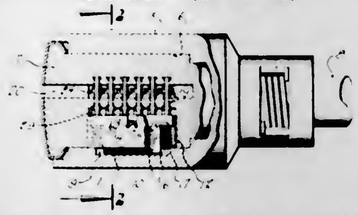


end of the cup, and an overrunning clutch element having a connection with the hub of the pinion and engaging said instruck abutment on the outer end of the cup to hold the pinion and hub against detachment from the shaft and to afford a driving connection between the pinion and cup upon rotation of the pinion in one direction.

2,004,432
LOCK

John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Original application March 12, 1934, Serial No. 715,135. Divided and this application July 2, 1934, Serial No. 733,378
9 Claims. (Cl. 70—46)

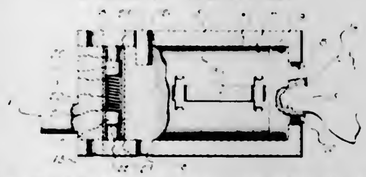


1. In a lock, a bored mounting member, a lock cylinder rotatable in the mounting member bore, key operable tumblers carried by the cylinder yieldably projectible into a groove in the mounting member, a locking bar disposed within the groove in the mounting member and having a part engageable with a recess in the cylinder to positively restrain rotation of the cylinder, said locking bar being projected by any tumbler toward the bottom of the groove in the mounting member in which position it engages in the cylinder recess, and spring means to move the locking bar toward the cylinder and out of engagement with the cylinder recess upon retraction of the tumblers by a proper key to free the cylinder for rotation.

2,004,433
LOCK

John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application October 17, 1934, Serial No. 748,655
13 Claims. (Cl. 70—46)

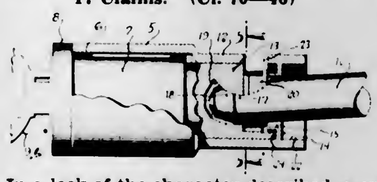


1. In a lock having a cylinder provided with tumbler guideways, key operable tumblers slidable in said guideways, said tumblers having a formation apt to have burrs on the sides thereof adjacent one edge, and said guideways having widened portions to accommodate such burrs, so that their presence does not interfere with the free action of the tumblers in the guideways.

2,004,434
LOCK

John W. Fitz Gerald, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application November 5, 1934, Serial No. 751,573
8 Claims. (Cl. 70—46)



1. In a lock, a bored mounting member, a lock cylinder mounted therein, frangible means to hold the cylinder against endwise displacement in either direction, said means being adapted to give way under a percussive force applied to the cylinder to permit endwise displacement of the cylinder upon the application of percussive force on the cylinder, and means to positively lock the cylinder against rotation and endwise motion upon endwise displacement of the cylinder a predetermined distance.

2,004,435
LOCK

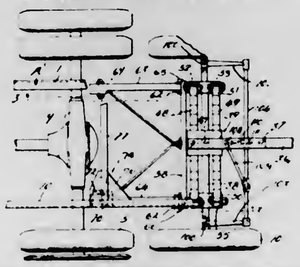
Edward N. Jacobi, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a corporation of Delaware

Application August 27, 1934, Serial No. 741,537
17 Claims. (Cl. 70—46)

1. In a lock of the character described, a cylinder having a cavity to provide an under cut recess in one end, a shaft to transmit rotation of the cylinder to mechanism to be actuated, said shaft having a hooked end portion adapted to be non-rotatably received in said under cut recess, the shaft being readily detachable from the cylinder while in a predetermined angular position with respect to the cylinder, and a casing for the cylinder having a part to engage the shaft and hold the same against movement to said predetermined angular position in which it is detachable from the cylinder.

2,004,436
MATCH

Alphons O. Jaeger, Mount Lebanon, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware



No Drawing. Application December 9, 1931, Serial No. 579,987
4 Claims. (Cl. 52—25)

1. A match, the head of which is provided with a coating comprising as a major constituent a synthetic resin selected from the group consisting of polyhydric alcohol-polybasic acid resins and phenol-aldehyde resins, said coating being substantially impervious to moisture but being so thin as to have no effect on the striking qualities of the match.

2,004,437
TRUCK TRAILER COMBINATION

Irving H. Judd, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a corporation of Michigan

Original application December 4, 1933, Serial No. 700,923. Divided and this application May 7, 1934, Serial No. 724,386
10 Claims. (Cl. 280—33.55)

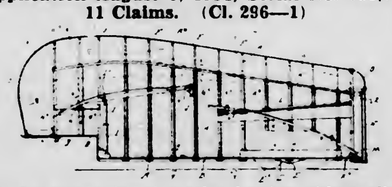
1. A truck-trailer combination comprising a truck having front and rear wheels and steering mechanism for said front wheels, a trailer having front and rear wheels, a connection between said vehicles holding the front wheels of the trailer in tandem relation with the rear wheels of the truck while permitting them to turn, and means carried by the trailer and entirely independent of the steering mechanism for the front wheels of said truck for making the front wheels of the trailer turn in an arc coincident with the center of the turning arc of the front wheels of the truck.

2,004,438
TRANSPORTATION OF AUTOMOBILES

Irving H. Judd, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a corporation of Michigan

Original application December 4, 1933, Serial No. 700,923. Divided and this application May 7, 1934, Serial No. 724,387
3 Claims. (Cl. 280—33.1)

1. In a method of loading automobiles on an articulated vehicle in which the trailing section of the vehicle has a front axle in tandem with the rear axle of the leading section of the vehicle and both of said sections have upper and lower tracks, the lower track on the leading section extending over the tandem axles, the steps which consist of moving an automobile forwardly from the ground over the lower tracks of the trailing section and leading section in the order named onto the upper track of the leading section, then



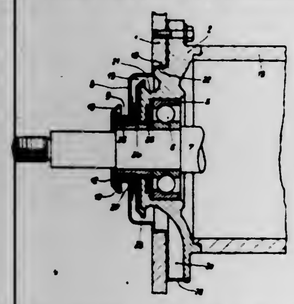
moving a second automobile forwardly from the ground over the lower track of the trailing section onto the lower track of the leading section to a position over said tandem axles, then moving a third automobile forwardly from the ground onto the lower track of the trailing section, and then moving a fourth automobile forwardly from the ground onto the upper track of the trailing section to a position over said third automobile.

2,004,439
AUTOMOBILE LOADING AND CARRYING MEANS

Irving H. Judd, Detroit, Mich., assignor to Whitehead & Kales Company, River Rouge, Mich., a corporation of Michigan

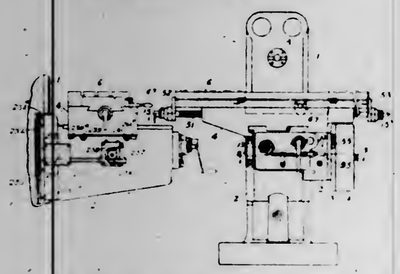
Application August 6, 1934, Serial No. 738,750
11 Claims. (Cl. 296—1)

2. In an enclosed trailer having side walls, a deck between said side walls for carrying an automobile, and elevated means adapted to be loaded from said deck for carrying another automobile forwardly of and in an elevated position relative to the first mentioned automobile, the combination therewith of inclined means loaded from said deck for carrying another automobile rearwardly of and in an elevated position relative to the first mentioned automobile, said means being supported at its forward end in an elevated position by said side walls and being supported at its rear end by said deck.



2,004,440
PACKING ARRANGEMENT FOR ELECTRICAL MACHINES

August Kazenmaier, Friedrich Allendorff, and Anton Schmid, Stuttgart, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany

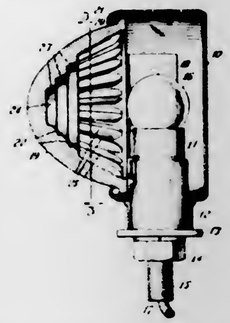


Application October 28, 1932, Serial No. 640,114
In Germany November 10, 1931
5 Claims. (Cl. 286—5)

1. A packing arrangement for preventing the penetration of liquid-oil lubricant and vapors of said lubricant from a gear box into the casing of a machine of the type having a rotor shaft extending from the machine into the gear box for driving the machine, comprising an end cover structure for said machine having a wall portion disposed in said cover structure inwardly with respect to said machine, rotatably journalling said shaft and forming an end boundary wall of

said machine, a flange adapting said cover structure to be attached to the wall of the gear box about the shaft, and an outer wall portion extending radially inward from said flange toward said shaft in such spaced relation with said first-mentioned wall portion as to form therewith a chamber in said cover structure about said shaft, said outer wall portion having a neck-like extension directed outwardly of said chamber in surrounding relation to said shaft and provided with an annular groove in its outer peripheral face, a rotatable splash ring on said shaft in proximity to said annular groove, means packing said chamber and said end boundary wall against said shaft, and conduit means formed in said cover structure opening said chamber to atmosphere at a point exterior to said gear box and said machine.

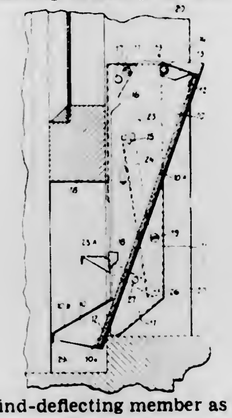
2,004,441
MILLING MACHINE ORGANIZATION
Edward J. Kearney, Wauwatosa, and Fred A. Parsons and Joseph B. Armitage, Milwaukee, Wis., assignors to Kearney & Trecker Corporation, West Allis, Wis.
Application May 11, 1925, Serial No. 29,433
Renewed April 18, 1932
42 Claims. (Cl. 90—21)



1. In a milling machine the combination of a work support, a rotatable tool spindle adjacent said support, a support for said spindle, said supports being relatively movable in a plurality of directions, a plurality of driving connections respectively for said different directions of support movement and each including means shiftable for altering the effect of its driving connection, a carrier movable independently of said support movement, a plurality of dogs on said carrier, a plurality of trip devices respectively movable into the path of movement of the respective dogs and respectively having motion transmitting connection with different of said shiftable means, and a power train connected to drive said carrier exclusive of said shiftable means.

2,004,442
ADDITIVE FIXED FILTER COLOR SYSTEM
Wilho A. Kosken, New York, N. Y., assignor to Wilho A. Kosken, Inc., a corporation of New York
Application August 29, 1931, Serial No. 560,111
4 Claims. (Cl. 88—1)

1. In combination in a lens system for combining two separate images into two coincident secondary images, a cooperative pair of relatively movable lens carriers; hinging means for hinging both of said lens carriers in the plane of said secondary image and for mounting said pair of lenses at their focal length from said plane; and means for adjusting said lens carriers.

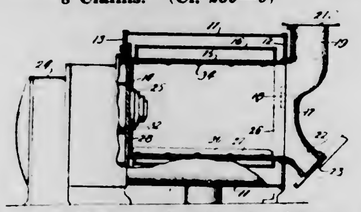


2,004,443
LENS
Rudolph Kovac, Chicago, Ill., assignor to American Automatic Devices Co., Chicago, Ill., a corporation of Illinois
Application September 14, 1934, Serial No. 743,964
3 Claims. (Cl. 88—82)

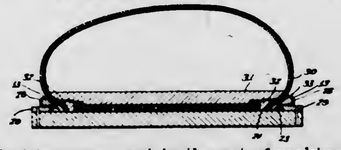
1. A concavo-convex lens having its convex side smooth, and having its concave side at its middle portion arranged in concentric steps and provided at its outer portion with diverging ribs each positioned at an angle of not more than approximately 30° from the axis of the lens.

2,004,444
WINDOW VENTILATOR
Richard G. Liptrott, Brooklyn, N. Y.
Application October 3, 1930, Serial No. 486,107
7 Claims. (Cl. 98—99)

1. The combination in a window ventilator of a wind deflecting member, a pair of side members adapted to support said member, each of said side members including a stationary plate and a movable plate, said stationary plate being provided with a slot the movable plate having a supporting pin adapted to slide and pivot in said slot, and also lever means attached to said stationary plate and adapted to be operated by the closing of the window to move said pin, thereby lifting and moving inwardly the movable plates with their wind-deflecting member as the window is lowered.

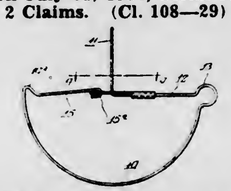


2,004,445
EYEGLASSES AND THE LIKE
Peter H. Meyer, Buffalo, N. Y.
Application August 4, 1934, Serial No. 738,551
5 Claims. (Cl. 88—45)



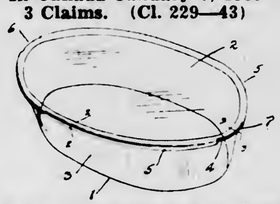
1. Eyeglasses comprising a pair of lenses, and a single-piece, combined bridge and frame member connecting the lenses, said member having a resilient middle spring portion and stiffer substantially rigid end portions which conform in shape to and extend about and bear against the upper outer peripheral edge portions of the lenses, and means for attaching said substantially rigid portions to the outer portions of the lenses.

2,004,446
COMBINED WHIPPER AND SCRAPER FOR ICE CREAM FREEZERS
Herbert S. Mills, River Forest, Ill., assignor to Mills Novelty Company, Chicago, Ill., a corporation of Illinois
Application August 28, 1933, Serial No. 687,097
8 Claims. (Cl. 259—9)



1. In a freezer, a combined whipper and scraper comprising a rotatable unit including an angle member positioned adjacent the freezer cylinder when the unit is inserted therein, said member having a blade adapted to contact with the cylinder wall to scrape the latter when the unit is rotated and a whipper element rigid with said scraper blade extending inwardly from said wall to whip the cream during such rotation.

2,004,447
CALKING WELT
Lloyd F. Plummer, Brockton, Mass.
Application September 12, 1931, Serial No. 562,441
Renewed November 7, 1934
8 Claims. (Cl. 36—78)

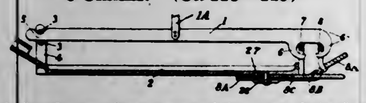


1. That improvement in the art of making calk welts which consists in producing a thin grain-surfaced leather layer, rabbetting a relatively narrow strip from one face of a leather blank strip at one margin leaving the edge face at the opposite margin intact and wrapping the layer about the intact edge face.

2,004,448
ROOF GUTTER BRACKET
John Sansonetti, Chicago, Ill.
Application July 31, 1934, Serial No. 737,826
2 Claims. (Cl. 108—29)

2. In a roof gutter bracket comprising a gutter circle formed of a strip of material, the ends of said circle being extended to form substantially horizontal gutter overlying portions one of said portions terminating in a hook, and the other in an upwardly directed hanger; means for connecting said gutter overlying portions together, said means comprising a plate-like link carried on top of said second named gutter overlying portion, said link having an aperture formed in one end thereof, means on said link adjacent the other end thereof and cooperating with said second gutter overlying portion to secure said link thereto, and said aperture being positioned to encircle said hanger at the base thereof and project beyond the same to provide means for engaging said hook of said first named gutter overlying portion.

2,004,449
DISH
George S. Stanley, Winnipeg, Manitoba, Canada
Application March 30, 1934, Serial No. 718,270
In Canada January 7, 1935
3 Claims. (Cl. 229—43)



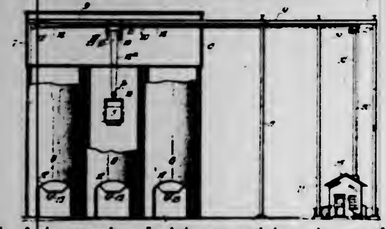
2. A dish for containing and displaying a food product comprising a dish body and a cover therefor, both the body and the cover being made from a resilient comparatively thin material and having the body portion provided at its rim with a flange and the cover with an edge-turned por-

tion, the said edge-turned portion being provided with a plurality of flange-extension spaces thereupon and adapted to be caught on the flange by manual pressure of the body.

2,004,450
MEANS FOR FACILITATING REFERENCE TO AND READING OF BOOKS AND THE LIKE

Hugh Alexander Thomson, Kensington, London, England

Application August 5, 1932, Serial No. 627,627
In Great Britain August 6, 1931
6 Claims. (Cl. 116—119)



1. A book marker comprising an interleaving member having its opposite ends bent laterally in the same direction, there being a recess in one of the bent ends of said member and forming a claw, a rigid frame member co-extensive with the interleaving member and spaced therefrom, means for interconnecting said members at one end thereof, and means for interconnecting and locking them at the other end comprising a longitudinally adjustable loop carried by the frame member and adapted to detachably engage said claw.

2,004,451
STABILIZER FOR TRAVERSING HOIST BUCKETS

Willis H. Towne, Wilmette, Ill., assignor to Gifford-Wood Company, a corporation of New York

Application November 8, 1926, Serial No. 146,890
9 Claims. (Cl. 212—77)

1. A traversing hoist comprising, in combination, a trolley movable along a track; a bucket suspended from the trolley by a hoist line; and means for stabilizing the bucket comprising a buffer against which the bail of the bucket strikes when the bucket is raised to its uppermost position; said buffer having resiliently mounted buffer arms of sufficient spread to be engaged by the bail of the bucket although oscillating in a plane transverse to the general plane of the trolley; the free ends of the buffer arms being inclined downwardly so as to guide the bail to a more or less central position relative to the buffer; the parts being so constructed and arranged that pendulum-like oscillation of the bucket is checked by elevating the bucket until the bail strikes the buffer arms.

2,004,452
CHEMICAL HEATER FOR OIL WELLS

James R. Vandever, Pampa, Tex., assignor to Richard P. Abele, Tulsa, Okla., as trustee

Application June 20, 1934, Serial No. 731,537
11 Claims. (Cl. 166—17)

1. A heater for oil wells comprising a closed housing adapted to be lowered into a well, a partition dividing said housing into two separate chambers, a valve in said partition, said valve being maintained in engagement with its seat by

the weight of said housing and means for opening said valve when the bottom of said well is reached.

2,004,453
METHOD OF RECORDING SOUNDS

Shumpei Watanabe, Koishikawa-Ku, Tokyo, Japan

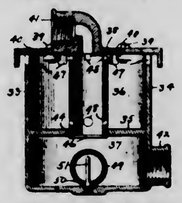
Application October 20, 1932, Serial No. 638,801
In Japan November 10, 1931
2 Claims. (Cl. 179—100.3)

1. Apparatus for recording sound on a light sensitive member comprising a cathode ray tube having means for producing a pencil of cathode rays provided with a metal window forming a slit having inclined surfaces through which the cathode rays are ejected from the tube in form of X-rays, a thin leaf covering said slit, a light sensitive member moving in contact with said thin leaf, electrostatic plates in said tube arranged opposite to the pencil of rays and means for applying to said plates a potential difference which varies in accordance with the sound waves to be recorded.

2,004,454
BURIAL VAULT

Eugene W. Wilson, Oak Park, Ill.

Application April 28, 1930, Serial No. 448,019
Renewed November 3, 1934
6 Claims. (Cl. 27—35)



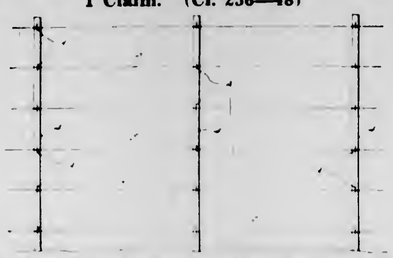
2. A container comprising a receptacle and lid therefor, said container having a wall ply of fusible material, an electric resistance wire embedded in the lid along the meeting line of the lid with the receptacle whereby to fuse the material in the affected zone into a homogeneous mass, and an enlargement of said wall ply of the lid and

encircling the container at a level immediately over the heated zone, said enlargement serving as a reservoir to supply additional fused material along the meeting line of the lid with the receptacle.

2,004,455
ANTISIPHONAGE DEVICE FOR WATER CLOSETS AND LIKE WATER SERVICE SYSTEMS

William J. Woolley, Chicago, Ill., assignor to Joseph A. Vogel Company, Wilmington, Del., a corporation of Delaware

Application February 21, 1933, Serial No. 657,889
21 Claims. (Cl. 4—23)

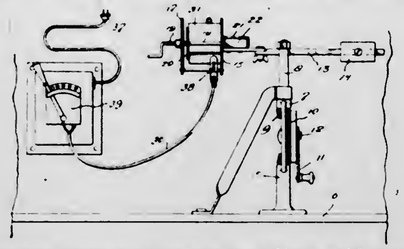


1. The combination with a water supply device having a drain outlet, and a waste conductor, of a connection between said drain outlet and waste conductor, and a device in said connection in open communication with the atmosphere and operating on the formation of a vacuum in said drain outlet to admit air thereto through said connection to break the vacuum therein.

2,004,456
SELF TYING CLIP

Edward Carson Armstead, Darrington, Wash.

Application January 10, 1934, Serial No. 706,122
1 Claim. (Cl. 256—48)



A device for fastening a flexible member to a post comprising a single piece of wire having an intermediate part adjacent one end, bent upon itself to provide inner and outer parallel portions which contact each other, the free end portion of the inner part being bent at right angles, away from the other part, and pointed and roughened to provide a post penetrating part, the inner part contacting the post when the pointed part is driven thereinto, the other end portion of the wire forming a vertical extension of the outer part, said extension having a straight lower part and an inwardly bowed upper part, the bowed part contacting the post with the straight part spaced from the post and providing a space between itself and the post to receive the flexible member.

2,004,457
CASTING APPARATUS

Eric Beringer, Waco, Tex.

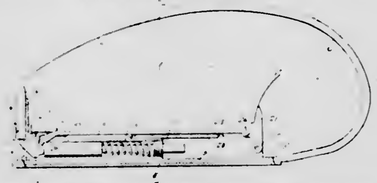
Application August 15, 1932, Serial No. 628,903
2 Claims. (Cl. 22—65.1)

1. A centrifugal casting machine comprising a rotatable shaft, a cross bar carried by and rotatable with said shaft, a crucible holder mounted on one end of said bar, an adjustable oven clamp carried by the last-named end of said bar at the outer side of said crucible holder and including an inner clamping plate fixed to said bar and having a central opening through which metal may be transferred to a flask in the oven from a crucible in said crucible holder, said oven clamp further including an adjustable outer

clamping plate and means to adjust said outer clamping plate toward the inner clamping plate, an oven removably mounted in said oven clamp, said oven being of cup-shape and open at its inner side for removable reception of a flask, and means including an electrical heating resistance forming part of said oven for heating the latter to any desired predetermined temperature while mounted in said clamp.

2,004,458
VAT AND SULPHUR DYESTUFF PREPARATION FOR PRINTING COTTON

Hermann Berthold, Leverkusen-I. G. Werk, Germany, assignor to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware



No Drawing. Application May 12, 1932, Serial No. 610,976. In Germany May 18, 1931
8 Claims. (Cl. 8—6)

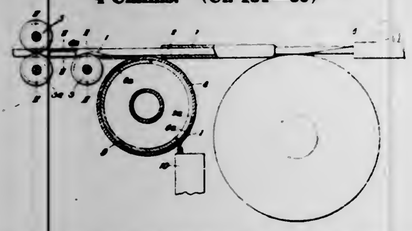
1. Vat and sulphur dyestuff preparations for printing cotton comprising besides the vat or sulphur dyestuffs a compound selected from the group consisting of anthraquinone mercaptans, salts and ethers thereof, anthraquinone thiocyanates, dianthraquinonyl-mono- and disulphides and reduction products of these compounds containing oxygen in the meso-position.

2,004,459
DINGER

Charles Boehnke, Rosemead, Calif.

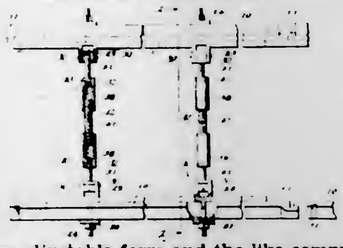
Application December 3, 1934, Serial No. 755,801
3 Claims. (Cl. 81—15)

1. A tool of the class described including a base, a cylinder mounted longitudinally on the base, a piston in the cylinder, a spring normally urging the piston out of the cylinder at one end, said one end being provided with a longitudinally extending slot, a rockable member opposite the slotted end of the cylinder, means for mounting the rockable member, a second cylinder, said second cylinder being mounted at right angles to



the first mentioned cylinder and opposite the rockable member, a trigger, means for rockably mounting the trigger on the other end of the base, a rod pivotally engaged with the trigger and extending along the outside of the first cylinder and having a hook end extending into the slot for engaging the end of the piston, means for urging said hook end toward the piston and a striking pin slidable in the second cylinder and engageable by the rockable member.

2,004,460
RADIO STEERING CONTROL
Theophile E. Brockstedt, San Francisco, Calif., assignor to Washington Institute of Technology, Inc., a corporation of Delaware
Application August 28, 1930, Serial No. 478,498
Renewed April 17, 1935
20 Claims. (Cl. 172—282)

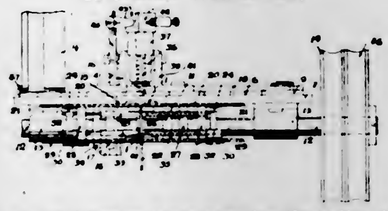


8. In automatic steering control apparatus, a receiver of differently characterized simultaneous signals, an electro-mechanical resonance differential control device operable responsive to the frequencies and relative magnitudes of said signals, and automatic steering apparatus control circuits operatively associated with said control device for differential actuation thereby.

2,004,461
MANUFACTURE OF CIGARETTES
Sidney Waterfield Bunker, London, England, assignor to Filter Tips Limited, London, England, a British company
Application October 31, 1934, Serial No. 750,905
In Great Britain July 14, 1933
4 Claims. (Cl. 131—39)

1. A method of applying tips to a moving cigarette rod, comprising moving an endless surface in contact with and at the speed of travel of the cigarette rod, feeding lengths of tipping material to said surface at spaced intervals for transfer to said cigarette rod, and wrapping said lengths of material about said cigarette rod.

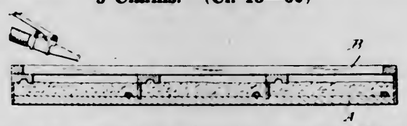
2,004,462
ADJUSTABLE FORM
Samuel I. Bush, Manassas, Va.
Application May 21, 1934, Serial No. 726,786
14 Claims. (Cl. 25—131)



1. An adjustable form and the like comprising elongated frame members having longitudinally extending openings formed throughout the length thereof, yoke members adapted to engage said frame members and extend through said openings, means for clamping the yoke members upon said frame members, adjustable expansion means detachably engaging the yoke members, and means for pivotally connecting the adjustable expansion means to said yoke members.

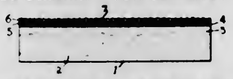
2,004,463
PRODUCTION OF HYDRAULIC CEMENT
Gerald Otley Case, Sevenoaks, England, assignor, by mesne assignments, to Carbo Plaster Limited, Westminster, England
No Drawing. Application September 18, 1931, Serial No. 563,679. In Great Britain August 26, 1931
1 Claim. (Cl. 106—24)

Hydraulic cement comprising a dry granular mixture of ground calcium carbonate rock and a clinker derived from burning a mixture of calcium carbonate and aluminium silicate wherein the ground carbonate constitutes 85% by weight of the total mixture, said clinker being ground to British Portland cement standard of fineness and the added carbonate being ground to a degree of fineness not greater than that to which the clinker is ground and not sufficiently coarse to leave any appreciable residue on a 76 mesh per inch sieve, whereby on the addition of water a portion of the added carbonate in the ratio of 8 parts of carbonate to 1 part of that calcium oxide which on the addition of water is liberated from the tri-calcium silicate in the clinker, will combine with said calcium oxide, the remainder of said carbonate acting as an aggregate.



2,004,464
MACHINE OR APPARATUS FOR THREADING BUTTONS ON TO A WIRE OR WIRES OR THE EQUIVALENT
Vincent Joseph Clarkson, Leeds, England
Application March 31, 1934, Serial No. 718,527
In Great Britain April 6, 1933
11 Claims. (Cl. 29—84)

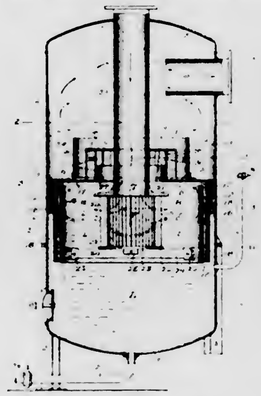
1, A machine or apparatus for threading buttons on to a wire or wires or the equivalent,



wherein the buttons are fed singly into a pocket or die the base of which is constituted by the upper one of two sets or pairs of superposed slides or shutters which alternately co-operate with the upper end or ends of the wire or wires or the equivalent to retain it or them in position to receive the buttons from said pocket or die.

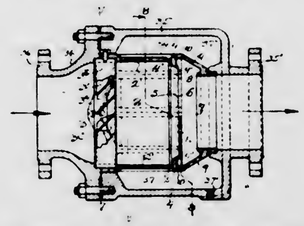
2,004,465
CEMENT SHINGLE
Charles Dietrichs, Little Ferry, N. J., assignor to Walker Cement Products, Inc., Little Ferry, N. J., a corporation of New Jersey
Application February 26, 1930, Serial No. 431,445
5 Claims. (Cl. 18—60)

3. The method of forming cement shingles which comprises pouring a cement mixture of suitable consistency into a mold for shaping the under side of the shingle and then treating the upper surface of the same with an air blast to produce irregular undulations in the shingle surface, the cement mixture being sufficiently plastic to permit the formation of the undulations in the surface thereof under the influence of the air blast and yet sufficiently stiff to prevent the undulations from disappearing before the material hardens.



2,004,466
ABRASIVE
Joseph B. Dietz, Lansdowne, and Henry L. Plummer, Philadelphia, Pa., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application April 28, 1931, Serial No. 533,538
10 Claims. (Cl. 51—280)

1. A flexible sheet of abrasive material comprising a base, abrasive material and a coating on said base comprised of a resinous mixed ester of polyhydric alcohol with polybasic acid and a mixture of fatty oil acids containing the acids of China-wood oil and the acids of a fatty oil other than China-wood oil.

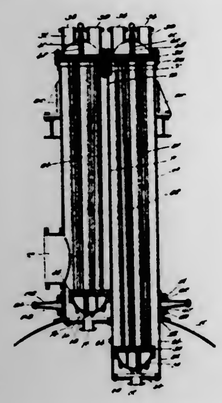


2,004,467
SCRUBBER
Charles Gilbert Hawley, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a corporation of Ohio
Application February 2, 1932, Serial No. 590,491
5 Claims. (Cl. 183—25)

2. The herein described scrubber, comprising a vertical drum having a gas outlet in its top, in combination with a floor containing a central gas passage and dividing the drum into upper and lower compartments, a drain belonging to the upper compartment and leading downward from the peripheral portion of said floor, a gas inlet nozzle extending downward through said passage and of less diameter, a bottomless whirl-promoting tuyère forming the terminus of said nozzle within said lower compartment, a cylindrical separating wall therein surrounding said tuyère and of greater diameter than said passage, the upper edge of said wall being spaced from the under side of said floor, a circumferential drain outward of said wall and leading downward from the under side of said floor, means adapted to maintain a stand of liquid within said drum and partly submerging said tuyère,

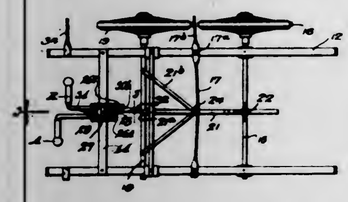
separating wall and drains, a tangentially bladed tuyère erected on the top of said floor in communication with said passage, and, a cylindrical separating wall erected on said floor between said bladed tuyère and the inner wall of the drum, substantially as and for the purposes described.

2,004,468
CENTRIFUGAL SEPARATOR
Charles Gilbert Hawley, Chicago, Ill., assignor to Centrifix Corporation, Cleveland, Ohio, a corporation of Ohio
Application April 2, 1932, Serial No. 602,765
Renewed November 14, 1934
11 Claims. (Cl. 183—80)



1. A centrifugal separator unit comprising a whirl promoting tuyère in combination with separating and eject chambers successively leading therefrom and having coaxial outlets of successively smaller sizes, and, said eject chamber having a relatively narrow annularly circumferential eject opening adjacent the end of said separating chamber, and distant from the smaller outlet.

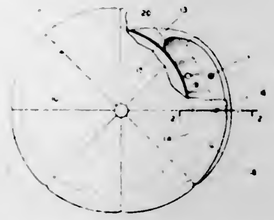
2,004,469
HEAT EXCHANGE APPARATUS
Charles H. Leach, Roselle, N. J.
Application November 13, 1929, Serial No. 406,770
Renewed November 12, 1934
8 Claims. (Cl. 257—34)



1. The combination with a distillation tower of a tubular condenser having a plurality of tube bundles, one of the bundles projecting downward-

ly into the upper portion of the tower and having provision for free communication between

the tower and the intertubular space surrounding the bundle.



2,004,470
FOOT CONTROL FOR BABY CARRIAGES
James Michal, Chicago, Ill., assignor to Storkline Furniture Corporation, Chicago, Ill.
Application August 25, 1933, Serial No. 686,843
1 Claim. (Cl. 280—47)

A carriage having an axle, a gearing for shifting the latter forth and back, dual foot levers depressible individually for the control of said gearing to procure the respective axle movements, oppositely-swingable sectors operated by the gearing and carrying the respective levers, the action of the sectors raising either lever when the other is depressed, means fixedly attaching one lever and pivotally attaching the other lever to the sectors relating thereto, and a torsion spring coiled about the pivot and connected with its ends to said other lever and its sector respectively, the spring automatically raising the related lever from the depressed position when such lever is released.

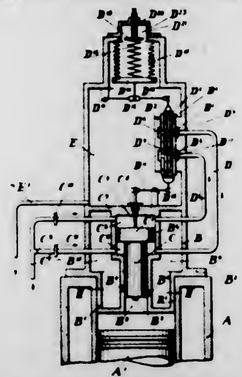
2,004,471
ADJUSTABLE CAP VISOR
William H. David, Tottenville, Staten Island, N. Y.
Application June 8, 1934, Serial No. 729,581
3 Claims. (Cl. 2—10)

1. A cap comprising a crown and rim portion of flexible material, the crown portion including a forward projection, a fixed visor secured to the front edge of the rim, projecting forwardly therefrom, overlapped entirely by the forward projection and being relatively rigid and opaque, the fixed visor and forward projecting portion of the crown coacting to form therebetween a flat crescent-shaped pocket, a second adjustable eye-shading visor of transparent or translucent material having a similar crescent shape and of a size to fit completely in the pocket and having two operative positions, in one position contained entirely in said pocket and thus concealed from view so that the cap will appear to be of conventional construction and in the other position having its rear portion only contained in said pocket and its forward portion projecting beyond the

fixed visor to form at will a transparent or translucent edge forming an eye shade extending beyond the fixed visor, means within the pocket for selectively securing the adjustable visor in its two operative positions, said means comprising two sets of openings extending through the adjustable visor with one set in advance of the other and a set of snap fasteners, one for each opening of the sets and each of said fasteners having an element thereof secured to the fixed visor and its companion secured to the forward portion of the crown and adapted to be passed selectively through its associated opening in one of the sets.

2,004,472
PRODUCTION OF LEATHER
George R. Pensel, Amsterdam, N. Y.
No Drawing. Application May 29, 1931, Serial No. 541,122
4 Claims. (Cl. 149—3)

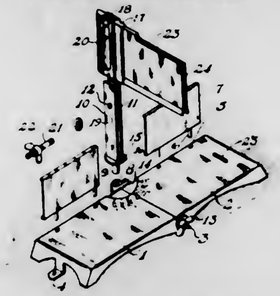
1. In the production of leather from skins pickled in strong acid of the pickle solution, the step comprising replacing the strong acid in said skins with acetic acid, and then converting the skins into leather by a formaldehyde tannage process.



2,004,473
PRODUCTION OF LEATHER
George R. Pensel, Amsterdam, N. Y.
No Drawing. Application April 21, 1933, Serial No. 667,306
26 Claims. (Cl. 149—3)

1. In the process of producing leather from skins, the step of treating the pickled skins with a salt of a soluble organic acid, prior to tanning.

2,004,474
COMPRESSOR
Charles Schaer, Langenthal, Switzerland, assignor to Sulzer Frères, Société Anonyme, Winterthur, Switzerland
Application January 9, 1934, Serial No. 705,907
In Switzerland January 14, 1933
19 Claims. (Cl. 230—21)

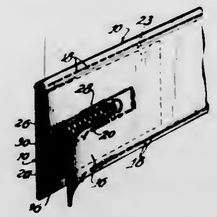


1. In a compressor, a compression chamber, a clearance chamber adjustable as to size and in communication with the compression chamber, additional fixed clearance chambers, piston valve

means for varying the first named chamber and for bringing the second named chambers into

communication successively with the compression chamber.

2,004,475
COLLAPSIBLE MITER BOX
Rudolph R. Seft, Brackenridge, Pa.
Application October 15, 1934, Serial No. 748,274
2 Claims. (Cl. 143—86)



1. A collapsible miter box comprising a hinged base having a peripheral flange forming the side walls of a compartment when the base is folded, a bracket pivotally mounted on said base at the hinge portion thereof, a saw guide for said bracket slidably mounted thereon for vertical adjustment, means for securing the saw guide in adjusted position, means for securing the pivotal bracket in different angular positions relative to the hinged base, and a plurality of abutments removably mounted in the base member to engage one edge of the work for alinement with the saw guide, said bracket, guide and abutments being separately removable for disposition in the compartment formed by the base when folded.

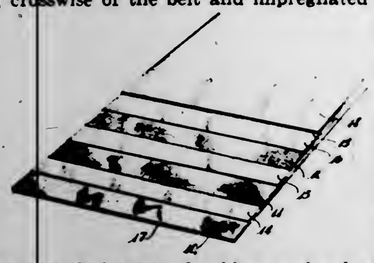
2,004,476
DYEING OF TEXTILES
Fritz Barz, Albert Landolt, Wilhelm Geigy, Hans Kaegi, and Charles Graenacher, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application October 14, 1931, Serial No. 568,870. In Switzerland October 16, 1930
11 Claims. (Cl. 8—5)

1. A process for improving the fastness of dyeings produced on materials by means of water-soluble dyestuffs, which consists in subjecting the dyed material to an after-treatment with water-soluble salts of organic bases which bases are characterized by containing at least one basic nitrogen-containing residue and an aliphatic residue consisting of at least 10 carbon atoms.

2,004,477
APPAREL BELT
Irwin E. Mather, Chicago, Ill.
Application December 21, 1932, Serial No. 648,196
5 Claims. (Cl. 241—8)

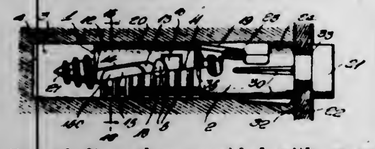
1. An apparel belt comprising an outer band and an inner lining, said lining having a longitudinally extending slit formed intermediate the edges thereof, a slide fastener secured to said inner lining at said slit and adapted to hold the portions of said lining at said slit together, a sheet of flexible anti-friction surfaced material secured to the inner surface of said band adjacent said slit, and stitching securing the edges of said lining to the edges of said band.

2,004,478
POWER CONTROL SYSTEM
Benjamin W. Hamilton, Great Falls, Mont., assignor to S. Logan Kerr
Application August 27, 1931, Serial No. 559,665
19 Claims. (Cl. 171—119)



1. The combination in an alternating current system having a plurality of generating units, each unit having means for varying its input, means responsive to both frequency and load variations from predetermined values, and means controlled thereby for effecting actuation of said power input means to control both load and frequency.

2,004,479
TRANSMISSION BELT
Allan B. Merrill, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application October 24, 1933, Serial No. 695,020
4 Claims. (Cl. 74—232)



4. A transmission belt comprising a stiffening ply of duck formed with straight warp threads

laid crosswise of the belt and impregnated with

a resinous derivative of rubber, and a layer of rubber adhered thereto.

2,004,480
BOLT ANCHOR
Henry W. Pleister, Westfield, and John Karitzky, Garwood, N. J., assignors to Henry B. Newhall Corporation, Garwood, N. J., a corporation of New Jersey
Application October 9, 1934, Serial No. 747,612
12 Claims. (Cl. 85—2.4)

5. In a bolt anchor provided with means to engage with an expanding member, the anchor carrying means adapted to automatically increase the area of engagement between said first means and the expanding member as the bolt anchor is driven into a hole in which it is to be expanded, to prevent failure of the bolt anchor when an excessive load is placed upon it.

2,004,481
GARMENT SUPPORTING MEANS
Alexander Simpson, London, England
Application June 5, 1933, Serial No. 674,265
In Great Britain June 9, 1932
3 Claims. (Cl. 2—237)

1. A nether garment having a waist band, means for supporting said garment upon an individual in combination with frictional gripping means, said supporting means comprising an elastic webbing secured adjacent its ends to said waist band, said elastic webbing extending along a portion of said waist band and being of shorter length than the adjacent waist band section, said frictional gripping means comprising spaced patches of rubber attached to the inside of said garment at the level of said waist band whereby a shirt worn by an individual will not pull out from beneath said waist band.

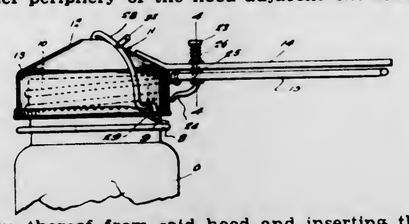
2,004,482
BOOKBINDING
Morris Welfson, Brooklyn, N. Y.
Application December 18, 1933, Serial No. 702,926
2 Claims. (Cl. 281—25)

1. A book comprising a plurality of sections and front and back end sheets therefor having hinge strips, said sections and said hinge strips being united together at the binding edges thereof, separate front and back cover units having head and foot edges extending outside the marginal edges of said sections and said end sheets and adhesively secured to said front and back end sheets and said hinge strips, a plurality of wire staples extending through said sections said hinge

strips and said cover units adjacent the binding edges thereof, and a channel shaped backer mounted over said front and back cover units and covering said plurality of wire staples, said backer having end flanges bent around and in compressed engagement with the extended edges of said front and back cover units for retaining said backer in position with relation to said cover units as aforesaid.

2,004,483
TREATMENT OF ALLOYS
Edmund F. Bainbridge, Albany, N. Y.
No Drawing. Application January 7, 1930, Serial No. 419,211
1 Claim. (Cl. 148—16)

The method of preventing pits and scores in a finished product made from an alloy containing chromium which comprises heating the alloy to a hot-working temperature between 1600° F. and 2500° F. adapting it to be rolled or forged, maintaining about the alloy throughout the heating thereof within said temperature ranges an atmosphere substantially free of carbon particles by supplying oxygen to said atmosphere in quantities sufficient to combine with any carbon particles in said atmosphere but not enough to decarburize the alloy substantially, removing the alloy from the heat when the desired working temperature has been reached, and thereafter hot-working it.



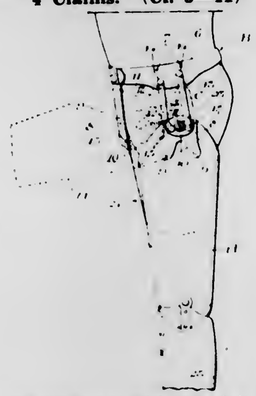
2,004,484
STENCIL SHEET AND METHOD OF MAKING THE SAME
Louis G. Brandt, Portsmouth, Va., assignor to The Multistamp Company, Inc., Norfolk, Va., a corporation of Virginia
No Drawing. Application May 3, 1932, Serial No. 609,046. Renewed November 15, 1934
9 Claims. (Cl. 41—38.6)

1. A stencil sheet comprising a sheet of Yoshino paper coated with a composition comprising coagulated, water-resistant gelatin, soap and an oil, present in the following approximate proportions by weight: 13:42:56, respectively.

2,004,485
FRUIT JAR TOOL
Philip Robert Brause, West Union, Iowa
Application August 23, 1934, Serial No. 741,165
3 Claims. (Cl. 81—3)

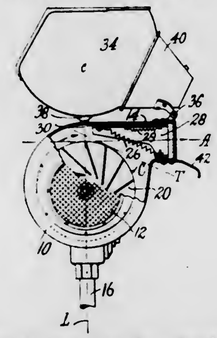
1. A gasket tool for fruit jars comprising a hood adapted to be placed in position over the neck of a jar with the jar cap in a loosened position and spaced from the abutting flange of the jar, and

means for removing a rubber gasket placed on the outer periphery of the hood adjacent the lower



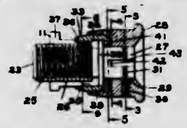
edge thereof from said hood and inserting the same between the cap and flange.

2,004,486
TEA-BAG PACKAGE AND CARTON
Simon Cooper, Brooklyn, N. Y., assignor to Cooper Tea Packet Company, Brooklyn, N. Y., a corporation of New York
Application February 16, 1934, Serial No. 711,461
1 Claim. (Cl. 206—46)



A package comprising an elongated box, a plurality of tea-bags along the bottom of said box in one space, the tea-fillings being centered and closely juxtaposed and the marginal portions of the envelopes of successive tea-bags lapping the mid-portions containing the tea-fillings of adjacent tea-bags, and a transparent wrapper extending across said lapped tea-bags and around the box and pressing the tea-bags upon the bottom of said box, said box having at its sides up-standing portions of less height than the high-portions of the series of lapped tea-bags and confining said series at the sides, and said up-standing portions having inwardly projecting portions overlying the margins of said series of tea-bags at the sides.

2,004,487
PELVIC ATTACHMENT FOR ARTIFICIAL LEGS
George Dorsch, New York, N. Y.
Application August 17, 1933, Serial No. 685,540
4 Claims. (Cl. 3—11)



1. The combination with a pelvic belt and an artificial leg, of a rocker mounted on the outer side of the upper leg section, and front and back links pivotally connecting said rocker to the belt and of a length to cause the rocker to move with the leg when worn, said links having their axes on the rocker beyond the respective sides of the rocker axis, and the front link being shorter than the back link, whereby the rocker is oscillated during the movement of the leg.

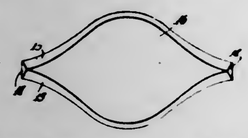
2,004,488
DRIER
John E. Kelley, Larchmont, N. Y.
Application April 29, 1933, Serial No. 668,546
1 Claim. (Cl. 219—39)

A drier of the character described comprising a fan casing, a rotary fan in said casing, a tangential delivery-tube, an electrical heating element, a diagonally sliced tube in which said heating element is mounted, said heating element and sliced tube extending over said fan for a substantial portion of its length diagonally across said delivery tube from a point adjacent the inner end of said tube to a point at the top of said casing adjacent a point directly over the axis of the fan.

2,004,489
TELESCOPE SIGHT MOUNTING
Frederick A. Kuhn, Meriden, Conn., assignor to The Lyman Gun Sight Corp., Middlefield, Conn., a corporation of Connecticut
Application October 18, 1932, Serial No. 638,307
14 Claims. (Cl. 33—50)

1. A mounting for telescope sights comprising a frame, a boss on said frame, a sleeve telescoped over said boss, means for limiting the movement of the sleeve on the boss to a direction axial of said boss, a screw threaded in the boss and extending through the sleeve and means on said screw cooperating with the sleeve for varying the resistance to manual rotation of the screw at predetermined amounts of rotation.

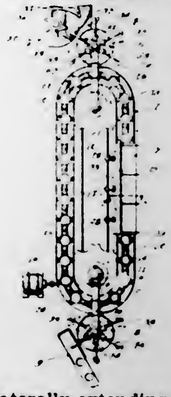
2,004,490
NECKWEAR
Albert Thomas Lapham, London, England
Application June 22, 1933, Serial No. 677,007
In Great Britain June 29, 1932
1 Claim. (Cl. 2—146)



A necktie comprising folded end pieces and a connecting neckband section, said end pieces being

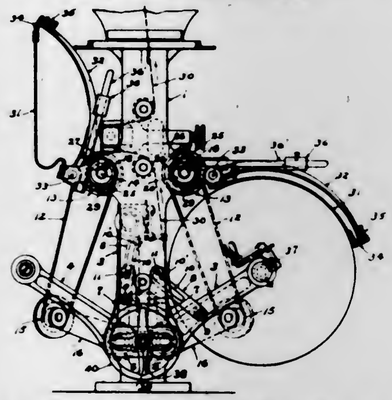
of the same form and dimensions and each cut on the bias, an interliner for each end piece, said interliners also being cut on the bias, and an elastic

reinforcing member extending longitudinally of the necktie, said elastic reinforcing member being positioned and secured between the interliners and the rear folds of the end pieces.



2,004,491
PIPE BEND
Eugene G. Luening, Louisville, Ky., assignor to The Girdler Corporation, Louisville, Ky., a corporation of Delaware
Application August 2, 1933, Serial No. 683,265
1 Claim. (Cl. 137—75)

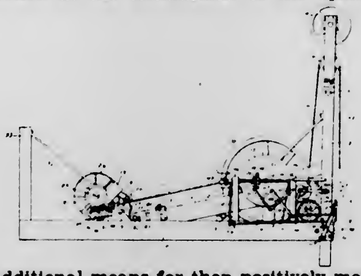
As an article of manufacture, a pipe fitting formed from a sheet bent to approximately a sector of a circle with the junction line forming a slit at approximately the center of said circle, whereby said bend may be expanded or contracted when welding the ends thereof to pipe sections and the like, with the walls of the slit adapted to be welded together along said slit at the same time.



2,004,492
VESSEL HANDLING AND FINISHING DEVICE
William L. McNamara and Louis P. Piazzoli, Jr., Connellsville, Pa., assignors to Capstan Glass Company, Connellsville, Pa., a corporation of Delaware
Application June 5, 1929, Serial No. 368,620
28 Claims. (Cl. 198—22)

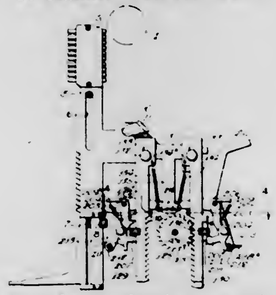
1. In a vessel transferring device of the class described, the combination of a rotary device having a plurality of arms thereon, vessel engaging suction heads on said arms for engaging the side of a vessel, means for moving said arms at a predetermined point in their movement to engage the side wall of a vessel, means for rotating the vessel engaging heads to invert the vessels and means for lowering said arms at a predetermined point in their movement for disengaging said vessels, valve members on said arms for controlling the suction effective on said suction

heads, and a laterally extending arm for engaging and operating said valve members.



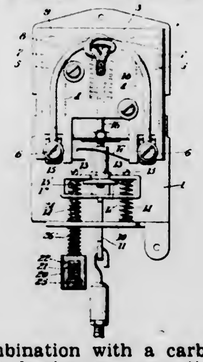
2,004,493
REEL SUPPORTING MECHANISM FOR USE IN PRINTING MACHINES
Cecil George Quick, Donald Arthur Ball, and Thomas Richard Bennett, London, England, assignors to Irving Trust Company, permanent trustee for R. Hoe & Co., Inc., New York, N. Y., a corporation of New York
Application February 25, 1933, Serial No. 658,542
In Great Britain February 29, 1932
15 Claims. (Cl. 242—58)

4. A web roll supporting mechanism for use with a printing machine, comprising a pair of arms angularly movable about a common axis, operating means to rock said arms simultaneously, and a connection whereby one of said arms may be rocked independently to permit the endwise insertion of a web roll to a mounting position.



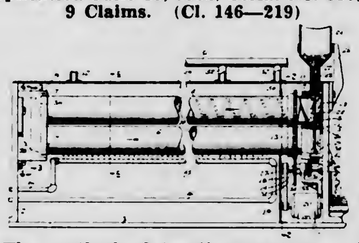
2,004,494
WELL DRILLING APPARATUS
Esta I. Shoe and Forrest C. Landis, Pleasant Hill, Ohio
Application April 26, 1933, Serial No. 668,084
17 Claims. (Cl. 255—11)

1. In a well drilling apparatus having a cable suspending a drilling bit within the bore of the well, a rocker arm cooperating with the cable for reciprocating the cable to provide impacts of the bit against the bottom of the bore of the well, a driving member, and a releasable driving connection between said driving member and said rocker arm for oscillating said rocker arm comprising means for moving the rocker arm to provide an upstroke to the cable and bit, said means having provisions for releasing its driving connection at the termination of the upstroke,



and additional means for then positively moving the rocker arm in the opposite direction at a rate faster than the initial part of the resulting gravity fall of the bit and cable to thereby provide slack in the cable to give a substantially free gravity fall of the bit on the cutting stroke, and means providing rebound of the rocker arm at the end of its cutting stroke, said releasable connection enabling said rocker arm to move away from the driving connection on said rebound to impart a sharp upward jerk on the cable and bit.

2,004,495
TRANSFER MECHANISM
Oscar J. Sundstrand, Rockford, Ill., assignor, by mesne assignments, to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Original application October 25, 1923, Serial No. 670,665. Divided and this application May 6, 1933, Serial No. 669,633
10 Claims. (Cl. 235—137)



1. In a transfer mechanism, a spring-actuated rack having a lug thereon, a pivoted pawl adapted to support said lug against the pressure produced by the rack, said pawl being so pivoted with relation to the point of application of the pressure of the rack as to tend to swing out of supporting relation to the rack, a dog pivoted on said pawl and having a tooth, a part against which said tooth is adapted to engage, a pinion carrying a projection arranged to disengage said tooth from said part, and a spring attached to said dog and serving to draw the dog rearwardly and assisting to swing the pawl out from under said lug when said tooth is disengaged from said part.

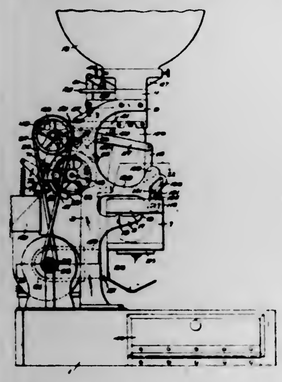
2,004,496
SEWING MACHINE MOTOR CONTROLLER
Henry L. Zabriskie, Westfield, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a corporation of New Jersey
Application January 8, 1932, Serial No. 585,409
4 Claims. (Cl. 201—51)

1. The combination with a carbon compression rheostat having an operating draw-bar movable in one direction by the operator to decrease the electrical resistance thereof, of an initially disengaged stop-screw disposed in the path of and adjustable in the direction of movement of said draw-bar, and spring means permitting said stop-screw to be yieldingly engaged by said draw-bar in the resistance decreasing movement of the latter.

2,004,497
METHOD OF TREATING CACAO BEANS
James J. Bajda, South Orange, N. J.
Application June 18, 1932, Serial No. 617,989
9 Claims. (Cl. 146—219)

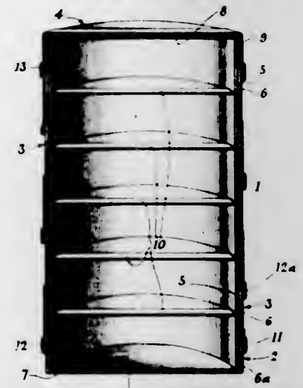
4. The method of treating raw cacao beans which consists in first thoroughly refrigerating the beans including the nib material thereof, subjecting the refrigerated beans to a temperature of from about 435 degrees F. to about 570 degrees F. for a period of from about two minutes to about six minutes, and then removing the outer shells of the beans.

2,004,498
PRODUCING COLUMBIUM ALLOYS
Frederick M. Becket, New York, N. Y., assignor to Electro Metallurgical Company, a corporation of West Virginia
No Drawing. Application April 11, 1934, Serial No. 720,071
17 Claims. (Cl. 75—17)



1. Process for producing alloys of columbium from material containing oxides of columbium and tantalum, which comprises the step of selectively reducing the said columbium oxide in preference to the tantalum oxide by reacting said material with silicon.

2,004,499
PATTERN MAKER'S TOOL
Julius E. Blumberg, Boston, Mass.
Application May 16, 1933, Serial No. 671,352
2 Claims. (Cl. 33—41)



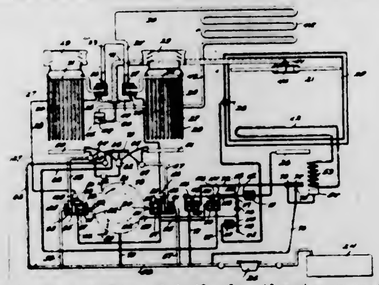
1. A tool of the class described comprising a handle, a shank extending from the handle, a tracing wheel rotatably mounted on the end of the shank, and a supporting element connected to the shank between the tracing wheel and the handle, said supporting element being arranged to cooperate with the tracing wheel and normally tending to hold the handle at a predetermined angle in relation to a plane over which the wheel is being moved.

2,004,500
COOKING MACHINE
Eugene A. Brunelle, Somersworth, N. H.
Application May 6, 1932, Serial No. 609,664
8 Claims. (Cl. 53—7)

1. A machine of the character described having, in combination, a container for cooking liquor, a movable basket for holding the articles while being cooked in said liquor, a hopper for the articles to be cooked, article feeding means for delivering measured quantities of the articles from said hopper to said basket comprising article discharge means from said hopper and article delivery means to said basket, a rotary exhauster for removing the fumes from said liquor, a motor, a common shaft for said motor and exhauster, a second shaft, a reduction gear connection between said shafts, and cam means on said second shaft for moving said basket and for operating said article discharge and article delivery means.

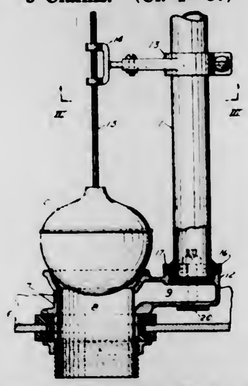
2,004,501
CONTAINER
Edward W. Curtis, Jr., Harrison, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a corporation of Delaware
Application October 11, 1933, Serial No. 693,061
5 Claims. (Cl. 229—6)

1. A container including interfitting sections and a sealing strip secured externally to a section and extending between two sections to seal the contents of one section and to support the contents of another section.



2,004,502
OVERFLOW DETECTOR
Charles A. Fieberling, Oakland, Calif., assignor of one-half to John H. Kimball, Berkeley, Calif.
Application April 22, 1933, Serial No. 667,400
5 Claims. (Cl. 116—118)

4. An overflow indicating attachment for a liquid containing tank having an overflow outlet, comprising a thimble formed for removable fitting to said outlet, and a body of diffusible material carried by said thimble in a position to be diffused in the liquid flowing through said outlet without obstruction thereto, said material being of a nature to impart a readily discernible quality to said liquid when diffused therein.

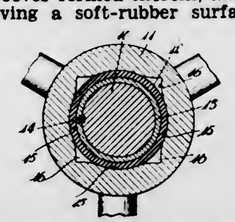


2,004,503
CONTROL APPARATUS FOR REFRIGERATION MACHINES
George E. Hulse, New Haven, Conn., assignor to The Safety Car Heating & Lighting Company, a corporation of New Jersey
Application November 24, 1930, Serial No. 497,879
36 Claims. (Cl. 257—8)

1. The method of maintaining a substantially constant temperature within a compartment comprising controlling the selection of cooling apparatus by the temperature without the compartment, controlling the operation of the cooling apparatus by the temperature within the compartment, and controlling the selection of

heating apparatus jointly by the temperatures within and without the compartment.

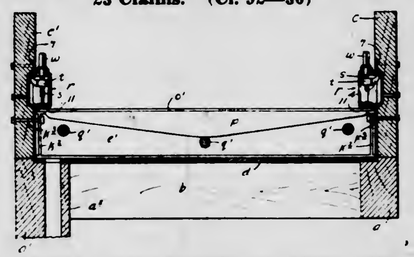
2,004,504
FLUSHING TANK
Thomas A. Lyons, Pittsburgh, Pa.
Application March 5, 1935, Serial No. 9,372
5 Claims. (Cl. 4—57)



1. The combination with flushing apparatus having a main discharge conduit, and an extension provided with an overflow passageway and an inlet opening, of an overflow pipe having a collar adjacent to its lower end, and a clamping device for rigidly drawing said collar into engagement with the said extension, with the lower end of the pipe positioned to discharge into the said overflow passageway.

2,004,505
PRIMING MIXTURE
Joseph D. McNutt, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland
No Drawing. Application August 30, 1932, Serial No. 631,102
11 Claims. (Cl. 52—2)

10. A priming mixture for ammunition primers comprising guanylnitrosoaminoguanyltetrazene and lead azide.



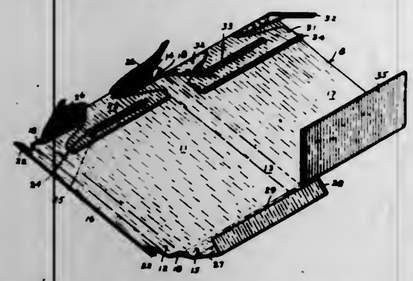
2,004,506
RESILIENT SHAFT JOURNAL AND BEARING THEREFOR
Lucian Q. Moffitt, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application March 6, 1934, Serial No. 714,236
14 Claims. (Cl. 308—238)

1. The combination of a shaft member and a bearing member therefor, one of said members having a rigid bearing surface interrupted by lubricant grooves formed therein, and the other member having a soft-rubber surface for co-

operating therewith, the grooved rigid surface and the soft-rubber surface being constrained to have relative rotation in the normal operation of the assembly.

2,004,507
FLAT SCREEN FRAME
Joseph J. Moravec, Washougal, Wash.
Application June 27, 1934, Serial No. 732,686
23 Claims. (Cl. 92—30)

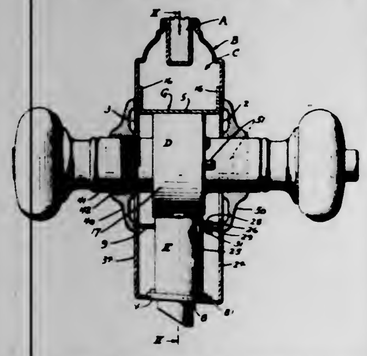
1. A flat screen assembly comprising adjacent rectangular all metal sections, each composed of sides, ends, a transverse middle bar, and screen plates, said middle bar being spaced from the bottom of the frame, the middle bar provided with a locking head for engaging adjacent screen plates, means for connecting the opposed sides of adjacent frame sections so spaced as to receive a screen plate lock-bar between them, a screen plate lock-bar adapted to be inserted between said opposed frame sides, said lock-bar provided with a head adapted to engage the sides of adjacent screen plates, and means for securing said lock-bars in place.



2,004,508
PROCESS FOR THE MANUFACTURE OF PRINTING ROLLERS
Curt Neubert, Giersdorf, near Hirschberg, Germany
No Drawing. Application December 31, 1931, Serial No. 584,288. In Germany January 8, 1931
2 Claims. (Cl. 106—23)

1. The process of making printing rollers including the steps of mixing substantially one part concentrated aqueous caoutchouc dispersion one part gelatinous substance and two parts glycerine, coagulating the mixture, and vulcanizing the coagulate.

2,004,509
SUIT BOX
Octavia E. Phillips, Santa Clara, Calif.
Application September 15, 1934, Serial No. 744,182
5 Claims. (Cl. 206—7)



1. A one-piece suit box having a bottom wall and side walls and end walls, a suit hanger flap

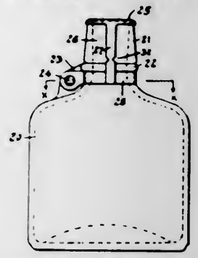
extending integrally from the top edge of a said wall and laterally shaped for engagement in the shoulder-receiving portions of an upper garment

and provided with a pants-receiving slot thereacross, and an integral flange extending from the lower slot edge and transversely from the plane of the flap.

2,004,510
METAL DOOR REENFORCEMENT AND LOCK MOUNTING
Walter E. Schlage, San Francisco, Calif., assignor to Schlage Lock Co., San Francisco, Calif., a corporation of California
Application June 14, 1932, Serial No. 617,118
20 Claims. (Cl. 70—16)

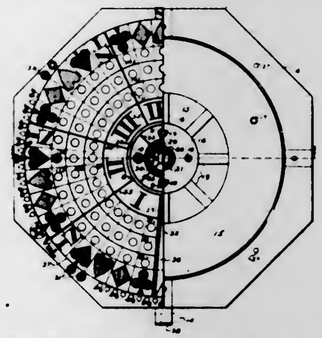
1. In a door structure of the character described a latch bolt unit insertable through an opening in the edge of the door, and interlocking means formed between the latch bolt unit and the door structure, said means adapted to interlock by rotation of the latch bolt unit.

20. In a door having a hollow metal stile a door lock insertable through an opening formed in the stile, and a lock securing device within the stile comprising means whereby a connection is formed between the lock and the stile upon insertion of the lock, said connection retaining the lock against removal from the stile.



2,004,511
UNDER ARM PROTECTOR
George H. Souther, Jr., Columbiaville, N. Y.
Application June 23, 1933, Serial No. 677,215
8 Claims. (Cl. 2—53)

1. As an article of manufacture, an under arm protector, comprising a filler of superimposed layers of absorbent material, and an interposed layer of moisture proof material folded upon itself transversely thereof to form pleats, whereby the protector is capable of being folded longi-

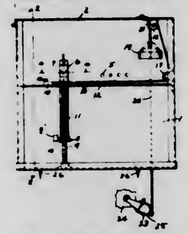


tudinally along an outward curve to fit to the arm pit in any position of the arm.

2,004,512
NONRESEALABLE CONTAINER
Howard R. Stewart, Los Angeles, Calif., assignor of one-third to Lewis D. Collings, Los Angeles, Calif.
Application February 27, 1934, Serial No. 713,111
3 Claims. (Cl. 215—94)

1. A non-resealable glass container having a lug or lugs integrally molded thereon, trunnions molded on said lug or lugs, a metallic cage adapted to cover the top of the said container, said cage having breakable metallic elements assembled over and inseparably secured to said lug or lugs by means of glass rivet heads integral with said lugs.

2,004,513
BRIDGE BIDDING MACHINE
Frederick B. Watkins, Los Angeles, Calif.
Application June 19, 1931, Serial No. 545,543
15 Claims. (Cl. 273—148)



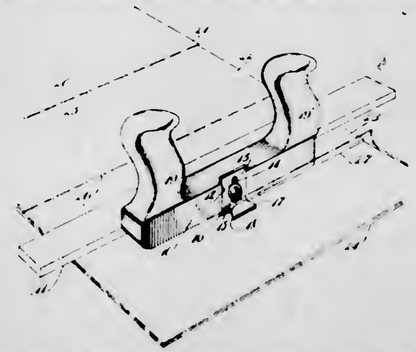
1. A bridge bidding board having several separate bid and pass indicators each operable at will to indicate bids and passes, and means in association with said board operated by an indication of a bid to remove all previously made indications of passes.

2,004,514
LACQUER ENAMEL
Henry W. Battle, Jr., Louisville, Ky.
No Drawing. Application December 21, 1932, Serial No. 648,212
17 Claims. (Cl. 134—79)

1. In a process for producing a black lacquer enamel involving the incorporation of black stock in a suitable solvent, the improvement which comprises employing black stock formed by milling a mixture comprising an insoluble black pigment, a cellulose ester, a medium capable of rendering the cellulose ester plastic, and an agent soluble in said medium and capable of functioning during the milling operation to so alter the physical characteristics of the pigment as to cause it to be maintained substantially uniformly dispersed in the lacquer enamel produced, thereby to form a substantially non-settling product of improved blackness.

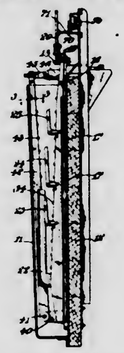
2,004,515
TIME RELEASE APPARATUS
Peter Beghetti, San Francisco, Calif.
Application December 14, 1932, Serial No. 647,110
5 Claims. (Cl. 161—1)

1. Time release apparatus comprising a ventilated box, a candle support therein, means engaging the candle to prevent deflection thereof, a device engaging around the candle, a weight, means connected to said device suspending said weight in a manner to drop the weight when the candle burns to the device, and means operated by the falling weight for doing work at a remote point.



2,004,516
CENTRIFUGAL FLUID MOVING APPARATUS
Harold F. Hagen, Dedham, Mass., assignor to B. F. Sturtevant Company, Inc., Hyde Park, Boston, Mass.
Application July 5, 1934, Serial No. 733,783
17 Claims. (Cl. 230—115)

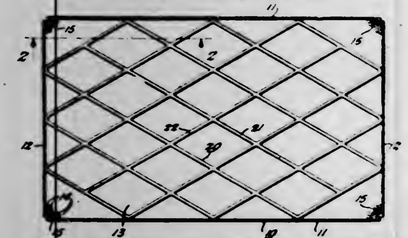
1. A combined radial and centrifugal fan blade having a substantially flat main working surface and a curved inlet portion shaped to direct air axially along said main surface, said curved portion having substantially a conoidal surface.



2,004,517
TOOL FOR PREPARING LAMINATED FABRICS FOR SPLICING
Otto F. Homeier, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a corporation of New York
Application September 28, 1932, Serial No. 635,150
1 Claim. (Cl. 164—83)

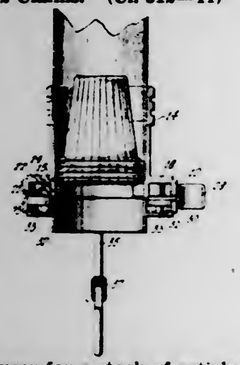
A tool for cutting and separating a face ply from an article formed of laminated sheet material, said tool comprising a body adapted to be propelled across the face of the article along a guide and having a lateral face of such substantial area as to follow said guide without substantial effort of the operator and an extensive bottom face of such extent as to provide stability of support from the face of the article, a pair of handles projecting from said body near the respective ends thereof, and a vertically disposed cutter adjustably attached to the body at a position between said handles and adapted to split a ply therefrom and to lift the ply at one side

only of the cut, said cutter being formed with an integral plough extending laterally therefrom on one side only of the cutter and having a flat lower face and bevelled on the upper side to provide a dull ply separating edge at said lower face, said cutter having a vertical slitting edge extending as far from the body as the lower face of the plough and located in advance of the ply separating edge thereof so as to slit the ply in advance of the plough, said plough extending away from the cutter in such a direction as not to be covered by the body and to permit lifting of the ply on one side of the cut.



2,004,518
MANUFACTURE OF SAFETY GLASS
Cyril Wilfred Bonniksen, Slough, England, assignor to Protectoglass Limited, London, England, a British company
Application September 23, 1933, Serial No. 690,759
In Great Britain June 4, 1932
10 Claims. (Cl. 49—81)

1. Apparatus for the manufacture of safety glass comprising a laminating bath, a vertically movable cradle to receive sheets of glass having an interposed mass of plastic material and to

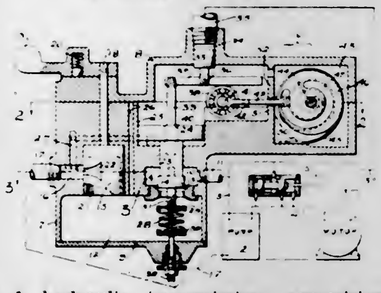


hold them in a non-horizontal position, means for lowering the cradle gradually into the liquid bath, and a leaf arranged for cooperation with the cradle and between which the glass sheets are located, which leaf is movably mounted so that it may be caused to approach the cradle after immersion of the glass and press the glass sheets together.

2,004,519
FLEXIBLE METAL ICE TRAY
Ralph H. Chilton, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application July 27, 1934, Serial No. 737,181
9 Claims. (Cl. 62—108.5)

1. A freezing tray comprising: a flexible sheet metal pan having flexible corrugations in the metal side walls of said pan at the corners thereof which permit an outward movement of said side walls when said pan is filled with ice.

2,004,520
DISPENSER
Eugene Conti, Mount Vernon, N. Y., assignor, by mesne assignments, to Herz Cup Company, Incorporated, New York, N. Y., a corporation of New York
Application July 13, 1933, Serial No. 680,171
2 Claims. (Cl. 312—44)

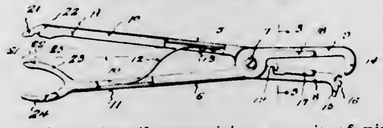


2. A dispenser for a stack of articles, comprising in combination, a tubular guideway for the articles, a plurality of dispensing devices disposed circumferentially around said guideway, a plate-like ring for operating said devices, an outer tubular wall retaining said ring, said wall and the exterior portion of said guideway being provided with ledges forming an upper bearing for said ring, and a spring secured at one end to the lower surface of said ring and at the other end to a fixed support above the level of the lower surface of the ring whereby to urge the ring circumferentially and upward.

2,004,521
CATALYTIC DEHYDRATION
Martin Mueller-Cunradi, Ludwigshafen-on-the-Rhine, and Ernst Ober, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application April 1, 1931, Serial No. 527,052. In Germany April 9, 1930
5 Claims. (Cl. 260—171)

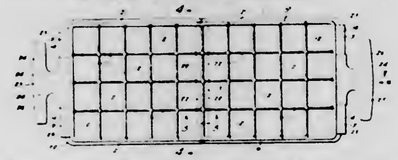
1. A process for the production of butadiene by catalytic dehydration of 1,3-butylene glycol by the action of heat, which comprises heating said 1,3-butylene glycol to a temperature of between 270° and 280° C. in the presence of a dehydration catalyst in the form of a coherent layer on the source of heat.

2,004,522
SPEED CONTROLLER FOR HYDRAULIC MOTORS
James K. Douglas, Milwaukee, Wis., assignor to The Oilgear Company, Milwaukee, Wis., a corporation of Wisconsin
Application September 19, 1932, Serial No. 633,750
20 Claims. (Cl. 60—53)



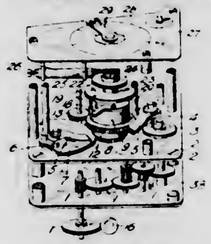
1. A hydraulic transmission, comprising a hydraulic motor for carrying a variable load, a pump for delivering motive liquid to said motor to operate the same and having with said motor a combined slip which varies in accordance with the variations in the pressure created by said pump in response to variations in said load, and means for subtracting liquid from the output of said pump at a predetermined volumetric rate at a predetermined pump pressure and responsive to variations in pump pressure to vary said volumetric rate inversely to said variations in pump pressure.

2,004,523
AMINOCARBOXYLIC ACIDS AND SALTS THEREOF
Reinhold Fick, Ludwigshafen-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application December 13, 1932, Serial No. 646,977. In Germany December 31, 1931
5 Claims. (Cl. 260—112)



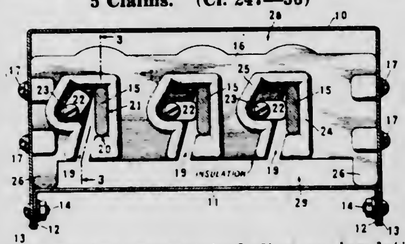
1. In the production of aminocarboxylic acids and salts thereof by a condensation of an aldehyde with ammonium cyanide and subsequent saponification of the resulting aminocarboxylic acid nitrile, the step which comprises carrying out the said condensation at a temperature between about 5° below zero centigrade and about 25° C. in the presence of a quantity of free ammonia corresponding at least to that present in the combined state in said ammonium cyanide and saponifying the aminocarboxylic acid nitrile in the resulting ammoniacal solution with an alkali metal base.

2,004,524
HOUSEHOLD TOOL
John P. Foeckler, Sr., Milwaukee, Wis.
Application June 30, 1934, Serial No. 733,255
1 Claim. (Cl. 294—3)



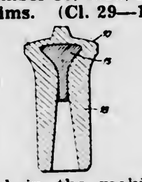
A kitchen utensil comprising, a pair of pivotally connected crossed levers, a right-angularly extending jaw formed on the forward end of one lever, an angularly extending jaw formed on the forward end of the other lever, said last mentioned jaw being provided with a transversely extending groove, and auxiliary flat jaws formed on the levers intermediate the pivotal connection of the levers and the first mentioned jaws, said auxiliary jaws projecting laterally beyond the levers and having their inner faces provided with longitudinally and transversely extending grooves, all of the grooves of the jaws being adapted to receive the wires of wire oven and broiler racks.

2,004,525
FREEZING TRAY
Harvey D. Geyer and Frederick W. Sampson, Dayton, Ohio, assignors, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application November 25, 1931, Serial No. 577,250
6 Claims. (Cl. 62—108.5)



6. In combination, a molded flexible rubber freezing tray and a metal support therefor attached thereto at its two upper end portions and its lower central portion, said combined rubber tray and metal support being capable of a substantial endwise bending movement, whereby to facilitate the upward flexing of the central portion of said tray.

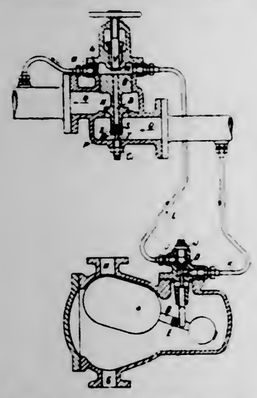
2,004,526
PREPAYMENT METER MECHANISM
Robert Constantine Graseby, New Malden, England
Application January 4, 1934, Serial No. 705,293
In Great Britain January 12, 1933
7 Claims. (Cl. 194—3)



1. For a prepayment meter mechanism having means for collecting a "fixed" charge including a time motor, and a supply-control means, means for connecting the time motor with the supply-control means comprising a pair of free-wheel clutches whose members are similarly disposed (when viewed from one and the same direction) and are in such frictional engagement that they move together, even in the free-wheeling direction, unless one member is held, mechanism for operatively connecting the time motor with one member of one of the clutches and adapted for imparting thereto a rocking movement with a constant stroke, stop means for restricting the stroke of rocking movement of the corresponding member of the other clutch, means for adjusting said stop means, and means for connecting the other members of the clutches together and to the supply-control means, the latter thereby receiving the restricted stroke in the one direction and the full constant stroke in the other direction.

2,004,527
ELECTRICAL CONDUCTING SYSTEM
Frank Harvey, Covington, Ky., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a corporation of Connecticut
Application July 31, 1933, Serial No. 682,998
5 Claims. (Cl. 247—36)

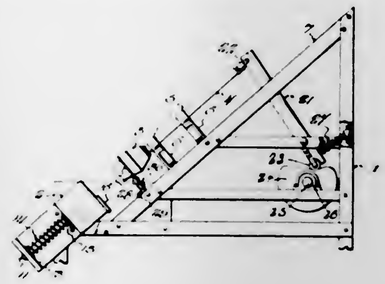
1. A bus bar support including an insulating cross bar adapted to be secured in a metal conduit and having a plurality of angular slots opening in one edge of the cross bar for receiving bus bars and each of said slots terminating in a recess having a relatively vertical side wall and a shoulder and a clamping device adjacent each of said vertical side walls for clamping the bus bar located therein against said side walls and definitely positioned with respect to said shoulder, said bar having means at each end for connection to said metal conduit.



2,004,528
METHOD OF MAKING VALVES
Oscar Hedlund, Battle Creek, Mich., assignor to Wilcox-Rich Corporation, Detroit, Mich., a corporation of Michigan
Application December 30, 1933, Serial No. 704,627
6 Claims. (Cl. 29—156.7)

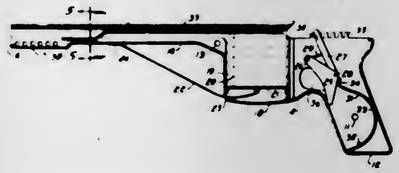
1. The method in the making of a poppet valve comprising forming of valve material an integral hollow part closed at one end, heating said part, forming an insert of a material of lower melting point than the valve material and having a head at one end thereof of larger di-

ameter than the remainder of the insert, applying the insert within the heated part so the head of the insert is applied to the closed end of said part, and forming the valve material around the insert while the insert is in solid form.



2,004,529
LIQUID LEVEL REGULATOR
Harold Hillier, Catheart, Glasgow, Scotland, assignor to G. & J. Weir, Limited, Glasgow, Scotland, a corporation of Great Britain
Application September 30, 1933, Serial No. 691,723
In Great Britain October 25, 1932
13 Claims. (Cl. 137—101)

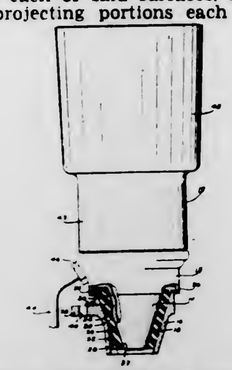
10. A feed water regulator for steam generators, comprising, in combination, a main valve interposed in the feed line to the generator, said valve exposed on the under side to the feed discharge pressure acting on said under side in the direction to unseat said main valve, piston means moving with said main valve and having a total effective area exceeding the area of said main valve, chamber means accommodating said piston means, an inlet connection to said chamber means from a point of the feed line upstream of said main valve, a discharge connection from said chamber means to a point of the feed line downstream of said main valve, a float-operated valve remote from said main valve and responsive to changes of water level in the generator, a needle valve dependent for its operation on the movement of said main valve and piston means, said needle valve controlling said inlet connection, and piping connecting the feed line to said chamber means and controlled by said float-operated valve.



2,004,530
APPARATUS AND METHOD FOR FORMING EDIBLE RECEPTACLES
Charles W. Howe, Milwaukee, Wis., and John A. Nevin, Wichita, Kans.; said Howe assignor to said Nevin
Application June 21, 1933, Serial No. 676,848
4 Claims. (Cl. 107—15)

1. An apparatus of the class described comprising, an angularly disposed female die provided with a tapered recess having a flat bottom and a vertical opening in said die communicating with the lowermost portion of said recess for the discharge of particles therefrom, a male die cooperating with the female die to form a container from a pliable blank of dough, means positioned in said recess for automatically ejecting the container therefrom upon retraction of the male die, said ejecting means serving to close said open-

ing when depressed in said die, and yieldable means for subsequently embracing the side walls of the male die to strip the container therefrom.



2,004,531
REPEATING TOY GUN
Charles H. Leonard, Detroit, Mich.
Application April 12, 1933, Serial No. 665,697
5 Claims. (Cl. 124—14)

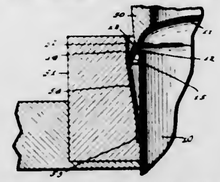
1. A repeating elastic band gun including a barrel having a bore therein and also having a slot intersecting the bore and extending to a point short of its front extremity, a magazine adapted to contain a plurality of projectiles, means for successively feeding projectiles from the magazine into the bore of the barrel, a plurality of elastic bands, means generally behind the barrel for maintaining the bands stretched to different positions therebehind, means farther forward and clear of the bore for retaining the front ends of the bands, the bands being arranged to travel in the slot and engage and project a projectile in the bore when released, a trigger, means connected to the trigger for independently releasing the bands upon successive actuations of said trigger and a receiving portion clear of the bore and connected to the slot for holding relaxed bands.

2,004,532
RESILIENT MOUNTING
Clyde W. Mapes, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 15, 1933, Serial No. 671,062
2 Claims. (Cl. 248—26)

2. In a resilient mounting for a motor, the combination comprising, a resilient member having substantially coaxial conical inner and outer surfaces, and integrally formed portions projecting from each of said surfaces, said integrally formed projecting portions each having three

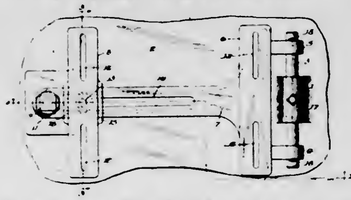
faces defining planes that are substantially parallel to the axis of said conical surfaces.

2,004,533
AUTOMATIC STOKER AND CONTROL THEREFOR
Walter A. Maynard, Cleveland Heights, Ohio
Application March 20, 1933, Serial No. 661,719
3 Claims. (Cl. 60—52)



1. In a hydraulic control system including a source of fluid under pressure and a plurality of reciprocable members operated by said fluid under pressure, a distributing valve comprising a casing having a plurality of outlets communicating with said members, a rotatable plug within the casing having an opening in constant communication with said fluid source and progressively with said outlets as the plug is rotated, said plug having a discharge opening for simultaneous communication with another of said outlets to relieve pressure on one side of one of said reciprocable members while fluid under pressure is delivered to said one member in an opposite direction, and hydraulically operated means for rotating said valve, said last named means being responsive to variations in pressure on the fluid in said system.

2,004,534
SEPARATION OF METALS
Carl Müller, Mannheim, Leo Schlecht, Ludwigshafen-on-the-Rhine, and Emil Keunecke, Oppau, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application October 10, 1932, Serial No. 637,200. In Germany February 24, 1927
14 Claims. (Cl. 23—203)



2. The process for the separate recovery of base metals capable of forming metal carbonyls from a material containing at least two of such metals, which comprises acting on said material, while the same contains the said metals in a form capable of reacting with carbon monoxide, with carbon monoxide under conditions causing reaction of each of said metals, thereby forming the carbonyl compounds of said metals simultaneously, and "fractionating" the resulting carbonyl mixture.

2,004,535
PROCESS OF MAKING LOCK-SEAMS
Quintin G. Noblitt, Indianapolis, Ind., assignor to Noblitt-Sparks Industries, Inc., Columbus, Ind., a corporation of Indiana
Application January 9, 1933, Serial No. 650,761
5 Claims. (Cl. 113—121)

2. The process of securing together a sheet-metal tube and a cap for one end thereof, which comprises separately forming on the end of the tube and at the edge of the cap complementary flanges, the flange on the cap being wider than the flange on the tube, bringing the cap and tube together with said flanges in engagement and the rim of the cap-flange projecting outwardly beyond the flange on the tube, folding the projecting rim of the cap-flange inwardly beneath the tube flange, compressing the seam thus formed, and then folding such seam inwardly into engagement with the wall of the tube and subjecting the exterior of the seam to inwardly directed radial pressure to cause a permanent reduction in the internal diameter of the tube in the plane of the seam.

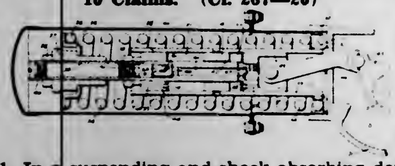
2,004,536
MOTOR MOUNTING
Charles A. Olson, Geneva, and Glenn A. Patterson, Chicago, Ill., assignors to Crane Co., Chicago, Ill., a corporation of Illinois
Application December 23, 1933, Serial No. 703,750
6 Claims. (Cl. 74—242.13)

6. A mounting for electric motors comprising a base and pedestal upstanding therefrom, a motor support cross member pivotally connected with said pedestal about an axis parallel to its own length, a single tongue rigidly supported on said member extending from the middle portion thereof at right angles thereto, a second motor support cross member solely supported on and slidably mounted transversely on said tongue, and means for clamping the second member to said tongue in a plurality of adjusted positions

2,004,537
SMOKER'S ACCESSORY
Roy W. Parkinson, Buffalo, N. Y., assignor to Edward F. McDonald, Buffalo, N. Y.
Application July 20, 1933, Serial No. 681,303
16 Claims. (Cl. 131—51)

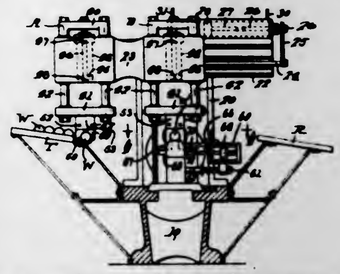
12. A smoker's accessory comprising a receptacle cover formed with a discharge opening, a supporting bracket on the under side of said cover, a pair of plates pivoted for movement in

edgewise relation on said supporting bracket for closing said discharge opening, a rock member pivoted on said bracket and engaged with said



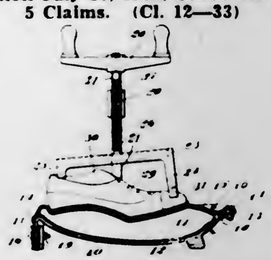
plates, and an operating member secured to said rock member and manually operable to move said rock member on its pivot for actuating said plates to uncover said discharge opening.

2,004,538
HANDLE
William A. Ready, Brookline, Mass., assignor to Ames Baldwin Wyoming Co., Parkersburg, W. Va., a corporation of Delaware
Application August 10, 1934, Serial No. 739,245
5 Claims. (Cl. 294—57)



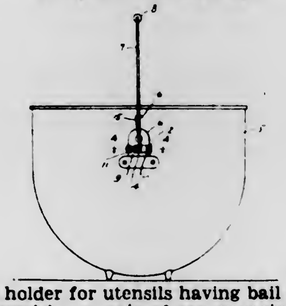
1. A handle construction for shovels and the like comprising sheet metal arms, a cross-grip between them, washer-like members overlying the ends of the arms having an eccentrically located part passing through the metal and entering the grip, and headed fastening means securing the arms against the ends of the grip having heads cooperating with said members.

2,004,539
SHOCK ABSORBER
Edwin F. Rossman, Dayton, Ohio, assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application September 15, 1933, Serial No. 689,628
10 Claims. (Cl. 267—20)



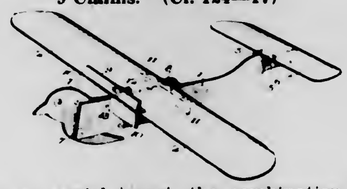
1. In a suspending and shock absorbing device for a vehicle, the combination with the frame and a wheel of the vehicle, an arm hingedly secured to the frame and having a spindle for supporting the wheel; a coil spring; a motion transmitting member secured to the arm and the free end of the coil spring; and means comprising a cylinder rigidly supported coaxially of the spring and a plurality of spaced members, one of which is secured within the cylinder, the others being slidable within the cylinder and fixed to the motion transmitting member for preventing tilting of the spring and providing a shock absorber for controlling the movements of the wheel supporting arm.

2,004,540
WORK-HANDLING MECHANISM FOR CENTERING AND LIKE MACHINES
Edwin R. Smith and Albert Schinkel, Seneca Falls, N. Y., assignors to Seneca Falls Machine Company, Seneca Falls, N. Y., a corporation of Massachusetts
Application June 29, 1932, Serial No. 619,948
5 Claims. (Cl. 77—18)



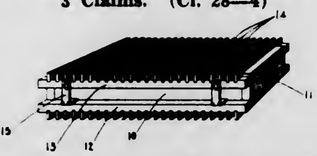
2. In a machine tool, a work support, work-engaging and transporting means effective to present pieces of work successively on said support, and power operated means forming a constituent part of said machine and movably mounted on said support, said latter means being effective to increase the pressure of said work-engaging means on each piece of work while the work is positioned thereby relative to said support and during a machine operation thereon, said latter means comprising a floating cylinder mounted on said work support for movement relative thereto, a piston movable in said cylinder, said cylinder and piston moving in opposite directions relative to said work support and transversely of said machine upon the application of fluid pressure in said cylinder, and means connected with said cylinder and piston respectively and directly contacting said work-engaging means on opposite sides thereof.

2,004,541
PNEUMATIC PRESS FOR CEMENTING SOLES ON SHOES
John L. Thompson, Somerville, Mass., assignor of one-half to George Laganas, Lowell, Mass., and one-half to Lena A. Wilson, Somerville, Mass.
Application July 30, 1932, Serial No. 626,397
5 Claims. (Cl. 12—33)



1. In a pneumatic press for cementing shoe soles, a base portion, a flexible air container member mounted against said base, a lower bridge member adapted to engage the toe of a shoe supported by said container and the upper heel portion of a last inserted in said shoe, said bridge member having a dovetail slideway on the upper side of and extending longitudinally thereof, an upper bridge member positioned above said container, and a compression screw threadedly engaging said upper bridge member and having a rounded enlarged end portion in slidable interlocking engagement with said dovetail slideway on the lower bridge member, whereby said lower bridge member will be supported by said compression screw when in its unclamped position and may be adjusted relative thereto to properly engage a shoe and last.

2,004,542
BAIL HOLDER
Harlan A. Wagner, Ruthven, Iowa
Application January 9, 1934, Serial No. 705,926
1 Claim. (Cl. 220—96)



A bail holder for utensils having bail attaching ears, comprising a pair of ear engaging clamps, each of said clamps including a U-shaped member provided on the end of one of its leg portions with a channeled formation to receive one edge portion of the ear, a plate provided at one end with a channeled formation to receive the other edge of the ear, a clamp screw extending through the leg portions of the U-shaped member and being threaded through the plate so that by rotating the screw the channeled formations can be brought snugly against the edge portions of the ear, a bail engaging element, said bail engaging element consisting of an elongated spring wire convoluted at one end to provide a coiled spring, said spring being attached to the bight portion of the U-shaped member and disposed laterally therefrom, said wire being disposed upwardly from the outer end of the coil and then inwardly to provide an arm, said arm at its upper end being provided with a hook to engage a portion of the bail above the corresponding ear.

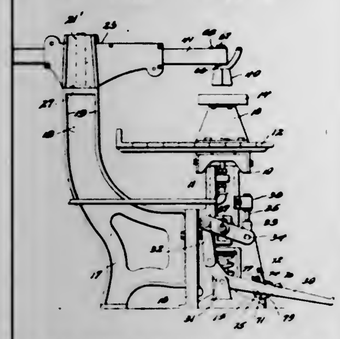
2,004,543
AERIAL TARGET
Walter G. Warren, Chicago, Ill.
Application June 19, 1933, Serial No. 676,593
In Belgium March 17, 1933
9 Claims. (Cl. 124—17)

1. In an aerial target, the combination of a body portion, supporting wing portions above and movable longitudinally of said body portion, means connecting said body and wing portions in one of the longitudinal positions of the latter but freeing the wing portions in another longitudinal position, and means actuated by the shot when said means are hit in the rear by the shot and shifting said wing portions from the connected to the disconnected position.

2,004,544
APPARATUS FOR MAKING SHAPE RETAINING FIBER MATTRESSES
William H. Waters and Jacob S. Kern, Fleetwood, Pa., assignors to Fleetwood Craftsmen, Inc., Fleetwood, Pa., a corporation of Pennsylvania
Application May 11, 1932, Serial No. 610,636
3 Claims. (Cl. 28—4)

1. In a machine for needling curled fibers, the combination with a pair of horizontal side frames having a form-carrying slide-way, a pair of endless feed belts traversing the latter, opposed uprights intermediate the length of said side frames, and needle-carrying bars above and below said slide-way mounted to reciprocate on said uprights and having fiber-entwining needles directed toward said slide-way; of a drive shaft associated with each needle-carrying bar mounted for vertical adjustment on said uprights and having a reciprocative connection to its respective bar and a drive connection to a vertical drive shaft, and separate means for adjusting each shaft relative to said slide-way; the shaft associated with one of said needle bars having a sliding drive connection to said vertical drive shaft to permit vertical adjustment of either shaft.

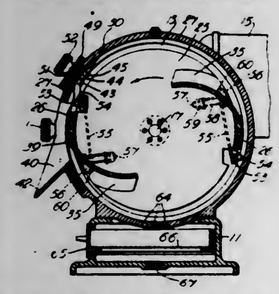
2,004,545
PRODUCTION OF POROUS BUILDING MATERIALS
Hans Wolf and Hermann Leuchs, Ludwigshafen-on-the-Rhine, and Hans Saenger, Bitterfeld, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application April 19, 1933, Serial No. 666,820. In Germany May 5, 1928
15 Claims. (Cl. 106—24)



1. The process for the production of porous building materials which comprises making a hydraulic mineral binding medium into a frothy pulp together with water, waterglass and a true sulphonic acid substance of an aromatic compound containing at least 6 carbon atoms.

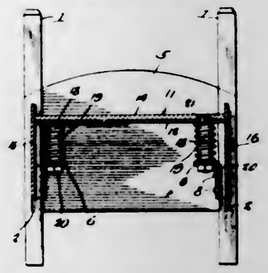
2,004,546
SULPHONIC ACID
Carl Wulff and Ernst Roell, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application February 13, 1933, Serial No. 656,585. In Germany February 24, 1932
10 Claims. (Cl. 260—159)

3. Dyestuff intermediates corresponding to the general formula $X_1—X_2—X_3$ in which X_1, X_2 and



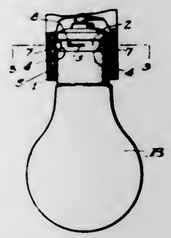
X_3 stand for a benzene nucleus, at least one of the nuclei X_1 and X_3 bearing at least one sulphonic acid group the said intermediates being obtainable by reacting a diphenylbenzene with a sulphonating agent.

2,004,547
GARMENT PRESSING MACHINE
Edwin H. Zacharias, Reading, Pa.
Application December 12, 1930, Serial No. 501,958
10 Claims. (Cl. 68—9)



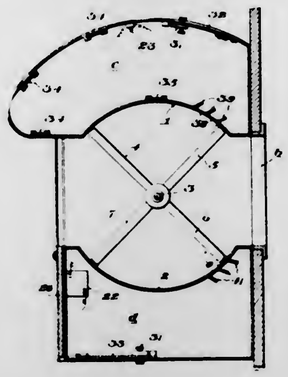
1. In a garment pressing machine, an upper iron, a vertically movable lower iron, a depressible treadle for raising said lower iron to engage said upper iron, a latch, and means for operating the latch pivoted to lie below the level of the treadle when the treadle is in an elevated position and adapted to lie above the top of the treadle when the treadle is in a lowered position, said means lying adjacent said treadle to be engaged by the foot of the operator as the treadle is depressed whereby the operator may set the latch without shifting or otherwise moving his treadle engaging foot and is thus able to exert a maximum pressure on the treadle while giving his entire attention to the garment under pressure.

2,004,548
MACHINE FOR CUTTING POTATOES OR OTHER OBJECTS INTO CHIPS OR SLICES
Geoffrey Joseph Abbott, London, England
Application June 13, 1932, Serial No. 617,013
In Great Britain June 29, 1931
8 Claims. (Cl. 146—166)



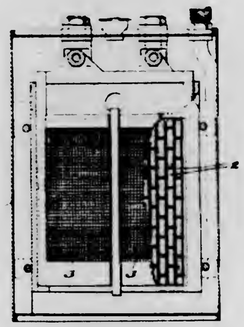
1. In a machine for cutting potatoes into chips, a stationary hollow cylindrical part, cutting blades carried thereby and projecting inwardly thereof, a rotor operative within the cylindrical part, throats carried by the rotor and cooperating with the cylindrical wall of the cylindrical part to form a pocket to pick up potatoes from the lower portion of the cylindrical part and carry them into cooperation with the blades, the throats being formed to retain and present to the blades potatoes picked up by the throats in the direction of their longitudinal axes, a rake carried by the rotor and operating to hold the last remaining portion of the potato in operative position within the throat, and means for moving the rake radially of the rotor to avoid contact with the blades.

2,004,549
BED
Randolph Boyd, Galva, Ill.
Application April 21, 1934, Serial No. 721,792
4 Claims. (Cl. 5—210)



3. A bed frame comprising head and foot members including posts, side rails connecting the head and foot members, a platform, means for supporting the platform yieldably upon the side rails, and side plates carried by the platform and located outwardly of the side rails, the side plates being wide enough to hide the side rails and being guided for vertical movement in the posts.

2,004,550
ELECTRICAL CONNECTER
Francois C. Bradley, Union, Miss.
Application July 30, 1932, Serial No. 627,029
5 Claims. (Cl. 173—360)

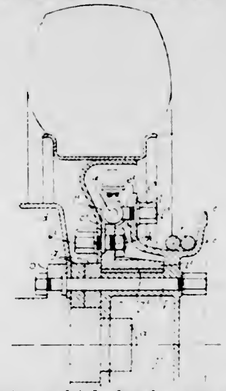


1. As a new article of manufacture, an electrical connecter comprising a shell for insertion within an internally threaded socket member, said shell having circumferentially spaced openings, and a bow spring positioned within the shell and having lugs normally extending outwardly of the shell through said openings, said lugs when extended having engagement with the thread of the socket member, said shell and bow spring having limited relative rotary movement, the lugs being hook-shaped to overlap the shell upon relative movement of the spring and shell in one direction to hold the lugs against movement inwardly of the shell.

2,004,551
BANK BANDIT TRAP
Walker B. Coleman and Frank J. Ebel, New Orleans, La.
Application February 23, 1932, Serial No. 594,724
3 Claims. (Cl. 20—1.01)

1. An entrance and exit for a bank or the like including an elongated passageway having a wall formed by a hollow compartment adapted to receive an attendant, a revolvable door positioned within the passageway, the compartment being formed and adapted to permit view of the passageway by the attendant and having openings therein, and vanes positioned adjacent the openings to deflect bullets away from the attendant in the compartment.

2,004,552
ELECTRIC STORAGE BATTERY
James Joseph Drumm and Albert George Burnell, Inchicore, Dublin, Ireland, assignors to Drumm Battery Company, Limited, Dublin, Ireland
Application May 17, 1933, Serial No. 671,540
In Great Britain May 18, 1932
3 Claims. (Cl. 136—28)

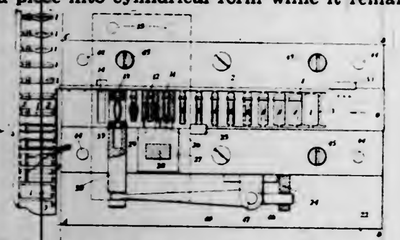


1. An alkaline electric storage battery comprising a negative electrode having a surface of nickel, an alkaline electrolyte and a positive electrode formed from a composite plate of iron, nickel plate, chromium plate, and nickel plate, the last mentioned plating being annealed in an atmosphere of hydrogen.

2,004,553
ARMED WOODEN PLATE AND ARMATURE BAR FOR THE SAME
Johannes Brynjälvsen Een, Oslo, Norway
Application June 20, 1933, Serial No. 676,754
In Norway June 23, 1932
9 Claims. (Cl. 20—91)

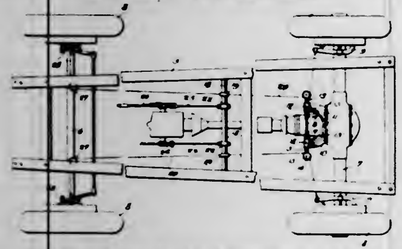
1. In armed wooden plates for building, furniture and the like purposes the combination of a single row of boards, placed side by side, with grooves arranged crosswise over the whole width of said row of boards, armature bars driven into said grooves, and teeth on said amature bars, adapted to be driven into the boards at the bottom of said grooves, said teeth being of varying length, the length being greater near the ends of said bar than at the middle.

2,004,554
PULLEY DRUM FOR MOTOR VEHICLES
Donald Stuart Kennedy, Longparish, Hampshire, England
Application August 13, 1934, Serial No. 739,689
In Great Britain January 10, 1934
5 Claims. (Cl. 180—53)



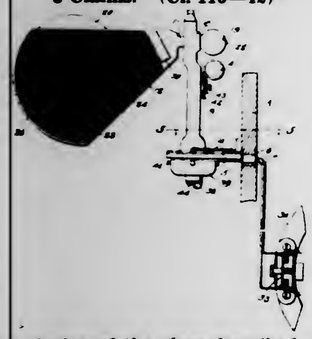
1. In a motor vehicle having an axle shaft, a driving member secured to said shaft, and a road wheel adapted to be driven from said shaft, a pulley drum, detachable means for securing said pulley drum to said driving member, a bearing member rotatable in relation to said pulley drum, and detachable means for securing said bearing member to said road wheel, said pulley drum and bearing member being concentrically mounted in relation to said shaft and road wheel, and detachable driving connections between said pulley drum and bearing member, said pulley drum and bearing member being detachable as a unit by removal of said securing means between said pulley drum and driving member and of said securing means between said bearing member and road wheel.

2,004,555
METHOD AND APPARATUS FOR THE MANUFACTURE OF ELECTRICAL CONTACT PLUGS
Ernst Kleinmann and Alfred Mendel, Berlin-Lichtenberg, Germany
Application September 2, 1933, Serial No. 688,043
19 Claims. (Cl. 153—2)



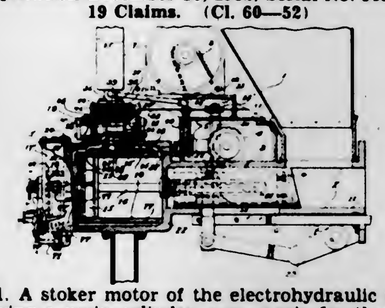
1. A method for the manufacture of a bulged electrical contact plug consisting in stamping a

metal sheet so as to form a piece of the appropriate shape that remains attached along part of each of two opposite ends to said sheet, bending said piece into cylindrical form while it remains



attached to said sheet at both ends, then detaching it from said sheet at one end, subsequently compressing the cylinder axially to bulge it and then detaching it at the other end.

2,004,556
MOTOR VEHICLE BRAKE
Fred H. Sharar, Williamsport, Pa.
Application September 16, 1932, Serial No. 633,501
3 Claims. (Cl. 188—204)



1. A motor vehicle brake actuating device comprising a bracket adapted to be attached to a part of the vehicle, arms on said bracket having bearings, rods slidably mounted within the bearings, means for restricting outward movement of the rods, pulleys mounted at the outer ends of the slidable rods, cables connected to the brakes of the vehicle and operating over the pulleys, and means for operating the cables.

2,004,557
DIRECTION INDICATOR
John L. Trotter and Virgil Hall, St. Louis, Mo.
Application May 26, 1931, Serial No. 540,116
3 Claims. (Cl. 116—42)

1. In a device of the class described, a hollow support, a vertical supporting post, a circular flange at the lower end of the supporting post and fitted in the hollow support, holding the supporting post in an upright position, spring members connected to the opposite sides of the supporting post and adapted to hold the supporting post in a predetermined position, a signaling housing mounted at the upper end of the post, and signaling means within the signaling housing.

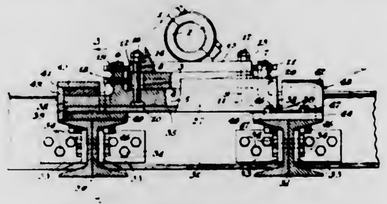
2,004,558
STOKER MOTOR
James F. Turner and Christian P. Breidenbaugh, Baltimore, Md., assignors to Flynn & Emrich Company, Baltimore, Md., a corporation of Maryland
Application December 30, 1932, Serial No. 649,558
19 Claims. (Cl. 60—52)

1. A stoker motor of the electrohydraulic type having a main cylinder, a reservoir for the hydraulic fluid, a feed trough and a ram guide formed in a single casting.

2,004,559
METHOD AND INSTRUMENT FOR ELECTRO-SURGICAL TREATMENT OF TISSUE
Reinhold H. Wappler, Yonkers, and Frederick Charles Wappler, New York, N. Y.; said Frederick C. Wappler administrator of said Reinhold H. Wappler, deceased
Application November 22, 1932, Serial No. 643,846
20 Claims. (Cl. 174—89)

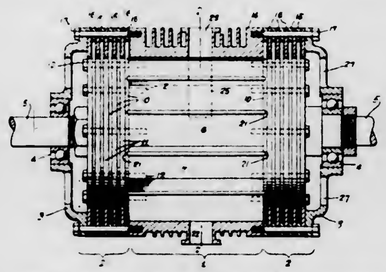
1. In an instrument of the character described, an elongated stem, a member pivotally mounted at its rear end to the forward portion of the stem so as to be movable from a longitudinal position into positions of varying obliquity with respect to the stem axis, a longitudinal electrode whose rear end is pivotally associated with the stem rearwardly of said member, and means articulating said member and electrode for constraining the electrode to move with and substantially parallel to said member.

2,004,560
MOTOR FUEL PRODUCTS
Robert E. Wilson, Chicago, Ill., assignor, by mesne assignments, to Gasoline Antioxidant Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application September 18, 1931, Serial No. 563,674
12 Claims. (Cl. 44—9.03)



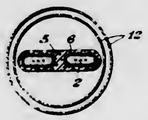
1. A motor fuel product comprising principally an unsaturated hydrocarbon distillate boiling within the gasoline boiling range and initially stable with respect to gum formation, an added small proportion of tetra ethyl lead solution as a knock suppressing agent, the addition of which results in an impaired stability of the motor fuel with respect to gum formation, and a small amount of an amino hydroxy benzene whereby said impairment of gum stability is corrected.

2,004,561
EXPANDING PINTLE FOR HINGES
Frederick W. Becker and Reginald P. Kinsley, Albany, N. Y., assignors to Watervliet Tool Company, Inc., Albany, N. Y., a corporation of New York
Application August 17, 1933, Serial No. 685,517
2 Claims. (Cl. 16—168)



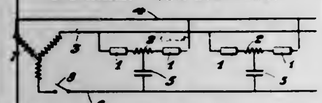
1. In a door hinge, comprising a member having spaced knuckles, a member having an intermediate knuckle between the spaced knuckles, the three knuckles having alined bores, a single piece pintle having one end headed, and having locking means at said headed end, and having an axial bore therein, said axial bore having large and small cylindrical portions intermediately connected by a wedging portion, the large cylindrical portion of the bore being threaded, a plurality of peripheral slots in said pintle extending substantially the entire length of said pintle and into said axial bore to form expander sections in the three alined bores of the said knuckles, a solid wedge ended expansion pilot in said axial bore with its wedge end fitting the wedging portion of said axial bore and an independent set screw tightly engaging the threaded end of said axial bore to engage said wedge ended pilot to hold the latter in position under the stress of expansion of said pintle.

2,004,562
ADJUSTABLE SHAFT MOUNTING
Daniel M. Blackburn, Carbondale, Pa., assignor to Hendrick Manufacturing Company, Carbondale, Pa., a corporation of Pennsylvania
Application February 3, 1934, Serial No. 709,568
6 Claims. (Cl. 308—59)



1. In a shaft mounting of the character described, in combination, a base block, a channel iron embracing the base block from below and having a side wall at each side of the base block, the base block and channel iron having aligning extending portions at both ends, a support, resilient members between the channel iron extensions and the support, a strap extending over each base block extension, resilient members intermediate the block extensions and straps, and means tightly clamping said straps to the support and placing and maintaining the resilient members under compression.

2,004,563
COMPRESSOR
Boris Bogoslowsky, Bridgeport, Conn., assignor, by mesne assignments, to Arnold C. Dickinson, Fitchburg, Mass.
Application June 23, 1931, Serial No. 546,274
4 Claims. (Cl. 230—152)

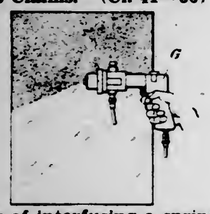


1. In an assembly of the character described, a stationary casing having coaxial annular recesses of castellated cross section in the opposite ends thereof, an intermediate portion of the casing constituting an eccentrically positioned chamber having inlet and outlet passages, a rotor positioned within said chamber and mounted to rotate coaxially of said recesses, flanges of castellated cross section on the ends of said rotor interfitting with said recesses, but free from contact with the walls of said recesses, said rotor having radial pockets and the flanges having juxtaposed radial channels in their inner faces, and vanes supported for radial movement in said pockets and channels, said vanes being positioned relatively close to one another to divide the chamber into a large number of relatively small pockets, the opposing surfaces of the interfitted castellated portions of the flanges and recesses being parallel to or coaxial with one another and spaced apart a substantially uniform distance throughout the labyrinth packing thus formed, whereby excessive axial or circumferential leakage or by-passing of pressure from or between the several pockets of the rotor is precluded.

2,004,564
GASEOUS ELECTRIC DISCHARGE LAMP DEVICE
Cornelis Bol, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application May 25, 1934, Serial No. 727,526
In the Netherlands June 3, 1933
2 Claims. (Cl. 176—122)

1. A gaseous electric discharge device comprising a curved container having the ends thereof in adjacent positions, each of said ends having a pinch part protruding therefrom, said pinch parts being in the same plane.

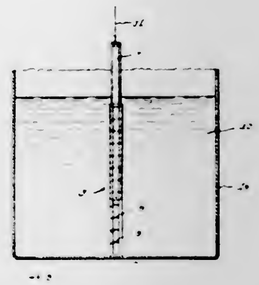
2,004,565
GASEOUS ELECTRIC DISCHARGE DEVICE
Cornelis Bol and Eduard G. Dorgelo, Eindhoven, Netherlands, assignors to General Electric Company, a corporation of New York
Application June 18, 1934, Serial No. 731,149
In the Netherlands June 24, 1933
3 Claims. (Cl. 176—124)



1. A starting and operating circuit for a plurality of gaseous electric discharge devices comprising in combination, a three-phase alternating current source for said devices, a series connected stabilizing impedance for said devices, said devices being connected in groups comprising at least two of said devices, the devices in each group being connected in series across two terminals of said current source and means to connect the mid-point of each group to the third terminal of said current source during the starting period of said devices and to disconnect the mid-point from the third terminal during the operation of said devices.

2,004,566
TRIMMING AND CUTTING MACHINE
Edward M. Brackett, Dietrich Daneke, and Leo C. Williams, Topeka, Kans., assignors, by mesne assignments, to Dexter Folder Company, New York, N. Y., a corporation of New York (1934)
Application January 8, 1934, Serial No. 705,761
21 Claims. (Cl. 164—51)

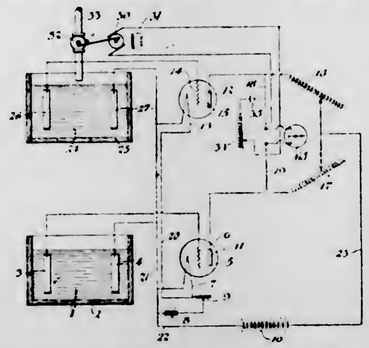
3. In combination with a cutter for severing a portion of a stack of sheet material, a holder for applying pressure to a portion of the stack to be cut off, means for supporting the holder for lateral shifting movement relative to the cutter, means carried by the holder for applying an initial pressure to said portion of the stack, and means for moving the holder concurrently with operation of the cutter to rack the cut off sheets of the stack for accommodating cutter displacement during the cutting operation.



2,004,567
COMBINATIONS OF ENAMEL AND SPRAYED METAL
Isaac V. Brumbaugh, St. Louis, Mo.
Application September 8, 1933, Serial No. 688,624
26 Claims. (Cl. 41—36)

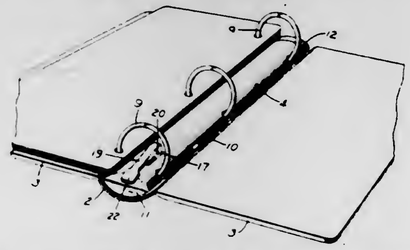
1. A process of interfusing a sprinkling of discrete metal particles on a surface of ceramic material into the ceramic surface by fusion of the latter.

21. An article of manufacture having a ceramic or vitreous surface with a sprinkling of metal particles fused and incorporated thereinto.



2,004,568
LIQUID SAMPLING DEVICE
Michael J. Carpinello, New York, N. Y.
Application April 25, 1933, Serial No. 667,931
2 Claims. (Cl. 137—18)

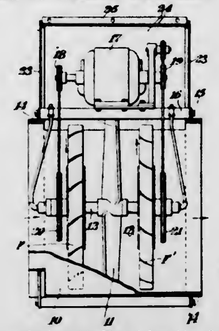
1. A liquid sampling device comprising an elongated rod like container of substantially semicircular cross sectional configuration and having a relatively narrow opening in its front wall extending centrally and longitudinally thereof, partitions in said container and providing superimposed compartments, a slidably mounted door for closing the opening, said door having reduced side portions extending to the sides of the container to close the compartments from each other and acting with the sides of the front wall to guide the door in its movement, a strip bridging the opening at its upper end, a projection on the lower end of said door to contact the strip to limit the upward movement of the door, said door being longer than the container to extend above the latter with an opening in the extension, flexible means secured in the extension opening to raise the door, a ring secured to the top of the container, and flexible means secured to the ring to raise and lower the container within a body of liquid.



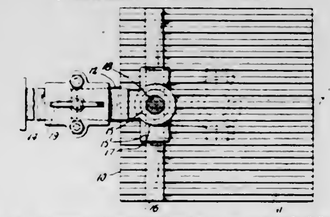
2,004,569
ELECTROMETRIC DETERMINATIONS
Archibald H. Davis, Jr., Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a corporation of New York
Application May 14, 1926, Serial No. 109,116
7 Claims. (Cl. 175—183)

1. An apparatus for electrometric determinations which comprises two pairs of electrodes each of which is positioned in a liquid conductor, two electron tubes, grid circuits associated with each of said tubes, the grid circuit of one tube including one of the aforesaid pairs of electrodes and the grid circuit of the other tube including the other of the aforesaid pairs of electrodes, filament circuits in parallel association with both tubes and including a source of electric current for heating the tube filaments common to both filaments, plate circuits in parallel association with both tubes and including a source of electric current common to both circuits, and an electric current indicating means associated with both of said plate circuits whereby the ratio of

the current in one of said circuits to the current in the other of said circuits is indicated.



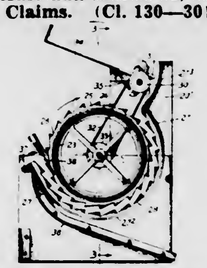
2,004,570
LOOSE LEAF BINDER
George H. Dawson, Chicago, Ill., assignor to Wilson-Jones Company, Chicago, Ill., a corporation of Massachusetts
Application October 9, 1933, Serial No. 692,747
16 Claims. (Cl. 129—24)



4. In a loose leaf binder, a ring metal including a pair of toggle plates and a plurality of sheet retaining prongs secured to said toggle plates, and a lever pivotally supported above said toggle plates, said lever engaging said toggle plates to move said prongs to closed position, said toggle plates being adapted to move said lever from inoperative to operative position when said prongs are moved to open position.

2,004,571
FAN
George de Bothezat, New York, N. Y., assignor to American Machine and Metals, Inc., New York, N. Y., a corporation of Delaware
Application September 8, 1931, Serial No. 561,524
12 Claims. (Cl. 230—123)

1. A fan unit consisting of a housing and a series of coaxial disk fan impellers therein drawing a supply of gas at one end of the series, increasing the pressure by each impeller rotated under substantially the same torque and discharging the gas at the opposite end of the series with substantially no rotation of the discharge around the axis, and means for driving said impellers with relatively opposite rotations at substantially the same speed, the impellers rotating in opposite directions having their respective blade widths and blade angles and the number of blades different as to at least one of these features and so related that their torque resistances are substantially identical under normal operating conditions.

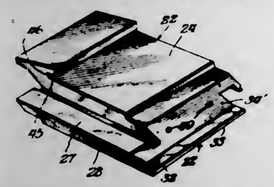


2,004,572
POWER TRANSMISSION
William H. Furness, Riverton, N. J., assignor to American Rayon Company, Inc., Riverton, N. J., a corporation of New Jersey
Application August 15, 1934, Serial No. 739,883
7 Claims. (Cl. 74—63)

1. In a power transmission, a revoluble plate having parallel teeth extending in a direction across a face thereof, a rack bar engaging said teeth, and a revolubly mounted yoke slidably engaging the rack bar.

2,004,573
PEA SHELLER
John Alfred Galley, Edgecliff, New South Wales, and Ernest Valentine Galley, Milsons Point, North Sydney, New South Wales, Australia
Application September 20, 1933, Serial No. 690,272
In Australia March 31, 1933
3 Claims. (Cl. 130—30)

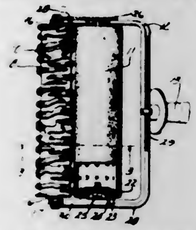
1. A pea-shelling device comprising a framing, a drum rotatably mounted in said framing, a plurality of spaced rubber ribs mounted annularly on the outer surface of said drum and each consisting of a separate endless rib located in a plane at right angles to the axis of the drum, a grid spaced



from and arcuately disposed about said drum and comprising a plurality of separate parallel rubber bars registering respectively with the interspaces between said drum ribs, means for rotating said drum to cause a transverse rolling of pea-pods between, and along the length of, said bars and ribs, and a plurality of apertures between said bars to permit escape of peas removed from the pods.

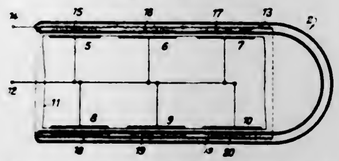
2,004,574
SPRAY GUN RESERVOIR
William Oliver Gee, Jr., Chicago, Ill.
Application February 13, 1933, Serial No. 656,520
6 Claims. (Cl. 299—88)

6. In a device of the class described for use with a spraying gun comprising a housing substantially circular in formation adapted to nest a cup, a demountable cup formed to be nestingly seated in the said housing, the body of said housing and said cup each being registeringly tapering, an outwardly extending flange upon the rim of said housing and an outwardly extending flange upon the rim of said cup adapted to register therewith, a demountable cover comprising a unit consisting of a closure member adapted to register on the flange of the cup above the flange of the housing and a resilient locking member; said cover having a conduit transversely therethrough, there being a portion adapted to extend into the cup and a portion extending outside of the cover; a fixed means and an adjustable means upon diametrically opposed external sides of the housing adapted to form parts of a locking means adapted to cooperate with the resilient member on the cover for tensionally locking the demountable cover assemblage to the housing.



2,004,575
ROOF AND SIDE COVERING FOR BUILDINGS
Irving A. Keyesawetter, Berwyn, Ill., assignor of one-half to Ernest R. Berg, Cicero, Ill.
Application July 19, 1933, Serial No. 681,115
3 Claims. (Cl. 108—10)

1. A building covering comprising a substantially parallelogram interlocking blank having a normally longitudinally extending channel on one edge thereof, a longitudinally extending narrow rib on one side of said channel, one edge of said channel undercut inwardly towards said blank, a longitudinally extending tongue complementary to said channel formed on the other edge of said blank, said longitudinal tongue formed by a relatively narrow channel complementary to the rib on the other side of said blank, a substantially horizontal flat portion at the upper end of said blank below the surface of said blank and transversely inclined in a direction towards said first named channel for draining the water thereinto, a forwardly beveled portion extending from said horizontal portion terminating in an upwardly extending substantially flat tongue, the lower portion of said blank being complementary to the upper portion of said blank, and a water lock rib co-extensive with said longitudinally extending rib for preventing the water draining to one side of said blank from passing between the blanks when assembled.



2. In combination with a building structure having spaced apart horizontally disposed members, of a covering in the form of interlocking blanks, hook portions formed integrally with said blanks for securing the upper ends of said blanks to said members, and dowel pins extending into aligned sockets of the adjacent upper and lower ends respectively of contiguous blanks for securing the lower end of each blank to the next lower adjacent blank.

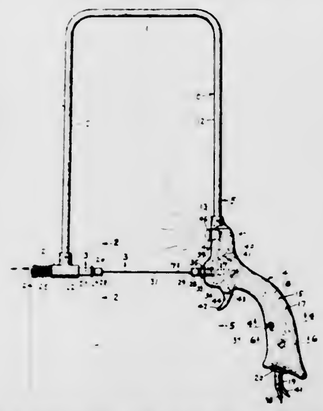
2,004,576
APPLICATOR ROLL
John Kirsch, Milwaukee, Wis.
Application April 15, 1932, Serial No. 606,936
2 Claims. (Cl. 101—376)

1. The combination with an applicator roll of resilient material, of a surface therefor comprising felt fibers impregnated into said material.

2,004,577
PROCESS AND APPARATUS FOR THE PRODUCTION OF LUMINOUS SIGNS IN ELECTRIC GAS DISCHARGE TUBES
Nikolai Lebedenko and Rudolf Levy, Berlin-Wilmersdorf, and Wladislaw Zeitlin, Berlin, Germany, assignors to Iris-Licht G. m. b. H., Berlin-Charlottenburg, Germany
Application December 15, 1932, Serial No. 647,426
In Germany October 15, 1931
22 Claims. (Cl. 176—14)

1. In a luminous discharge tube for operation from high frequency currents, an envelope of dielectric material enclosing an ionizable gas, a support removably connectible with said envelope, and a multiplicity of electrodes mounted on said support in positions capacitatively related to the ionizable gas in said envelope.

2,004,578
GASEOUS ELECTRIC DISCHARGE DEVICE
Hendrik Lems, Eindhoven, Netherlands, assignor to General Electric Company, a corporation of New York
Application August 12, 1932, Serial No. 628,578
In Germany August 20, 1931
4 Claims. (Cl. 176—122)



1. An electric discharge device comprising a container, electrodes sealed therein, a gaseous atmosphere therein, at least two of said electrodes being main discharge supporting electrodes, an auxiliary electrode extending from one of said main electrodes to a point adjacent the other of said main electrodes, said auxiliary electrode being coated with the oxide of the material constituting said auxiliary electrode to prevent sputtering of material from said auxiliary electrode during the operation of said device.

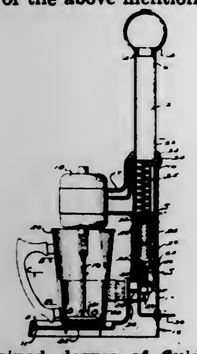
2,004,579
REENFORCED TENNIS NET AND METHOD OF MAKING THE SAME
Valentine Lichtenstein, Jersey City, N. J., assignor to The Fish Net and Twine Co., Jersey City, N. J., a corporation of New Jersey
Application August 23, 1932, Serial No. 630,001
6 Claims. (Cl. 273—29)

1. The herein described method of producing a centrally reenforced tennis net, which consists in squaring a strip of diamond netting having a single strand mid portion and heavy strand side portions to procure a strip having alternate parallelogram shaped sections of single and double strand netting, severing the single strand portion along a center line running transversely of the net, arranging the severed pieces of the netting to bring the free sides of the double strand portions into position to form a V-shaped opening therebetween, and thereafter filling out the opening with a heavy strand section to form a continuous netting.

2,004,580
ELECTRIC SCROLL SAW
Edwin L. Meyer, Bridgeport, Conn.
Application March 16, 1934, Serial No. 715,835
16 Claims. (Cl. 219—29)

11. In a device of the character described, an electric resistance wire forming a burner element; a frame in which said wire is carried and having an open side across which the said wire is stretched, said frame having a hand grip the axis of which forms an angle of greater than 30° with the axis of the wire, by means of which hand grip the frame is manipulated to draw the resistance wire over the work; means for supplying low voltage high amperage currents to said wire to heat the same, said means including a switch carried by the frame; and a finger-piece for said switch carried by the hand grip to be operated by the finger of the operator's hand holding the hand grip to instantly open and close a circuit supplying current to the resistance wire.

2,004,581
METHOD OF AND MEANS FOR SHAPING OR ARCHING EYEBROWS
William Meyer, Chicago, Ill.; Lina R. Meyer executrix of said William Meyer, deceased
Application July 14, 1934, Serial No. 735,097
17 Claims. (Cl. 128—355)



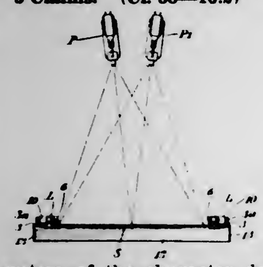
3. A device for shaping eyebrows comprising a pair of rolls having pointed ends held in engagement and adapted to grasp hairs individually and generally endwise therebetween, and bearing means for said rolls, said bearing means being disposed entirely away from the pointed ends of the rolls.

2,004,582
MECHANISM FOR DISINTEGRATING FROZEN LIQUID
Glenn Muffly, Richmond, Mich.
Application May 23, 1931, Serial No. 539,437
11 Claims. (Cl. 259—1)

1. An apparatus for preparing cold drinks from frozen material comprising means for heating the material, means for mechanically agitating it

while it is heated, and automatic means for controlling one of the above mentioned means when

a predetermined degree of fluidity is obtained and depending upon said degree of fluidity.



2,004,583

SOUND REPRODUCING SYSTEM

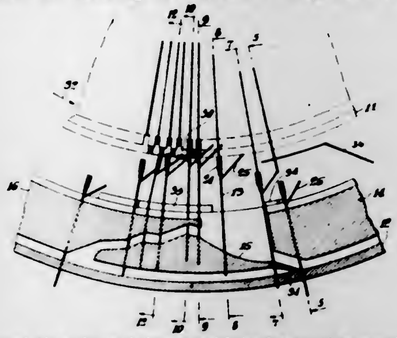
David F. Newman, Freeport, N. Y., assignor to Trans-Lux Daylight Picture Screen Corporation, New York, N. Y., a corporation of Delaware

Application January 14, 1931, Serial No. 508,669

5 Claims. (Cl. 88—16.2)

1. In a system of the character described, a screen structure including a flexible member comprising a composition of matter resistant to passage of sound waves therethrough and with which a light beam is adapted to coact throughout a central area thereof for the display of images, a rectangular vertical frame, means for holding said member under tension on the frame, said screen structure, at different sides of said central display area, being provided with openings readily transparent to sound waves, magnetic loud speaker reproducing units at the rear of said screen structure for passing sound waves through the openings, said reproducing units having their forward ends arranged substantially in the plane of the screen structure, means for supporting said reproducing units independently of said screen structure, and resilient vibration and sound deadening means forming a closed connection between the forward end of the speaker units and the surface of the screen structure.

2,004,584



FASHIONING ATTACHMENT FOR KNITTING MACHINES

Morris Philip, New York, N. Y.

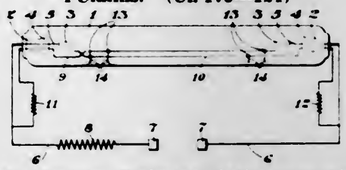
Application April 6, 1933, Serial No. 664,689

2 Claims. (Cl. 66—24)

1. A transfer attachment for knitting machines of the character described including their needle beds, comprising an additional needle bed for a plurality of fashioning jacks arranged to co-operate with the knitting needles of the machine, means to gradually transfer the thread from said knitting needles to said fashioning jacks, a loop holder for holding the thread during the trans-

fer of the thread from said jacks to the vertical needles a cam to swing the jacks into proper position to the knitting needles for the transfer of the thread, and means pivotally attached to one of the cams controlling the transfer of the thread from the knitting needles to the jacks and to lock the fashioning jacks if no transfer is desired.

2,004,585



GASEOUS ELECTRIC DISCHARGE DEVICE

Marcello Pirani, Berlin-Wilmersdorf, Hans Ewest, Berlin, and Georg Gaidies, Berlin-Pankow, Germany, assignors to General Electric Company, a corporation of New York

Application April 4, 1932, Serial No. 603,168

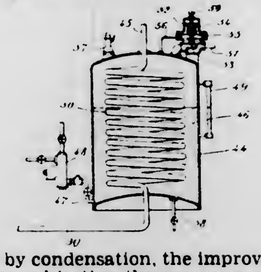
In Germany April 15, 1931

4 Claims. (Cl. 176—124)

2. An electric discharge device comprising a container, electrodes sealed therein, a gaseous atmosphere therein, and a plurality of electrically conducting members extending along the discharge path between said electrodes and in parallel positions, each of said members being connected through a resistance with one of said electrodes, one end of each of said members being adjacent one of said electrodes opposite that to which said member is connected, the distance between said ends and said electrodes and the distance between said members being less than the striking distance of the potential applied to said device.

2,004,586

RECOVERY OF VAPOR PHASE OXIDATION PRODUCTS AND APPARATUS THEREFOR



Riewen Riegler, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a corporation of New York

Application May 20, 1931, Serial No. 538,766

8 Claims. (Cl. 260—123)

1. In the oxidation of organic compounds in the vapor phase by a process which includes subjecting a vapor mixture of the organic compound

and an oxidizing gas to an oxidizing action under suitable conditions of temperature control to produce a vaporous mixture containing a desired partial oxidation product of said compound, and recovering the said product from the vaporous

mixture by condensation, the improvement which comprises subjecting the vaporous mixture, prior to the condensation, to a precooling whereby its temperature is adjusted to a controlled value above the dew-point of said mixture with respect to said product.

2,004,587

GLOW DISCHARGE TUBE CIRCUIT

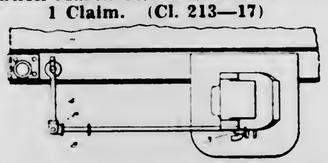
Fritz Schröter, Berlin-Schmargendorf, Germany, assignor to Radio Patents Corporation, New York, N. Y.

Application April 19, 1930, Serial No. 445,790

In Germany July 11, 1929

10 Claims. (Cl. 178—7)

1. In a signalling system a receiving circuit; means for transforming signals of constant amplitude and variable frequency into signals of variable amplitude consisting of a glow discharge tube, a first electrode within said tube, a second electrode on the outside of said tube; said electrodes forming a condenser therebetween, and means for impressing signals from said receiving circuit, across said electrodes, of constant current amplitude and variable frequency.



2,004,588

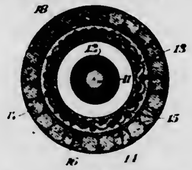
OPERATING DEVICE FOR CAR COUPLERS

Arthur E. Small, Chicago, Ill., assignor to Union Metal Products Company, Chicago, Ill., a corporation of Delaware

Application March 14, 1931, Serial No. 522,572

1 Claim. (Cl. 213—17)

In a railway car, an operating device for use with a car coupler mounted upon the car to move laterally in service and having a member mounted upon the coupler arranged to operate the coupler upon rotation of an operating rod, said device comprising a bracket mounted upon the car, an operating rod having a shank operatively connected to the member at its inner end, and a substantially upright member loosely supported at its upper end by said bracket to swing lengthwise and sidewise of the car, the lower end of said upright member having a horizontal portion extending inwardly toward the coupler substantially in alignment with said shank and forming a handle hingedly attached at its inner end to the shank in such manner that said upright member and shank move relative to each other only in a single plane.



2,004,589

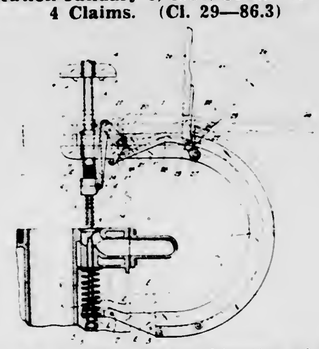
ELECTRICAL CONDUCTOR

Anderson B. Smedley, Flushing, N. Y., assignor to Anaconda Wire & Cable Company, New York, N. Y., a corporation of Delaware

Application May 25, 1932, Serial No. 613,347

13 Claims. (Cl. 247—3)

1. A unitary article of manufacture for installation underground comprising in combination a conductor with an insulating covering attached thereto and a duct of non-conducting material which is by itself stiff enough to be self-supporting under external pressure when laid underground and is waterproof and flexible enough lengthwise to follow the contour of the ground, the conductor and the duct being assembled in fixed relation to each other before use and the insulated conductor being loosely encased in the duct and adapted to be pulled out of the duct after installation.

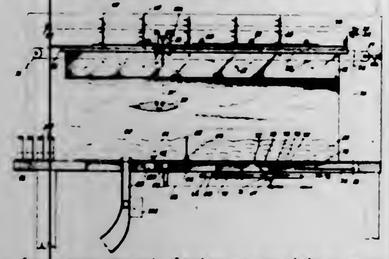


2,004,590

COMBINED VALVE LIFTER AND SPRING COMPRESSOR

Joseph Sunnen, Kirkwood, Mo.

Application January 6, 1934, Serial No. 705,502

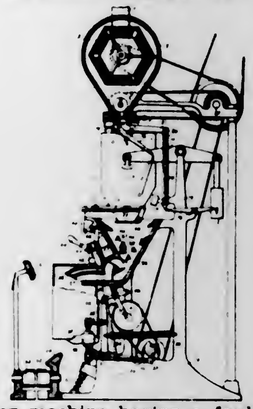


4 Claims. (Cl. 29—86.3)

1. In a valve lifter the combination of a handle frame, a guide member disposed transversely at one end of the frame, a valve engaging member slidingly mounted in said guide for co-action with the frame, a block adjustably mounted on said valve engaging member, a bell-crank mounted on the frame in close proximity to said guide member, a handle lever pivotally mounted on the frame at a point spaced inwardly from the bell-crank lever, a connecting link between said block and the upper arm of the bell-crank

lever, and a second connecting link between the lower arm of the bell-crank lever and the handle lever, the points of connection of the links with the respective levers being such that the first link will move substantially along a vertical line and the second along a horizontal line.

2,004,591
AMUSEMENT DEVICE
Max Sünskes, New York, N. Y.
Application January 16, 1934, Serial No. 706,800
6 Claims. (Cl. 273—1)

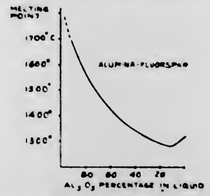


1. An amusement device comprising a motor operated carriage, a means for supporting the motor operated carriage for movement, a circuit, a lamp within said circuit, a holder for said lamp, cables by means of which said holder is vertically displaceable suspended from said carriage, a prescribed path through which said lamp must be guided, means to interrupt said circuit to extinguish the lamp if the lamp deviates from the said path, and means to allow a return of the carriage into its original position at the end of each play.

2,004,592
ELECTRICAL CONDUCTOR CABLE
John L. Alden, La Grange, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application May 12, 1933, Serial No. 670,698
2 Claims. (Cl. 173—264)

1. In a conductor cable, a plurality of intertwisted principal conductors each comprising a plurality of conductor strands intertwisted without a core strand and each composed of a plurality of flat ribbons of conductive material wound in an open helix upon a central nonconductive core, a sheath of non-conductive binding strands upon each plurality of conductor strands, a sheath of electrically insulating material over each sheath of binding strands, a sheath of thermally insulating material over each sheath of electrically insulating material, and an outer binding sheath of non conductive strands braided over the whole.

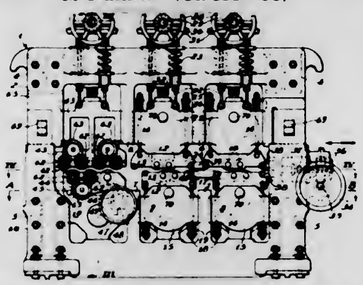
2,004,593
FILLING MACHINE
Arno Andreas, Munster, Germany
Application January 10, 1930, Serial No. 419,986
In Germany September 23, 1929
38 Claims. (Cl. 226—48)



1. A filling machine having a feeding structure above a series of weighing devices, conveying means below the weighing devices, filling and supporting means for receptacles, cooperating to pass material from the conveying means into the receptacles, said supporting means being swingable to cast off the receptacles, and means under the control of the machine for operating the feeding structure and tilting the supporting means.

2,004,594
SILICON CARBIDE REFRACTORY
Raymond C. Benner and Henry N. Baumann, Jr., Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
No Drawing. Application January 28, 1932, Serial No. 589,527
5 Claims. (Cl. 106—9)

1. A refractory article comprising silicon carbide and a bond containing calcium fluoride.

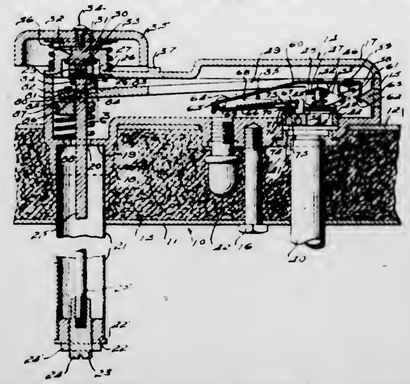


2,004,595
PROCESS OF MAKING SILICON CARBIDE ARTICLES AND RAW BATCH THEREFOR
Raymond C. Benner and Henry N. Baumann, Jr., Niagara Falls, N. Y., assignors to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application August 26, 1932, Serial No. 630,494
In Great Britain November 20, 1928
4 Claims. (Cl. 25—156)

1. In the process of making silicon carbide refractory articles, the steps which comprise admixing with silicon carbide grain a carbonaceous temporary binder and a vitrifiable binder of that class of mixtures of fluxing and refractory materials, each of which mixtures is characterized when present in such an admixture by initial softening of a portion only thereof at but not substantially below a temperature approximating that at which rapid oxidation of silicon carbide begins, in which softened portion the more refractory portion dissolves in increasing amounts progressively over a range of at least 400° C. as the temperature is raised

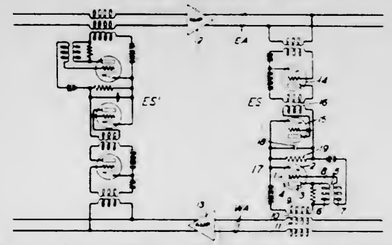
above the initial softening point, forming the mixture, heating the formed mixture for a time sufficient to burn out the temporary binder at a temperature below that at which rapid oxidation of silicon carbide begins, and thereafter raising the temperature to a point sufficient to cause the bond to flow enough to protect the silicon carbide from oxidation which would otherwise take place.

2,004,596
METHOD AND APPARATUS FOR MANUFACTURING METAL SHEETS AND STRIPS
Florence C. Biggert, Jr., Crafton, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application December 13, 1933, Serial No. 702,211
42 Claims. (Cl. 153—54)



1. A roller leveler machine comprising a pair of upper working rolls, a pair of lower working rolls in staggered relation thereto, a backing roll for each pair of working rolls, the centers of said backing rolls being out of vertical alignment, and means for adjusting each pair of working rolls around the corresponding backing roll.

42. The method of treating metal strip which consists in continuously passing it through a series of relatively small rolls arranged in staggered relation to loosen the scale, remove bulges, kinks, etc., and then passing it through a similar arrangement of larger rolls to flatten it.

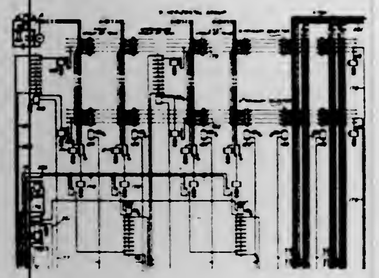


2,004,597
OVEN REGULATOR
Fred E. Birtch, Detroit, Mich.
Application August 31, 1931, Serial No. 560,364
21 Claims. (Cl. 236—15)

4. A temperature controlled heat regulator for ovens or the like, comprising means for supplying and gradually diminishing the supply of gas to the oven burner and then temporarily supplying a smaller uniform quantity of gas to the burner, snap action means operable after a predetermined time for quickly cutting off the smaller quantity of gas supplied to the burner,

and temperature control means for actuating said snap action means and first means.

2,004,598
TRANSMISSION CONTROL CIRCUIT
Bjorn G. Bjornson, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 17, 1931, Serial No. 563,277
9 Claims. (Cl. 178—44)

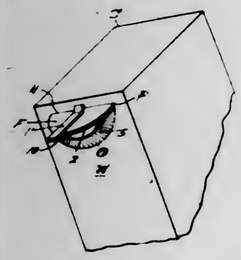


1. In a transmission system, a signal transmission circuit, an electric space discharge device having an input and an output circuit, means inductively coupling the output circuit of said device to said transmission circuit so as to place an alternating current impedance in said transmission circuit which controls transmission therein, said impedance normally having a certain value, means for impressing a potential on said input circuit of said device so as to change said alternating current impedance in said transmission circuit to a different value, and means for effectively increasing the difference between the value of the normal alternating current impedance in said circuit and that of the changed impedance therein, the last mentioned means comprising a circuit for feeding back in proper phase relation energy from the output to the input circuit of said device.

2,004,599
TELEPHONE SYSTEM
Warren W. Carpenter, Garden City, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application July 19, 1933, Serial No. 681,102
23 Claims. (Cl. 179—18)

1. In a telephone system having subscribers' lines, outgoing trunks and primary selectors for

connecting said outgoing trunks with calling subscribers' lines, each of said primary selectors having access to a plurality of trunks, a control circuit responsive to the initiation of a call by



one of said lines for choosing one of said primary selectors having accessibility to two or more free outgoing trunks from which to select an outgoing trunk for connection with said line.

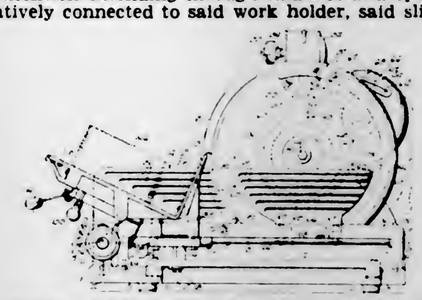
2,004,600

COMBINATION CARDBOARD BOX OPENER AND SPOUT

John Thomas Cooney, Los Angeles, Calif.

Application March 21, 1934, Serial No. 716,669
6 Claims. (Cl. 221—11)

1. A combined carton flap cutter and pouring spout device including a body and a handle forming part with a medially disposed pointed spindle to be punched into a carton wall to form an axis of rotation, a cutter fixed on said body and adapted to be pressed into the said wall and to cut a curved kerf and form a flap about said axis when the handle part is rotated; said part provided with a segmental element complementary to the cut kerf to form a spout, and means cooperative with the handle part for clamping the spout segment to the cut flap.



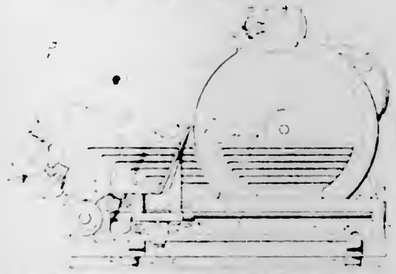
2,004,601

SLICING MACHINE

Joseph Folk, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana

Application June 30, 1930, Serial No. 464,823
22 Claims. (Cl. 146—102)

1. A slicing machine comprising a slicing knife, a work holder, a guide for said work holder, a cover for said guide, and a guard forming an extension of said cover for protecting said guide on the side thereof adjacent said knife, said guard having a longitudinal opening therein, and a slice receiving table having an extension extending through said slot and operatively connected to said work holder, said slice



receiving table being adapted to receive the slices as they are cut by said knife.

2,004,602

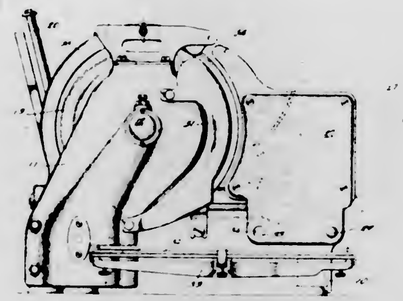
COMBINED WORK HOLDER AND CLAMP

Joseph Folk, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana

Application July 3, 1930, Serial No. 465,597
19 Claims. (Cl. 146—217)

1. In a work support for slicing machines, the combination with a plate having an opening therein, of a frame slidably mounted in said opening for movement substantially parallel to the supporting surface of said plate, and a supporting member mounted on said frame and adapted to occupy a position in substantially the same plane as said plate, said member being also movably mounted on said frame for movement to a position at an angle to said plate, and means for clamping a substance against said member while said member is in either of said positions.

2,004,603



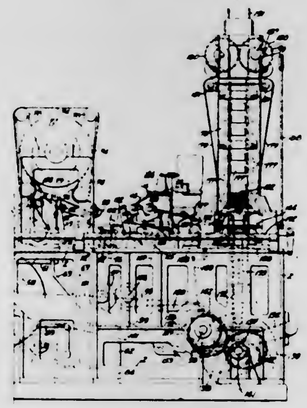
GAUGE PLATE CONSTRUCTION

Joseph Folk, La Porte, Ind., assignor to U. S. Slicing Machine Company, La Porte, Ind., a corporation of Indiana

Application October 11, 1932, Serial No. 637,246
18 Claims. (Cl. 146—102)

1. A slicing machine comprising a support, a knife, a gauge plate slidably mounted on said support with one edge thereof near the edge of said knife when in operative position, micrometer control means for actuating said gauge plate rectilinearly in a direction away from the cutting plane of said knife to move the substance engaging surface thereof through successive parallel positions, said control means being operable through variable increments of movement whereby to position said gauge plate in various gauging positions with respect to the

knife, said gauge plate being also movable in a plane parallel to its substance engaging portion when the gauge plate reaches a predetermined



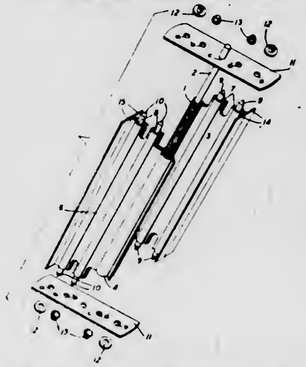
position of rectilinear adjustment, and means for preventing said last mentioned movement of said gauge plate until the same reaches said position.

2,004,604

BOX MAKING MACHINE

George F. Ford, Los Angeles, and Walter F. Pittman, Huntington Park, Calif., assignor to Fibreboard Products Inc., San Francisco, Calif., a corporation of Delaware

Application February 14, 1933, Serial No. 656,692
14 Claims. (Cl. 93—47)



1. A machine for making boxes from blanks comprising means for holding a nest of the boxes, a forming head shaped to fit the interior of the box, a plurality of movable elements between which the head is adapted to pass, means for positioning a blank between said head and elements, means for moving the head against the blank to drive the latter between the elements, means operating in time with the head moving means for moving said elements against portions of the blank for folding said blank about the head to form a box, and means for continuing movement of the head to drive the newly formed box past said elements and into the nest.

2,004,605

ELECTRON DISCHARGE TUBE

Frank D. Goodchild and Wilfrid E. Benham, Aldwych, London, England, assignors to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

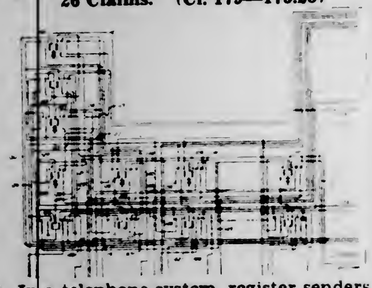
Application May 4, 1933, Serial No. 669,320
In Great Britain May 6, 1932
4 Claims. (Cl. 250—27.5)

1. An electron discharge device comprising an enclosing vessel, a unitary assembly therein including a pair of spaced insulating members having a plurality of apertures therein, a cathode seated at opposite ends in corresponding apertures in said insulating members, a plurality of supports to one side of said cathode and having ends extending through corresponding apertures in said insulating members, means rigidly fixing said supports to said members, and an electrode having a portion in proximity to said cathode and having an outwardly extending portion secured to said supports, and means separate from said supports for mounting said unitary assembly within said vessel.

2,004,606

PROCESS OF CEMENTING WELLS

Erle P. Halliburton, Los Angeles, Calif.



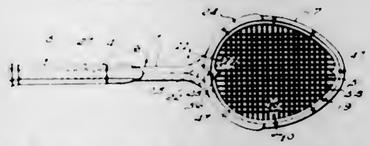
Application May 5, 1934, Serial No. 724,064
5 Claims. (Cl. 166—21)

3. A process of cementing an oil-well having a plurality of spaced apart oil producing sands, which comprises introducing into the oil-well a casing having screen sections at points spaced apart distances corresponding to the distances

between the oil producing sands, the casing being lowered until said screen sections are opposite the oil producing sands, then circulating a non-hardening fluid through the casing and up to the surface of the well, thereafter introducing a closure means adapted to open communication through the sides of the casing at a point above and adjacent to the lowermost oil sand, thereafter introducing cement through the casing and into the well-hole at said point above and adjacent to the lowermost oil producing sand and forcing the same to rise upwardly, thereafter introducing a second closure means on top of said cement, thereafter introducing a non-hardening fluid and a third closure means adapted to open communication through the sides of the casing at the point of the next oil producing sand, thereafter introducing a non-hardening fluid at the next higher oil sand and forcing the same to rise upwardly so as to remove cement, if any, opposite said second higher oil sand, thereafter introducing a fourth closure means on top of said non-hardening fluid adapted to open communication through the sides of the casing at a point near the top of said second higher sand, and then introducing fluid cement through the casing and forcing the same to enter the well at said point near the top of the second higher sand and forcing such cement to rise upwardly in the well-hole.

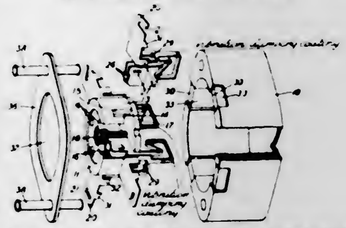
2,004,607
TESTING SYSTEM
Ralph K. Hersey, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 13, 1934, Serial No. 720,368
26 Claims. (Cl. 179—175.23)

1. In a telephone system, register senders comprising a plurality of registers for receiving and controlling the transmission of the elements of telephone designations, a testing device for testing said senders including means for transmitting digits to said senders and means for receiving digits from said senders, a key for each digit, a pair of transfer relays for each digit, means for operating said relays to associate said keys with said transmitting means, and means for reoperating said relays to associate said keys with said receiving means.



2,004,608
REEL
Albert S. Howell, Chicago, Ill., assignor to The Bell & Howell Company, Chicago, Ill., a corporation of Illinois
Application December 7, 1933, Serial No. 701,259
12 Claims. (Cl. 242—74)

1. In a reel the combination of a substantially circular hub, adjacently spaced side flanges secured therewith to form the reel and at least one of which has a portion of materially reduced radius, and means for securing a strip end at said hub for the winding of the strip thereon and ar-

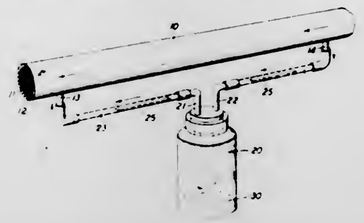


ranged with reference to said reduced flange portion so as to facilitate the securing of the strip end.

2,004,609
TENNIS RACKET
Harry Johnston, Detroit, Mich.
Application March 21, 1932, Serial No. 600,183
4 Claims. (Cl. 273—73)

1. A racket comprising a frame having a pair of parallel bar ends with an elongated recess formed therebetween, a pair of handle sections secured upon said frame and having a pair of tongues projecting into said recess for securing said bar ends in properly spaced relation, and an adjustable weight mounted in said recess between said tongues and the adjacent surfaces of said bar ends.

2,004,610
MOUNTING FOR ELECTRICAL APPARATUS
Edward H. Jones, Summit, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 14, 1931, Serial No. 556,953
12 Claims. (Cl. 173—328)

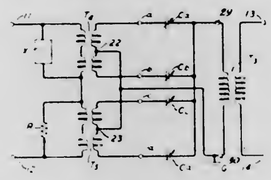


1. A mounting for electrical apparatus comprising a stationary member, a movable socket member, and means for resiliently supporting said socket member from said stationary member, said means having portions cooperating mechanically to finally limit displacement of said socket member in several directions.

9. A mounting for electrical apparatus comprising a stationary support, a movable socket member, means for resiliently mounting said socket member from said support, and a coating of a vibration damping substance on said means.

2,004,611
FLOW INDICATOR
Walter C. Kleinfelder, Rosebank, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application September 23, 1932, Serial No. 634,571
17 Claims. (Cl. 23—230)

1. A flow indicating device comprising a tubular conduit, a visible chemical indicator in one part of said conduit, and a supply of reactive fluid in another part of said conduit and normally out of contact with said indicator, said fluid



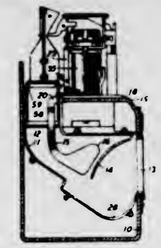
being visibly reactive with said indicator when admitted into contact therewith by admission to said conduit of the flow to be observed.

2,004,612
CABLE AND METHOD OF MAKING SAME
Henry R. Massingham, Westfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application September 14, 1933, Serial No. 689,377
15 Claims. (Cl. 173—13)

1. A method of making a non-self-inductive cable, which comprises the step of folding a group of strands to and fro into recurrent waves.

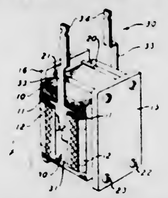
2,004,613
PHASE SHIFTING APPARATUS
Larned A. Meacham, Montclair, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 23, 1933, Serial No. 686,352
17 Claims. (Cl. 178—44)

1. In a variable phase shifter, four branches in parallel, each branch comprising a variable capacitor, the rotors of said capacitors consisting of two sets of plates mounted in quadrature on a common shaft, and the capacitance of each of said capacitors having a sinusoidal variation with respect to the angular displacement of said rotors.



2,004,614
CONTAINER FOR ABSORBENT COTTON
Glenn B. Meagher, Chicago, Ill., assignor to The Kendall Company, Boston, Mass., a corporation of Massachusetts
Application December 13, 1930, Serial No. 502,042
12 Claims. (Cl. 206—63.5)

10. A dispensing container for cotton comprising a box, a quantity of cotton in strip form therein, an outlet opening of less area than the cross-sectional area of said strip, and means engaging the strip for guiding it to said outlet

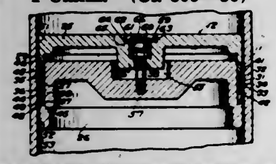


opening at a predetermined angle with respect thereto.

2,004,615
COIN COLLECTING APPARATUS
Percy E. Mills, Towaco, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 31, 1934, Serial No. 709,060
15 Claims. (Cl. 179—6.3)

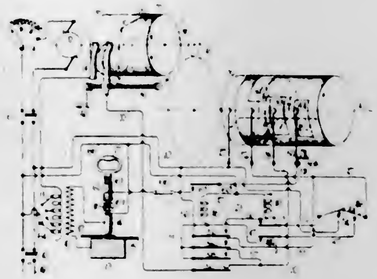
1. In a coin collecting device, a coin refund chute, a pendent lever extending downwardly into said chute, means for supporting said lever to permit movement of said lever when the lower end of said lever is subjected to pressure from any direction in a given horizontal plane and electrical contact means actuated by said movement.

2,004,616
ELECTRIC APPARATUS
Robert E. Park, Jr., Bloomfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application March 9, 1933, Serial No. 660,123
7 Claims. (Cl. 175—41)



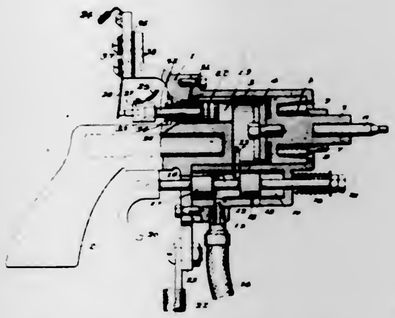
1. A sheet metal electrical terminal having two clips integral therewith and each arranged in U shape with the closed portions of the U facing each other for gripping two groups of conducting members to connect all of the conducting members together.

2,004,617
JACK FOR KNITTING MACHINE NEEDLES
Edmond O. Roy, Franklin, N. H., assignor to Franklin Needle Company, Franklin, N. H., a corporation of New Hampshire
Application May 12, 1934, Serial No. 725,325
1 Claim. (Cl. 66—124)



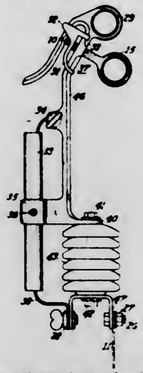
A jack for use in knitting machines comprising a body portion having a shallow elongated recess in one side thereof, which recess is deeper at one end than the other, and a leaf spring in said recess, said body having integral therewith a spring-retaining projection extending from the bottom of the deeper portion of the recess through one end of the spring, said projection having a greater transverse dimension in the lengthwise direction of the spring than in a direction transverse thereto and being headed over to retain the spring thereon, the exposed surface of the head lying below the side face of the jack.

2,004,618
PRESS-HEAD FOR STUFFING MACHINES
Oscar C. Schmidt, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a corporation of Ohio
Application July 29, 1933, Serial No. 682,878
1 Claim. (Cl. 309—36)



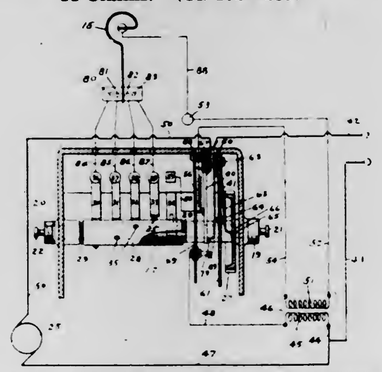
In a press-head, the combination of a closed elastic annular band containing rubber bodily extensible and contractible as a closed annulus in radial directions to change its diameter and having ends whose inner peripheries are inclined inwardly toward each other and outer peripheries tapering toward the respective ends of said closed elastic annular band, said closed elastic annular band further having a cross-sectionally outwardly bulged annular middle portion between said ends and located in an outer annular groove between relatively axially movable press-head sections having guiding means between them extending in axial direction for separating movement and approaching movement between said press-head sections during opposite axial reciprocations of said press-head, said press-head sections provided with limiting means limiting separating movement between said press-head sections, the respective ends of said outer annular groove, forming annular shoulders, closed annular elastic bands containing rubber and of less elasticity than said first-named closed elastic annular band and located in said outer annular groove between said respective annular shoulders and the respective ends of said first-named closed elastic annular band, the adjacent ends of said second-named closed annular elastic bands having annular end inclined faces inclined outwardly away from each other and coacting with said first-named inclined ends for movement behind said first-named inclined ends upon approach between said press-head sections and for recession from said last-named position upon recession between said press-head sections.

2,004,619
WELDING SYSTEM AND METHOD
John P. Tarbox, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Original application March 27, 1931, Serial No. 525,674. Divided and this application April 21, 1932, Serial No. 606,630
4 Claims. (Cl. 219—4)



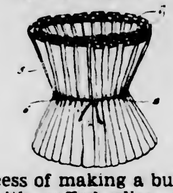
2. The method of indirect resistance welding which comprises supplying the necessary pressure by impact and welding current substantially only during such impact.

2,004,620
PORTABLE WELDING TOOL
John P. Tarbox, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 3, 1932, Serial No. 608,874
Renewed August 20, 1934
4 Claims. (Cl. 219—4)



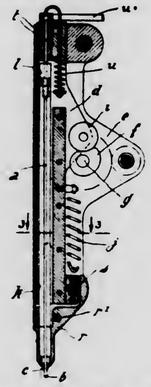
1. The method of spot welding without the necessity of rigidly clamping the work between the electrodes, which comprises applying an electrode to one side of the work between the work and a free moving mass, applying a force between the electrode and the mass to move the mass away from the electrode, utilizing the reaction pressure exerted during the accelerating movement of the mass to press the electrode against the work, and passing a welding current through the work by way of the electrode only during a time interval within the time of said accelerated movement.

2,004,621
FUSIBLE LINE TAPPING DEVICE
Carroll H. Walsh, Pine Bluff, Ark., assignor to Tips Tool Company, Inc., Taylorville, Ill., a corporation of Illinois
Application March 26, 1934, Serial No. 717,463
5 Claims. (Cl. 200—115.5)



1. A fusible line-tapping device comprising a clamp of conducting material arranged to cooperate with a line conductor and to be detachably supported thereby, a fuse tube of insulating material open at both ends, means including an integral portion of said clamp for rigidly supporting said tube near the midpoint thereof, an insulator, means combined with one end of said insulator for cooperating with an integral portion of said clamp for rigidly securing said insulator thereto, a terminal adapted to engage a load wire rigidly secured to said insulator adjacent the other end thereof, and means including a fuse link extending through said tube for connecting said clamp to said terminal.

2,004,622
REMOTE CONTROL REGULATOR MOTOR
Everett H. White, St. Paul, Minn.
Application September 24, 1930, Serial No. 484,108
11 Claims. (Cl. 172—239)



1. In an electrically operated mechanism for the remote control of a device requiring motive power to effect its operation, a motor for regulating said device, an operating electrical circuit for said motor including a motor starting switch, a transformer, a primary circuit for said transformer, a remotely controlled electrical circuit including the secondary of said transformer, means in said remotely controlled electrical circuit for closing said motor starting switch, and means operative upon the setting of said regulator motor into operation to break the primary circuit of said transformer and thus discontinue flow of current in said remotely controlled electrical circuit, said last mentioned means maintaining the motor starting switch closed.

2,004,623
BUFFING OR POLISHING WHEEL
Albert S. Yohe, Jersey City, N. J., assignor to The Bias Buff & Wheel Company, Inc., New York, N. Y., a corporation of New York
Application February 1, 1934, Serial No. 709,342
4 Claims. (Cl. 51—193)

2. The process of making a buffing or polishing wheel unit with ruffled plies, which comprises gathering a strip of suitable material along its median line, then rolling the gathered strip upon itself to provide the number of plies required in the unit, and afterwards folding the gathered and wound strip and further gathering it on its median line around and to form a central opening.

2,004,624
DEVICE FOR SETTING TUBULAR RIVETS
Jean Baptiste Seide Antelme, St.-Cloud, France, assignor to Blériot-Aéronautique, Suresnes, France, a company of France
Application May 11, 1933, Serial No. 670,595
In Belgium May 11, 1932
22 Claims. (Cl. 218—19)

1. In an apparatus for the setting of tubular rivets with an inner collar, a supporting frame, a magazine tube fixedly mounted on the said supporting frame, a spindle disposed in the magazine tube and movable with respect to the said magazine tube, said spindle comprising on the one hand a rod on which a plurality of rivets are previously engaged in the order in which they are to be set and on the other hand a head on which the first rivet to be set rests, actuating members carried by the said frame for actuating the spindle which slides in the first rivet

to be set, the head of the spindle outwardly clenching the inner collar of said rivet for the setting of the latter, and means for supporting and bringing into setting position the rivet engaged on the rod above the first rivet.

2,004,625

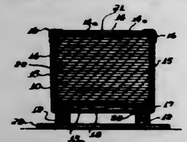
METHOD OF PRODUCING PHOTOGRAPHIC DYESTUFF IMAGES

Béla Gaspar, Berlin, Germany

No Drawing. Application February 14, 1933, Serial No. 656,764. In Germany February 15, 1932

6 Claims. (Cl. 95—88)

1. A method of producing photographic dyestuff images in an emulsion containing silver halide and a dye capable of being decolorized by reduction, which consists in simultaneously developing the exposed silver halide and reducing the colored dyestuff at the same points that development is taking place with a bath containing a weak reducing agent and an acid reacting agent.



2,004,626

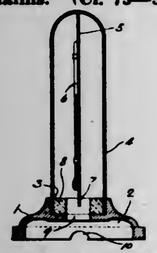
MEANS AND METHOD FOR PACKAGING SHEET MATERIALS

George L. Hann, Staten Island, N. Y., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois

Application April 28, 1932, Serial No. 608,047

6 Claims. (Cl. 206—60)

3. A shipping package for a stack of composition wallboards superimposed upon each other in non-slipping face to face contact, said stack being composed of a multiplicity of crushable composition wallboards of commercial length, composition wallboard panels on the outer surfaces of said stack covering the sides thereof, strong angular protecting members distributed along the edges of the package, and tie wires encircling the package under substantial tension and passing over said protecting members, the combined force exerted by the binding wires and the number of boards in the package being sufficient to produce a solid unbendable block-like package.



2,004,627

SELF-SUPPORTING THERMOMETER

Julius G. Hoeflich, Springfield, Ohio, assignor to The Chaney Manufacturing Company, Springfield, Ohio, a corporation of Ohio

Application December 22, 1930, Serial No. 504,036

5 Claims. (Cl. 73—52)

3. In a thermometer, a circular base of substantially ogee form having in its top a socket to receive a tubular glass housing, an upright tubular glass housing seated in said socket, a chamber in said base communicating with the interior of the glass housing, the base having a vent therein leading from the exterior of the base to the chamber, a graduated thermometer back confined within the housing and a thermometer tube carried by the back.

2,004,628

CARBON REMOVING COMPOSITION

Charles Rexford Keen and Clyde Elmer Moore, San Diego, Calif.

No Drawing. Application January 16, 1934, Serial No. 706,896

1 Claim. (Cl. 87—5)

A carbon removing composition composed of kerosene, creosote, castor oil and amyl acetate, combined in substantially the following proportions: kerosene, forty-nine and one-half percent; creosote, twenty-five percent; castor oil, twenty-five percent and amyl acetate, one-half of one percent.

2,004,629

FENCE POST

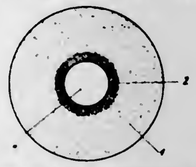
William J. Kibler, Tonawanda, N. Y., assignor to Buffalo Steel Company, Tonawanda, N. Y., a corporation of New York

Application January 2, 1932, Serial No. 584,425

8 Claims. (Cl. 256—57)

1. A fence post comprising a face plate provided on its edge with supporting lugs having bevelled edges; and a clip adapted to engage with one of said lugs and adapted to secure one of the strands of a wire fence to said face plate.

2,004,630



GRINDING DISK

Carl Krug, Frankfort-on-the-Main, Germany

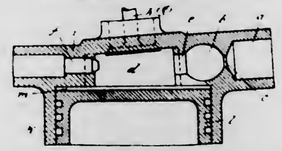
Application March 30, 1934, Serial No. 718,133

In Germany December 6, 1932

4 Claims. (Cl. 51—206)

1. A grinding wheel of uniform basic structure which has an arbor hole therethrough and which has an outer zone and a relatively narrow inner annular zone adjacent the arbor hole to which has been added a strengthening material throughout the thickness of the wheel, the outer zone being unchanged.

2,004,631



DIESEL ENGINE

Franz Lang, Munich, Germany, assignor to Lanova Aktiengesellschaft, Vaduz, Liechtenstein

Application March 20, 1933, Serial No. 661,731

In Germany September 7, 1931

5 Claims. (Cl. 123—32)

5. In an injection engine, a cylinder and a piston operating therein, a combustion chamber overlying and opening downward into the cylinder in unrestricted communication therewith for free flow of the fuel mixture and the hot products of combustion downward into the cylinder, an injection nozzle at one side of the combustion chamber and disposed to inject fuel thereinto substantially normal to the cylinder axis, an inner air storage chamber at the other side thereof opening into the combustion chamber through a restricted orifice, and an outer main air storage chamber of materially greater capacity than said inner chamber and opening into the latter through a restricted orifice, said orifices being so related that the flow of air from the main air storage chamber into said inner chamber is materially more restricted than the flow of air from said inner chamber into said combustion chamber.

2,004,632

METHOD OF ENAMELING

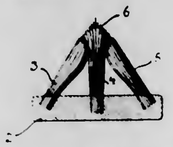
Wesley G. Martin, Wilwaukee, Wis., assignor to A. O. Smith Corporation, Milwaukee, Wis., a corporation of New York

No Drawing. Application June 11, 1934, Serial No. 730,063

7 Claims. (Cl. 91—73)

1. In the art of vitreous enameling ferrous metals by a wet process, the step of improving the physical properties of such an enamel when applied to non-enameling iron and steel stock, which consists in fusing the enamel in an atmosphere substantially devoid of free oxygen, water vapor and hydrogen and containing a mixture consisting principally of nitrogen, carbon dioxide and carbon monoxide.

2,004,633



MASSAGE BRUSH

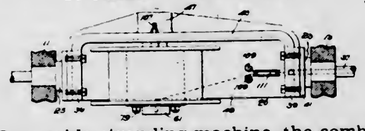
Samuel Charles Miller, New York, N. Y., assignor of one-half to John A. Weis, New York, N. Y.

Application March 14, 1933, Serial No. 660,639

Renewed October 27, 1934

3 Claims. (Cl. 15—167)

1. A massage brush having three longitudinal rows of bristle tufts located in the head thereof, the outer rows being arranged to support the central row and form therewith a brushing surface of an inverted V cross section.



2,004,634

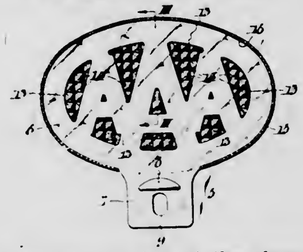
CABLE STRANDING MACHINE

Arthur R. Petterson, Marblehead, Mass., assignor to Thomson-Judd Wire Machinery Company, Lynn, Mass., a corporation of Massachusetts

Application May 12, 1934, Serial No. 725,326

14 Claims. (Cl. 117—20)

1. In a cable stranding machine, the combination with a pair of spaced cradle supporting members rotatable about a common horizontal axis and forming a cradle-holding, stranding structure, of a series of cradles carried between said members and mounted each on trunnion supports in said members and adapted to travel in an orbital path about the axis of rotation of said structure, a spindle carrying member connecting the trunnion supports on each cradle, a fixed, rigid, spool-carrying spindle mounted in and extending from said member and having its opposite end free and detached from said cradle and the latter presenting thereat an open, unobstructed space, a rotatable spool supporting structure mounted on and retained by said spindle, bearings between said structure and said spindle permitting rotary movement of the former on the latter, a spool being adapted to fit over and to be installed on said structure, and means for holding said cradles each against rotation about its individual axis while traveling in its orbital path during rotation of the stranding structure and with the spool-carrying spindle and supporting structure in a substantially horizontal position and in overhung relation to said spindle carrying member, whereby each of said cradles is supported to present the overhanging end of said spindle and supporting structure outwardly from between said cradle members when brought to a loading position in the course of rotation of said stranding structure and a spool may be installed thereon from the side of the stranding structure over the overhung end of said rotatable spool supporting structure.

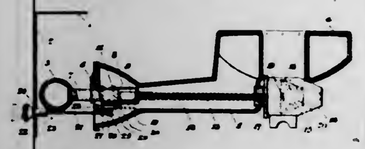


2,004,635

EMBLEM OR SIGN

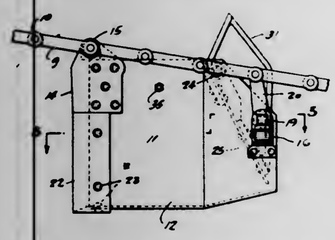
Wilbur F. Price, Allentown, Pa., assignor to L. F. Grammes & Sons, Inc., Allentown, Pa., a corporation of Maryland

Application March 8, 1934, Serial No. 714,617



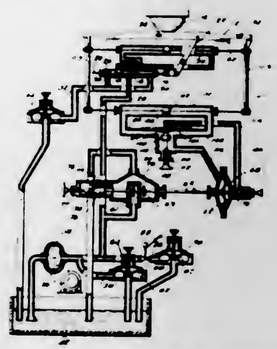
6 Claims. (Cl. 40—135)

1. An emblem or sign of the character described, comprising a stenciled frontal plate of stout sheet metal; an element having an unbreakable embossed reflecting surface at the rear of said frontal plate; a colored sheet of unbreakable transparent material interposed between the



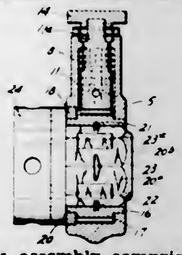
frontal plate and the reflecting surface; and a backing plate of sheet metal for permanent retainment of the reflecting element, said backing sheet having its edge overlapping the periphery of the frontal plate.

2,004,636
TEMPERATURE CONTROLLED VALVE
James Pymm, Brooklyn, N. Y.
Application February 21, 1933, Serial No. 657,772
1 Claim. (Cl. 158—117.1)



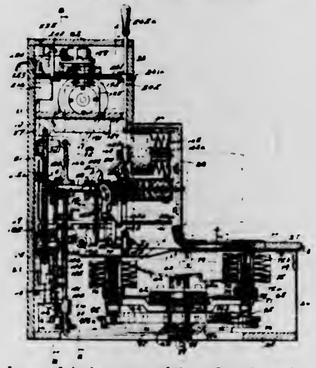
The combination with a gas burner, of a valve chamber containing a passage connecting said burner to a gas main, a rotatable valve in said chamber operable to regulate the flow of gas through said passage, a shut-off valve in said passage, a bellows type thermostat positioned in heating relation to said burner, a frame about said thermostat and connected to move therewith, a rod connecting said movable frame and said shut-off valve, a spring surrounding said rod tending to maintain said shut-off valve closed by tension thereagainst when said thermostat is contracted, means operatively interconnecting said valves and operable to rotate said first mentioned valve and to open said shut-off valve against the tension of said spring and contracted thermostat, a manually operable extension on said interconnecting means for manually holding said plunger valve open until said thermostat is expanded by heat from said burner, ratchet means on said extension to hold said rotatable valve in a selected open position while said shut-off valve is opened, and means responsive to the closing of said shut-off valve operable to disengage said ratchet and to close said rotatable valve.

2,004,637
BUCKET
Lawrence B. Schauer, Huntington Park, Calif., assignor to Ruth Dredger Manufacturing Corporation, Ltd., Los Angeles, Calif., a corporation of California
Application October 23, 1933, Serial No. 694,700
2 Claims. (Cl. 198—140)



1. In combination, an excavator bucket adapted to be connected to conveyor chains, means for pivotally connecting the bucket adjacent its front and rear to the chains, including hangers for the rear of the bucket, and stops on the bucket for limiting rotation of the hangers.

2,004,638
SPEED GOVERNOR FOR HYDRAULIC DRIVES
Ed S. Smith, Jr., Providence, R. I., assignor to Builders Iron Foundry, Providence, R. I., a corporation of Rhode Island
Application December 22, 1931, Serial No. 582,576
4 Claims. (60—52)



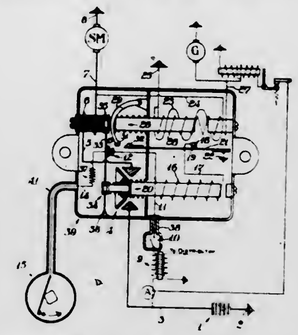
1. In a machine, a movable member subject to other influences affecting its movement, a fluid system for driving said members, means to supply fluid to said fluid system in excess of the amount necessary to give it the desired movement, an auxiliary flow stream responsive in its movement to the movement of the movable member, means to set up a differential pressure in said auxiliary flow stream, a bypass line in said main fluid system, a controller valve in said bypass line, and means actuated by said differential produced by said auxiliary flow stream operative to control said controller valve in said bypass line to automatically bypass from the main flow of fluid in said system an excess of the amount of fluid necessary to continuously maintain a substantially constant movement of the movable member regardless of said other influences.

2,004,639
DIESTOCK
William O. Thewes, North Ridgeville, Ohio, assignor to The Ridge Tool Company, North Ridgeville, Ohio, a corporation of Ohio
Application April 11, 1933, Serial No. 665,533
6 Claims. (Cl. 10—124)

1. A die stock assembly comprising an actuating frame, a ratchet drive ring mounted for relative rotation in said frame, pawl mechanism associated with said frame and ring for rotating the latter, a tool-holder provided with a drive barrel which is inserted in and has a driving engagement with said ring, the ring and barrel being formed with coacting contiguous surfaces of polygonal formation, the periphery of the barrel being formed with an annular groove intersecting the corners of the polygon and the contiguous surface of the ring being formed with a complementary groove, and a split spring ring positioned in said grooves and serving to releasably hold the barrel against axial displacement with respect to said ring.

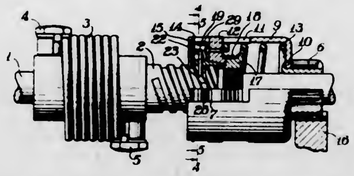
2,004,640
SHOE CLEANING AND POLISHING MACHINE
Mathew Hillard Thornton, St. Paul, Minn.
Application February 1, 1934, Serial No. 709,314
21 Claims. (Cl. 15—35)

1. A shoe shining machine having in combination, a series of rotatable members for engaging the shoe and cleaning and polishing the same, a cam track extending substantially about said shoe, means for moving said members about the shoe out of engagement therewith and controlled by said cam track and for moving said members about the shoe in engagement therewith uncontrolled by said cam track.



2,004,641
FOUNTAIN PEN
Roger Blomley Watson, Colorado Springs, Colo.
Application August 23, 1934, Serial No. 741,129
4 Claims. (Cl. 120—46)

1. In a fountain pen, the combination of a barrel having a longitudinal slot; a sac pressure bar within said barrel; a main operating lever having a pair of longitudinal projections; an auxiliary operating lever having lugs and a central projection adapted to fit in between the longitudinal projections of the main operating lever; a pin passing through said longitudinal projections and central projecting portions and into the adjacent sides of said slot; said main operating lever being adapted to be operated by an inward pressure upon its free end.

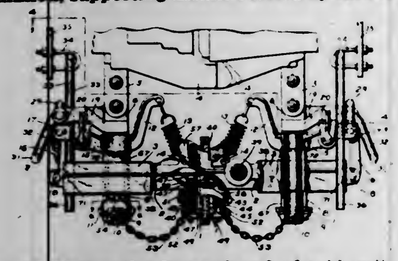


2,004,642
ELECTRICAL SYSTEM FOR INTERNAL COMBUSTION ENGINES
Daniel L. Wertz, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira, N. Y., a corporation of New York
Application April 13, 1932, Serial No. 605,045
3 Claims. (Cl. 290—37)

1. In an automatic control for starting and ignition systems for internal combustion engines, a starting circuit including a starting switch, an ignition circuit including an ignition switch and timing mechanism, an electromagnet for controlling said starting switch, a magnetic relay for opening the starting switch by deenergizing said electromagnet when the engine starts, means

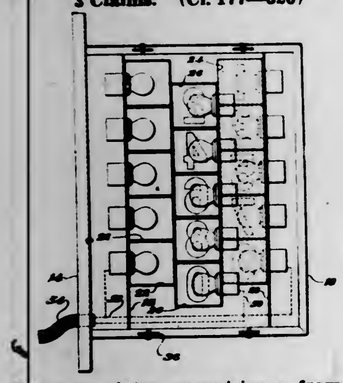
whereby said electromagnet causes closure of the ignition switch during the starting operation, and means whereby said relay magnet maintains said ignition switch closed as long as the engine is in operation irrespective of the opening of the starting switch by the deenergization of said electromagnet.

2,004,643
STARTER DRIVE
Maurice P. Whitney, Elmira, N. Y., assignor to Eclipse Machine Company, Elmira Heights, N. Y., a corporation of New York
Application September 2, 1933, Serial No. 687,987
10 Claims. (Cl. 74—7)



1. In an engine starter drive, a power shaft, an engine driving member mounted for movement with respect thereto into and out of engagement with a member of the engine to be started, means for rotating the driving member from the power shaft including a connection which permits the engine driving member to freely overrun the power shaft, means located between the shaft and the overrunning connection for preventing disengaging movement of the driving member, and means responsive to a predetermined rotational speed of the engine driving member for rendering said preventing means inoperative.

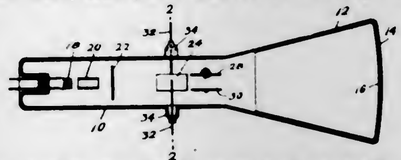
2,004,644
TRAIN PIPE COUPLING
Henry F. Woernley, deceased, late of Wilkinsburg, Pa., by Theodore Robertson Woernley, executor, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application February 18, 1933, Serial No. 657,402
21 Claims. (Cl. 285—58)



1. The combination with a train pipe coupling unit, of a trunnion adapted to be secured to a

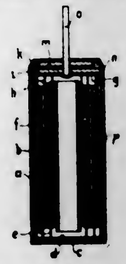
car coupler in fixed relation thereto and in vertical position, a sleeve rotatably mounted on said trunnion, supporting means carried by said sleeve

for supporting the forward end of said unit, and supporting means carried by said sleeve for supporting the rear end of said unit.



2,004,645
ANNUNCIATOR
Randall B. Baker, Needham, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a corporation of Massachusetts
Application March 20, 1931, Serial No. 524,070
3 Claims. (Cl. 177—326)

1. An annunciator comprising a frame, partitions mounted in said frame, dividing said frame into a plurality of compartments arranged in three vertical columns, a viewing panel for each face of said frame, each panel having two vertical columns of characters, one column of characters on each panel being disposed opposite the middle column of compartments and the other column of characters on said panel being disposed opposite one of the other columns of compartments, the columns and characters on both of said panels being similarly disposed as viewed from the front of each panel, a lamp in each compartment, each character being rendered visible when the lamp in its corresponding compartment is energized.

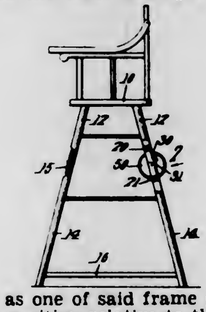


2,004,646
CATHODE RAY TUBE
Carl W. Becker, Allston, Mass.
Application August 18, 1932, Serial No. 629,263
3 Claims. (Cl. 250—27.5)

1. A cathode ray tube having an envelope comprising a tubular neck and an enlarged bell at one end of the neck, a screen at the end of said bell, means including a cathode and an anode at the other end of said neck for projecting a cathode ray on said screen, opposed flat and parallel electrostatic ray-deflecting plates disposed in said neck between said anode and screen and on opposite sides of and parallel with the path of said ray for deflecting it, and conducting supports which carry said plates and are extended gener-

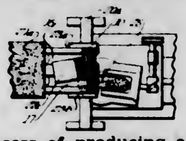
ally parallel with said plates and generally at right angles with the axis of said envelope away from said plates and through the envelope of said tube and are sealed in said envelope out of the line passed between said plates.

2,004,647
ELECTRIC CONDENSER
Karl Beer, Stuttgart, and Gustav Pfrommer, Obertuerkheim, Germany, assignors to Robert Bosch Aktiengesellschaft, Stuttgart, Germany
Application January 26, 1932, Serial No. 589,020
In Germany January 28, 1931
7 Claims. (Cl. 175—41)



1. An electrical condenser comprising a casing open at one end and closed at the other, a condenser body in said casing including a pair of condenser elements and insulating means between said elements, an electrical connection passing through the open end of said casing, a metallic disc in said casing between the open end thereof and said condenser body and freely bearing against said condenser body, one of said condenser elements being electrically connected through said metallic disc to said connection and the other element being electrically connected to said casing, a rigid cap of insulating material positioned inwardly adjacent the open end of said casing, means on the casing engaging the periphery of said cap in a manner clamping the condenser body between the cap and the closed end of the casing, a cover for said casing, plastic sealing material between said cover and cap, and means for securing said cover in position.

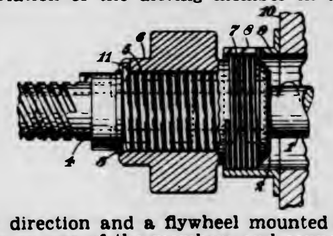
2,004,648
SECURING DEVICE FOR CONVERTIBLE HIGH CHAIRS
Ernest L. Bolster, Gardner, Mass., assignor to Chair Town Manufacturing Co., Gardner, Mass., a corporation of Massachusetts
Application April 12, 1934, Serial No. 720,264
5 Claims. (Cl. 155—38)



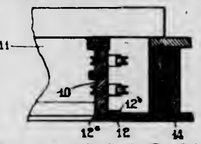
1. A convertible high chair having upper and lower frame parts hinged together at one side, each frame part having a cross round at the opposite side and each frame part having portions projecting beyond its respective cross round and abutting corresponding portions of said other frame part, whereby said rounds are spaced ver-

tically when the frame parts are assembled in operative relation, a pair of latch members mounted on said cross rounds and projecting toward each other for engagement in the space between said cross rounds to collectively form a securing device, one of said latch members having a tongue and the other having a slot receiving

said tongue as one of said frame parts is swung to operative position relative to the other frame part, thereby securely locking said frame parts together, and means on the projecting portions of one of said frame parts overlapping the projecting portions of the other frame part, said latch members lying within and being engaged within the confines of said overlap.



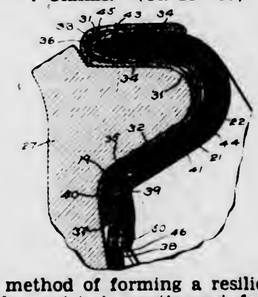
2,004,649
METHOD OF GRINDING WORKPIECES
Clement Booth and Sol Einstein, Cincinnati, Ohio, assignors, by mesne assignments, to The Heald Machine Company, Worcester, Mass., a corporation of Massachusetts
Application May 19, 1930, Serial No. 453,540
3 Claims. (Cl. 51—278)



1. The process of producing a tubular article having concentric inner and outer surfaces, consisting in first forming a true cylindrical exterior surface thereon, rotating the article on said preformed surface while internally abrading same and effecting a relative axial translation between the work and abrading member to generate a true inner cylindrical bore, and similarly rotating the work piece on said preformed outer surface while restraining the same against axial movement, abrading a predetermined portion of said preformed outer surface to produce a groove or depression therein, whereby said inner cylindrical surface and outer groove will be produced accurately concentric one to the other through use of the preformed outer surface as a position determinate during their formation.

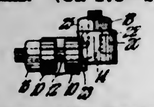
2,004,650
FREE-WHEEL DRIVING MECHANISM
John Robert Collyear, Bushey, and Samuel Lee Bapty, Harlesden, London, England; said Bapty assignor to Thomas George Baxenden, Hertfordshire, England
Application May 19, 1934, Serial No. 726,532
In Great Britain May 29, 1933
5 Claims. (Cl. 74—7)

1. A driving mechanism adapted to disengage the drive on a sudden decrease in speed of rotation of the driven member comprising a rotatable driving member, a rotatable driven member, a spring connecting the driving and driven members for transmission of the drive and, under static conditions, in light frictional engagement with the driven member and arranged to tend to increase its grip of the driven member on rotation of the driving member in the forward direction and a flywheel mounted for rotation on one of the members and connected to the end of the spring overlying the driven member in such manner that the spring transmits the drive to the flywheel and, on a sudden decrease in speed of rotation of the driven member, the flywheel releases the driving grip of the spring.



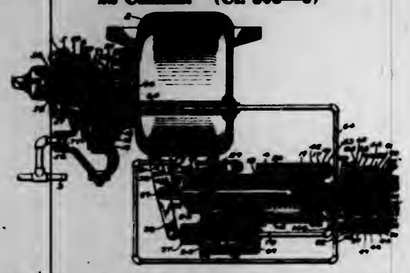
2,004,651
FLUSHING STRIP FOR WINDOW FRAMES
Harry W. Cook, Malta, Ohio
Application March 11, 1935, Serial No. 10,531
3 Claims. (Cl. 20—11)

1. Means for permitting flushing of a wall covering with the stiles and other members of a window frame consisting of a strip rabbeted lengthwise to form two portions only therein of different thickness, whereby either of said portions can be applied to an edge of said frame members according to the thickness of the adjacent wall covering to be applied.



2,004,652
PROCESS OF MAKING CYLINDER PACKINGS
Philip W. Dempsey, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application October 28, 1933, Serial No. 695,638
7 Claims. (Cl. 18—55)

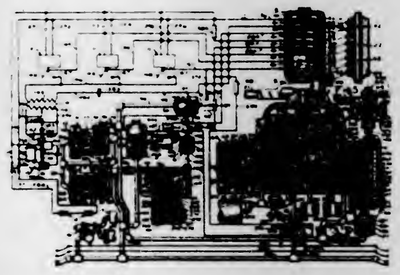
1. The method of forming a resilient packing disc which consists in coating reinforcing fabric with raw, plastic, curable substance, forming a circular disc from some of said material, form-



ing a plurality of annuluses from more of said material, joining the inner margin of said annuluses to the margin of said disc in overlapping relationship to form a blank, confining said blank under pressure so as to give it its final form and in applying heat to said blank while so confined for curing it into a resilient one-piece packing.

2,004,653
BATTERY CLAMP DEVICE
Edward A. Duval, Easthampton, Mass.
Application September 13, 1933, Serial No. 689,224
Renewed November 15, 1934
6 Claims. (Cl. 173—259)

1. A device for use with the lugs of a clamp having aligned openings therethrough comprising, a bolt having a body portion for extending through the openings in the lugs and a tail extending angularly therefrom, both ends of the bolt being threaded, a nut on the threaded end of the main body portion of the bolt for abutting the outer face of one lug, a wedge member having an opening receiving the tail of the bolt and having an inclined face for bearing against the outer face of the other lug and a nut on the threaded end of the tail for bearing on said lug to move the same along the tail.



2,004,654
FLUID PRESSURE BRAKE
Clyde C. Farmer, Pittsburgh, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application March 4, 1932, Serial No. 596,754
22 Claims. (Cl. 303—6)

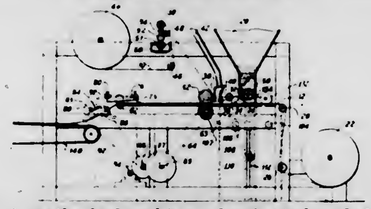
1. The combination with a brake lever, of means for applying braking force to said lever and movable a predetermined distance relative to said lever before becoming effective, a brake cylinder piston adapted to be locked to said means for operating said means, and another piston adapted to operate said lever to take up the slack in the brake rigging before the operation of the brake cylinder piston.

2,004,655
REMOTE CONTROLLED BRAKE
Clyde C. Farmer, Pittsburgh, and Raymond E. Miller, Wilkinsburg, Pa., assignors to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application November 2, 1933, Serial No. 696,476
6 Claims. (Cl. 303—20)

1. The combination with a brake pipe on a train, of two train wires extending through the train, a source of direct current, direct current controlled normally energized electro-responsive means on a car in the train connected across said train wires and operative upon deenergization to effect a sudden reduction in brake pipe pressure, a pair of switch devices parallel connected in the circuit with said electro-responsive means, a source of alternating current of one characteristic, a second source of alternating current of another characteristic, a brake valve device on the locomotive having a running position for connecting said source of direct current across said train wires and for connecting the first mentioned source of alternating current to said train wires, switch means on the locomotive having a normal position for closing the circuit from said brake valve device to said train wires and operative to another position for opening said circuit and for closing a circuit from said second source of alternating current direct to the train wires, means in a shunt circuit around said switch means when in the first mentioned position for blocking

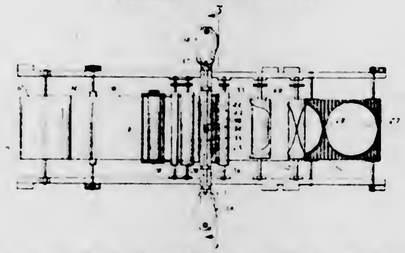
the flow of alternating current through said shunt circuit, electro-responsive means on said car responsive only to current from the first mentioned source of alternating current for effecting closure of one of said pair of switch devices and operative upon deenergization to effect a service reduction in brake pipe pressure and to effect opening of said switch device, electro-responsive means on said car responsive only to current from the second mentioned source of alternating current for effecting closure of the other of said pair of switch devices, valve means on the locomotive operative to effect a reduction in brake pipe pressure, means controlled by traffic conditions and operative when traffic conditions become unfavorable to effect the operation of said valve means and said switch means to the second mentioned position, means for blocking the flow of alternating current to said source of direct current, means for blocking the flow of direct current to said source of alternating current, and means for blocking the flow of direct current to said electro-responsive means on the car.

2,004,656
STOCKING
John L. Fonville, Burlington, N. C., assignor to King Cotton Mills Corporation, Richmond, Va., a corporation of Virginia
Application June 29, 1934, Serial No. 733,099
6 Claims. (Cl. 66—202)



1. A stocking knitted from an undyed regenerated cellulose yarn and having a design knitted therein from an undyed cellulose acetate yarn comprising a filament strand and a spun strand twisted together which is fed to the needles for

a few loops and then withdrawn, whereby cross-dyeing effects can be produced, and whereby the

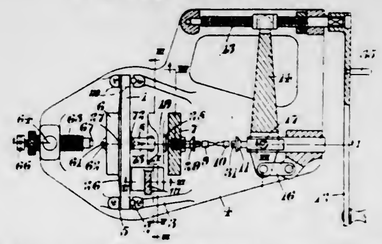


desired luster, strength and anti-skid properties are obtained in the cellulose acetate yarn.

2,004,657
METHOD AND APPARATUS FOR MAKING SEALED PADS
George A. Gerard, Reading, Mass., assignor to Cotton-Wood Products, Inc., Reading, Mass., a corporation of Massachusetts
Application November 10, 1931, Serial No. 574,066
39 Claims. (Cl. 154—33)

1. A method of making a laminated sealed pad which consists in depositing fibrous material on a traveling fabric sheet, removing at intervals portions of the material over transverse narrow bands, applying an upper fabric sheet, sealing the sheets over the transverse areas from which the material has been removed, and severing the the sheets in the transverse band portions.

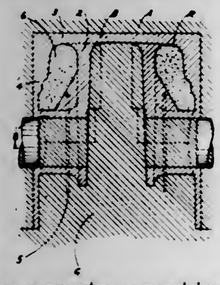
2,004,658
METHOD AND MACHINE FOR MAKING CUSHION PADS
George A. Gerard, Reading, Mass., assignor to Cotton-Wood Products, Inc., Reading, Mass., a corporation of Massachusetts
Application November 10, 1931, Serial No. 574,067
Renewed August 4, 1934
22 Claims. (Cl. 154—33)



1. A method of making a cushion pad which consists in forming a continuous bat of fibrous material, trimming the bat to a desired non-rectangular shape, placing the bat between fabric sheets, causing the fabric sheets to adhere around the peripheral edge of the bat, and cutting the sheets around the edge of the bat.

2,004,659
TABLE FORK
Robert D. Groch, Sacramento, Calif.
Application August 9, 1933, Serial No. 684,308
5 Claims. (Cl. 30—5)

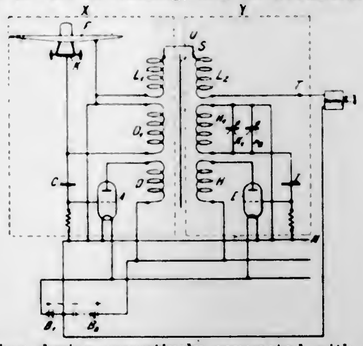
1. A table-fork comprising a handle, a tine-assemblage rotatable with respect to the handle, and spaced apart lugs extending laterally from the outer tines, forming food positioning and maintaining means.



2,004,660
MATERIAL STRENGTH TESTING MACHINE
Leslie Haywood Hounsfield, London, England
Application October 21, 1931, Serial No. 570,243
In Great Britain April 17, 1931
9 Claims. (Cl. 265—18)

9. In a testing instrument for measuring physical properties of steel and other materials under load, the combination of a base, means carried by the base for applying a tensile load to one end of a specimen under test, supports fixed to the base, a stiff plate-spring anchored at its ends to said supports, packing pieces of shock-absorbing material interposed between the spring and the supports, means for coupling the other end of the specimen to the center of the spring to deflect the latter in proportion to the load applied to the specimen, a spring clip mounted centrally on the spring, an indicator-needle carried by the spring clip, an upstanding V-shaped ridge formed on the base adjacent to the spring and at right angles thereto, a bracket slidably mounted on the base and formed with a V-shaped groove engaging the said V-shaped ridge, a microscope carried directly by the bracket for observing the point of the indicator-needle, a cross-wire in said microscope, micrometer adjusting means for adjusting the said

bracket along the V-shaped ridge on the base to enable the cross-wire to be aligned with the virtual image of the point of the indicator-needle, a coil-spring for holding said bracket in engagement with the micrometer adjusting means, a scale associated with the micrometer adjusting means for measuring movements of the bracket along the base, and means whereby the effective length of said plate-spring may be varied in order that the scale markings may indicate directly the load per unit area on the specimen.

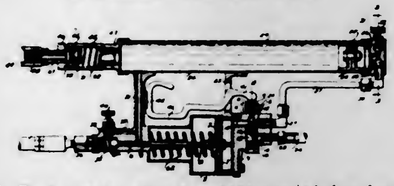


2,004,661
PISTON SAND CORE
Frank Jardine, Cleveland, Ohio, assignor to Aluminum Company of America, Pittsburgh, Pa., a corporation of Pennsylvania
Application April 10, 1930, Serial No. 443,081
4 Claims. (Cl. 22—165)

1. Molding apparatus comprising a permanent mold having a casting cavity therein shaped to form the outer walls of a piston, a permanent core construction removably positioned within said casting cavity and spaced from the walls thereof to define the inner surfaces of the piston skirt at the open end thereof, the sides of said core construction being offset inwardly to form the inner surfaces of a pair of piston pin bosses and the inner surfaces of webs extending from said piston pin bosses to the skirt, the offset portion of said core construction being extended to form a portion of the inner surface of the piston head and to form the inner walls of a pair of hangers extending from said piston pin bosses to the head and a pair of sand cores arranged to provide re-entrant recesses between each of the sand cores and the permanent core to form the outer side surfaces of the hangers and the webs and the adjacent inner surfaces of the piston skirt and head.

2,004,662
MEANS FOR MEASURING THE DISTANCE OF AN AIRCRAFT FROM GROUND
Hugo Junkers, Dessau, and Heinrich Wigge, Koethen, Germany
Application February 7, 1931, Serial No. 514,216
In Germany February 12, 1930
3 Claims. (Cl. 177—352)

1. A device for measuring the distance of an aircraft from ground comprising two self-excited oscillating circuits arranged so as to produce a beat note, means for automatically varying the resonant frequency of one of said circuits in accordance with the distance of the aircraft from ground, means for maintaining the resonant frequency of the other circuit at a value independent of the distance of the aircraft from ground, said oscillating circuits being so tuned and coupled that the beat note disappears at a predetermined altitude at which the aviator performs an act in landing, and an acoustical in-

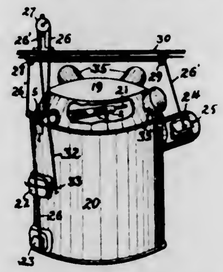


dicating device operatively connected with said oscillating circuits.

2,004,663
METHOD OF UTILIZING THE NITROGEN IN NITROSYL CHLORIDE
Oskar Kaselitz, Berlin, Germany
No Drawing. Application April 12, 1932, Serial No. 604,875. In Germany July 9, 1931
1 Claim. (Cl. 23—102)

The method of recovering nitric acid from nitrosyl chloride and utilizing same in a cyclic process comprising heating nitrosyl chloride to decomposition temperature, rapidly cooling the gas mixture thus obtained by an addition of oxygen, passing a liquor obtained by washing artificial potassium nitrate in counter-current to the gas current to separate nitrogen dioxide from chlorine while controlling the proportion of the washing liquor so as to ultimately obtain a solution of potassium nitrate in strong nitric acid, withdrawing said solution and re-using it in the conversion of fresh quantities of potassium chloride into potassium nitrate.

2,004,664
MUZZLE LOADING GREASE GUN
Steven J. Krannak, Minneapolis, Minn., assignor to Min-A-Max Co., Minneapolis, Minn., a corporation of Minnesota
Application October 21, 1931, Serial No. 570,078
2 Claims. (Cl. 221—47.3)

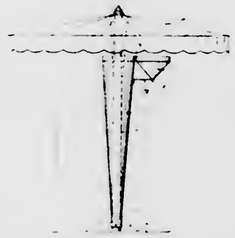


1. In a grease gun, a grease-containing barrel provided at one end with a grease inlet and at its opposite end with an air inlet passage and between said two noted passages a grease-outlet passage, a normally closed valve in said grease intake passage having a projecting nozzle which, when pressed toward the interior of the barrel, opens said grease intake valve, a valve in said air intake passage arranged to be opened by pressure toward the interior of said barrel, a floating piston working in said barrel between said air intake port and said grease outlet passage, means for controlling the discharge of grease from said grease-discharge passage, and means for releasing the air pressure in said barrel between said piston and said air intake valve, so that said piston may be retracted when grease pressure is applied to said barrel past the pressure-opened intake valve of said grease intake passage.

2,004,665
METHOD OF TIGHTENING LOOSE RIVETS IN STRUCTURAL MEMBERS
Arthur G. Leake, Bridgeport, Conn.
Application December 30, 1931, Serial No. 583,816
2 Claims. (Cl. 29—150)

2. The method of tightening an elongated rivet in structural members while under load which comprises holding one head of the rivet tightly against one of the members, and while the rivet is so held welding the periphery of the other head to another member by building up a ring of weld metal around the head between it and the member and welding it to the head and the member.

2,004,666
FURNACE REGULATOR
Thomas J. Long, South Bend, Ind.
Application April 30, 1934, Serial No. 723,095
7 Claims. (Cl. 236—16)

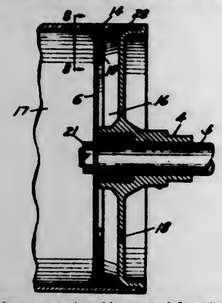


3. In apparatus for controlling automatically the draft and check dampers of a furnace, a thermostat disposed in the hot air bonnet of said furnace, an arm pivoted in the head of said thermostat and actuated thereby provided with sheaves in its free end, a rock frame pivoted in said head provided at its free end with sheaves alined with the sheaves in said arm, a supported adjusting drum more or less remote from said furnace, and a cable engaging said sheaves and connected with said drum to be adjustably moved thereby, one end of said cable being connected with the draft damper of the furnace and the opposite end of said cable being connected with the check damper therefor.

2,004,667
THERMOSTAT
Robert Henri Mautsch, Brussels, Belgium, assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Original application November 17, 1931, Serial No. 575,512. Divided and this application March 28, 1933, Serial No. 663,149. In Great Britain November 18, 1930
5 Claims. (Cl. 297—11)

2. A heat expansible element for a thermostat comprising two non-heat expansible sections and an integrally united heat expansible section intermediate the non-expansible sections forming a uniform lineal structure of a definite length, the length of the expansible section relative to the lengths of the non-expansible sections being chosen such that the coefficient of expansion of the element as a whole is a selected predetermined quantity.

2,004,668
TENT
Michael J. McAuliffe, Vicksburg, Miss.
Application November 9, 1934, Serial No. 752,203
5 Claims. (Cl. 135—5)

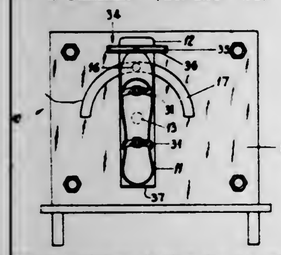


1. In a device of the kind described, a post, a folding rib assembly on the post, and a casing slidably mounted on the post and adapted to cover the ribs when they are folded.

2,004,669
PACKING CUP
Raymond E. Miller, Wilkinsburg, Pa., assignor to The Westinghouse Air Brake Company, Wilmerding, Pa., a corporation of Pennsylvania
Application September 9, 1932, Serial No. 632,362
7 Claims. (Cl. 309—6)

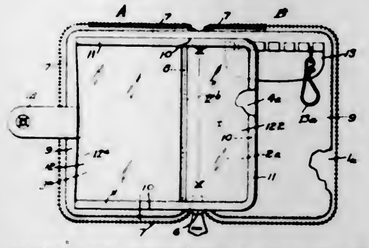
7. In combination, a cylinder and a piston movably mounted in said cylinder, said piston comprising a central portion and a skirt portion affixed to and carried by said central portion and engaging the wall of said cylinder, a peripheral groove in said skirt portion at the edge thereof

adjacent said central portion, and a lubricating wick in said peripheral groove, a portion of the



central portion contacting said wick and cooperating with said groove for carrying the wick.

2,004,670
MANUFACTURE OF SOAP POWDERS
Charles Watson Moore, Warrington, Lancaster, and Horatio Ballantyne, Tadworth, Surrey, England, assignors to Lever Brothers Limited, Port Sunlight, England, a company of Great Britain
No Drawing. Application April 2, 1932, Serial No. 602,870. In Great Britain May 22, 1931
14 Claims. (Cl. 87—16)

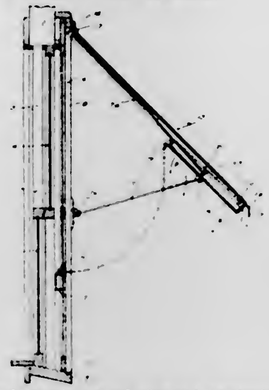


12. As an article of manufacture a perborate soap powder containing sodium silicate and magnesium chloride uniformly distributed therein as stabilizing substance in amount equivalent to 0.1 per cent to 0.3 per cent of magnesium oxide (MgO) on the weight of the soap powder.

2,004,671
HEALTH PROMOTING MACHINE
William John Nelson, New York, N. Y.
Application November 27, 1933, Serial No. 699,934
2 Claims. (Cl. 128—24)

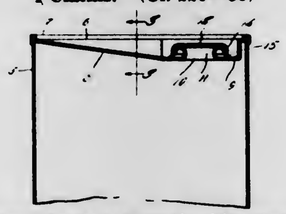
1. In an exercising device for causing twisting movements in a human limb while the free and fixed members of said limb are in alignment, the combination with a horizontal spindle having a vertical member mounted thereon intermediate the ends of said member, said member having means for gripping the free extremity of a human limb, means for oscillating said vertical member to cause rapid and sudden reversals in the twisting of said limb, said means comprising a box-like frame having spaced front and rear walls, said front wall having a circular slot adjacent the upper end of said vertically mounted gripping member, a drive pin secured to said vertical member and extending through said slot, an arm rotatably mounted intermediate its ends on said spindle and having its upper end fixed to said drive pin, a pin fixed to the lower end of said arm and having a link rotatably mounted thereon, a drive shaft rotatably mounted in said rear wall and having a crank arm fixed thereon and facing said front wall, the free end of said crank arm being movably connected to one end of said link and means for rotating said drive shaft.

2,004,672
POCKET CASE
Patrick W. Penta, Stoneham, Mass.
Application May 16, 1933, Serial No. 671,323
1 Claim. (Cl. 150—39)



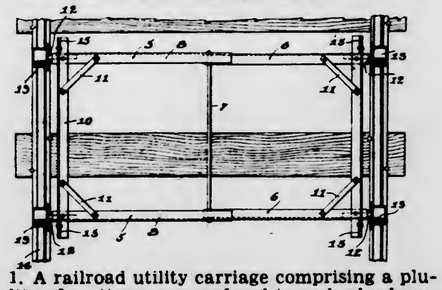
A pocket case comprising a cover member, a lining therefor, the case foldable vertically to form two panels, one panel having on its inner face automobile-identifying-element securing means; a second panel having additional modified automobile-identifying-element securing means, said additional means comprising a pocket member with a transparent cover and a back, hinged vertically at its inner edge to the second panel, adjacent the fold line of the case cover; the pocket ends and its free side closed with a binding which extends over, upon and is secured to the second panel of the case adjacent the fold line thereof; and said binding with the lining of the said second panel, and a transparent cover therefor, forming a panel pocket with open sides, the inner side of the closed end panel pocket registering with the inner side of the closed end hinged pocket, and thereby, when used jointly, forming a two-part, foldable pocket for a longer automobile-identifying-element, the pocket having an opening at its outer edge and also near the medial line of the case, whereby an automobile-identifying-element may be inserted at the outer edge of the panel pocket, or the inner edge of the hinged pocket and successively into both pockets for observation through the transparent covers; and a strap-like member for locking the hinged pocket to the cover, thereby closing the outer side entrance to the panel pocket and the inner side entrance to the hinged pocket, and thus the foldable pocket; and a case-locking means on the case edge, as a further securing means for said elements.

2,004,673
MANUFACTURE OF A NUTRIENT MEDIUM
Ernst Pieper, Berlin-Tempelhof, and Walter Wolffenstein, Berlin, Germany, assignors to Schering-Kahlbaum A. G., Berlin, Germany
No Drawing. Application April 12, 1932, Serial No. 604,866. In Germany May 26, 1931
1 Claim. (Cl. 167—78)



A nutrient medium suitable for use in the cultivation of gonococci which consists substantially of an aqueous extract of placentæ in plain water containing at least about 1.5 parts placenta to 1 part of aqueous extract, having a pH of about 7.2 to 7.4, and which may contain the usual additions used for bacteriological purposes.

2,004,674
CLOSURE FORMING AWNING
Frank R. Quisenberry, Tampa, Fla., assignor of twenty-five per cent to Francis E. Geary, twenty-five per cent to George W. Mansfield, twenty-five per cent to Martin H. Samson, and twenty-five per cent to Nathaniel L. Spengler, all of Tampa, Fla.
Application May 5, 1933, Serial No. 669,589
1 Claim. (Cl. 189—55)

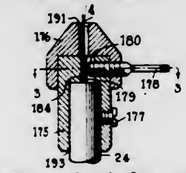


A combined awning and closure assembly comprising a relatively large main awning section, means for attaching the upper end thereof to a window frame, a complementary relatively small lower section hingedly attached to the extreme lower ends of said upper section, a spring carried by said upper section, one end thereof being connected to the upper end of said main awning section, and the other end extending to substantially the mid-point of the main section, a rod secured to the free end of the spring and adjustably attached to the lower awning section intermediate the upper and lower edges thereof, a pull chain connected to the lower end portion of said upper section, stay links pivotally connected at their outer ends to the intermediate outer edge portion of said lower section, and brackets to which the inner ends of said links are connected, said brackets being adapted for anchorage on the window frame at predetermined points.

2,004,675
CAN COVER
William Albert Rathbun and Frank Joseph Doyle, Grand Rapids, Mich.
Application March 9, 1934, Serial No. 714,849
4 Claims. (Cl. 220—66)

1. A cover for a can or the like comprising a disk like body formed with a trough extending from one edge to a point spaced therefrom and merging into a well, the bottom of the trough inclining downwardly to the bottom of the well, said bottom of the well being provided with an opening, and cap means associated with said opening.

2,004,676
HAND CAR
Albert G. Seitter, Wilmington, N. C.
Application October 18, 1934, Serial No. 748,906
5 Claims. (Cl. 105—160.5)



1. A railroad utility carriage comprising a plurality of sections arranged end to end, wheels rotatably mounted upon the outer end of each sections, and a rod pivotally connecting the inner ends of the sections, one of said sections being provided with series of apertures to removably receive the rod whereby the width of the carriage may be adjusted.

2,004,677
REPAIR LINK
Lloyd Stowe, Corry, Pa., assignor to Raymond Manufacturing Company, Corry, Pa., a corporation of Pennsylvania
Application September 6, 1927, Serial No. 217,835
1 Claim. (Cl. 59—85)

A repair link for tire chains composed of a wire rod bent into two open loops with the intermediate portion thereof positioned diagonally therebetween, the free end portion of each loop being bent outwardly out of the plane of said diagonal portion and being of such a length that it will substantially abut but not overlap the diagonal portion when in closed position, the ends of said loops being adapted to be bent into closed position in the plane of said diagonal portion.

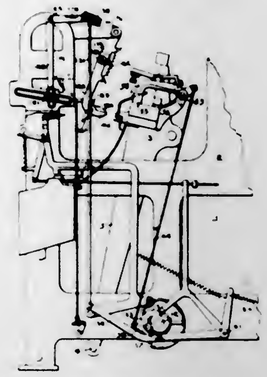
2,004,678
SCROLL SAW CHUCK
Herbert E. Tautz, Milwaukee, Wis., assignor to Delta Manufacturing Company, Milwaukee, Wis.
Original application June 7, 1933, Serial No. 674,748, now Patent No. 1,984,500, dated December 18, 1934. Divided and this application October 9, 1933, Serial No. 692,869
11 Claims. (Cl. 279—44)

1. A saw-holding chuck for a scroll saw comprising a tubular member having a non-tubular cylindrical end portion with a substantially longitudinal slot therein and open at said end thereof, a head fitting over said cylindrical end of the tubular member and having an axial bore, a

screw passing through a portion of the head and a portion of the non-tubular cylindrical end of the tube and threaded through one of said members and a resilient chuck jaw arranged within said slot to cooperate with said screw, whereby a saw blade may be clamped between one surface of the said slot and the said resilient jaw.

2,004,679
FASTENING DEVICE
George A. Tinnerman, Rocky River, Ohio, assignor to Albert H. Tinnerman, Cleveland, Ohio
Application January 9, 1933, Serial No. 650,772
1 Claim. (Cl. 24—73)

A snap fastener for holding tubes and the like, comprising an integral strip of resilient metal of uniform width throughout, said strip being bent intermediate its ends to form a head portion greater in extent than an opening in a support through which the fastener is adapted to be passed, said head being adapted to rest against one face of the support, a pair of arms extending from the head and adjacent the midportion thereof, the arms being flared outwardly to provide shoulder portions that are adapted to rest against the opposite face of the support and to receive a tube or similar article, and being then extended inwardly toward each other to embrace the tube, and said arms being flared outwardly again adjacent their free ends to facilitate the admission of a tube.

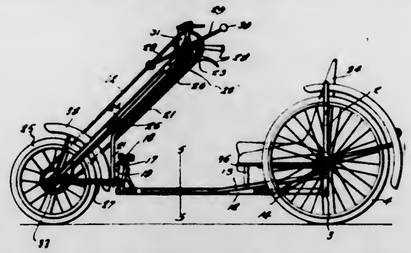


2,004,680
OPEN ELECTRIC ARC-LAMP FOR THE GENERATION OF ULTRA-VIOLET RADIATIONS
Max Volmer, Neubabelsberg-Steinstucken, Germany
Application June 24, 1933, Serial No. 677,454
In Germany January 21, 1932
10 Claims. (Cl. 176—51)

1. A non-oxidizable electrode for an open arc lamp, comprising a portion made of a mixture of a highly refractory oxid and another oxid which copiously produces ultra-violet rays at the temperature of the arc, a highly refractory metallic rod, one end of said rod terminating within the said portion and the other end projecting freely out therefrom and a coating of conductive material on the said portion, establishing conductive connection with the said metallic rod.

2. A non-oxidizable electrode for an open arc lamp, comprising a portion made of a mixture of zirconium oxid and iron oxid, a highly refractory metallic rod, one end of said rod terminating within the said portion and the other end projecting freely out therefrom and a coating of conductive material on the said portion, establishing conductive connection with the said metallic rod.

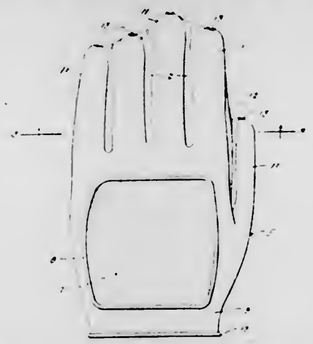
2,004,681
SHUTTLE CHANGING LOOM
Lewis S. Vose, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a corporation of Massachusetts
Original application April 4, 1932, Serial No. 603,051. Divided and this application May 24, 1933, Serial No. 672,667
7 Claims. (Cl. 139—227)



1. In a shuttle changing loom which stops with the lay at back center to effect shuttle change, means to replace a depleted shuttle with a fresh shuttle and then resume weaving operations, a center filling stop motion to detect the condition of weft in the shed every pick of the loom except the one immediately following the resumption of weaving, a thread clamp to hold the thread of the depleted shuttle after the latter has been ejected from the loom, and additional means to detect the condition of weft held by the clamp on said pick and prevent continued running of the loom if the thread laid by the expelled shuttle fails to be held by the clamp.

2,004,682
METHOD OF ARTIFICIALLY COLORING ROOFING GRANULES
Stephen G. Wright, Chicago, Ill.
No Drawing. Application November 20, 1933, Serial No. 698,931
6 Claims. (Cl. 91—70)

2. As a new article of manufacture, adapted to be used in connection with asphalt roofing, rock particles having thereon a fused cullet glaze, said glaze comprising a major portion of fused low melt point cullet, having imbedded therein a color pigment, and a minor portion of projecting irregular particles of unfused high melt point cullet.



2,004,683
WHEEL CHAIR
Leonard S. Wright and Alfred M. Wright, Oyster Bay, N. Y.
Application March 28, 1934, Serial No. 717,859
3 Claims. (Cl. 280—32)

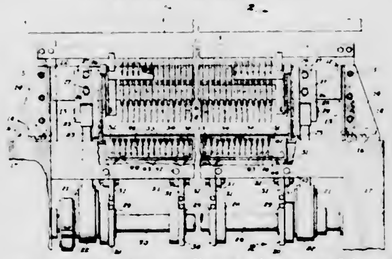
1. A wheel chair comprising a frame, a pair of rear wheels for supporting the rear part of the frame, a seat on the rear part of the frame, a front wheel assembly including a wheel and a rearwardly and upwardly extending frame, an upright spindle at the front end of the first frame, an inverted U-shaped brace member having its ends connected with the front part of the first mentioned frame, means for connecting a portion of the bight of the brace member to the top of the spindle, a tubular part rotatably arranged on the spindle and to which a part of the front wheel assembly frame is connected, spring means connecting the front wheel assembly to the front end of the first mentioned frame for holding

the front wheel assembly in a straight position, a crank shaft rotatably arranged in the upper end of the frame of the front wheel assembly, means for transmitting the motion of the crank shaft to the front wheel, and handles connected to the cranks for turning the shaft and the front wheel assembly.

2,004,684
SWIMMING GLOVE
Earl B. Bell, Brooklyn, N. Y.
Application July 26, 1933, Serial No. 682,341
1 Claim. (Cl. 9—21)

A swimming glove of the class described comprising a body part, finger and thumb stalls and webs connecting the stalls together, said glove being of one-piece construction and formed of thin rubber the stalls having openings in their ends and that part of the glove which covers the back of the hand having a single substantially rectangular-shaped opening therein, the side walls of which are spaced inwardly from the side edges of the glove, the front wall being spaced inwardly from the inner ends of the finger stalls, and the rear wall of which is spaced an appreciable distance from the rear end of the glove, that part of the glove between the rear wall of the opening and the rear end of the glove forming with the rest of the rear portion of the glove an endless wrist engaging portion, said wrist engaging portion being of short length and of a width but slightly less than the width of the rest of the glove, the finger openings, the rectangular opening and the rear end of the glove all being formed with marginal reinforcing beads.

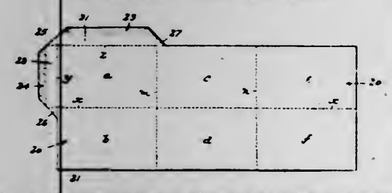
2,004,685
ORNAMENTAL LINK RECEPTACLE FOR WRIST WATCH BANDS AND CHAINS
George Washington Best, Reidsville, N. C.
Application February 13, 1934, Serial No. 711,019
1 Claim. (Cl. 24—265)



A link member for wrist watches comprising a plate having a pocket therein, the plate at the wall of the pocket being undercut, an ornamental insert for disposition in the pocket to engage with the wall thereof, a pair of longitudinally projecting and apertured ears at one end of the plate and a pair of laterally disposed ears at the opposite end of the plate, said plate being provided with a transverse bore extending through the last mentioned ears.

2,004,686
METHOD OF PRODUCING SOUND ABSORBING MATERIAL
Charles Birchy, Atlanta, Ga., assignor of one-half to Samuel D. Hewlett, Atlanta, Ga.
No Drawing. Application April 21, 1933, Serial No. 667,264
10 Claims. (Cl. 25—156)

1. A method of producing a ceramic acoustical material consisting in reducing a body material to particles, subjecting said particles to a burning operation, then coating said particles with a fusible adhesive substance, then to a molding operation, and then subjecting said molded mass to a burning operation, whereby a porous sound absorbing material is effected.



2,004,687
TURFING MECHANISM FOR SEWING MACHINES
Erskine E. Boyce, Gastonia, N. C., assignor to The Boysell Company, Gastonia, N. C., a corporation of North Carolina
Original application January 12, 1932, Serial No. 586,204. Divided and this application April 19, 1934, Serial No. 721,385
3 Claims. (Cl. 112—79)

1. In a multiple needle sewing machine for tufting fabrics, a carrier for a plurality of needlebars, means latching the needlebars to the carrier for movement therewith, a plurality of loop-

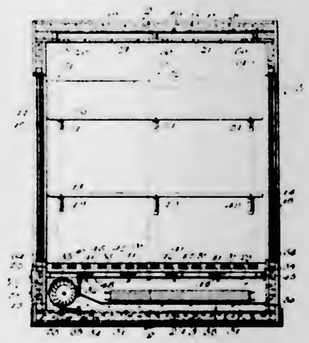
receiving members one for each needle and each including a finger movable back and forth in a path intersecting the path in which the needle-bar reciprocates, said finger having a cutting edge, a blade pivotally connected to each of said members and having a cutting edge co-operating with the cutting edge of said finger, said pivoted cutting blade having a depending portion, a support on which the depending portions are fulcrumed, and means to collectively move said fingers to cause all of said cutting blades to be moved into and out of cutting relation with the cutting edges of the fingers solely by the movement of said members.

2,004,688
CORRESPONDENCE SHEET
Hope Bruce, Washington, D. C.
Application April 20, 1933, Serial No. 667,080
2 Claims. (Cl. 229—92.7)

1. A correspondence sheet adapted to be folded and sealed in packet form, said sheet being substantially rectangular and comprising an even numbered equal sized zones adapted to be folded into superimposed flat relation to form the packet, one corner zone forming the rear face thereof, flaps in the form of a trapezoid extending from the free edges of said corner zone and adapted to be folded back thereover, and the zone adapted to form the rear face of the packet and its adjoining flap having a cut away corner whereby when sa'd zone is folded into such packet back forming position and the corresponding flap is folded thereover, an aperture will be presented for the introduction of an appropriate packet opening instrument.

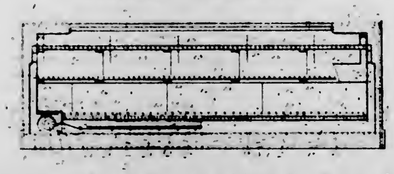
2,004,689
MELTING AND/OR REFINING OF MAGNESIUM AND MAGNESIUM ALLOYS PRIOR TO CASTING, AND FLUX THEREFOR
Leslie George Day, Taplow, England, assignor to Magnesium Castings and Products Limited, Slough, England
No Drawing. Application September 22, 1934, Serial No. 745,044. In Great Britain September 21, 1933
12 Claims. (Cl. 75—17)

1. In the process of treating magnesium metal, the improvement which comprises forming a flux by melting together about 50 to 80 parts of anhydrous $MgCl_2$ and about 50 to 20 parts of MgF_2, solidifying the melt so obtained and breaking it, all prior to use of said material as a flux.



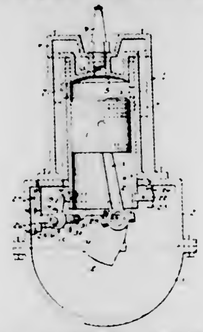
2,004,690
BOTTLE CLOSURE
Aladar Fonyo, Chicago, Ill.
Application June 11, 1934, Serial No. 730,123
5 Claims. (Cl. 215—82)

1. A package comprising a bead-necked bottle of highly carbonated liquid, a cork in the neck of the bottle, a relatively thin resilient sealing disk overlying the upper end of the cork, a binding strip over said sealing-disk, the edges of said binding strip extending downwardly over the neck of said bottle, means for securing said strip,



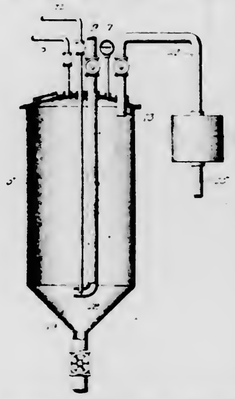
and a cap fastened about the bead on the neck of said bottle.

2,004,691
FLORIST'S REFRIGERATOR
George E. Friedrich, San Antonio, Tex., assignor to Edward Friedrich, San Antonio, Tex.
Application December 4, 1934, Serial No. 755,953
4 Claims. (Cl. 62—102)



1. In refrigerators, a cabinet having a bottom, a top, a back wall, side walls and a front wall, doors in the front wall, said cabinet enclosing a display chamber, a perforated ceiling spaced from the top of the cabinet within said display chamber and providing a top air space, a down-air duct located across the back of the cabinet within the display chamber, said down-air duct communicating along its top with the space above the ceiling, a horizontal air collecting duct located within the cabinet at the juncture of the bottom and the back wall and communicating along its length with the bottom of said down-air duct to receive the air therefrom, a blower duct within the cabinet at the juncture of the bottom and one end wall, one side of said blower duct communicating with said air-collecting duct, a blower in said blower duct, said cabinet having a cooling compartment at the bottom extending from said blower duct to the opposite side of the cabinet and located between the front wall of the cabinet and said air collecting duct, pans constituting a cover for said cooling compartment and having air passages, a duct extending along the bottom of the cabinet from said blower duct to the opposite side of the cabinet and being in communication with said blower duct and having its top wall perforated, cooling means mounted in said cooling compartment above said perforated duct, a foraminous floor laid over said pans, and flower supporting shelves located adjacent the down-air duct.

2,004,692
REFRIGERATOR
George E. Friedrich, San Antonio, Tex., assignor to Edward Friedrich, San Antonio, Tex.
Application December 4, 1934, Serial No. 755,954
7 Claims. (Cl. 62—102)

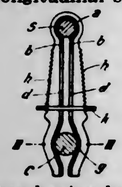


1. In a refrigerator, a cabinet having a food compartment which extends substantially the full length and depth and height of the cabinet, a floor for said compartment having air passages, an air collecting duct and a cooling chamber extending lengthwise of the cabinet beneath the floor, cooling means in said cooling chamber, a blower chamber at one end of said cabinet with which one end of said air collecting duct communicates, a down-air duct located at each end of the cabinet, said air collecting duct communicating at one end with one of said down-air ducts and communicating at the other end with said blower chamber, a blower in said blower chamber, an air delivery duct extending from said blower beneath said cooling chamber and terminating adjacent the opposite end of the cabinet and having a foraminous top to deliver air into said cooling chamber, an approximately horizontal combined food shelf and return air duct extending lengthwise in said compartment, spaced below the top thereof and communicating at its ends with said down-air ducts respectively.

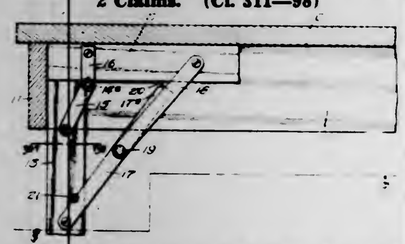
2,004,693
SINGLE SLEEVE VALVE ENGINE
Edward Leslie Gilbert, Fort Bayard, N. Mex.
Application November 20, 1933, Serial No. 698,908
Renewed May 7, 1935
1 Claim. (Cl. 123—81)

An internal combustion engine including a base carrying a cylinder having intake and exhaust ports and an ignition means for said cylinder, a sleeve valve having intake and exhaust ports slidably and rotatably mounted in the cylinder for controlling the intake and exhaust ports of said cylinder, a piston slidable in said sleeve, a crank shaft journaled to the base, means connecting the piston to the crank shaft, a cam shaft journaled to the base and driven from the crank shaft, an eccentric on the cam shaft, a sleeve-like member journaled on the eccentric of the cam shaft, an arm integral with the sleeve-like member, an annular member rotatably secured to the sleeve valve and pivoted to said arm whereby said sleeve valve may be reciprocated by the rotation of the cam shaft, a lug carried by the sleeve valve, a connecting arm journaled to said lug and pivoted to the sleeve-like member and including a universal construction within itself to impart oscillatory movement to the valve sleeve during the latter's reciprocal movement, a guide secured to the base, a guide lug on the annular member and received by the guide, a second guide carried by the base, and a second guide lug upon the sleeve-like member and received by the second-named guide.

2,004,694
TREATING WATER
James M. Gillet, Evanston, Ill., assignor to Victor Chemical Works, a corporation of Illinois
Application September 2, 1931, Serial No. 560,819
2 Claims. (Cl. 210—14)



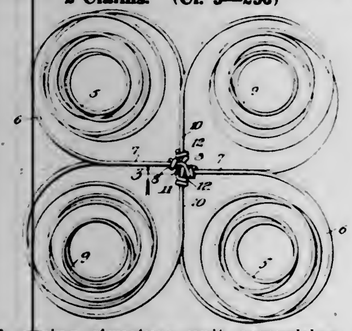
1. The process of softening boiler feed water consisting in adding to the feed water soluble phosphates to flocculate and precipitate impurities as insoluble phosphates, maintaining the water in a relatively quiescent state under pressure at a temperature above 110° C. to accelerate the flocculation and to permit the insoluble phosphates to settle, decanting the water largely freed from suspended phosphates, and supplying softened water to a boiler.



2,004,695
HANGER FOR CABLES OF OVERHEAD LINES
Fritz Hager, Berlin, Germany
Application July 9, 1934, Serial No. 734,345
In Germany February 20, 1932
3 Claims. (Cl. 248—61)

3. A hanger for cables of overhead lines comprising an open loop forming an eye adapted to engage a suspension wire, opposing shanks continuing from the ends of the eye, opposing jaws carried by the lower end parts of the shank adapted to engage a cable extending through said jaws, each of said shanks having a longitudinal slot extending between the loop and the

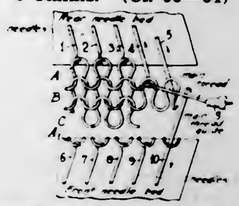
jaw provided on the shank, each of the said shanks having oppositely and outwardly extending flanges along its longitudinal edges, each of said flanges having serrated edges diverging outwardly towards their lower ends from the longitudinal axis of the hanger, and a key extending through the longitudinal slots in the opposing shanks, said key having lugs projecting laterally from its ends to engage the diverging serrated edges of the flanges so that downward movement of the key in the slots operates to force the shanks together to clamp the loop around the engaged suspension wire and to clamp the opposing jaws on to the engaged cables.



2,004,696
TABLE CONSTRUCTION
Albert Heath, Chicago, Ill., assignor to R. F. Weisbrenner, Chicago, Ill.
Application July 30, 1934, Serial No. 737,678
2 Claims. (Cl. 311—98)

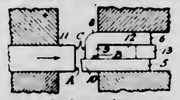
2. Table construction, including; a top; a leg hinged under the top; a toggle, including links hinged to the side of the leg and on the underside of the top, respectively, and pivotally connected, the former provided with an extension projecting beyond such pivot; and a seat under the top adapted to be engaged by the end of said extension when the toggle is moved inwardly beyond its straight position.

2,004,697
SPRING STRUCTURE
Frank J. Hruza, Cicero, Ill.
Application April 16, 1934, Serial No. 720,906
2 Claims. (Cl. 5—256)



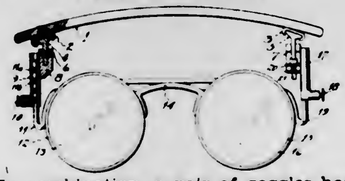
2. A spring structure unit comprising: four wire upholstery springs having open end-convolutions arranged in square juxtaposition, the end-portions of the wires of one pair of diagonally opposed top end-convolutions being spliced together at a top central junction point to form a resilient connection and the end-portions of the wires of the other pair of opposed top end-convolutions being spliced together in like manner and interlocked with the connection of the first pair at said junction point, and the bottom end-convolutions of said springs being spliced and interlocked with each other at a bottom central junction point in like manner.

2,004,698
RECEPTACLE CLOSURE
Georgina F. Jonits, Washington, D. C.
Application June 7, 1934, Serial No. 729,510
8 Claims. (Cl. 229—47)



1. In combination with a carton or box, means secured to one of the walls of said carton at the inside thereof for releasably retaining the lid of said carton in closed position after the original closure of said carton has been opened, said means comprising a strip of bendable but relatively stiff material, a tongue portion at one end of said strip, said carton having slots in one of its walls, said tongue portion passing through said slots and being bent upwardly upon itself so as to clamp the wall of said carton between said slots, and securing said strip to said wall, said strip being bent toward the inside of the carton when said carton is in originally closed position, said lid when in opened position being hinged to said carton along one of its edges opposite said strip, a flange at the other end of said strip whereby said lid can be releasably secured to said carton after the original closure thereof has been opened and said strip has been bent so as to rest flatly against said wall.

2,004,699
METHOD OF KNITTING TUBULAR FABRIC
Simon Krautkopf, Stuttgart, Germany
Application January 12, 1934, Serial No. 706,392
In Germany May 13, 1932
2 Claims. (Cl. 66—64)

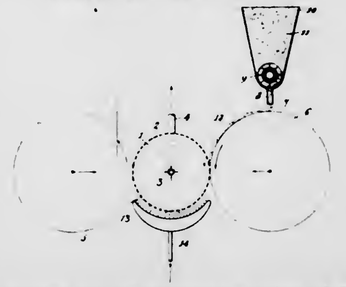


1. The process of knitting a tubular fabric on a two bed flat knitting machine which comprises forming a first course of loops by feeding a thread to the needles of the rear and front beds in the order named, forming a second course by feeding said thread to the needles of the front and rear beds in the order named, feeding said thread to an end needle only of the front bed at the completion of the second course, and then starting a third course on the needles of the rear bed.

2,004,700
METHOD OF FORMING EYELETS ON MEAT SAWS AND THE LIKE
Charles A. Laemmel, Brooklyn, N. Y., assignor to Atlantic Service Company, Inc., Brooklyn, N. Y., a corporation of New York
Application November 12, 1934, Serial No. 752,733
7 Claims. (Cl. 76—112)

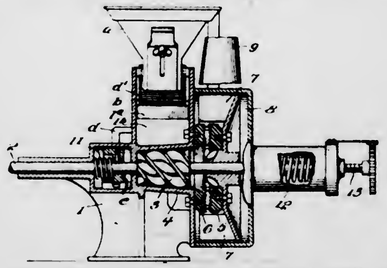
1. The method of forming an eye on a saw frame, which consists in folding a blank back on itself and then bending the end of one leg of the blank toward the other leg of the blank and leaving one leg of the blank longer than the other, placing a piece of metal within the eyelet of a higher fusing point than the metal of the blank and frame, butt-welding the eyelet to the frame, removing the piece of metal from the eyelet, and grinding the flashings from about the points of juncture.

2,004,701
GOGGLE SUPPORT
Orville A. Livengood, Wyoming, Pa.
Application February 13, 1934, Serial No. 711,050
9 Claims. (Cl. 2—10)



1. In combination, a pair of goggles having a pair of transparent members and a frame for retaining said members in predetermined relation, and supporting means for supporting said goggles on the brim of a hat or helmet, said supporting means including channel members attached to said brim, means for adjusting the vertical position of said goggles and means slidable in said channel members for adjusting said goggles backward and forward.

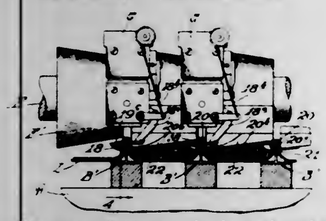
2,004,702
ELASTIC LACE
Fred Luttmann, Jr., Chicago, Ill.
Application May 23, 1934, Serial No. 727,189
3 Claims. (Cl. 24—143)



1. An elastic shoe lace having on each end thereof an arrow-shaped anchoring head of resilient material.

2,004,703
PROCESS FOR THE DIRECT MANUFACTURE OF FIBROUS CEMENT TUBES BETWEEN COUPLES OF ROTATING CYLINDERS
Alessandro Magnani, Casale Monferrato, Italy
Application August 2, 1933, Serial No. 683,393
In Germany August 22, 1932
16 Claims. (Cl. 25—155)

1. A process for manufacturing tubes of fibrocement on a formation drum with a porous cylindrical shell, preferably subject to an internal suction and under pressure from molding cylinders which turn and are tangential to the formation drum, comprising, depositing on the formation drum successive very thin layers of well mixed and powdery, dry, mixture of cement and fibrous materials, and directing an atmosphere charged with a watery spray around the said drum towards its surface so as to moisten the said thin layers and cause them to be plastered on the drum and pressed by the molding cylinders.



2,004,704
GRINDING MILL
Wayne P. Martin, Anoka, Minn.
Application January 18, 1932, Serial No. 587,419
2 Claims. (Cl. 83—8)

1. The combination in a grinding mill of a casing having inlet and discharge openings, a worm conveyor within the casing adjacent the inlet opening, a chamber communicating with the inlet opening, a second chamber partially enclosing the said conveyor and, separated from the first named chamber by a vertical partition, said partition being apertured at its upper portion to provide a communication between the two chambers, cooperating grinding burrs, and a fan for inducing a current of air from the inlet opening to and through the aperture in the partition, the conveyor and the grinding burrs, whereby the light material will be drawn through the aperture in the partition and be fed to the worm conveyor, and the heavy foreign material will fall beyond the aperture into the first named chamber, said second chamber inclosing that portion of the conveyor moving in a direction

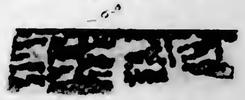
counter to the flow of material, whereby the material will be fed to the side of the conveyor moving in the direction of travel of the material.

2,004,705
UPHOLSTERY METHOD
Allister S. Mitchell, Detroit, Mich., assignor to National Automotive Fibres, Inc., Oakland, Calif., a corporation of Delaware
Original application February 19, 1930, Serial No. 429,708. Divided and this application March 5, 1931, Serial No. 520,360
13 Claims. (Cl. 112—262)

1. In the manufacture of pleated upholstery, the steps which comprise: feeding fabrics and batts with batts disposed between the fabrics, forming seam-portions in the fabrics, holding each batt spaced from one side of a seam-portion to provide interior sewing spaces, and engaging loops of the sewing thread with looper thread loops formed in said sewing spaces.

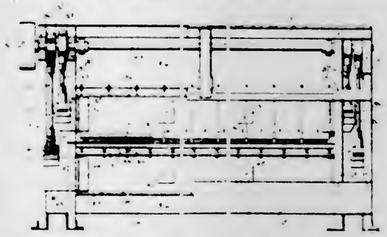
2,004,706
PROCESS FOR THE PRODUCTION OF FERTILIZER FROM CELLULOSE MATERIALS BY BACTERIAL ACTION
Ferdinand Adolphus Nuske, East Malvern, Victoria, Australia
No Drawing. Application March 3, 1931, Serial No. 519,901. In Australia March 4, 1930
2 Claims. (Cl. 71—6)

1. A process for the production of artificial manure from waste cellulose material, consisting in inoculating said material with a decomposing fungus to insure an anaerobic fermentation, permitting the fermented material to reach a temperature of approximately 60–65° C., inoculating the material with a nitrogen-fixing bacteria, and nourishing such bacteria with a waste fermentation product, as distillery wash.



2,004,707
GAME
John Luther Perkins, Baltimore, Md.
Application May 23, 1934, Serial No. 727,178
5 Claims. (Cl. 273—146)

1. A game piece unit formed with a plurality of faces each having symbols thereon which designate separate portions of a complete object.



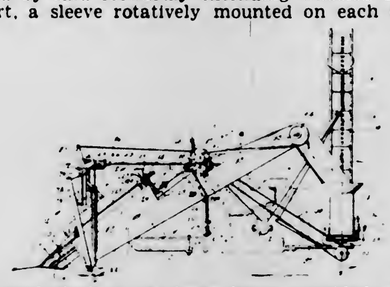
2,004,708
BEARING METAL AND BEARING
Carl Pfanstiehl, Highland Park, Ill., assignor to Pfanstiehl Chemical Company, a corporation of Illinois
Application October 10, 1931, Serial No. 568,160
12 Claims. (Cl. 308—241)

1. The method of forming a bearing surface which comprises subjecting a surface of a metal consisting principally of a copper constituent and a lead constituent to the action of a selective copper solvent, thereby effecting superficial removal of the copper constituent thereof, and

forming the remaining lead constituent at said surface into a continuous bearing surface.

2,004,709
FELT PUNCHING MACHINE
Robert S. Phillips, Chicago, Ill., assignor to American Hair & Felt Company, Chicago, Ill., a corporation of Delaware
Application March 20, 1933, Serial No. 661,671
6 Claims. (Cl. 28—4)

1. In a felt-punching machine, the combination of a movable needle-board, a movable bolster, means for reciprocating said needle-board, means for reciprocating said bolster in a direction opposite to that of said needle-board whereby said needle board and bolster move toward and away from each other, and a stripper grid cooperating with said needle-board and bolster, and with respect to which grid said last named parts are relatively movable.

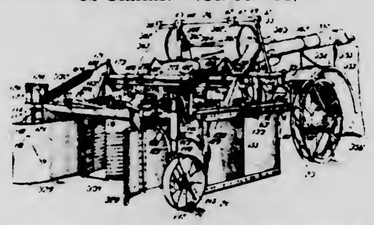


2,004,710
PRESSBOARD
Henry Sieb, Hammond, Ind.
Application September 1, 1934, Serial No. 742,383
3 Claims. (Cl. 11—1)

1. A press board composed of a wooden panel and a channel-shaped frame surrounding the same, the panel being set at its edges into the channel in the frame.

2,004,711
CORN PICKER
William B. Thieman, Albert City, Iowa, assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application April 23, 1926, Serial No. 104,069
73 Claims. (Cl. 56—18)

1. In combination, a tractor having a forwardly extending wheeled support, a gathering, snapping and conveying device adjacent to each side of said tractor, means for pivotally mounting one end of each of said devices to said tractor frame, a transversely arranged shaft carried by said forwardly extending wheeled support, a sleeve rotatively mounted on each end

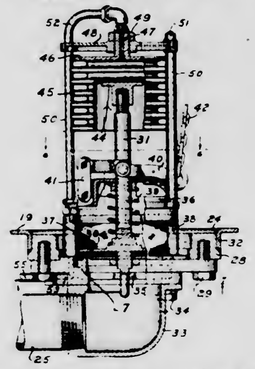


of said shaft, said sleeve being provided with rock arms, links carried by said rock arms, means for pivotally connecting the lower ends of said links with the forward ends of said gathering, snapping and conveying devices, and means for rotating either of said sleeves independently of the other.

2,004,712
ELASTIC SHAFT COUPLING
Leon Thiry, Huy, Belgium
Application February 26, 1931, Serial No. 518,446
In France June 2, 1930
2 Claims. (Cl. 287—85)

1. An elastic joint comprising a rigid inner piece, an elastic ring stretched on said inner piece in order that the mean diameter of said ring be greater than when said ring is in the free state, and an outer rigid piece surrounding said elastic ring, said elastic ring being provided with at least one longitudinal cut made after insertion of said ring between said inner and outer pieces.

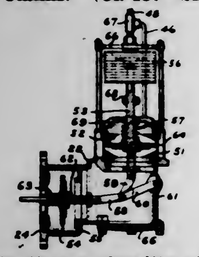
2,004,713
HARVESTER
Frederick A. Thomann, East Moline, Ill., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application June 20, 1930, Serial No. 462,516
52 Claims. (Cl. 56—14)



1. In a cotton harvester, the combination with a tractor, of an attachment comprising a bracket secured to said tractor centrally thereof, a cotton picking mechanism, an arm pivotally connected to said bracket and extending laterally therefrom, said arm having journal portions on the laterally directed ends thereof, and a frame having laterally spaced members connected to said journal portions and supporting said mechanism on said tractor.

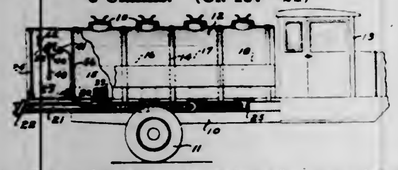
2,004,714
TREATMENT OF HYDROCARBONS
Charles L. Thompson, Thomas S. Bacon, and Joseph E. Bludworth, Eastland, Tex., assignors, by mesne assignments, to Hanlon-Buchanan, Inc., a corporation of Delaware
No Drawing. Application July 23, 1931, Serial No. 552,610. Renewed March 20, 1935
18 Claims. (Cl. 260—156)

1. A process for producing aliphatic alcohols and other oxidation products from low-boiling hydrocarbons such as occur in one of the group consisting of natural gas, refinery gas, and natural gasoline plant vapors, and from mixtures of such hydrocarbons, which comprises continuously forming a mixture of a fresh quantity of such hydrocarbon in vapor form and a fresh quantity of air and a quantity of uncondensed reaction-products containing nitrogen and carbon oxides and a substantial proportion of unconverted hydrocarbons, said quantities being in such proportion that the mixture contains by volume 0.5% to 3% of uncombined oxygen and 10% to 40% of hydrocarbons and the remainder is composed mainly of nitrogen containing relatively smaller quantities of carbon oxides, heating the mixture while under pressure in excess of 200 pounds to a temperature not substantially in excess of 700° F., maintaining the mixture at substantially the temperature resulting from the reaction until combination of the free oxygen is substantially complete, cooling the resulting vapors, and utilizing the uncondensed vapors resulting from the cooling operation as the source of uncondensed reaction-products introduced into the mixture with said fresh quantities of hydrocarbon and air.



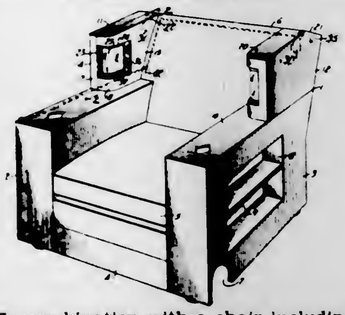
2,004,715
VALVE MECHANISM
Frederick G. Thwaits, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application November 18, 1932, Serial No. 643,151
5 Claims. (Cl. 137—21)

1. In combination, a tank having a fluid outlet, a valve associated with said outlet and having a stem extending into said tank, said valve comprising a fixed seat and a movable valve member secured to one end of said stem, a spring co-



acting with a fixed abutment rigidly attached to said seat and directly with said valve member for closing the valve, a bellows operable by ambient fluid pressure within said tank to open said valve, said bellows having normally fixed and movable opposite ends the former of which is adjustably associated with said valve seat and the latter of which is connected directly to the opposite end of said stem, and a manually operable lever pivotally attached to said fixed abutment and to said stem between said movable bellows end and said spring for independently opening said valve.

2,004,716
VALVE STRUCTURE
Frederick G. Thwaits, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application February 27, 1933, Serial No. 658,787
7 Claims. (Cl. 137—21)

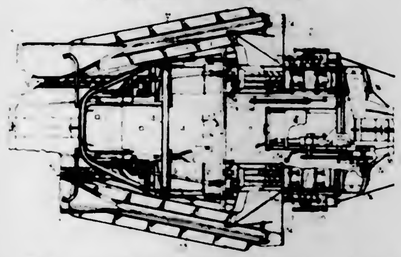


1. In combination, a plurality of liquid receptacles, a common conduit communicable with all of said receptacles, a valve for independently establishing and interrupting communication between each of said receptacles and said common conduit, common means for controlling the opening of all of said valves, means for closing each of said valves against the pressure in said conduit, and means operable directly by the closing movement of each of said valves for gradually relieving the back pressure thereon and for maintaining said valves when closed relieved from pressure existing within said conduit.

2,004,717
VALVE ACTUATING MECHANISM
Frederick G. Thwaits, Wauwatosa, Wis., assignor to The Heil Co., Milwaukee, Wis., a corporation of Wisconsin
Application June 26, 1933, Serial No. 677,671
8 Claims. (Cl. 137—21)

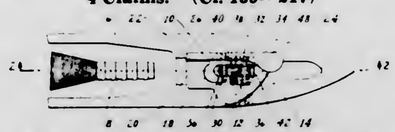
1. In combination, a receptacle comprising a plurality of compartments each having a fluid outlet, an emergency valve for each of said outlets, means for automatically closing each of said valves, a rock-shaft disposed remote from said valves, independent motion transmitting mechanism connecting each of said valves with said rock-shaft, a lever, a toggle interposed between said lever and said rock-shaft, said rock-shaft being movable by said lever through said toggle to open said valves and said toggle serving to lock said valves in open position, and automatically operable means other than said lever for releasing said toggle to permit said automataic valve closing means to act.

2,004,718
CHAIR
Frederick G. Brixner, Kansas City, Mo.
Application April 16, 1934, Serial No. 720,735
8 Claims. (Cl. 240—4)



8. In combination with a chair including side, seat and back rest members, a wing portion built into the juncture of the back rest with the side members and having an opening located in front of the occupant seated in the chair, and a light source supported in the wing portion to the rear of the occupant for emitting light rays through the opening.

2,004,719
PRIMING MIXTURE
Willi Brün, Bridgeport, Conn., assignor to Remington Arms Company, Inc., a corporation of Delaware
No Drawing. Application March 15, 1933, Serial No. 660,857
7 Claims. (Cl. 52—2)

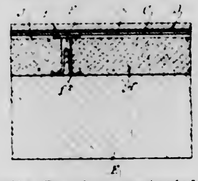


7. An ammunition priming composition containing a combustion initiator, and a copper ammonium salt of diazo-amino-tetrazole, said copper ammonium salt being present in an amount not greater than 6%.

2,004,720
HARVESTER
Wilbur J. Coultas and Norman F. Andrews, Moline, Ill., assignors to Deere & Company, Moline, Ill., a corporation of Illinois
Application January 16, 1933, Serial No. 651,886
Renewed November 24, 1934
31 Claims. (Cl. 56—18)

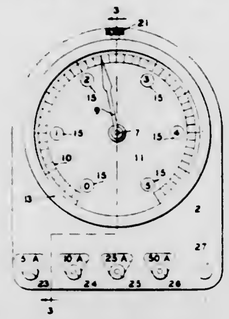
1. The combination with a tractor, of an agricultural implement comprising a frame adapted to embrace the tractor, a supporting wheel for said frame, means connecting said frame with said tractor permitting said frame and wheel to move relatively to said tractor, picking mechanisms on said frame at opposite sides of the tractor, and husking apparatus on said frame adjacent to the rear end of the tractor.

2,004,721
SHUTTLE
Emil E. Fuller, Woonsocket, R. I., assignor to Shambow Shuttle Company, Woonsocket, R. I., a corporation of Rhode Island
Application March 18, 1933, Serial No. 661,533
4 Claims. (Cl. 139—217)



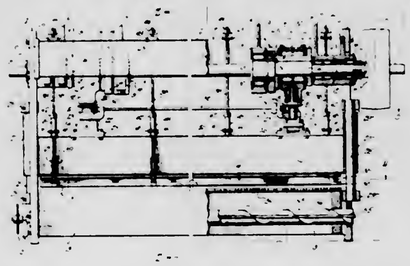
1. A shuttle having an eye, a block having a longitudinal thread passage, a tension device including longitudinally disposed pads arranged adjacent to the eye and below the thread passage and from which the thread leads directly to the eye, each pad having an upstanding thread guiding portion at the front end of the thread passage.

2,004,722
WEATHER STRIP
William S. Hamm, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application February 27, 1933, Serial No. 658,676
3 Claims. (Cl. 189—65)



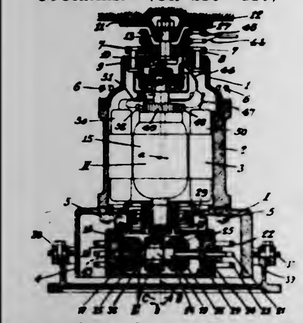
1. A weather strip which comprises a pile fabric strip, a rubber strip secured to the back of the fabric strip, and a metal strip positioned behind the rubber strip and provided with inturned edge flanges which are clamped against the edges of the fabric and rubber strips with the center portions of the latter bowed away from the center portion of the metal strip.

2,004,723
COMPOSITE FLOORING MATERIAL
Harold C. Harvey, Trenton, N. J.
Application August 4, 1934, Serial No. 738,446
4 Claims. (Cl. 154—49)



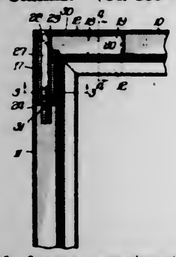
1. A composite flooring material comprising a substantially rigid base board of fibrous material having resiliency and high heat and sound insulating characteristics, said base board being of substantial thickness, a comparatively thin sheet of an impervious covering material, an intermediate sheet having a high degree of resiliency and a low degree of ductility, and spacing means between such intermediate sheet and the base board providing air spaces therebetween, such spacing means being of such number and of such vertical (and horizontal) dimensions as to permit the intermediate sheet to be depressed until it receives support from the base board when the average weight to which the flooring has to be subjected is placed thereupon.

2,004,724
MEASURING INSTRUMENT
Erwin P. Herzog, St. Louis, Mo.
Application July 3, 1933, Serial No. 678,737
1 Claim. (Cl. 171—95)



In an electrical instrument, the combination with measuring means including a dial and an indicator cooperating therewith, of a plurality of sets of indicia varying in value, said sets being arranged around the dial at equal distances from its axis of rotation in overlapping relation, a plurality of impedances, means for associating with said measuring means a selected impedance to produce varying ranges of measurement, a cover for said dial having a scale and a plurality of openings for exposing the indicia, and means for rotating the dial relative to the cover to bring into visual cooperation with the scale a set of indicia corresponding in value with the range of the selected impedance.

2,004,725
FELT PUNCHING LOOM
Reginald H. Johnson, Maplewood, N. J., assignor to American Hair & Felt Company, Chicago, Ill., a corporation of Delaware
Application July 29, 1932, Serial No. 625,891
2 Claims. (Cl. 28—4)

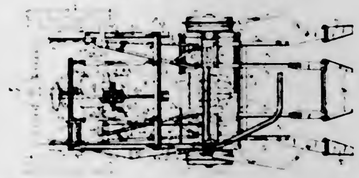


1. In a needling loom, the combination of a bolster, a needling means mounted above said bolster and movable vertically toward and away from the same, a stripper grid cooperating with said needling means, carrying means for said stripper grid, a carrying connection between said carrying means and said needling means for movement of said stripper grid by said needling means and relative movement between said carrying means and needling means, means for limiting the upward movement of said carrying means, and adjustable means for positively limiting the downward movement of said grid by said carrying means.

2,004,726
COMPRESSOR
Emil Kägi, Winterburg, Switzerland, assignor to firm Sulzer Frères Société Anonyme, Winterthur, Switzerland
Application May 9, 1933, Serial No. 670,081
In Switzerland May 27, 1932
8 Claims. (Cl. 230—137)

1. In a machine for working optionally as pump and compressor, in both cases independently of stuffing boxes, the combination of a driving structure including an electro-motor rotor circumscribing the whole machine by being a body with a centric surface of revolution rotative about its axis of symmetry; an intermediate structure arranged with its axis of symmetry displaced relatively to the axis of rotation of the rotor comprising at least the non-rotating part of the electro-motor and a pump casing containing the working chamber moving translatorily under the influence of the driving structure; and a structure for working on the fluid, said last structure being driven by the inertia effects caused by the said translatory motions of the intermediate structure, said driving structure and said intermediate structure being mutually so mounted as to place the axes of their motions substantially parallel.

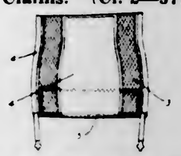
2,004,727
SASH CONSTRUCTION
Walter E. Keller, Elkhart, Ind., assignor to The Adlake Company, Chicago, Ill., a corporation of Illinois
Application September 10, 1932, Serial No. 632,565
5 Claims. (Cl. 189—76)



1. In metal frame construction, two frame members which together form a corner of the frame, and means for establishing a rigid but readily separable connection therebetween comprising an elongated tongue which projects from one end of one of the members at right angles thereto, an elongated socket in the adjoining end of the other member for the reception of the tongue, which socket is provided with a threaded aperture in the bottom thereof, and a screw which has its head seated in the back of the first member and extends longitudinally of the tongue into the aperture in the bottom of the socket with the screw supported only at its head whereby to permit sidewise movement of the lower threaded end of the screw into registration with the aperture.

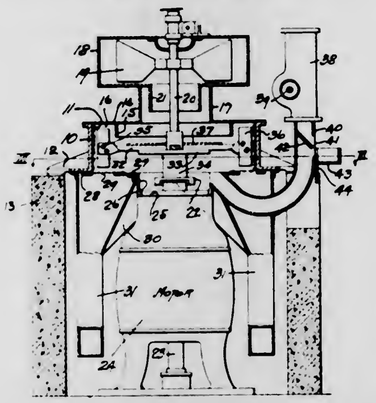
2,004,728
HYDROXY ARYL MERCAPTO COMPOUNDS AND PROCESSES FOR PREPARING THE SAME
Keith William Palmer, Blackley, Manchester, England, assignor to Imperial Chemical Industries Limited, a corporation of Great Britain
No Drawing. Application July 23, 1932, Serial No. 624,354. In Great Britain July 31, 1931
22 Claims. (Cl. 260—154)

1. A process for the manufacture of mercaptophenols which comprises heating an alkali metal phenoxide having at least one free ortho or para position with an alkali metal disulfide.



20. A benzene compound having at least one member of the group consisting of hydroxy and alkali metal oxy groups directly connected to nuclear carbon atoms and at least two similar members of the group consisting of mercaptan and alkali metal mercaptide groups directly connected to nuclear carbon atoms.

2,004,729
TRACTOR PROPELLED IMPLEMENT
Talbert W. Paul, Kansas City, Kans., assignor to Deere & Company, Moline, Ill., a corporation of Illinois
Application January 21, 1933, Serial No. 652,784
Renewed October 15, 1934
29 Claims. (Cl. 56—10)



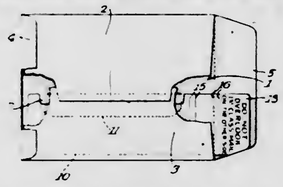
1. The combination with a tractor comprising rear traction wheels and a relatively narrow front steering truck, of an agricultural implement frame embracing said tractor, dirigible supporting wheels for said frame, steering means for causing said implement wheels to be steered simultaneously with said front steering truck of the tractor, and means connecting said frame with said tractor permitting said frame and its supporting wheels to rise and fall relatively to said tractor.

2,004,730
GIRDLE
Hazel V. Reidenbach, Richmond Hill, N. Y.
Application June 15, 1934, Serial No. 730,685
3 Claims. (Cl. 2—37)

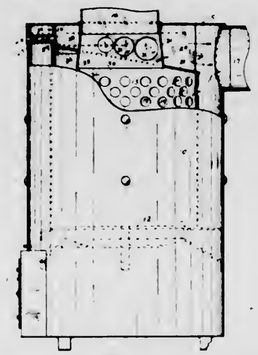
1. A girdle of the step-in type formed of elastic webbing and having a strip of sheet rubber secured to the bottom and on the inside portion thereof to prevent the girdle from rolling or creeping upwards.

2,004,731
MEANS AND METHOD FOR DEFIBRATING
Carew Henry Reynell and Arthur J. V. Ware, Memphis, Tenn., assignors to Reynell-Ware Incorporated, Memphis, Tenn., a corporation of Tennessee
Application May 15, 1933, Serial No. 671,172
16 Claims. (Cl. 19—44)

1. In apparatus for defibrating cotton seed hulls, a vertical shaft and beaters secured to and extending radially therefrom, a shallow chamber concentric with said shaft and housing said beaters, an exhaust fan, said chamber having an annular cover and a lint flue leading from the opening in said cover and to said fan, a baffle concentric with said shaft and depending from said cover, and a disk concentric with said shaft, of greater diameter than said flue, and disposed below and spaced from said cover.



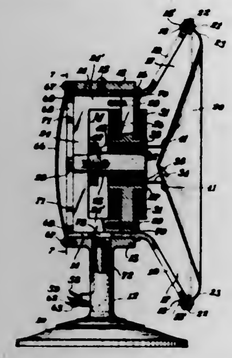
2,004,732
BALE TIE
Alvin V. Rowe, Galesburg, Ill.
Application March 21, 1934, Serial No. 716,737
15 Claims. (Cl. 24—27)



1. A wire bale tie including a main length of wire, a plurality of tie buttons formed along one extremity of said wire, a tie loop provided at the other extremity of said wire adapted to interlock with at least one of said tie buttons, and auxiliary means carried by the loop for counteracting the collapsing thereof and for preventing inadvertent detachment of a tie button interlocked with said loop.

2,004,733
ENVELOPE
Joseph Sawdon, Montrose, Calif., and Victor J. Sawdon, New York, N. Y.; said Joseph Sawdon assignor to said Victor J. Sawdon
Application July 11, 1932, Serial No. 621,880
Renewed November 15, 1934
16 Claims. (Cl. 229—72)

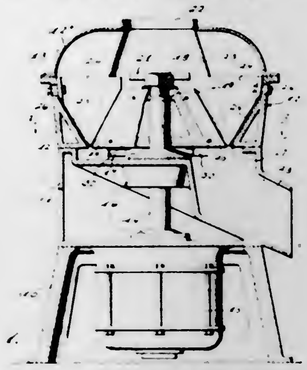
11. In a duplex envelope, means fixed on the inside of the front wall of the envelope and forming therewith a relatively small compartment for one class of mail, means including rear flaps folded and fastened together and forming behind said front wall and smaller compartment a larger compartment for another or the same class of mail, the smaller compartment being adapted to be sealed, together with a flap for closing while leaving sealed or unsealed one edge of the larger compartment, means on the front of the envelope to admit mail matter into said smaller compartment, adapted for closing this entrance to the smaller compartment, in combination with a signal device associated with said flap to indicate the presence of and the necessity for opening the smaller compartment in the event that the larger compartment is opened first, said closing means comprising a loose flap for one end of the larger compartment, adapted to be tucked inside or secured to the outside of the larger compartment, and said signal device comprising an inside relatively small flap associated with said closing flap, adapted to be brought into view by the opening of the said larger closing flap.



2,004,734
CROSS DRAFT MEANS FOR INCINERATORS
Edward W. Strube, Brightwaters, N. Y.
Application February 7, 1930, Serial No. 426,698
6 Claims. (Cl. 110—18)

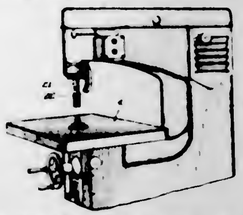
1. In an incinerator, a casing structure having an outlet flue, an apertured combustion chamber positioned within and spaced from the casing structure to form a flue space which communicates with the interior of the combustion chamber by means of the apertures, an expansion chamber formed on top of the combustion chamber comprising a bottom and side walls, the bottom wall closing the top of the combustion chamber and the side walls extending to the top of the casing structure, the side of the expansion chamber adjacent the said outlet flue opening into the said flue space and the opposite side having an intake duct communicating with the atmosphere, an intake chute passing through the expansion chamber to discharge material into the combustion chamber, and vents in the chute opening into the expansion chamber.

2,004,735
LOUD SPEAKER
Adolph A. Thomas, New York, N. Y., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application July 27, 1928, Serial No. 295,638
11 Claims. (Cl. 179—115.5)



1. In a telephone instrument, a magnetic frame having three polar limbs, a magnetic arm connecting the two outer limbs, said arm being formed at the center with a ring, the third limb constituting a central pole piece projecting into said ring to form an annular airgap, and a magnetizing coil mounted on said frame at right angles to said central pole piece.

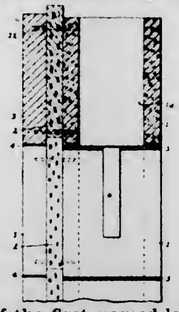
2,004,736
ELECTROSTATIC LOUD SPEAKER
Adolph A. Thomas, New York, N. Y., assignor to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application April 5, 1929, Serial No. 352,642
2 Claims. (Cl. 181—31)



1. An acoustic device, comprising in combination, a housing including a disc shaped member, a diaphragm, supporting members attached to said housing for supporting said diaphragm, and a grille mounted opposite said housing for protecting the diaphragm, supports for said grille, said supports for the grille being independent of the supports carrying the diaphragm.

2,004,737
WOOD HOG
Thomas Tonks, Saginaw, Mich., assignor to Tonks Manufacturing Company, Saginaw, Mich., a corporation of Michigan
Application November 17, 1930, Serial No. 496,243
2 Claims. (Cl. 83—6)

1. In a device of the class described, a rotary cutter head, a plurality of cutter elements carried by said head, an annular hopper member surrounding said cutter head, said hopper member having circumferentially disposed vertically extending slots, baffle plates mounted exteriorly of said hopper member and extending through said slots to the interior of said hopper member, and means for adjustably mounting said baffle plates whereby they may be adjusted toward and from said cutter elements.



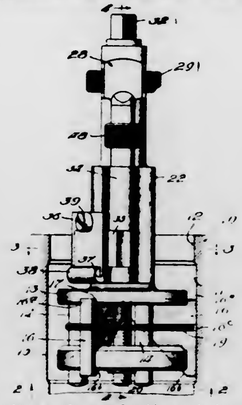
2,004,738
ADJUSTABLE STOP PIN FOR ROUTERS
Charles L. White, Thomasville, N. C., and Gustave T. Johnson, Beloit, Wis., assignors to Yates-American Machine Company, Beloit, Wis., a corporation of Delaware
Application December 23, 1933, Serial No. 703,698
5 Claims. (Cl. 144—145)

1. In a wood working machine, the combination with a work-supporting table, and a shaping cutter above the table, of a disk rotatably mounted in an aperture in the table, a pin movable radially of the disk, and means for locking the pin and disk against movement in any position of adjustment.

2,004,739
BUILDING CONSTRUCTION
George E. Whritenour, Sloatsburg, N. Y.
Application November 24, 1934, Serial No. 754,551
8 Claims. (Cl. 72—41)

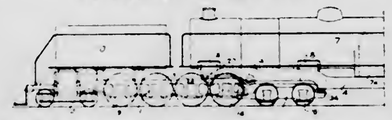
1. A wall construction including an upright wall-layer itself including superposed courses of relatively non-compressible load-bearing sections and an upright wall-layer of superposed courses of compressible sections, each section of the second-named layer being rigidly connected

to a section of the first-named layer and held in a state of compression by the load of the load-bearing sections.



2,004,740
SPRING-MOUNTED CYCLE HUB WITH BRAKE
Franz Winkler, Schweinfurt, Germany
Application November 19, 1932, Serial No. 643,308
In Germany November 20, 1931
5 Claims. (Cl. 188—26)

1. In a vehicle wheel construction of the class described, an axle, a bearing member eccentrically mounted on said axle, a hub shell rotatable upon said bearing member, a brake drum connected to said hub shell, brake shoes carried by said bearing member, a brake applying lever pivotally supported on said bearing member at a point spaced from the axis of said shell, and extending substantially radially with respect to said hub shell, and a cable extending substantially radially with respect to said hub shell and connected to the free end of said lever near the axis of said hub shell for operating said lever.

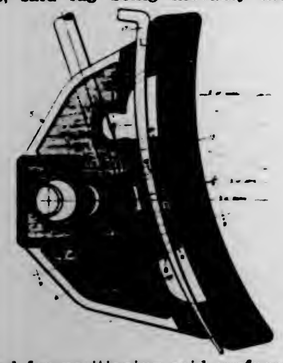


2,004,741
CYLINDER RIDGE REAMER
Herman W. Zimmerman, Chicago, Ill., assignor to Automotive Maintenance Machinery Co., Chicago, Ill., a corporation of Illinois
Application July 16, 1932, Serial No. 622,918
9 Claims. (Cl. 77—2)

6. In a portable device for removing the ridge of a worn cylinder, in combination: a support unit insertable into the cylinder including a plurality of radially movable parts, means for adjusting said parts into engagement with the cylinder wall to fix said unit in said cylinder and a bearing on the upper portion of said unit; a member operatively connected to said adjusting means and extending through and above said bearing, said member being provided with actuating means adjacent its upper end; a cutter unit comprising a body journalled on said bearing and extending above and substantially enclosing the extending portion of said member, said body being formed with a lateral opening to give access to said actuating means whereby the support unit may be fixed in the cylinder with said units assembled; a radially adjustable cutting blade carried by the cutting unit; and a spring pressed ball member carried by said

cutting unit and projecting into an annular groove in said bearing whereby said units are releasably held against axial separation and relative rotation therebetween is frictionally retarded.

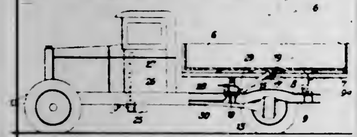
2,004,742
LOCOMOTIVE CONSTRUCTION
Edwin W. Albers, Schenectady, N. Y.
Application May 19, 1933, Serial No. 671,812
20 Claims. (Cl. 105—172)



1. A locomotive comprising a superstructure having a supporting frame; a driving truck having a frame; a non-tractive-and-non-buffing-force-transmission connection permitting relative pivotal movement and preventing relative lateral movement, of said frames at said connection and serving to transmit load of said superstructure to said truck; and a rigid bar flexibly connected at its opposite ends with said supporting frame and said truck frame respectively, said bar serving as a tension member to transmit all tractive and buffing forces transmitted between said frames which are applied in one direction and as a compression member serving to transmit all tractive and buffing forces transmitted between said frames which are applied in the opposite direction.

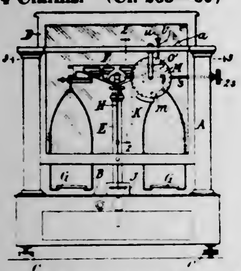
12. A locomotive comprising a superstructure having a supporting frame; a driving truck having a frame flexibly connected with and supportingly engaging said supporting frame; and a truck at one end of said driving truck frame having a frame flexibly and supportingly engaging said supporting frame and flexibly and supportingly engaging said driving truck frame.

2,004,743
BRAKE HEAD
Harley E. Anderson, Chicago, Ill., assignor of one-half to John H. Sharp, Chicago, Ill.
Application January 2, 1935, Serial No. 45
13 Claims. (Cl. 188—236)



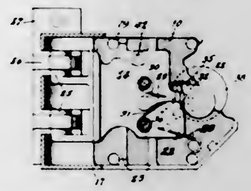
1. An article of the class described comprising a brake head, and a brake-shoe supporting

lug having a plurality of brake shoe supporting surfaces, said lug being movably mounted on



said head for positioning said surfaces in brake shoe supporting position.

2,004,744
HYDRAULIC REAR TIPPER FOR FAST DELIVERY VANS
Otto Ballert, Berlin, Germany
Application June 10, 1932, Serial No. 616,397
In Germany October 13, 1931
2 Claims. (Cl. 298—22)



1. In a fast delivery vehicle, a chassis, a body tippable about a transverse journal connecting the chassis and body, an obliquely placed hydraulic hoist comprising a piston and cylinder, joined to the chassis at its cylinder end and to the body at its piston end, the connection between said cylinder and chassis including ball and socket joint elements and a bolt connecting the elements of said joint, there being sufficient clearance between said bolt and one of said elements to permit limited lateral displacement of one of said elements with respect to the other.

2,004,745
BALANCE OR WEIGHING SCALE
Christopher A. Becker, Nutley, N. J., assignor to The Torsion Balance Company, New York, N. Y., a corporation of New York
Application June 5, 1934, Serial No. 729,100
4 Claims. (Cl. 265—60)

1. A scale or balance comprising a scale beam, a movable chain carrier, and a weighing chain suspended at one end from the beam and at its other end from the movable carrier, the points of suspension of the chain, which determine the catenary curve which the chain will assume for any particular effective length of chain, lying in a common, substantially horizontal plane.

2,004,746
LOCK
Peter Boyko, Bronx, N. Y.
Application March 23, 1932, Serial No. 600,588
1 Claim. (Cl. 70—14)

A lock including a casing in the form of a hollow box open at its inner side, said box provided on the inner side of its bottom with integral guide bars and with an integral bolt stop, a bolt slidably mounted in the guide bars and provided with projecting fingers, a bolt spring acting on the bar and urging it towards said stop, a manually actuated bolt shifting knob mounted for rotary movement in and extending through the bottom of the box and provided with a lever adapted to engage the bolt for moving it into its open position against the tension of said spring, a pointed end lever pivotally mounted on the side of the bolt facing the open side of the box and constituting a thrust member, a pair of studs positioned on opposite sides of the axis of rotation of the lever, a pair of balancing springs with one end of each coiled about one of the studs and having their free ends bearing on opposite sides of the thrust lever, a cover plate for closing the open side of the box, a notched end lever provided with a hub journalled for rotary movement about a fixed axis in the cover plate, said hub provided with a slot adapted to receive a spacing bar of a tumbler lock, said lever extending across the inner side of the cover plate and removable bodily therewith without affecting the bolt and its associated parts carried by the box, the free end of said lever provided with an angularly disposed notch higher on one side than on the other to form a shoulder and disposed when the lever is rotated in one direction to bear on the thrust lever and move past the same and when moved in the opposite direction to cause the end of the thrust member to engage in said recess and when reverse therefrom to engage said shoulder to shift the bolt into its open position and against the tension of the bolt spring.

2,004,747
MANUFACTURE OF GOLD INLAYS
John A. Daly, New Rochelle, N. Y.
Application May 15, 1931, Serial No. 537,622
8 Claims. (Cl. 32—16)

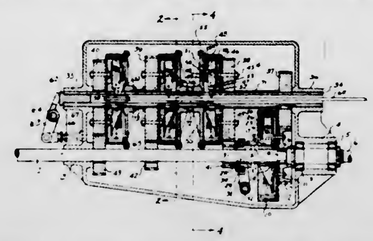
1. A pure gold inlay comprising a porous, felted mass of gold foil, substantially as described.

2. The method of making inlay material comprising brushing pure gold foil over a plurality of openings whereby to roughly puncture said foil and provide a multitude of dictinctly jagged corners and edges projecting from the surface

of said foil of such character whereby to provide means to felt a plurality of said sheets together.

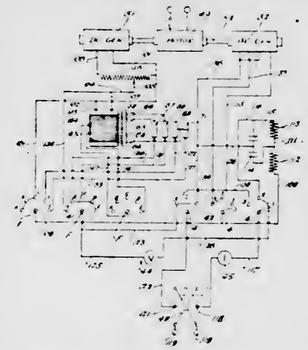
2,004,748
VEHICLE
Hugh Joseph Dillon, Detroit, Mich.
Application September 18, 1933, Serial No. 689,805
15 Claims. (Cl. 180—54)

1. In a vehicle, the combination of a single driving axle assembly suitably mounted, said driving axle assembly being provided with a pair of driving gear mechanisms each having a different driving speed ratio than the other of said driving gear mechanisms, a pair of engine assemblies suitably mounted, one of said engine assemblies only being operatively connected with each of said driving gear mechanisms of said single driving axle, and means for controlling each of said engine assemblies to operate at a different speed from the other of said engine assemblies when the vehicle is being driven in a straight ahead direction.



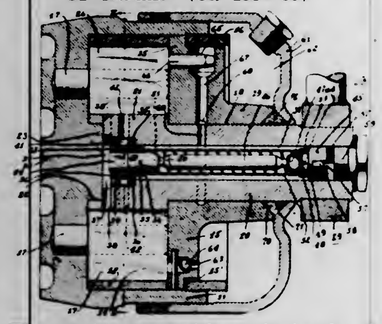
2,004,749
VEHICLE
Hugh Joseph Dillon, Highland Park, Mich.
Application October 23, 1933, Serial No. 694,835
15 Claims. (Cl. 180—44)

1. In a vehicle, the combination of a front steering driving axle having a driving gear reduction mechanism, a rear driving axle having a driving gear reduction mechanism of different ratio than said front steering driving axle, a pair of power plants operatively connected with said driving axles, and means for controlling each of said power plants to operate simultaneously at a different rate of speed relative to the other of said power plants.



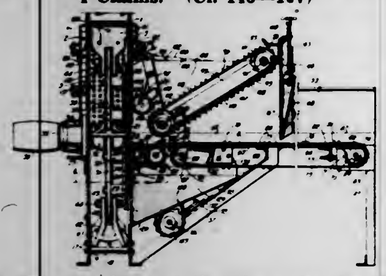
2,004,750
CLUTCH DEVICE FOR VARIABLE SPEED TRANSMISSION MECHANISM
John Eckhard, Cincinnati, Ohio
Application December 29, 1931, Serial No. 583,721
7 Claims. (Cl. 192—76)

1. A clutch for clutching together a shaft and an element rotatable on the shaft, comprising a shell connected to the element, a carrier connected to the shaft and having radial guides, shoes guided by the guides to and from the interior of the shell, means movable on the shaft,



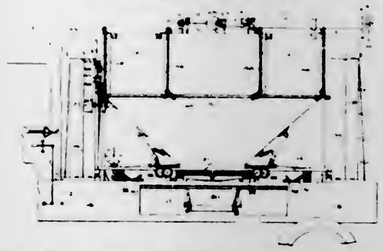
means to transmit movement of said means to the shoes for pressing the shoes to the shell, and means holding the shoes to the guides, movable by the hands without the use of tools, to permit removal of the shoes from the guides.

2,004,751
LOW VOLTAGE GENERATOR
Herman G. Fischer, Peter P. Musket, and Donald E. Richardson, Chicago, Ill., assignors to H. G. Fischer & Company, Chicago, Ill., a corporation of Illinois
Application March 23, 1931, Serial No. 524,530
9 Claims. (Cl. 171—97)



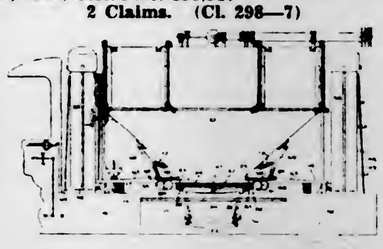
6. An apparatus for generating current of wave form for use in electro-physiotherapy and for other uses, including an aggregate consisting of an alined motor, direct current generator and alternating current generator, a commutator having a plurality of axially alined electrically insulated rings, said commutator being rotated by said motor, a plurality of brushes severally conductively connected with said rings and also rotated by said motor, a plurality of alined resistance bars over which said brushes travel while successively engaging different bars, the resistance elements being connected with said direct current generator, a plurality of switches interposed between said direct current generator, and some of said brushes, and adapted to vary the electric connection between said commutator rings and said generator, and another plurality of switches interposed between said alternating current generator and said first named switches additionally to vary the relation of said brushes to said resistances and to superimpose an alternating current of selectively variable form upon the direct current of selectively variable form.

2,004,752
HYDRAULIC SHOCK ABSORBER
Merritt L. Fox, Buffalo, N. Y., and Fred E. Ullery, South Bend, Ind.; said Fox assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application June 16, 1932, Serial No. 617,614
31 Claims. (Cl. 188—89)



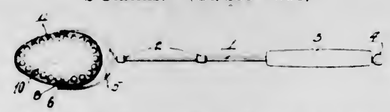
1. The combination with an hydraulic shock absorber having a by-passage for the discharge of fluid under pressure, of a regulating valve structure for controlling the discharge of fluid through said by-passage and including an adjustable head at one end, a rotary valve plug at its opposite end, and a stem having universal coupling connections at its ends with said head and said plug respectively.

2,004,753
COMBINATION CUTTING AND GRINDING MILL
Otto N. Gredell, Kansas City, Mo., assignor to Standard Steel Works, North Kansas City, Mo., a corporation of Missouri
Application March 12, 1932, Serial No. 598,407
4 Claims. (Cl. 146—107)



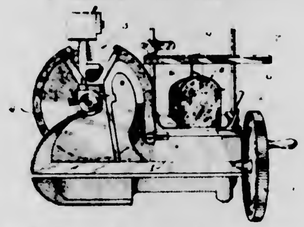
1. In a machine of the character described, a casing having substantially vertically spaced openings therein for admitting forage and grain respectively, a rotor in the housing for reducing the material delivered through said openings, a conveyor supported in feeding relation with said openings for delivering forage material directly to the upper opening, a hopper supported below the conveyor and in covering relation with the lower opening having an inclined bottom sloping downwardly and laterally toward said opening so that grain discharged from the conveyor is delivered by the hopper in the direction of rotation of said rotor to prevent rotation of the rotor from interfering with the delivery of the grain, and an inverted trough shaped baffle member fixed to the bottom of said hopper for stopping and diverting air blasts generated by said rotor to prevent their interference with the grain delivery into the casing.

2,004,754
DUMP WAGON
Theodore C. Harvey, Philadelphia, Pa.
Original application February 8, 1933, Serial No. 655,744. Divided and this application October 14, 1933, Serial No. 693,545
5 Claims. (Cl. 298—8)



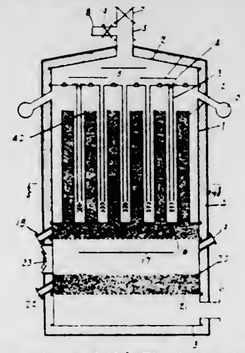
1. A dump wagon of the character described comprising, in combination, a main body constituting the load receptacle and being provided in the bottom thereof with a discharge opening, a vertically extending post within said main body, said post being provided with a plurality of circumferentially spaced vertically extending grooves, and a plurality of removable partition members arranged within said main body with the inner vertical edges of said partition members respectively slidably received within said grooves of said post, said partition members being relatively so arranged with respect to each other and with respect to said main body as to provide the latter with a plurality of independent compartments having discharge openings which respectively constitute portions of the bottom opening in said main body.

2,004,755
DUMP WAGON
Theodore C. Harvey, Philadelphia, Pa.
Original application February 8, 1933, Serial No. 655,744. Divided and this application October 14, 1933, Serial No. 693,547
2 Claims. (Cl. 298—7)



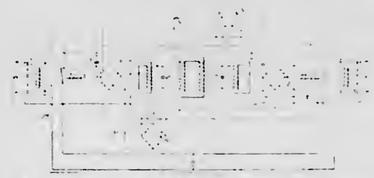
1. A dump wagon of the character described comprising, in combination, a main body constituting the load receptacle, said main body being provided with a bottom discharge opening, a supporting platform for said main body, said platform being adapted for vertical movement whereby to raise or lower said main body, a revoluble chute discharge member operatively associated with said main body and disposed immediately beneath the bottom discharge opening thereof, said chute discharge member being provided with a radially extending chute extension, a circular rack secured to the peripheral edge of the body of said chute discharge member, a laterally extending shaft journalled in said platform and having a worm gear in mesh with said circular rack for effecting the rotation thereof in one direction or another, said laterally extending shaft being extended outwardly beyond one side edge of said plaform and provided at the outer extremity thereof with a bevel gear, a vertically extending shaft journalled upon the side of said main body, a bevel gear carried by said vertical shaft and arranged for slidable movement therealong but fixed against rotation with respect thereto, said last-mentioned bevel gear being in mesh with said first-mentioned bevel gear, and means for rotating the said vertical shaft in one direction or another whereby to effect the rotation of said revoluble chute member in one direction or another, said bevel gears being maintained in meshed engagement with each other throughout the vertical movement of said platform and the main body supported thereby.

2,004,756
SPOON
Margaret Hess, Morocco, Ind.
Application August 27, 1934, Serial No. 741,719
2 Claims. (Cl. 259—144)



1. A spoon for mixing, draining and stirring and adapted to be revolved through a circle with respect to its transverse axis, said spoon comprising an elongated and apertured spoon-shaped body having a concave face and a convex back and having a pair of oppositely disposed lugs extending downwardly from its rim and intermediate the ends of the spoon, and a handle including a pair of spaced-apart and bent forks having their ends pivotally connected to said lugs, said forks being spaced so that said spoon is adapted to revolve through a circle therebetween.

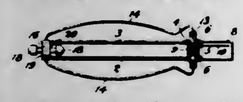
2,004,757
MEAT HOLDER
Robert L. Ingram and Herbert P. Adler, Chicago, Ill., assignors to Industrial Patents Corporation, Chicago, Ill., a corporation of Delaware
Application September 3, 1932, Serial No. 631,674
5 Claims. (Cl. 146—217)



1. A meat slicing machine comprising in combination a frame, a table for supporting and holding the meat while being sliced, upright standards on said table, a meat cutting element, means for effecting relatively transverse reciprocatory movement between the meat cutting element on the one hand and said table on the other hand, whereby a cutting operation can be carried out on meat while supported on and by said table, and means for effecting longitudinal feed of the table in accordance with the periodic relative movement between the cutter and the table, said slicing machine being characterized in that it has employed in conjunction with said upright standards on the table a transversely extending vertically positionable carrying bar from which there is pivotally supported a gripping and holding plate, which plate in transverse cross section on the underside thereof is concave but has straight, longitudinally extending elements, and which plate has holes bored therein so as to provide a perforated gripping surface on the underside thereof.

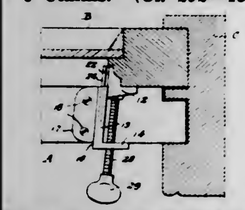
2,004,758
CATALYTIC APPARATUS
Alphons O. Jaeger, Crafton, Pa., assignor, by mesne assignments, to American Cyanamid & Chemical Corporation, a corporation of Delaware
Application December 2, 1927, Serial No. 237,212
4 Claims. (Cl. 23—288)

1. In converters of the Tentelew type in which the catalyst is contained in vertical tubes mounted at the bottom ends in a tube sheet, the improvements which comprise means for causing at least part of the reaction gases entering the converter to flow substantially parallel to the catalyst tubes in indirect heat exchanging relation thereto, and means for causing the reaction gases to thereafter reverse their flow and contact with the exterior walls of the catalyst tubes.



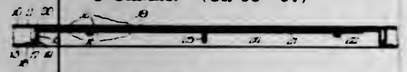
2,004,759
RINGING REPEATER
Alfred T. Jester, Houston, Tex.
Application July 12, 1934, Serial No. 734,821
4 Claims. (Cl. 179—84)

1. A ringing repeater circuit for telephone lines comprising a repeating coil interconnecting two transmission lines, means to supply ringing alternating current to either side of said coil, a relay for each line controlling the connection of said coil to the transmission lines, a local source of current for said relays, and means actuated by the alternating current supplied to one side of said repeating coil to connect said local source of current to the relay



controlling connection of the other side of said coil to its transmission line, said means comprising direct current relays controlling completion of the local circuit through said relays, and rectifiers receiving current from said repeating coil and supplying current to said last named relays.

2,004,760
HAIR CURLER
Harry H. Klein, New York, N. Y.
Application January 7, 1935, Serial No. 713
7 Claims. (Cl. 132—41)



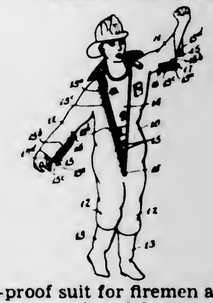
1. A hair curler having the combination of a hair winding bar, a hair gripping arm hinged to said bar, a hair retaining band, a framing pivoted to said band, and said bar and arm being mounted to rotate within said framing.

2,004,761
LOCKING DEVICE
Gregory Laput, Brooklyn, N. Y.
Application September 13, 1934, Serial No. 743,803
6 Claims. (Cl. 292—155)

1. A lock for sliding window sashes including a base member adapted to be fixedly mounted upon the upper rail of the inner sash, a slide member carried by the base for guided sliding movement diagonally of said sash rail having a head conforming to and adapted to engage with the inner vertical corner of the outer sash for exerting a thrust diagonally of the two sashes to cause said sashes to bind in opposite vertical corners of the window frame.

2,004,762
SASH VENTILATOR
Carl H. Larson, Elkhart, Ind., assignor to The Adlake Company, Elkhart, Ind., a corporation of Illinois
Application September 22, 1930, Serial No. 483,407
3 Claims. (Cl. 98—97)

1. In a sash ventilator, the combination with a hollow sheet metal sash rail which is provided in its outer wall with a group of apertures and in its inner wall with a relatively large opening in opposition to the group of apertures, of a sheet metal frame which is set into the rail substantially flush with the opening in the inner wall in substantially contiguous association with the apertured portion of the outer wall, a screen positioned between the frame and the apertured portion of the outer wall, and a ventilating slide which is carried by the frame and is provided with a group of apertures for movement into and out of register with the apertures in the outer wall of the rail.



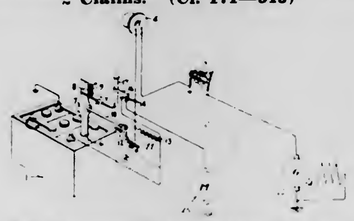
2,004,763
N (p-AMINO-PHENYL) MORPHOLINE AND METHOD OF PREPARING THE SAME
Herbert A. Lubs, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 11, 1932, Serial No. 616,745
6 Claims. (Cl. 260—28)

1. The process of producing N(para-aminophenyl) morpholine which comprises treating a solution of a member of the group consisting of N(p-nitroso-phenyl) morpholine and N(p-nitrophenyl) morpholine in a non-oxidizing acid with a metal such as will react with the acid to liberate free hydrogen.

2,004,764
PREPARATION OF N(p-AMINO-PHENYL) MORPHOLINE
Herbert A. Lubs and George Clifford Strouse, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 14, 1932, Serial No. 617,244
15 Claims. (Cl. 260—28)

1. The method of preparing N(p-amino-phenyl) morpholine which comprises adding N(p-nitroso-phenyl) morpholine hydrochloride to an aqueous solution of a sulfide of an alkali metal.

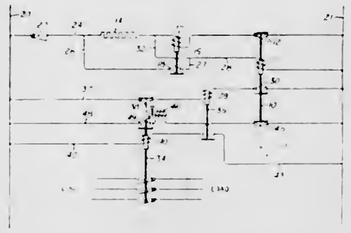
2,004,765
WATERPROOF SUIT FOR FIREMEN AND OTHERS
Frederick G. Molter, Hempstead, N. Y.
Application June 27, 1934, Serial No. 732,609
1 Claim. (Cl. 2—82)



A water-proof suit for firemen and others, comprising water-proof and heat-proof material in the form of a suit having a body portion, arm portions, leg portions and boot portions all connected to an integral unit, said body portion being formed with an opening extending down from the neck at the front to the vicinity of the crotch, said arm portions being formed with openings extending in from the free ends thereof, and means for holding each of said openings closed, comprising hook fasteners along the edges of said opening and a control slide for engaging and disengaging said hooks from each other, and shield strips behind said openings permanently attached along one of their edges upon the material of the suit on one side of the openings and detachably connected with the material of the suit on the other sides of the openings, each detachable connection comprising a snap device formed from wires so as to be flexible and adapted to have two parts coacting, one attached permanently upon the shield strip and the other part permanently attached upon the material of the suit.

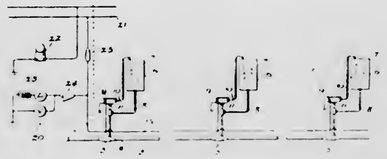
2,004,766
NECKTIE LINING
Barney R. Nyhagen, Bronx, N. Y.
Application December 14, 1933, Serial No. 702,295
1 Claim. (Cl. 2—146)

A necktie comprising a tubular body portion and a lining of an elongated strip of inherently flexible and resilient material interposed within the tubular body portion and having openings of relatively different sizes substantially throughout the effective length thereof, said openings being grouped at different areas of the lining in relatively different spacing, those at the knot forming portion being less closely grouped so as to provide a greater degree of resiliency at the knot forming portion of the tie and portions of greater flexibility in other parts of the lining.



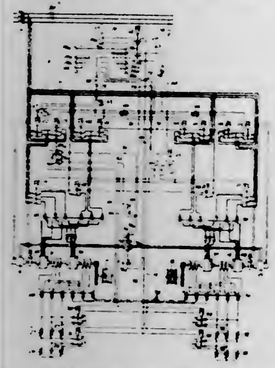
2,004,767
BATTERY CHARGING SYSTEM
David C. Prince, Swarthmore, Pa., assignor to General Electric Company, a corporation of New York
Application June 8, 1932, Serial No. 616,051
2 Claims. (Cl. 171—313)

1. In an automobile, a storage battery, a charging generator connected to charge said battery, a pressure operated switch arranged to reduce the charging rate of said battery when the pressure on said switch produced by gassing of said battery exceeds a predetermined value, a starter motor, a starter switch for connecting said starter motor to said battery, and means operated by said starter switch for releasing the gas pressure on said pressure operated switch.



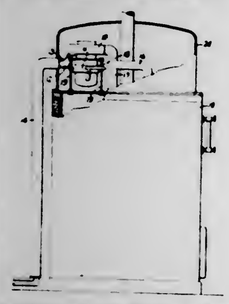
2,004,768
PROTECTIVE SYSTEM
Raemon C. Samuels, Philadelphia, Pa., assignor to General Electric Company, a corporation of New York
Application October 13, 1932, Serial No. 637,624
5 Claims. (Cl. 175—294)

1. In combination, a switch provided with an operating coil, a holding resistor, connections for connecting said resistor in series with said coil thereby to limit the current flow through said coil to a predetermined value, an operating circuit for increasing the energization of said coil, and means for preventing repeated operation of said



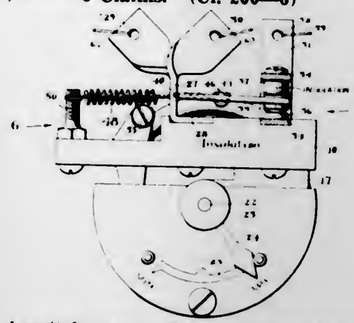
switch in case of failure of said resistor comprising a relay having its operating coil connected in series with said resistor, and connections for connecting said relay in said operating circuit so that the completion of said operating circuit depends upon the operation of said relay.

2,004,769
MEANS FOR AND METHOD OF DETECTING AND ASCERTAINING THE REGION OF OIL LEAKS IN CABLE SYSTEMS
George B. Shanklin, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 6, 1929, Serial No. 390,819
2 Claims. (Cl. 177—311)



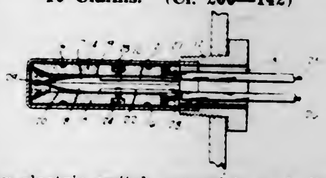
1. A cable system comprising lengths of cable, each having a sheath and filled with liquid insulation, joints at spaced intervals for permanently uniting the lengths of cable, liquid containing reservoirs connected through the joints to the cable to supply liquid to and receive it from the cable, each reservoir comprising a casing element having a chamber containing gas and a variable capacity element receiving liquid from the cable, in combination with means for indicating an abnormal operating condition of the cable without interrupting its operation comprising a differential device associated with each of the reservoirs, each device comprising a casing element having a chamber connected to the gas chamber of a reservoir and a member one side of which is exposed to the action of the gas and the other side to the action of the liquid insulation within the cable, stationary and movable contacts located within the gas chamber, means moved by the member for actuating the movable contact, a signal circuit including the contacts of all of the differential devices and connected to a source of current supply, and means located at a selected point comprising a signal device actuated by the current flowing in the signal circuit when the circuit of the latter is closed at one of said devices.

2,004,770
BRIDGE CONTROL SYSTEM
Joseph A. Setter, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application May 11, 1933, Serial No. 670,476
11 Claims. (Cl. 172—293)



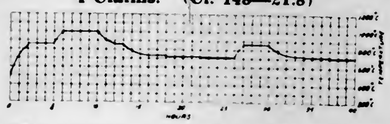
1. A control system for providing synchronous operation of a plurality of devices, comprising a plurality of driving motors, a plurality of polyphase synchronizing motors each connected to a different driving motor, means for starting said driving motors, and means responsive to operation of said starting means for supplying single phase power to said synchronizing motors prior to energization of said driving motors.

2,004,771
OIL BURNER
Alexander R. Stevenson, Jr., Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application February 28, 1931, Serial No. 519,200
1 Claim. (Cl. 158—1)



In combination, an oil furnace having an electric motor driven blower pump unit mounted upon the top thereof for supplying air and oil thereto, a casing mounted upon the top of said furnace and forming therewith a closed housing surrounding said unit with the blower intake opening into the interior of said housing to reduce the pressure therein below atmospheric and exhaust oil vapors and fumes therefrom, and an inlet for said casing comprising a tubular air duct of restricted cross section extending downwardly from said casing and opening adjacent the base of said furnace whereby air is admitted to the casing and the operating noise of said unit is substantially suppressed.

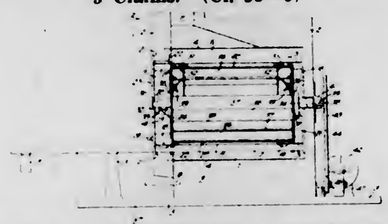
2,004,772
ELECTRIC SWITCH
Fred W. Sonn, Pottstown, Pa.
Application January 10, 1934, Serial No. 706,005
6 Claims. (Cl. 200—6)



6. A switch organization comprising a Bourdon tube, a base block pivoted relative to the Bourdon tube, a plurality of cooperating switch arms fulcrumed upon the base, springs positioned to exert tension across and normally upon one side of the fulcrum, a finger carried by the Bourdon tube positioned to exert pressure laterally and successively upon the springs tending to shift the tensions successively across to the opposite sides of the fulcrums, and means to tilt the base upon its pivot to bring the finger into action at different positions of the tube.

2,004,773
ELECTRIC SWITCH
Fred William Sonn, Pottstown, Pa.
Application September 10, 1934, Serial No. 743,447
10 Claims. (Cl. 200—142)

1. An electric switch comprising a hollow substantially cylindrical body of insulating material formed in opposed segments, a switch contact part carried by each of the opposed segments, means tending to separate the switch parts, and an easily fused material holding the contact parts in connection.

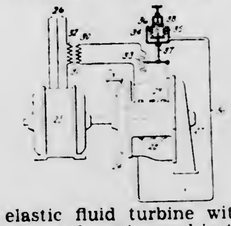


2,004,774
SHORT CYCLE ANNEAL OF MALLEABLE IRON
Irving R. Valentine, Erie, Pa., assignor to General Electric Company, a corporation of New York
Application March 21, 1930, Serial No. 437,823
4 Claims. (Cl. 148—21.8)

1. The method of making malleable cast iron which comprises the following steps: heating white cast iron at a temperature materially higher than 750° C. but not materially higher than 1000° C., cooling the casting gradually and in a few hours to a temperature lower than 750° C. but higher than 675° C., maintaining the casting at said last mentioned temperature for about twelve hours, again heating the casting to a temperature materially higher than 750° C. but not materially higher than 1000° C. and then cooling the casting to a temperature zone having an upper limit of 750° C. and a lower limit of 675° C., and maintaining the casting in said temperature zone for several hours, the duration of said steps being approximately 40 hours.

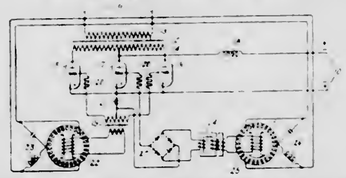
2. The method of cooling a casting from an elevated temperature to a lower temperature which comprises placing the casting in a furnace heated to said lower temperature and alternately removing the casting from the furnace and reinserting it in the furnace until the casting has reached substantially the temperature of the furnace.

2,004,775
APPARATUS FOR COOKING MATERIAL
Vincent Wright, Alameda, Calif.
Application June 16, 1931, Serial No. 544,857
5 Claims. (Cl. 53—6)



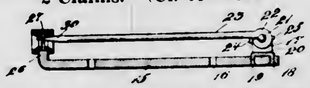
1. In a cooking apparatus, a cylinder, means for rotatably mounting said cylinder to turn about a horizontal axis, internal ribs extending longitudinally of said cylinder and projecting radially from walls thereof in spaced relation to each other circumferentially of the cylinder and flanges extending along free side edges of said ribs whereby material placed within the cylinder will be held in spaced relation to its walls and the flanged ribs serve to carry basting fluid upwardly from the lower portion of the cylinder and dump the fluid at the upper portion thereof during rotation of the cylinder.

2,004,776
AUTOMATIC CONTROL EQUIPMENT
Herman Bany, Lansdowne, Pa., assignor to General Electric Company, a corporation of New York
Application May 26, 1934, Serial No. 727,708
12 Claims. (Cl. 171—118)



1. In combination, an alternating current circuit, a synchronous machine disconnected from said circuit, means for driving said machine at approximately synchronous speed, means for rotating the stator of said machine relative to the rotor thereof, and means controlled by the phase relation between the voltages of said circuit and machine for controlling the operation of said stator rotating means and the connection of said machine to said circuit.

2,004,777
ELASTIC FLUID TURBINE
Kurt Bassler, Berlin, Germany, assignor to General Electric Company, a corporation of New York
Application February 1, 1934, Serial No. 709,338
In Germany May 27, 1933
3 Claims. (Cl. 290—2)

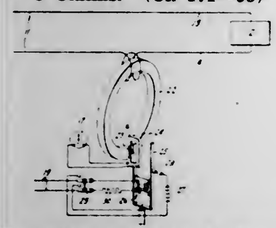


1. In an elastic fluid turbine with a casing having heavy flanged portions subject to different varying temperatures, means for externally heating the casing comprising resistances provided in recesses of the flanges, and a source of electric energy for supplying current to the resistances in accordance with the load on the turbine.

2,004,778
ELECTRIC VALVE CONVERTING APPARATUS
Burnice D. Bedford, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York
Application September 14, 1932, Serial No. 633,141
9 Claims. (Cl. 172—281)

9. In combination, an alternating current supply circuit, an alternating current load circuit, electric valve converting apparatus including a pair of inductive windings each provided with end terminals and an electrical neutral and an electric valve connected to each of said terminals and said neutrals and interconnecting said circuit through said windings, said valves associated with one winding being oppositely disposed with respect to one of said circuits from those associated with the other winding, and means for independently controlling the conductivity of said valves connected to said neutrals and said valves connected to said end terminals to control the relative voltages of said circuits.

2,004,779
FASTENING FOR JEWELRY
Thomas S. Bennett, North Attleboro, Mass.
Application July 20, 1933, Serial No. 681,298
2 Claims. (Cl. 24—160)



1. A safety catch comprising a keeper for the pin having a central opening, a locking member comprising a pair of ears on opposite sides of

said keeper, each ear provided with a tapered bearing trunnion extending into said opening for rotatably supporting said member on said keeper, and means connecting said ears together for movement in unison and serving as a handle for rotating said member.

2,004,780
ELECTRICAL MEASURING SYSTEM

Brian A. G. Churcher, Bowdon, England, assignor to General Electric Company, a corporation of New York

Application April 30, 1934, Serial No. 723,249
In Great Britain May 5, 1933
5 Claims. (Cl. 171—95)

1. Current-responsive apparatus comprising in combination, a current-conducting winding movable in the magnetic field produced by current to which the apparatus is intended to respond, means for vibrating said winding in said field, and means responsive to voltage produced in said winding.

2,004,781
INSULATING COMPOSITION FOR IMPREGNATING ELECTRICAL TAPE

Frank M. Clark and Ralph A. Ruscetta, Pittsfield, Mass., assignors to General Electric Company, a corporation of New York

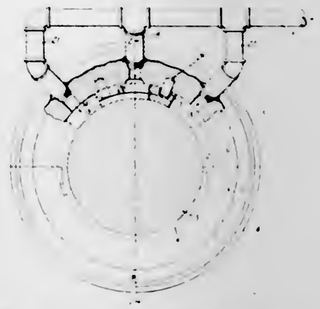
No Drawing. Application September 18, 1930, Serial No. 482,985
7 Claims. (Cl. 106—17)

1. A composition of matter containing a high melting wax in an amount about 40 to 50 per cent by weight and also containing substantial amounts both of rosin and non-drying fatty oil to produce an adhesive material suitable for use in insulating friction tape.

2,004,782
KITCHEN IMPLEMENT

Elizabeth J. Dean, St. Louis, Mo.

Application July 16, 1934, Serial No. 735,301
1 Claim. (Cl. 294—7)



An article of the character described comprising a central staff, a food supporting means attached to one end thereof, the other end of said staff being bent at right angles and provided with an eye, a handle consisting of a wire looped around the staff then bent downwardly forming gripping members, one end of one of the gripping members looped around the staff immediately above the right angular bend, the end of the other gripping member extending into the eye of the right angular bend, said gripping members when pressed together imparting motion to the staff and food supporting member.

2,004,783
SHAFT BEARING

John H. Doran, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

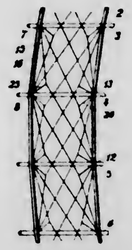
Application April 28, 1932, Serial No. 607,999
8 Claims. (Cl. 308—9)

1. The combination with a shaft and a bearing having a bearing surface fitting the shaft and a recess in the bearing surface facing the shaft opposite the load carrying region, of a member provided in the recess and being movable radially relative to the shaft, and means for supplying oil under pressure to force the movable member towards the shaft to reduce vibratory movement of the latter.

2,004,784
BUSHING

Bernard C. Evans, Fort Wayne, Ind., assignor to General Electric Company, a corporation of New York

Application December 13, 1933, Serial No. 702,185
2 Claims. (Cl. 22—202)

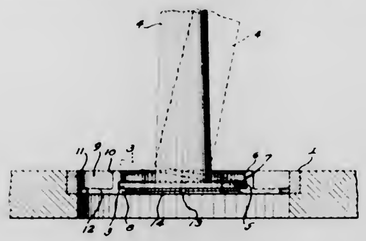


1. The method of securing a bushing in an opening in an electrical apparatus casing, said bushing having a shoulder adjacent the outer surface of the casing and a surface adjacent to and tapered at an acute angle with the inner surface of the casing, said method including the casting of an integral metal ring around said bushing and between said surfaces of the bushing and casing.

2,004,785
METHOD OF BRACING THE CIRCUMFERENCE OF GAS-INFLATED RIGID AIRSHIPS

Arthur Förster, Friedrichshafen, Bodensee, Germany, assignor to Luftschiffbau Zeppelin Gesellschaft mit beschränkter Haftung, Friedrichshafen, Bodensee, Germany

Application March 21, 1933, Serial No. 661,918
In Germany April 4, 1932
3 Claims. (Cl. 244—3)

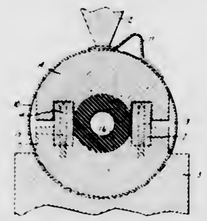


1. A rigid airship hull comprising a plurality of spaced longitudinal members, a plurality of spaced transverse members intersecting said longitudinal members, a plurality of bracing wires extending substantially diagonally between points of intersection of said longitudinal members with said transverse members and crossing without connecting thereto at least one of said longitudinal members, and tie wires leading from the intersections of said crossed longitudinal members with said transverse members and deflecting the bracing wires from straight connecting paths.

2,004,786
STAFF HOLDER

George E. Gaus, Washington, D. C., dedicated to the free use of the Public

Application September 20, 1934, Serial No. 744,755
1 Claim. (Cl. 248—38)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



A staff holder comprising a plate having a circular aperture and adapted to support a staff provided with a disc-like base, said plate including an upstanding outer flange, the inner wall thereof being concentric with the wall of the aperture, an annular rib spaced inwardly from the flange and concentric therewith, said plate having radially disposed slots extending through the wall of the aperture and rib and terminating adjacent the flange to provide a plurality of radially disposed flexible portions.

2,004,787
MANDREL

Robert T. Gillette, Scotia, N. Y., assignor to General Electric Company, a corporation of New York

Application December 1, 1934, Serial No. 755,644
7 Claims. (Cl. 219—4)

1. A mandrel comprising a plurality of electrically conductive work supporting members, electrically conductive means forming a freely sliding connection between said members and expanding means acting when expanded to force said work supporting members against the work and to tighten the freely sliding connection between said electrically conductive means and said work supporting members.

2,004,788
SPRAY MATERIAL

Edmund L. Green, Washington, D. C., dedicated to the free use of the Government and the People of the United States

No Drawing. Application September 16, 1932, Serial No. 633,463
2 Claims. (Cl. 167—42)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

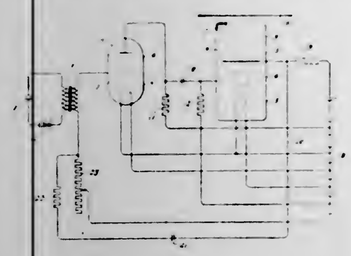
1. A flocculated bentonite characterized by failure to swell or disperse in water.

2,004,789
ACTIVE OR TOXIC SPRAY MATERIAL

Edmund L. Green, Washington, D. C., dedicated to the free use of the Government and the People of the United States

No Drawing. Application September 16, 1932, Serial No. 633,464
1 Claim. (Cl. 167—16)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

A plant spray, comprising copper silicate and lime.



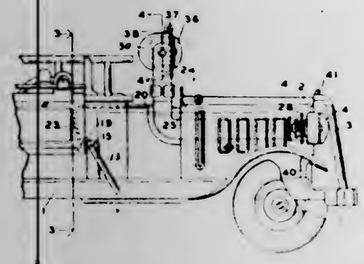
2,004,790
ELECTRON DISCHARGE DEVICE

Friedrich W. Hehlgans, Berlin-Hermsdorf, Germany, assignor to General Electric Company, a corporation of New York

Application May 11, 1933, Serial No. 670,556
In Germany May 27, 1932
5 Claims. (Cl. 179—100.3)

1. In combination, a cathode-ray tube for translating electrical impulses into light rays, said tube including a cathode, an anode, an electrostatic control member and a screen adapted to fluoresce when struck by electrons, energy supply circuits for the electrodes, a source of electrical impulses connected to said control member, and means for transferring electrical energy from the anode of said tube to the control member, said means including an electrical coupling be-

tween said anode and control member, whereby control of the electrons through the tube and the



variations in intensity of the light spot on the fluorescent screen are enhanced.

2,004,791

HEADLIGHT AND SPOTLIGHT DEVICE FOR TOY VEHICLES

Alfred C. Korte, St. Louis, Mo., assignor to Metalcraft Corporation, St. Louis, Mo., a corporation of Missouri

Application April 22, 1933, Serial No. 667,451
7 Claims. (Cl. 240—7.1)

1. A spotlight comprising a pair of supporting brackets, said brackets being firmly joined together but electrically insulated from each other, corresponding ends of said bracket members being spread apart and provided with trunnions to receive a spotlight assembly therebetween, a spotlight assembly mounted on said trunnions, said assembly comprising an outer body member pivotally mounted on one of said trunnions, an inner body member pivotally moupted on the other of said trunnions, said outer and inner body members being electrically insulated from each other.

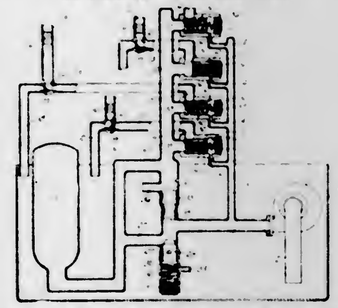
2,004,792

ELECTRIC SWITCHING

Orin P. McCarty, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York

Application June 23, 1933, Serial No. 677,200
11 Claims. (Cl. 171—119)

1. In apparatus for transferring a variable electric current having relatively high and low values from one point to another without interrupting the current, the combination of alternative electrical conducting paths for the current during the transfer, one of said paths having a positive volt-ampere characteristic and the other of said paths having a negative volt-ampere characteristic, said characteristics having an in-



tersection point at a current value intermediate said high and low values.

2,004,793

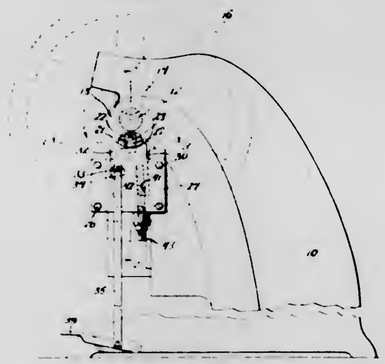
HYDRAULIC APPARATUS

Donald H. Montgomery, Berlin, Conn., assignor to The New Britain-Gridley Machine Company, New Britain, Conn., a corporation of Connecticut

Application January 29, 1931, Serial No. 511,950
23 Claims. (Cl. 103—42)

1. In an apparatus of the character described, a pump pressure chamber or passage, a pump for delivering liquid under pressure to said chamber, a variable accumulator, a port between said chamber and accumulator and through which said accumulator receives the liquid from said chamber, a port between said accumulator and chamber and through which said accumulator is adapted to discharge into said chamber, a pressure retaining valve for preventing liquid from flowing through said first mentioned port until a predetermined pressure is built up on the pump pressure side, means for closing said second mentioned port while the pressure on the pump pressure side is above that of the accumulator pressure side, an exhaust port for the system, and a relief valve for controlling said exhaust port and arranged to be moved to closed position by pressure on the pump pressure side and to be moved to open position by pressure on the accumulator side.

4. In an apparatus of the character described, a chamber, a pump for delivering liquid under pressure to said chamber, a variable accumulator, a pressure retaining valve for preventing fluid from flowing into said accumulator until a predetermined pressure is built up in said chamber by said pump, a plurality of passages adapted to be respectively associated with devices to be



actuated, and a plurality of check valves, one for each passage, each check valve in one position establishing communication between said chamber and the respective passage and in another position establishing communication between the accumulator and the respective passage, each check valve being moved to the latter position when the pressure normally tending to move the valve to the first position becomes less than the accumulator pressure.

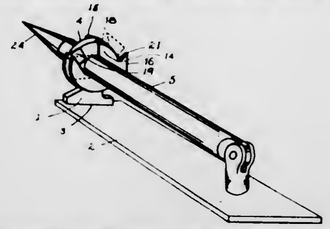
2,004,794

CLUTCH

Frederick E. Munschauer, Buffalo, N. Y., assignor to Niagara Machine & Tool Works, Buffalo, N. Y., a corporation of New York

Application November 15, 1934, Serial No. 753,175
7 Claims. (Cl. 192—25)

1. A clutch of the character described, comprising concentric driving and driven members, an eccentric arm on said driven member, a coupling member at the outer end of said arm and movable into coupling relation with said driving member and retractable therefrom, a loosely guided cam plate arranged crosswise of the axis of said driven member and having a cam face along one side adapted to engage and retract said coupling member, a stop arranged at one side of said cam plate and limiting its movement toward said coupling member, a spring reacting against the opposite side of said cam plate, said spring urging said cam plate toward said coupling member and cooperating with said stop to continue the retraction of said coupling member after the driving connection between said driving and coupling members has been broken and thereby provide a clearance between said coupling member and said driving member and means for retracting said cam plate, the edge of said cam plate adjacent its cam surface having substantially the same curvature as the path of rotation of said coupling member.



2,004,795

SAFETY CATCH

Clarence S. Oakey, Oriskany, N. Y., assignor of one-half to Samuel McL. Birch, Clinton, N. Y.

Application July 17, 1934, Serial No. 735,641
4 Claims. (Cl. 24—160)

1. In a safety catch, a post member having an open aperture therein, a rock member mounted on said post member, said rock member formed with duplicate parts having laterally extending shoulders that fit within the open aperture of said first named member, whereby to form a bear-

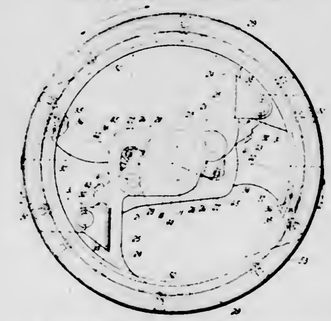
ing and means for holding said members in given relation to each other.

2,004,796

METHOD OF CLEANING FILTER SCREENS

Elmer H. Payne, Wood River, Ill., assignor to Standard Oil Company (Indiana), Chicago, Ill., a corporation of Indiana

No Drawing. Application December 14, 1933, Serial No. 702,361
7 Claims. (Cl. 210—62)



1. A method of cleaning an incombustible filter screen employed in the filtration of tarry material containing combustible binding ingredients which comprises baking the screen to a temperature sufficient to decompose the combustible binder.

2,004,797

COLLAPSIBLE DRUM

Fred Brown Pfeiffer, Akron, Ohio, assignor to National Rubber Machinery Company, Akron, Ohio, a corporation of Ohio

Application December 31, 1931, Serial No. 584,039
12 Claims. (Cl. 154—9)

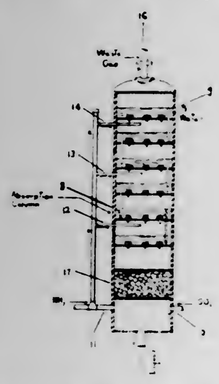
1. In a collapsible drum the combination of a spindle, a quill mounted for relative angular movement thereon, a hub mounted upon the spindle, a pair of key sections and a pair of intermediate sections constituting a sectional tire building drum, respective arms pivotally mounted upon the hub and constituting the sole support for the intermediate sections, the key sections being hinged to said arms, and links connecting the respective key sections to the quill.

2,004,798

METHOD AND MEANS FOR ILLUMINATING SURFACES

Max Poser, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York

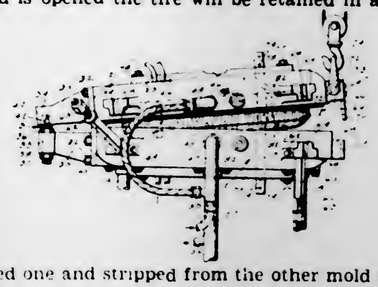
Application March 2, 1933, Serial No. 659,275
2 Claims. (Cl. 240—1)



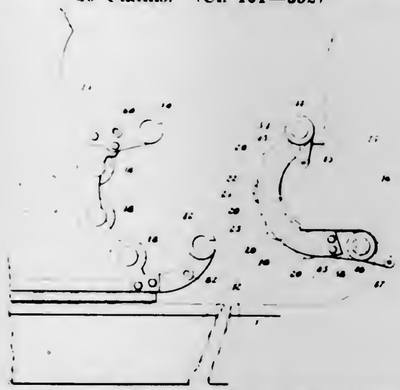
1. A method of providing substantially uniform illumination for a relatively large surface,

which comprises projecting light rays onto said surface from a single fixed source, making a filter having a gradually varying density from one side to another by photographing said illuminated surface, placing said filter before said light

source and projecting light rays through said filter onto said surface, the densest part of the filter being positioned in the path of light rays which fall on that part of the surface which is closest to the source.



2,004,799
PROCESS FOR PREPARING AMMONIUM SULPHITE OR BISULPHITE SOLUTIONS
Roger W. Richardson, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
Application April 23, 1931, Serial No. 532,191
2 Claims. (Cl. 23—129)

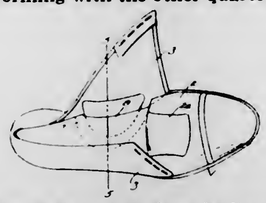


1. In the process of making ammonium sulphite or bisulphite solution the step which comprises contacting ammonia and sulphur dioxide with a falling shower of water while controlling the temperature and rate of absorption by introducing the ammonia at a plurality of levels and regulating the relative amounts thus introduced.

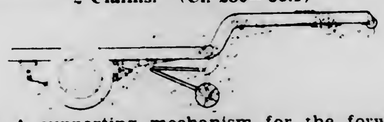
2,004,800
TIRE RETREADING MOLD
Thomas E. Rogers, Los Angeles, Calif., assignor to Arch B. Cleveland and James E. Belden, jointly, both of Los Angeles, Calif.
Application June 26, 1933, Serial No. 677,631
1 Claim. (Cl. 18—18)

A tire mold comprising a pair of separable mold sections with a cavity therein for receiving a tire, and ejecting devices supported on opposite sides of said mold sections and extensible into the planes of the adjacent mold sections for engagement with a portion of a tire whereby when the mold is opened the tire will be retained in a selected one and stripped from the other mold section.

2,004,801
PRINTING PRESS
Joel F. Sheppard, Dover, N. H., assignor to U. P. M.-Kidder Press Co., Inc., Dover, N. H., a corporation of Delaware
Application May 12, 1933, Serial No. 670,682
20 Claims. (Cl. 101—352)



1. A printing press having, in combination, a printing section, an ink distribution section, means to move one of said sections relatively to the other to produce an open or closed press, a form roller frame, means on said frame and on each of said sections for supporting the frame on a section, and mechanism for transferring the frame from one section to the other.

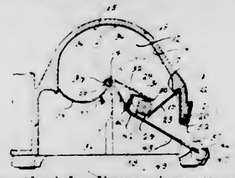


16. The method of preparing a printing press for making individual radial adjustment of the form rollers of its movable ink distribution mechanism to the plates on its plate cylinder which comprises advancing the inking frame including said form rollers to a closed press position, disconnecting said form rollers from the inking frame and locking them in printing relation about the printing plates, then withdrawing the remainder of the ink distribution train to leave space in front of the form rollers for an operator to work while making said radial adjustments.

2,004,802
SHOE
Edward W. Ward, North Girard, Pa.
Application August 22, 1932, Serial No. 629,775
2 Claims. (Cl. 36—8.5)

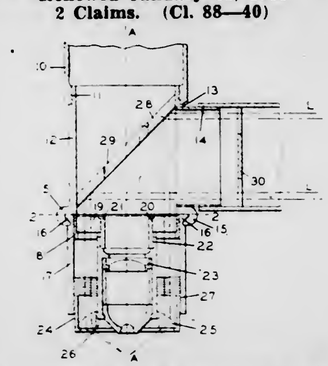
1. A shoe comprising a sole and an upper including a cut-off vamp and quarters, the quarters overlapping the vamp and having their front edges free from the vamp to a point adjacent the sole, one of the quarters extending over the instep and forming with the other quarter a slit extending from adjacent to the sole diagonally to a point over the instep adjacent the center of the shoe.

2,004,803
SEMITRAILER
Sidney B. Winn, Lapeer, Mich.
Application July 27, 1932, Serial No. 625,011
2 Claims. (Cl. 280—33.1)



1. A supporting mechanism for the forward end of a rear-wheeled trailer, comprising, a swinging prop unit having its rear end pivotally connected to the trailer toward the forward end of the trailer, cam elements pivotally mounted on the trailer toward the forward end of the prop unit and engaging the forward swinging end of the prop unit, the cam elements having their actuating portions engaged with the prop unit for causing the prop unit to swing upwardly when the cam elements are moved rearwardly, and actuating means for said cam elements extending thereto from the forward end of the trailer.

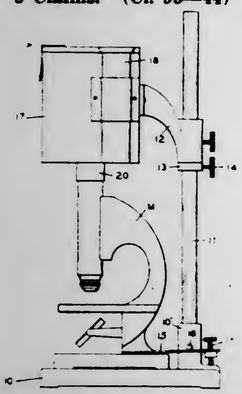
2,004,804
METHOD OF MAKING MOPS
Roy J. Badgley, Springfield, Ohio
Application March 14, 1934, Serial No. 715,506
1 Claim. (Cl. 300—21)



The method of making mops, which consists in employing a single length of cord to form the entire body of one complete mop, arranging the cord into parallel strands of double the length of the completed mop, forming a reverse loop by each end of each two of said strands, securing the central portion of all of the strands together by laying one half of a plurality of spaced apart cord sections transversely across all of the strands of the mop body, bringing the other half of each of said transverse cords over and upon the upper surface of all of the strands of the body of the mop inserting each between each two or more of the strands, looping said transverse strand members around the first mentioned half of the cords and then inserting them back between two of the strands and so on until all the strands are connected by the plurality of single length of the transverse cords, then tying the two ends of each of the two transverse cords together at one of the edges of the body of the mop, then securing each of the two ends of the transverse cords where they can not be seen in the completed mop, and then folding one half of each of the strands of the body member upon the other half thereof whereby the parts of the strands which are secured together by the transverse cords will form the head portion of the body of the mop and the means by which the ends of the transverse cords which are secured together will be hidden, all substantially as shown and described.

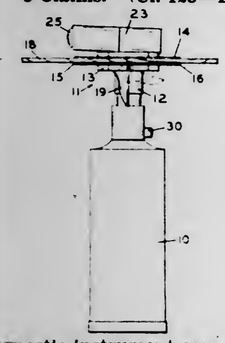
2,004,805
TOOTHPICK DISPENSER
Julius D'Agostino, Detroit, Mich.
Application January 10, 1933, Serial No. 651,016
7 Claims. (Cl. 312—84)

1. In a toothpick dispensing machine of the class described, a rotatable toothpick ejecting member for carrying a toothpick to an outlet opening; an inclined deflecting plate overlying said ejecting member and engaging its periphery and projecting across its longitudinal axis and terminating within the marginal limits thereof; and depending means on said deflecting plate in spaced relation to said ejecting member and adapted for engaging a disarranged toothpick carried by said ejecting member and preventing discharge of the same from the ejecting member in disarranged position.



2,004,806
MICROSCOPE ILLUMINATOR
Gerhard A. Ellestad, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application February 2, 1933, Serial No. 654,915
Renewed January 21, 1935
2 Claims. (Cl. 88—40)

1. An illuminator for attachment to the body tube of a microscope, said illuminator comprising a casing having means for attaching it to the body tube, a reflector mounted in said casing, said reflector having a portion for transmitting



light rays, a second casing detachably secured to said first casing, said second casing carrying a transparent member having a central aperture, a bushing mounted in said aperture, an objective secured to said bushing, and light condensing means mounted on said second casing, said condensing means having a central opening in alignment with said objective.

2,004,807
PHOTO-MICROGRAPHIC APPARATUS
Gustave Fassin, Irondequoit, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application April 7, 1934, Serial No. 719,504
3 Claims. (Cl. 95—44)

1. In a photo-micrographic apparatus the combination of a base, a support rod on said base, a bracket slidably and rotatably mounted on said rod, an adjustable collar on said rod for limiting the vertical movement of said bracket, a camera secured to said bracket, a focusing tube fixedly mounted on the side of said camera, a translucent screen element mounted in said tube, said element being positioned substantially in the plane of the sensitized element carried by said camera.

2,004,808
DIAGNOSTIC INSTRUMENT
George B. Gallasch, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a corporation of New York
Application February 24, 1934, Serial No. 712,776
5 Claims. (Cl. 128—16)

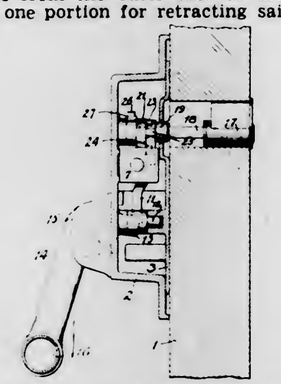
1. A diagnostic instrument comprising a member having an opening providing a guideway adapted to receive a tongue depressor blade, said guideway being open on three sides whereby said blade may be inserted in said guideway either laterally or longitudinally and means for selectively locking the blade in the guideway.

2,004,809
STABILIZING HYDROGEN PEROXIDE SOLUTIONS WITH PYROPHOSPHORIC ACID PLUS A TIN COMPOUND
Harvey N. Gilbert and Joseph S. Reichert, Niagara Falls, N. Y., assignors to E. I. du Pont de Nemours & Company, Inc., Wilmington, Del., a corporation of Delaware
No Drawing. Application December 1, 1932, Serial No. 645,324
13 Claims. (Cl. 23—251)

1. Method of stabilizing peroxide solutions comprising adding thereto a pyrophosphoric acid-tin compound.

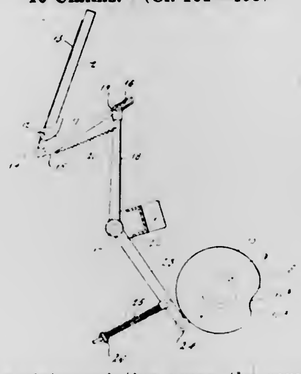
5. Method of stabilizing hydrogen peroxide solutions comprising adding thereto pyrophosphoric acid-tin compound equivalent to 0.2 grams $H_4P_2O_7$+0.005 grams tin per liter and adjusting the pH to between 1.5 and 3.0.

2,004,810
METHOD OF MAKING HINGES
James F. Hines, Lakewood, Ohio, assignor to Russell J. Hines, Lakewood, Ohio
Application July 10, 1934, Serial No. 734,489
2 Claims. (Cl. 29—11)



1. The method of making a hinge and the like which includes assembling a core unit including a pin, a sleeve rotatably located on the pin, the pin being longer than the sleeve and having ends extending beyond the opposite ends of the sleeve, and pairs of abutting washers provided with central apertures rotatably fitting on the pin, each pair being located at one end of the sleeve and one of the washers of each pair abutting the adjacent end of the sleeve, placing the core unit in a mold having one piece leaf forming cavities, and casting one piece leaves in the mold cavities, one leaf engaging the sleeve and the washers abutting the ends thereof, and the other leaf engaging the outer ends of the pin and the other washers.

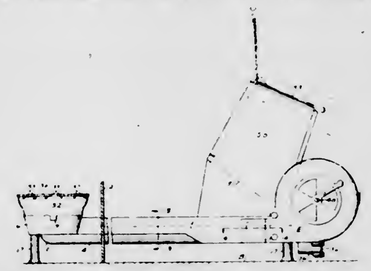
2,004,811
PANIC BOLT
Norman B. Hurd, Newington, Conn., assignor to The American Hardware Corporation, New Britain, Conn., a corporation of Connecticut
Application February 1, 1935, Serial No. 4,458
7 Claims. (Cl. 70—29)



1. In a panic door bolt, a case, a spring projected bolt, mechanism including means at the inner side of a door to cause the bolt to be retracted by pressure toward the door, an oscillating bolt dogging means, a key-controlled rollback concentric with said dogging means and

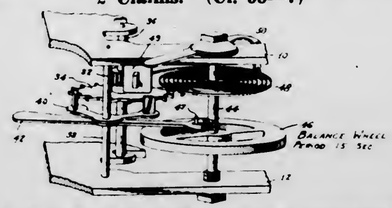
operable from the outer side of the door and having one portion for retracting said bolt and

another portion for operating said dogging means.



2,004,812
PLATEN PRINTING PRESS
Lawrence R. Johnson, Cleveland, Ohio, assignor to The Chandler & Price Company, Cleveland, Ohio, a corporation of Ohio
Application April 11, 1934, Serial No. 720,083
10 Claims. (Cl. 101—408)

1. In a platen printing press, the combination of a platen, means for oscillating said platen between the sheet-receiving and printing position, grippers mounted for pivotal movement with respect to said platen and adapted to engage a sheet on the platen when the latter is in printing position, and means for maintaining said grippers in engagement with said sheet until the platen has returned to substantially the sheet-receiving position.



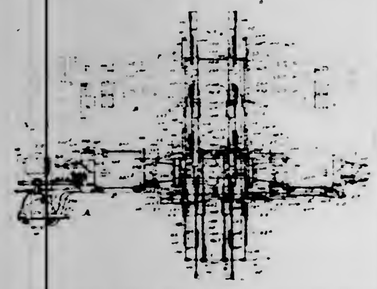
2,004,813
FUEL STOKER
James E. Jones, Richmond, Ind.
Application August 17, 1931, Serial No. 557,641
3 Claims. (Cl. 110—45)

1. A fuel stoker having in combination a burner bowl having inner and outer walls and an air passage formed therebetween, a hopper, a screw conveyor extending from the hopper to the burner bowl, a blower fan, an air passage leading from the fan to the air passage of the burner bowl, and an annular crown bowl rigidly secured to said burner bowl, said crown bowl having an air passage formed therein registering with the air passage in said burner bowl, an inwardly and downwardly extending inner portion, an outwardly extending horizontal portion formed integral with the inner portion and extending par-

tially across the passage of the crown bowl, said outwardly extending horizontal portion having slots formed therethrough whereby air may be forced downwardly and inwardly therethrough and into said burner bowl.

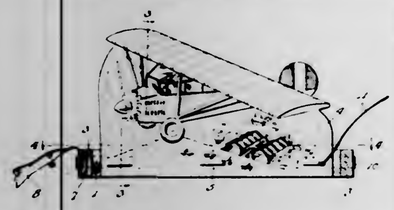
2,004,814
CLOCK MOVEMENT
Max Knobel, Arlington, Mass.
Application August 29, 1934, Serial No. 741,924
2 Claims. (Cl. 58—7)

1. A slow beat clock movement comprising a main spring, a driven shaft, a gear train interposed therebetween, an escapement controlling said train, and a balance wheel having a light, coiled hair spring related to the balance wheel substantially in accordance with the equation $k=17$ I.



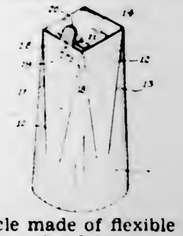
2,004,815
OPHTHALMIC LENS AND PROCESS OF MAKING THE SAME
Max A. Laabs, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a voluntary association of Massachusetts
Application August 10, 1932, Serial No. 628,191
8 Claims. (Cl. 88—54)

3. A multifocal or bifocal lens comprising a major portion of lens medium having a relatively large countersink therein with the shape of a portion of its contour edge definitely controlled and the remainder uncontrolled, and a minor portion of lens medium of a different index of refraction having a portion of its contour edge shaped substantially to the same contour shape and to align with the definitely shaped portion of the edge of the countersink secured in



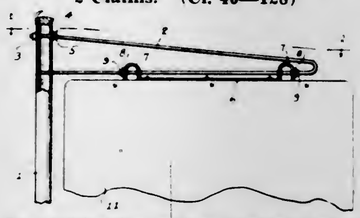
said countersink with the said shaped edges in aligned relation with each other, said countersink being relatively large with respect to the size of the minor portion and extending beyond said minor portion on all sides except the aligned shaped edges wherein portions of the shaped edge of the countersink extend outwardly beyond the opposite ends of the shaped edge of said minor portion.

2,004,816
METAL BARREL DRUM BEADING MACHINE
Bror J. Lindgren, Buffalo, N. Y., assignor to Niagara Machine and Tool Works, Buffalo, N. Y., a corporation of New York
Application December 21, 1932, Serial No. 648,184
32 Claims. (Cl. 153—2)



1. A conveyor mechanism for moving bodies to be worked upon to and from an operating station including a track over which said bodies are moved, a feeding frame reciprocating lengthwise of said track, and feeding means movably mounted on said frame and adapted to project upwardly from said frame and operatively engage the bodies during the forward movement of the frame and to be deflected downwardly out of the path of said bodies during the backward movement of the frame, each of said feeding means having a dog pivoted at its lower end on said frame and provided with an arm, a shifting rod connected with said arm, a guide for said rod, a spring interposed between said guide and a shoulder on said rod and operating to hold the dog yieldingly in its operative position, and a stop for limiting the movement of said dog under the action of said spring.

2,004,817
SOUNDING TOY
Albert T. Linney, Lexington, Ky.
Application August 13, 1934, Serial No. 739,694
9 Claims. (Cl. 46—14)

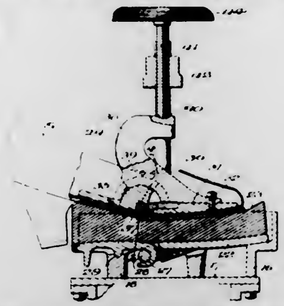


1. A device of the type described comprising a frame, a sheet of stiff material extending longitudinally of the frame and rising therefrom, a tail of light material having one end disposed against one end of the frame, a plug in said end of the frame, and an elastic band stretched around the ends of the frame and over the end of the tail.

2,004,818
PAPER RECEPTACLE
William S. Luckett, New York, N. Y.
Application May 11, 1933, Serial No. 670,579
16 Claims. (Cl. 229—7)

1. A receptacle made of flexible material comprising a body member having one end polygonal and its other end cylindrical, a polygonal closure member for said first end, means securing said members together and sealing the joint therebetween, a dispensing opening in one member, and a part on the other member covering said opening and movable to uncover said opening, and a closure for said second end of the body member.

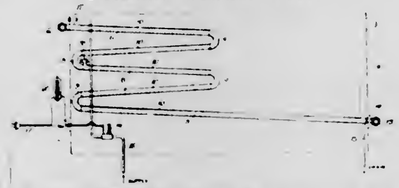
2,004,819
SWINGING SIGN SUPPORT
William H. Martin, Ottawa, Kans., assignor to Beatrice Martin, Ottawa, Kans.
Application December 5, 1934, Serial No. 756,151
2 Claims. (Cl. 40—128)



2. In combination with a tubular post and an element to be suspended, a substantially hairpin-shaped member having its upper limb passing through the post adjacent the top thereof and fastened to the post, the lower limb passing through a hole in one wall of the post and abutting the portion of the opposite inner wall, a member having its ends bent into substantially inverted U-shape through which the lower limb passes, washers on the lower limb engaging the outer limbs of the U-shaped members and holding the same under pressure, projections on the lower limb of the hairpin-shaped member for holding the washers in place, and means for attaching the element to the member having the U-shaped end portions.

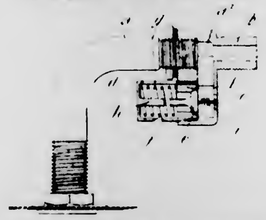
2,004,820
SHOE PRESSING MACHINE
Roy F. McClenathan, Erie, Pa., assignor to Lamac Process Company, Erie, Pa., a corporation
Application May 26, 1932, Serial No. 613,737
12 Claims. (Cl. 12—33)

1. A unit for use in pressing a shoe sole against its upper during a repair operation including a base equipped with an articulate plate, a yieldable shoe supporting pad superimposed on the



CARNEGIE LIBRARY OF ATLANTA

plate, and articulated means engageable in the shoe and movable inwardly against the sole of

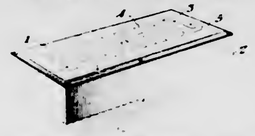


the latter to automatically urge the parts of the articulate plate against the pad.

2,004,821
HUMIDIFIER
Stowell W. Mears, New York, N. Y.
Application November 29, 1932, Serial No. 644,855
4 Claims. (Cl. 257—183)

2. A humidifier including an inner pipe for hot fluid, an outer pipe enclosing the first mentioned pipe, said pipes inclining from their upper to their lower ends so that water supplied to the upper end of the outer pipe will flow by gravity to the lower end of the said pipe, said pipes comprising a plurality of straight sections connected by return bends, the straight portions of the pipe having slots in their upper portions.

2,004,822
PRESSURE CONTROL FOR PNEUMATIC TIRES
Louis Marcel Mercier, Neuilly-sur-Seine, France
Application December 15, 1932, Serial No. 647,445
In Belgium October 27, 1932
1 Claim. (Cl. 152—11.5)



A safety valve for use in connection with a pneumatic tire valve device including a valve stem, a vale in said stem and a valve rod projecting from said valve stem, which comprises, in combination, a casing having a screw threaded bore for connecting it to the inlet end of said valve stem, a tubular air inlet extension carried by said casing and adapted to receive slidably the end of said valve rod, a cylinder opening at one end into said casing and rigidly fixed thereto, said cylinder being provided with a hole in its intermediate wall so as to connect its inside with the atmosphere, a piston slidably mounted in said cylinder provided with an opening extending therethrough, a valve mounted in said opening, elastic means adapted to act on said piston for resisting the action of the air pressure in said casing thereon, and an abutment rigidly carried by said cylinder and mounted to contact with said valve when the piston has moved a predetermined distance in the cylinder under the action of the air pressure in the casing.

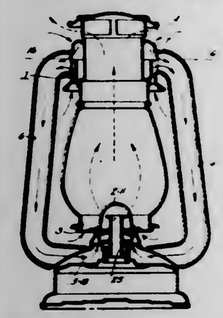
2,004,823
SHOE
Samuel J. Meyer, Brooklyn, N. Y.
Application July 18, 1934, Serial No. 735,871
2 Claims. (Cl. 36—45)

1. In a low shoe, a reinforcing and supporting member connected between the shank portion of the sole of the shoe and the upper part of the quarter of the shoe on the inside of the shoe and on that side which engages the inner side of the foot, said member being relatively broad at its point of connection with the sole and extending along the shank substantially from the heel to the ball of the foot and tapering towards the top, the degree of said taper increasing progressively to a point adjacent the top of said member and being relatively shorter between the points where it connects to the shoe than the quarter of the shoe between the same two points.

2,004,824
PRINTING PLATE AND THE PROCESS OF MAKING THE SAME
John MacLean, Pueblo, Colo.
Application March 9, 1931, Serial No. 521,299
13 Claims. (Cl. 41—41.5)

13. The process of making printing plates which comprises, taking a body portion of German silver, applying a layer of nickel on the face thereof, etching away the nickel coating in part to leave only desired printing portions defined by the remaining nickel coating, and directly treating the exposed portions of the German silver body with mercury.

2,004,825
SWIMMING BATH
Godfrey Ewart Morgans, London, England
Application October 23, 1934, Serial No. 749,638
In Great Britain November 11, 1933
8 Claims. (Cl. 4—172)

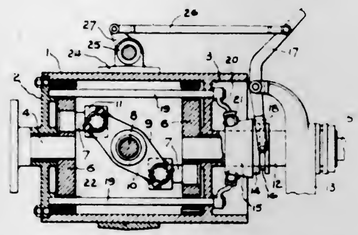


1. A swimming bath having an inlet in the centre of its base, a collector channel disposed ex-

ternally of said bath slightly below the water level of the bath, an outlet disposed around the periphery of the base of the bath and in communication with said collector channel so as to

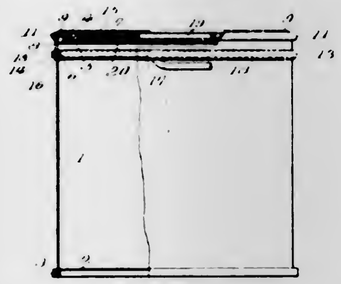
supply the water leaving said bath to the collector channel and conduits for conducting pure water to the central inlet and for removing impure water from the collector channel.

2,004,826
HURRICANE LANTERN
Bruno Nier, Beierfeld, Germany
Application May 6, 1933, Serial No. 669,776
In Germany May 7, 1932
7 Claims. (Cl. 240—27)



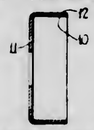
1. A hurricane lantern of the wick type burning liquid fuel, comprising a glass chimney, a sieve plate carrying the glass chimney, and a lantern head located above the glass chimney and formed with apertures for the escape of the gaseous products of combustion, the space between the sieve plate and the apertures in the lantern head not exceeding 120 cubic centimeters per Hefner candle power produced.

3. A hurricane lantern burner comprising a wick sheath, and strips of copper connected at one end with the top of the wick sheath, the said strips of copper extending transversely to the current of air flowing upwardly around the wick sheath and being adapted to conduct away rapidly the heat generated at the wick-sheath by the burning of the lantern.



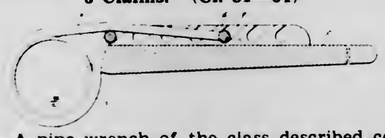
2,004,827
REVERSING TRANSMISSION
Floyd P. Quinn, William Horrobin, and William Frank Hawkins, Vancouver, British Columbia, Canada
Application July 5, 1934, Serial No. 733,872
3 Claims. (Cl. 74—67)

1. In a reversing transmission of the type described, a pair of aligned shafts, a crank to each shaft and a fixed crank pin extending from the crank parallel to the shafts, rocker arms mounted for sliding movement transversely of the axis



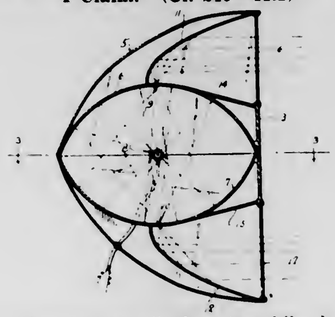
of the shafts and trunnioned crossheads carried by the rocker arms slidably journalled upon the crank pins.

2,004,828
METAL CONTAINER
William F. Punte, Syracuse, N. Y., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application July 22, 1931, Serial No. 552,514
2 Claims. (Cl. 220—47)



1. A container comprising a body portion having the upper edge thereof rolled inwardly to form a hollow strengthening bead, the wall of said container being formed with an inwardly extending bead adjacent the upper end and spaced from said hollow bead, a cover end for closing said container including a top portion and an outside slip flange, said top portion having an outwardly extending bead forming a recess within the cover directly over the rolled edge on the body, a gasket between the top and the body overlying said recess, said cover flange having an outwardly extending bead conforming to the bead in the body and disposed so as to be exposed to said bead in the body when the cover is forced into tight sealing contact with the gasket, and the gasket in sealing contact with the rolled edge of the body, and a retaining wire housed within said recess formed by the beads in the cover flange and the body and operating to maintain a sealed contact between the cover, gasket and container, said retaining wire having a projecting end portion extending beneath the flange of the cover and parallel therewith and serving as a gripping means whereby said wire may be forcibly removed from beneath the flange for releasing the cover.

2,004,829
BRAKING MEMBER
Earl J. W. Ragsdale, Norristown, Pa., assignor to Budd Wheel Company, Philadelphia, Pa., a corporation of Pennsylvania
Application November 12, 1930, Serial No. 495,043
12 Claims. (Cl. 188—218)

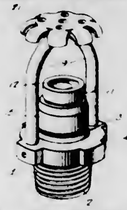


3. An austenitic stainless steel brake drum.

2,004,830
PIPE WRENCH
Nelson G. Rector, Jonesboro, Ark.
Application September 7, 1934, Serial No. 743,127
3 Claims. (Cl. 81—64)

1. A pipe wrench of the class described comprising a handle, a pair of flanges extending from one side only and around one end of the handle, said pair of flanges disposed in spaced coextensive parallelism with each other and provided with spaced aligned notches on the confronting faces of the flanges, a flexible nonarticulate member, heads on the ends of the flexible member extending laterally of the member for selectively and detachably seating in aligned notches.

2,004,831
AUTOMOBILE HEADLIGHT
Clifford Mercer Rice, Daytona Beach, Fla.
Application October 13, 1934, Serial No. 748,254
1 Claim. (Cl. 240—41.1)

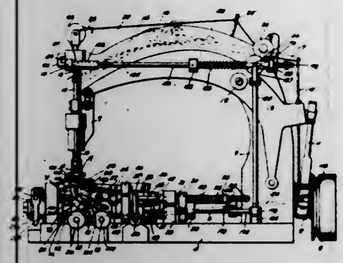


The herein described automobile headlight comprising a casing, an elongated light source of cylindrical shape mounted transversely in the casing, a pair of cylindro-semi-elliptical reflectors surrounding said light source, the light source extending from side to side of said reflectors, and the rear portions of said reflectors being provided with dark surfaces; secondary cylindro-parabolic reflectors arranged above and below said cylindro-semi-elliptical reflectors, said cylindro-semi-elliptical reflectors having apertures formed therein whereby the light rays from the said elliptical reflectors are focused to pass outwardly through said apertures to be reflected outwardly by the secondary cylindro-parabolic reflectors; and said casing having an open front side, a transverse opaque plate spaced from the upper and lower portions of the casing and extending across said front side, and transparent plates closing the front side of the casing above and below said transparent plate and covering said parabolic reflectors.

2,004,832
ACETYLENE BURNING IRON
Joseph L. Roberts, Jamaica, N. Y., assignor of one-half to Henry J. McCarthy, Baltimore, Md.
Application August 18, 1931, Serial No. 557,899
5 Claims. (Cl. 158—14)

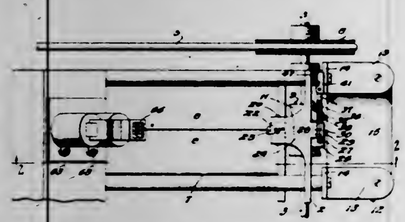
1. In an acetylene burning iron, a tubular handle, a tubular stem carried by the handle, an air supply inlet in the stem, a tubular combustion chamber in communication with said stem, said chamber having formed therein a threaded reduced portion and two inwardly directed annular ribs, one of said ribs being spaced axially of the threaded portion to form in the chamber an annular groove and the other rib being formed at the other edge of the chamber to constrict the same, and a burning tool having a shank of less diameter than the diameter of the combustion chamber at said ribs inserted in the chamber to be connected to the said threaded portion, said shank having a pocket formed therein in communication with the bore of the stem and with ports through the wall of the pocket to connect the latter with said annular groove.

2,004,833
SPRINKLER HEAD FOR FIRE-EXTINGUISHING SYSTEMS
Arthur C. Rowley, Drexel Hill, Pa., assignor to Globe Automatic Sprinkler Company, Philadelphia, Pa., a corporation of Pennsylvania
Application May 18, 1934, Serial No. 726,360
8 Claims. (Cl. 169—38)



1. A sprinkler head comprising a tubular body member formed with a seat, a closure element seating on said seat, and retaining means for said element comprising a sleeve adjustable on said member, and a collapsible strut assembly embraced and forcibly held by said sleeve in closure-retaining position and including a body of fusible composition acting under compression to prevent collapse of said assembly.

2,004,834
TUFTING ATTACHMENT FOR SEWING MACHINES
Julian Guy Russell, North Chattanooga, Tenn., assignor, by mesne assignments, to Carter Brothers, Incorporated, Chattanooga, Tenn., a corporation of Tennessee
Application December 9, 1929, Serial No. 412,821
Renewed July 19, 1933
34 Claims. (Cl. 112—79)



1. In a machine of the character described, the combination with a reciprocating needle, means

for guiding a strand thereto, loop forming mechanism, comprising a fixed abutment, a reciprocating looper bill movable toward and from said abutment, a pair of separately movable gripper

arms and abutments with which said gripper arms cooperate for holding portions of successive loops during operation of the needle to produce successive loops of uniform dimensions.

2,004,835
MONEY COUNTING MACHINE
Ernest P. Schneider, Washington, D. C.
Application May 15, 1933, Serial No. 671,263
15 Claims. (Cl. 271—57)

1. In a machine of the character described the combination of a bodily movable roll for feeding paper money to the machine, means for rotating said roll, and means actuated by the bodily movement of said roll caused by the insertion of a plurality of bills of paper money for reversing the direction of rotation of said roll to reject the said bills from the machine.

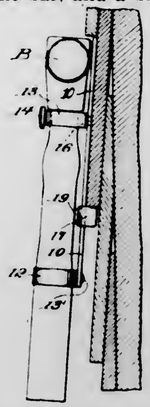
2,004,836
PROCESS FOR THE PRODUCTION OF CHROMIUM STEEL ALLOYS BY THE BASIC PROCESS
Ernst Hermann Schulz, Dortmund, Germany, assignor to firm Vereinigte Stahlwerke Aktiengesellschaft, Dusseldorf, Germany
No Drawing. Application January 3, 1934, Serial No. 705,159. In Germany December 18, 1930
8 Claims. (Cl. 75—45)

1. A process for the production of chromium steel alloys of all kinds by the basic process, which comprises subjecting a steel which contains phosphorus to a blowing treatment in a converter and interrupting said blowing before the elimination of phosphorus has reached the normal extent from .03%, then introducing sufficient chromium into the converter to give a content of between .2 and 1% of chromium in the final steel, thereupon intimately mixing the chromium with the steel bath by subjecting the bath to a very short blow.

2,004,837
LOOSE LEAF BINDER
Wilfrid Shewell and Harold Arthur Cherry, Northfield, Birmingham, England, assignors to Morland & Impey Limited, Birmingham, England
Application November 15, 1933, Serial No. 698,192
In Great Britain November 23, 1932
3 Claims. (Cl. 129—41)

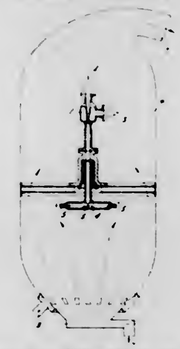
1. For use in loose leaf binders, a cover of rectangular form and constituted by a single thickness of material having a deep outer recess arranged adjacent to each of its longitudinal edges, the portion between the recesses forming at the inside of the cover a recess which serves to accommodate part of the binding mechanism, substantially as described.

2,004,838
DEVICE FOR GRINDING AND SHARPENING RAZOR BLADES
Ferdinand Soucsek, Brusau, Czechoslovakia
Application May 13, 1933, Serial No. 670,980
In Czechoslovakia May 31, 1932
16 Claims. (Cl. 51—161)



16. A razor blade sharpener comprising two spaced abrading members providing juxtaposed and oppositely inclined sharpening surfaces, means for holding a razor blade in spring pressed relation against said sharpening surfaces and spaced actuating members acting individually for imparting a positive revolvable movement to said razor blade whereby the cutting edges thereof are brought into engagement with said sharpening surfaces.

2,004,839
SHINGLE GAUGE
Peder Steien, Lancaster, Minn.
Application February 5, 1934, Serial No. 709,844
1 Claim. (Cl. 33—188)



A shingle gauge for hammers comprising a scale bar having a scale marking longitudinally thereof, a resilient clip swiveled to one end of the bar for embracing a handle of the hammer, a U-shaped clamp attached to the bar intermediate of its length and engageable with the handle to protrude the other end of the bar alongside of a head of the hammer, a bolt engaged in the clamp for making fast the same to the handle of the hammer, a split slide fitted on the bar and

having a protruding threaded stud extended laterally from the bar, and a binding nut engaged

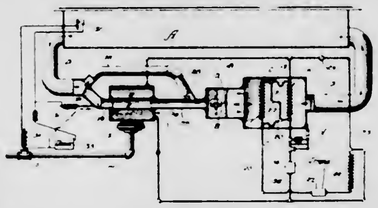
on said stud for rendering the slide fast in adjusted position on the bar.

2,004,840
APPARATUS FOR DISPERSING LIQUIDS AND MIXTURES
Eduard Ferdinand van Suchtelen, Amsterdam, Netherlands
Application October 11, 1932, Serial No. 637,325
In the Netherlands October 12, 1931
8 Claims. (Cl. 159—4)

4. Apparatus for dispersing or spraying liquids and the like, comprising an injector, means for passing a fluid mass at high pressure into said injector, means for forcing under high pressure a fluid mass to be mixed with the said first-mentioned mass into said injector, and a reaction-type atomizer having narrow lateral openings and communicating with said injector and rotatably mounted for passing the atomized fluid outwardly in a circular path due to the reaction of the mixed fluids on the atomizer.

2,004,841
EXTERMINATOR FOR INSECTS
Guy Vinson, Miami, Fla.
Application February 4, 1935, Serial No. 4,937
4 Claims. (Cl. 43—131)

1. In an insect exterminator, a shield formed of sheet metal having opposite walls spaced apart, a body of poison located between such walls, which extend beyond such body leaving the edge faces thereof exposed and forming open spaces for the insects where they have access to the edge faces of poison, a guard of woven wire fabric pro-

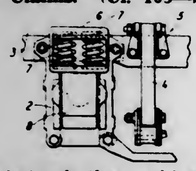


tecting and holding in position the body of poison, portions of the guard and of the shield inter-engaging to unite these parts.

2,004,842
BRAKE
Fredric H. Wandell, Los Gatos, Calif.
Application March 26, 1934, Serial No. 717,465
1 Claim. (Cl. 188—234)

In a device of the character described, the combination with a brake shoe, having offset recesses formed therein said recesses being spaced one from the other, transverse grooves formed in the face of said brake shoe and positioned between said offset recesses, and a brake lining engaging said brake shoe, the brake lining having offset ribs corresponding to the grooves formed in said shoe, said brake lining having offset lugs adapted to enter said recesses, said recesses having grooves formed in the sides thereof, and locking pins interposed between said lugs and said brake shoe and resting in said grooves formed in said offset recesses.

2,004,843
ABSORPTION CYCLE TEMPERATURE CONTROL APPARATUS
Gilbert Wilkes, Jacksonwald, and John S. Avery, Pennside, Pa., assignors to Wilkes Avery Corporation, New York, N. Y., a corporation of New York
Application August 4, 1932, Serial No. 627,500
12 Claims. (Cl. 62—118)



1. In apparatus for heating and in combination with an area to be heated, an absorption cycle heat pump comprising a generator-absorber, a condenser and an evaporator arranged in series, a casing duct-connected with said area for the circulation of a fluid, and means for causing circulation of the fluid, said condenser being disposed in said casing, the duct connections between said casing and said area comprising parallel duct branches with one of which said generator-absorber is in heat transfer relation.

2,004,844
CONTAINER CLOSURE
Marion R. Williams, Kansas City, Mo.
Application May 17, 1934, Serial No. 726,136
2 Claims. (Cl. 221—60)

2. The combination of a neck of a container having a lateral discharge opening, a cap slidably fitted upon said neck, a valve controlling said discharge opening and having a stem fixed to the cap, and a disk-like resilient member interiorly fitting the cap, encircling said stem and engaged with said neck and normally holding the valve in closed position.

2,004,845
BOGIE FOR VEHICLES TRAVELING UPON RAILS
Jacques Worms, Versailles, France
Application October 6, 1932, Serial No. 636,601
In France October 14, 1931
2 Claims. (Cl. 105—224)

1. In a bogie truck, the combination of journal box castings with a truck frame, each side bar of which is a single flat bar, cast yokes having a groove in which rests said side bars and a cap at the top of the outer face of one of the vertical walls of said groove, helical springs disposed on the top of said journal box castings and located along side of one vertical face of said cast yokes and of said side bars for supporting said yokes by means of said cap, bolts for securing said yokes to said side-bars, and means for suspending the load from said side-bars in the closest possible vicinity of the axle journals.

2,004,846
TRACTOR DRAWN GRADER
John James Allison and James Pleasant Ivy, Chandler, Ariz.
Application July 9, 1934, Serial No. 734,398
5 Claims. (Cl. 37—164)

1. A tractor drawn grader having a forward tractor hitch and rear supporting wheels, and including side bars, the forward portions of which are rounded in connection with one another in approximately a semicircle, a curved cross member connecting the forward ends of the side bars and forming, with their said forward rounded ends, an inwardly opening channel, provided at one point with vertically aligned openings, a turntable movable within said channel and having a series of apertures therealong for selective alignment with the openings of the said housing, an angle bolt for extension through the openings of the house and the apertures of said turntable to secure the latter in adjusted position, a pair of depending blade supporting bars in connection with said turntable, and a blade pivoted to, and having an adjustable connection with, the lower portions of said supporting bars.

2,004,847
CRATE
William W. Birnstock, York, Pa.
Application March 19, 1930, Serial No. 437,121
17 Claims. (Cl. 217—20)

1. In a crate having sides, ends, partition rods at different levels joining opposite walls to form bottle receiving compartments, and supporting rods joining opposite walls to form a bottom rest for the bottles; a spacer engaging one side of one lower partition rod throughout its exposed length and having openings to receive the adjacent supporting rods so as to lock the said one lower partition rod to said spacer, and a bracket engaging said spacer, a plurality of supporting rods and one of the upper partition rods and having openings therethru to receive a plurality of partition rods located between the upper partition rod engaged by the bracket and the lower partition rod engaged by the spacer.

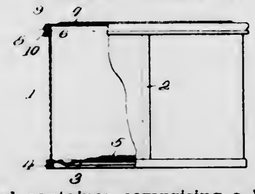
2,004,848
GARMENT STRETCHER
Lee Bond and Le Roy Clair Bond, Brookfield, Mo., assignors to The Davis Company, Omaha, Nebr., a corporation of Nebraska
Application October 9, 1934, Serial No. 747,640
5 Claims. (Cl. 223—19)

1. In a garment stretcher of the character described, a substantially U-shaped member having a sleeve secured in one end thereof, a handle having a threaded engagement with the sleeve, a rod having a non-threaded portion extending through and rotatable in the handle, said rod having an operating crank on one end and reversely threaded portions on a relatively opposite end, follower nuts on the threaded portions of the rod, a pair of side members, links pivotally connecting the follower nuts with the side members, and other links pivotally connecting said sleeve with the side members.

2,004,849
METHOD OF TREATING HYDROCARBONS
Max E. Bretschger, Buffalo, N. Y., and Ernest A. Bosing, Long Beach, Calif., assignors to Buffalo Electro-Chemical Company, Inc., Buffalo, N. Y.
No Drawing. Application March 21, 1932, Serial No. 600,372
5 Claims. (Cl. 196—29)

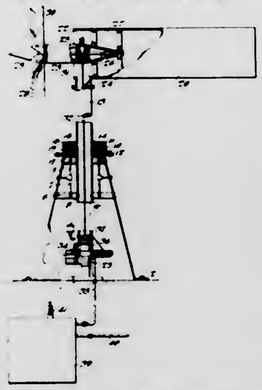
3. The step in the refining of liquid hydrocarbon distillates containing aromatic compounds which includes agitation of the hydrocarbon with hydrogen peroxide in the presence of sulfuric acid insufficient in concentration to combine with the aromatic compounds but sufficient to dissolve the oxidized sulfur compounds.

2,004,850
SEAT FOR USE IN ROAD OR RAIL VEHICLES
Ettore Bugatti, Molsheim, France
Application November 21, 1933, Serial No. 699,071
In France November 28, 1932
5 Claims. (Cl. 155—99)



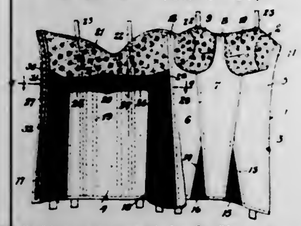
1. A seat of the type described which comprises, in combination, a supporting frame including two horizontal members disposed in parallel relation to each other both at substantially the same level above the bottom of the frame, a seat unit consisting of two elements making a given angle with each other and rigidly assembled together, and at least one hook carried by the outer face of at least one of said elements, adapted to pivotally engage on either of said horizontal members, the other element then resting on the other horizontal member, whereby the seat can be fixed in either of two opposed positions in said frame.

2,004,851
RESISTOR GRID FOR ELECTRIC FURNACES
Frank T. Cope, Salem, Ohio, assignor to The Electric Furnace Company, Salem, Ohio, a corporation of Ohio
Application March 1, 1932, Serial No. 596,034
16 Claims. (Cl. 201—69)



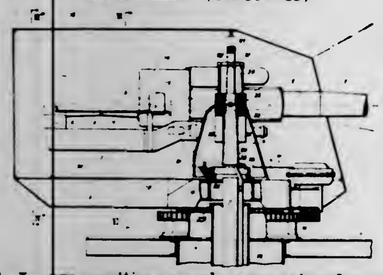
1. A cast metal resistor grid including a straight bar of substantially V cross sectional shape with an apex rounded both on the inside and outside on substantially the same center.

2,004,852
SHEET METAL CONTAINER
John Coyle, Baltimore, Md., assignor to Continental Can Company, Inc., New York, N. Y., a corporation of New York
Application February 23, 1934, Serial No. 712,646
1 Claim. (Cl. 220—60)



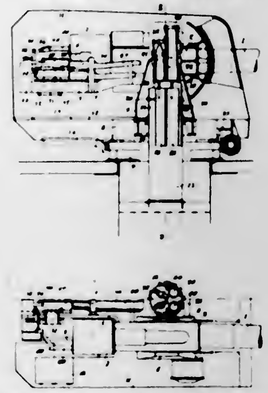
A metal container comprising a body portion having an upwardly projecting hollow bead at the upper end thereof, the lower portion of which is spaced away from the outer wall of the container body whereby said bead is permitted to yield inwardly, a cover for said body portion having a depending flange extending beneath said bead on the body portion, said cover flange being curved downwardly and inwardly so as to provide a retaining recess for the hollow bead on the container end, the lower edge portion of said depending flange being rolled outwardly into a closed bead disposed beneath the hollow bead on the container for strengthening said edge portion of the flange, said flange at the lower edge portion thereof having an inner diameter which is slightly less than the outer diameter of the hollow bead on the container body, and also a diameter which is greater than the outer diameter of the container body so that when said cover is seated on the container body, said lower portion of the flange is spaced away from the container body.

2,004,853
AIR OPERATED POWER UNIT
Palmer H. Crary, Coconut Grove, Fla., assignor of one-third to William F. A. Buehner, Miami, Fla., and 10 per cent to Robert A. Wright, Rye, N. Y.
Application November 18, 1932, Serial No. 643,264
8 Claims. (Cl. 170—4)



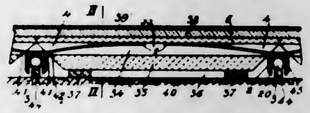
1. An air operated power unit comprising, a swingable support, a wind wheel carried by said support and rotatable on a substantially horizontal axis, and a wind tube carried by said support trailing behind and substantially in line with the axis of rotation of said wind wheel and provided with a venturi.

2,004,854
FOUNDATION GARMENT
Katherine E. Cunningham, New Haven, Conn., assignor to I. Newman & Sons, Inc., New Haven, Conn., a corporation of Connecticut
Application March 28, 1933, Serial No. 663,210
1 Claim. (Cl. 2—30)



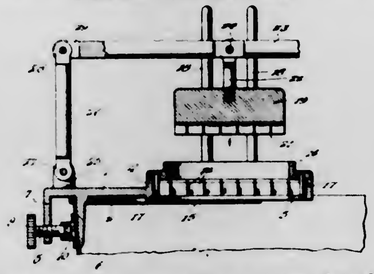
A foundation garment including a corset body and a brassière having breast pockets, said brassière merging into the top of the corset body, said corset body and brassière being open from top to bottom along one side, said corset body having a substantially inelastic front, an inelastic back and a pair of elastic side panels extending from the top to the bottom of the corset body, a bracing strap confined below said breast pockets and attached to the corset body adjacent the forward edges of the respective elastic panels and acting to constrict the waistline and uplift the breasts of the person wearing the garment, said bracing strap having elastic and inelastic portions and means for connecting said strap to said inelastic back substantially centrally thereof.

2,004,855
AMMUNITION SUPPLYING DEVICE FOR PAIRS OF GUNS MOUNTED IN TURRETS OR THE LIKE
Leon Daum, Paris, France, assignor of one-half to Schneider & Cie., Paris, France, a company of France, and one-half to Compagnie des Forges & Acieries de la Marine et d'Homecourt, Paris, France, a company of France
Application July 24, 1933, Serial No. 681,980
In France August 19, 1932
20 Claims. (Cl. 89—45)



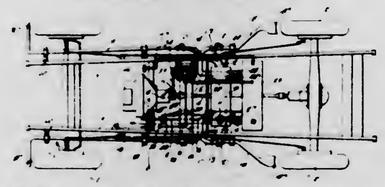
1. In ammunition supply apparatus for rotatable twin gun mounts, the combination of a fixed central hoist for delivering ammunition for both guns to a point between the guns, means for receiving and retaining the ammunition delivered by said hoist, a member in which said receiving means is pivoted for movement about a horizontal axis, a support for said member fixed with respect to said guns, and means for swivelly mounting said member in said support for movement about a vertical axis whereby said receiving means may be brought into alinement with said hoist regardless of the direction in which said guns are trained.

2,004,856
AMMUNITION SUPPLYING DEVICE FOR PAIRS OF GUNS MOUNTED IN TURRETS OR THE LIKE
Leon Daum, Paris, France, assignor of one-half to Compagnie des Forges et Acieries de la Marine et d'Homecourt, Paris, France, a company of France, and one-half to Schneider & Cie, Paris, France, a company of France
Application October 14, 1933, Serial No. 693,654
In France August 19, 1933
14 Claims. (Cl. 89—45)



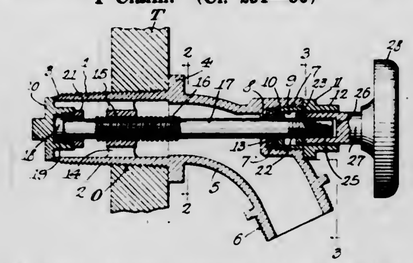
1. In apparatus for supplying to the guns of a rotatable twin gun mount ammunition of the type in which the projectile and propelling charge are separate, the combination of a fixed main hoist adapted to deliver a pair of projectiles and a pair of propelling charges simultaneously to a point between the guns, a member mounted above said hoist having four compartments symmetrically arranged in pairs, each pair of compartments being adapted to receive from said hoist and to retain a projectile and a propelling charge, respectively, a pair of superposed ammunition trays associated with each of said guns, means for simultaneously transferring the projectiles and propelling charges from said compartments to said trays, and means for successively moving the projectile and charge delivered to each pair of trays into loading position in alinement with the bore of the associated gun.

2,004,857
APPARATUS FOR THE DISTRIBUTION OF HEAT
William Dériaz, Geneva, Switzerland
Application December 15, 1932, Serial No. 647,497
In Switzerland December 21, 1931
6 Claims. (Cl. 257—248)



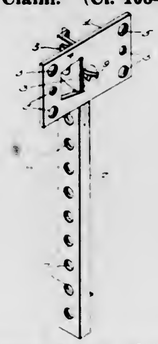
1. A heat-exchange installation comprising means for giving a substantially uniform temperature to all points of a heat-exchange surface, the said means comprising a net of tubes disposed parallel to said surface and containing the source of thermal energy, the enveloping surface of said tubes being materially smaller than the exchange surface, heat-distributing means between the tubes and the said surface, at least one compensating part of greater specific resistance to thermal transmission than the distributing means and disposed between said means and said surface, the compensating part having the value of its absolute thermal resistance measured at right angles to the said surface greater in a region near the tubes than in a region remote therefrom in such manner that there is obtained a practically uniform temperature throughout the entire heat-exchange surface.

2,004,858
POTATO CUTTER
George M. Farabough, Rogers, Ark.
Application September 29, 1933, Serial No. 691,545
1 Claim. (Cl. 146—169)



A potato cutter comprising a base plate having an arcuate edge adapted to rest upon the rim of a pan and having a depending flange on its under side adjacent said edge to fit within the pan against walls of the pan, the base plate being formed with an opening, means at the arcuate edge of the base plate to clamp the plate to walls of the pan, an upstanding rim bordering the opening and at only one side thereof formed with sockets, a cutter mounted in said opening, guide rods rising from said rim at only the said side of the opening and spaced from each other and having their lower ends secured in the sockets, a plunger adapted to fit within the opening and having a lateral extension at only one side formed with openings through which the rods extend to slidably mount the plunger and guide vertical movement of the plunger, and means mounted upon the base plate and connected with the plunger for sliding the plunger along the rods toward and away from the cutters.

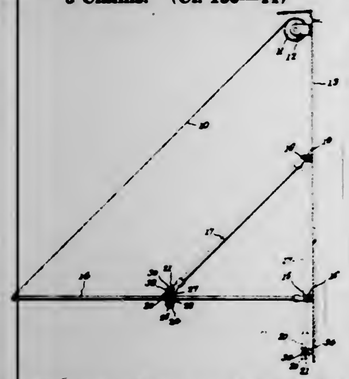
2,004,859
AUTOMOBILE SURFACE SANDER
Lyle T. Farley, Norwich, N. Y.
Application May 4, 1934, Serial No. 723,960
4 Claims. (Cl. 291—15)



1. A sanding unit attachment for disposition on a motor vehicle, said attachment comprising a sand container, conduit pipes leading therefrom, valves operable to control the discharge through said conduits, and means for operating the valves from the brake pedal of the vehicle, an air tank in communication with the sand container, an air compressor in communication with the air tank, a support for the air compressor extending transversely of the vehicle and along which the air compressor is movable, means for driving the compressor from the motor shaft of the vehicle including belt and pulley drive means, and means for moving the compressor along its support to develop or take up slack in the drive belt to thereby control the driving connection between the motor shaft and the compressor.

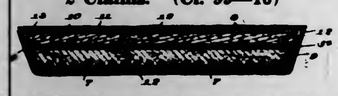
2,004,860
BUNG FAUCET
Abele Ferrari, Mario Scallone, and Cesare Rafanelli, Healdsburg, Calif.
Application March 6, 1935, Serial No. 9,676
1 Claim. (Cl. 251—50)

A bung faucet including a tapered screw threaded bung portion one end of which constitutes a valve seat, there being a spout extending from the other faucet end portion, said spout having a recess in the wall thereof in axial alinement with the bung portion, a cup adjustably seated in the recess, packing material interposed between the cup and the inner end of the recess, a screw threaded stem, means in the bung portion for supporting the stem and feeding it longitudinally when the stem is rotated, a valve carried by one end of the stem and movable against the seat, means within the cup and adjustable on the other end of the stem for limiting the longitudinal movement of the stem, and means detachably mounted in the cup for engaging and actuating the stem.



2,004,861
GUTTER HANGER
Howard B. Feltman, Wyncote, Pa., assignor to Berger Brothers Company, Philadelphia, Pa., a corporation of Pennsylvania
Application February 24, 1933, Serial No. 658,423
1 Claim. (Cl. 108—29)

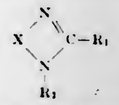
A gutter hanger fixture of the type comprising a plate adapted to be secured against an



exposed surface of an eaves structure underneath the roof overhang, said plate having apertures for passage of securing elements therethrough, said fixture comprising also a stem at one face of and depending from said plate and adapted to receive a gutter-supporting circle, and a projection on the opposite face of said plate located adjacent said apertures and in substantial alignment with the stem whereby impact on the latter is transmitted by direct thrust to said projection to cause the projection to penetrate the eaves structure to thereby fix the fixture in a normal permanent position preparatory to entering said securing elements, said projection being above the center of weight of the entire fixture.

2,004,862
AWNING FASTENING DEVICE
Charles W. Gaswint, Mason City, Iowa
Application August 17, 1934, Serial No. 740,331
3 Claims. (Cl. 156—44)

2. A fastening device for awnings having a downwardly swinging frame arm, a diagonal brace having a pivotal support above said frame arm and having a slotted and apertured ear at its free end, a clamp adjustably mounted on the awning arm, a threaded bolt carried by the clamp and extending outwardly therefrom for receiving the ear thereover, and a winged nut carried by the bolt for passage through the aperture and slot of the ear, said nut being adapted to be turned up against the ear for binding the same to the clamp.



2,004,863
CONFECTION
Harvey C. Gibson, Columbia, Pa.
Application June 12, 1933, Serial No. 675,472
2 Claims. (Cl. 99—16)

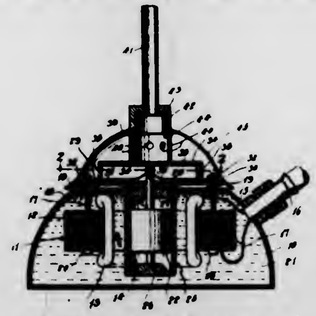
1. A confection comprising an elongated edible container, the bottom and side walls of said container being corrugated, the corrugations on the side walls being cuspidated and terminating short of the upper edge of the container, an edible wafer serving as a partition and disposed parallel to the bottom, the ends and sides of said partition being in frictional engagement with the walls of the container, edible fillings above and below said wafer, a second wafer forming a top, means for sealing said second named wafer in position, and an edible coating on the outside of the container and the top wafer.

2,004,864
IMIDAZOLE DERIVATIVES, USEFUL ESPECIALLY AS TEXTILE ASSISTANTS AND PROCESS OF MAKING SAME
Charles Graenacher, Basel, and Franz Ackermann, Binningen, near Basel, Switzerland, assignors to the firm Society of Chemical Industry in Basle, Basel, Switzerland
No Drawing. Application May 25, 1934, Serial No. 727,584. In Switzerland June 9, 1933
22 Claims. (Cl. 260—44)

12. The imidazole derivatives of the general formula

wherein X stands for an aromatic radical of the benzene or naphthalene series, wherein further the two N-atoms are bound to two carbon atoms in ortho-position, R_1 represents an aliphatic radical containing at least 3 carbon atoms, and R_2 an aliphatic or araliphatic radical, which products form with hydrohalic acids salts whose dilute aqueous solutions are strongly capillary active.

2,004,865
EXHAUST GAS PURIFIER FOR VEHICLES
Joseph Grison, Braintree, Mass.
Application January 25, 1933, Serial No. 653,377
5 Claims. (Cl. 23—288)



1. An exhaust gas purifier for internal combustion engines, comprising a tubular casing adapted to be attached at one end upon the exhaust pipe of said motor, a cylindrical lining rotative within said tubular casing, a plurality of transverse screens within said lining dividing off compartments, scrap material within one of said compartments, said lining and said transverse screens and said scrap material being of metal adapted to readily oxidize upon the passage of hot exhaust gases and air to form a compound adapted to give off oxygen to change the CO to CO_2 in the exhaust gas, and air tubes on said casing to supply the necessary air into said compartment means for moving said lining, and stationary cleaning elements engaging against the inside of said lining.

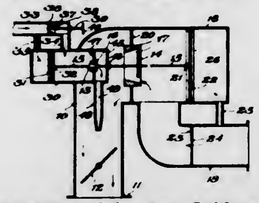
2,004,866
SUBMERSIBLE PUMP AND ELECTRIC MOTOR UNIT
James F. Haldeman, Bloomfield, Ind.
Application October 4, 1934, Serial No. 746,919
3 Claims. (Cl. 103—87)

1. A device of the class described comprising a casing having a chamber, an impeller in said chamber, a discharge pipe leading from the casing, said discharge pipe having an inlet, said chamber having outlet openings, a hood secured over said casing by said discharge pipe to confine the discharge from the chamber and cause it to pass into the inlet of the discharge pipe, a plate adjacent the bottom of the hood surrounded by the hood and having an opening constituting an inlet for the chamber, a base having an electric motor

therein, the armature shaft of the motor extending above the base and through said opening and driving the impeller, bolts connecting the

field core of the motor, said casing and plate together, and means spacing the plate and casing from the base and surrounding said bolts.

2,004,867
PROCESS FOR MAKING POTASSIUM OXALATE
Emil Hene, Berlin, Germany, assignor to Rudolph Koepp & Co., Chem. Fabrik A. G., Oestrich, Germany
No Drawing. Application May 24, 1933, Serial No. 672,736. In Germany May 30, 1932
5 Claims. (Cl. 260—115)

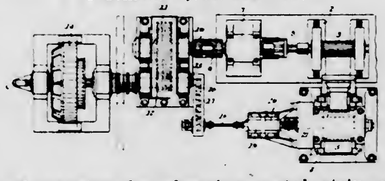


1. A process for making potassium oxalate from potassium formate consisting in melting potassium formate at a temperature between 350° C. and 300° C. and bubbling an inert gas through the melt at normal pressure.

2,004,868
APPARATUS FOR USE IN CHEMICAL DIGESTIONS
Abraham Henwood, Cynwyd, and Raymond M. Garey, Willow Grove, Pa.
Application October 30, 1933, Serial No. 695,916
10 Claims. (Cl. 23—292)

1. An apparatus for use in Kjeldahl digestions, comprising a Kjeldahl flask and an acid-resistant septum fitting snugly within the neck of said flask to prevent the formation of sulphuric acid fog by excluding cold air from said flask, such septum being pervious to the passage of gases but impervious to the passage of sulphuric acid mist.

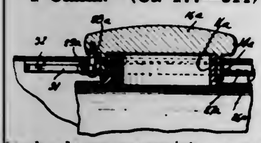
2,004,869
CHARGE FORMING DEVICE
John Webb Hogg, Llanerch, Pa.
Application March 26, 1934, Serial No. 717,476
8 Claims. (Cl. 261—50)



1. Apparatus for mixing two fluids under pressure in constant relative proportion, comprising a conduit for each fluid, the conduits being in communication, a valve in each conduit, means coupling the valves together, means separate from said valves for establishing a differential pressure in each fluid and means responsive to said differential pressure of each fluid and in operative connection with the valves.

2,004,870
BLOTTING ATTACHMENT FOR PENS
Robert Innes, Coldbrook, Nova Scotia, Canada
Application September 11, 1934, Serial No. 743,582
20 Claims. (Cl. 120—24)

1. A blotting attachment for pens comprising a container adapted to house a blotting strip, a releasable closure member for the container and resilient means for projecting a portion of said blotting strip beyond said container when said closure member has been released.



2,004,871
FEEDING AND SHEARING MECHANISM
Lorenz Iversen, Pittsburgh, Pa., assignor to Mesta Machine Company, Homestead, Pa., a corporation of Pennsylvania
Application August 15, 1932, Serial No. 628,878
5 Claims. (Cl. 164—68)

1. Apparatus for shearing metal strip comprising two units, namely, a feed means and a rotary shear, in direct alignment with one another, the shear having a rotor with a cutting blade thereon, the feed means being effective for substantially continuously advancing material to the shear, and length controlling means effective for causing the shear blade to move at peripheral speeds differing in an adjusted amount from the linear speed of the material, said means including a fluid pump operatively connected with one of said units, a fluid motor

actuated thereby and operatively connected to the other of said units, and an adjusting device for adjusting the speed of the fluid motor, the units running at substantially constant relative speeds for any adjusted position of said device.

2,004,872
GAS TANK ALARM
Edward S. Johnson, Seven Mile, Ohio
Application February 9, 1932, Serial No. 591,891
Renewed November 16, 1934
1 Claim. (Cl. 177—314)

A gas tank alarm comprising a gas tank and a rotatable closure cap, an electric alarm and control switch therefor, pull cord operating means for the control switch connected to the switch, operative connections between the pull cord and tank cap, including a spring arm to which the pull cord is attached, a pin carried by the cap movable in a path upon rotary movement of the cap to operate the spring arm for sounding the alarm, a cover wall for the tank spaced therefrom and having an opening therein overlying the closure cap opening and an arcuate recess in the edge wall of the cover wall opening providing clearance for movement of the pin carried by the closure cap.

2,004,873
THIOSULPHATE ESTERS AND THEIR PRODUCTION
Alfred Kirstahler, Dusseldorf, and Wilhelm Jacob Kaiser, Dusseldorf-Benrath, Germany
No Drawing. Application December 5, 1933, Serial No. 701,082. In Germany January 4, 1932
21 Claims. (Cl. 260—99.12)

1. Process for the manufacture of high-molecular organic compounds, characterized in that the esters of, on the one hand, organic compounds of the group consisting of aliphatic, cycloaliphatic and aliphatic-aromatic compounds containing hydroxyl groups and having at least 6 carbon atoms, and, on the other, of carboxylic acids containing reactive halogen atoms, are treated with soluble salts of thiosulphuric acid.

21. As new products high-molecular organic esters of the general formula

$$R.O.CO.R'.S_2O_3Me$$

wherein R stands for a nonaromatic organic residue having at least 6 carbon atoms, R' for an organic residue and Me for an alkaline metal or for a radical of ammonium.

2,004,874
PRODUCT AND PROCESS FOR PREPARING SAME
Wilbur Arthur Lazier, Marshallton, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 18, 1932, Serial No. 629,307
11 Claims. (Cl. 87—16)

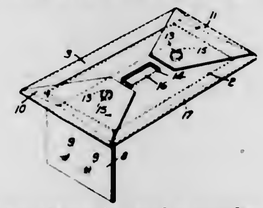
1. A soap containing an aliphatic open-chain alcohol, having from 8 to 20 carbon atoms, and corresponding to a fatty acid which is contained in naturally occurring fats.

2,004,875
MANUFACTURE OF ARTIFICIAL MATERIALS
Leon Lilienfeld, Vienna, Austria
No Drawing. Application June 27, 1930, Serial No. 464,426. In Austria July 15, 1929
5 Claims. (Cl. 18—54)

1. A process of removing yellowness and opalescence in artificial materials prepared from a solution of a xanthated product and containing free sulphur and also having a yellowness and opalescence not completely removable by desulphurization with solutions containing up to 3% of $Na_2S.9H_2O$, as heretofore applied to artificial silk, which process comprises subjecting such artificial materials to a treatment with a warm alkali sulphide solution of at least 5% strength, figured as $Na_2S.9H_2O$, until the said opalescence and yellowness are for the most part at least removed, and thereafter washing.

2,004,876
MANUFACTURE OF ARTIFICIAL THREADS AND OTHER PRODUCTS FROM CELLULOSE COMPOUNDS
Leon Lilienfeld, Vienna, Austria
No Drawing. Application July 14, 1933, Serial No. 680,498. In Great Britain July 15, 1932
7 Claims. (Cl. 18—54)

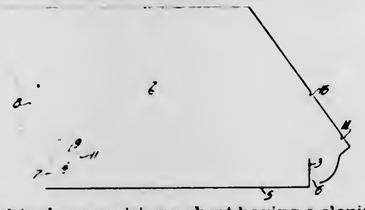
1. Process for refining artificial materials, made from a solution containing a xanthate of an oxy-organo derivative of cellulose by wet spinning, which process comprises treating the artificial materials first with an alkali sulphide solution of desulphurizing strength, at a temperature not exceeding 25° C. and thereafter with an alkali sulphide solution at a temperature exceeding 40° C.



2,004,877
MANUFACTURE OF ARTIFICIAL THREADS AND OTHER PRODUCTS FROM CELLULOSE COMPOUNDS
Leon Lilienfeld, Vienna, Austria
No Drawing. Application July 14, 1933, Serial No. 680,499. In Great Britain July 15, 1932
7 Claims. (Cl. 18—54)

1. A process of refining shaped artificial structures particularly threads, made by coagulation of a shaped body of a solution containing a xanthate of an oxy-organo compound of cellulose, which structures contain in addition to free sulphur, colored substances not readily removable by treatment with a solution of $Na_2S.9H_2O$ of up to 3% strength, which process comprises subjecting the said structures to contact with a solution containing an alkali metal sulphide equivalent to at least 10% of $Na_2S.9H_2O$ and which also contains dissolved caustic alkali equivalent to at least 3% of NaOH, such solution being at a temperature of at least 50° C., until said colored substances are sufficiently removed.

2,004,878
CONTAINER
Malcolm S. MacNaught, Yonkers, N. Y., assignor to Hixon Electric Co., Boston, Mass., a corporation of Massachusetts
Application August 17, 1932, Serial No. 629,134
3 Claims. (Cl. 229—87)

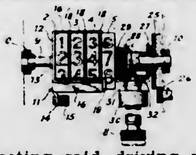


3. A container-forming blank of transparent sheet material comprising a base panel area having end and side adhesive wings cooperatively foldable thereon to form the container, one wing having a plurality of apertures for receiving mechanical locking elements to secure the container

and contents to a support and an aperture to receive a part of the contained article; a scored adhesive-carrying area in the base area severable sufficiently from the base and foldable on itself to be secured along a plurality of its edges to the scored area to form a closed pocket for

said locking elements; and a supplementary separable wing on the blank, foldable to form a hood-like cover for said part of the contained article in one of the apertures and of a construction to project through the aperture when the article is assembled with the container.

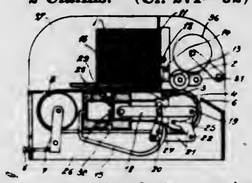
2,004,879
SHINGLE
Ernest C. Matthews and Loraine M. Clary, Eureka, Calif., assignors to The Paraffine Companies, Inc., San Francisco, Calif., a corporation of Delaware
Application April 20, 1932, Serial No. 606,376
3 Claims. (Cl. 108—7)



1. A shingle comprising a sheet having a sloping side edge, a receiving slot at one corner of the sheet and extending from the bottom edge of the shingle, a locking tab at an adjacent corner projecting outwardly from the sloping side of the shingle to provide a substantially V-shaped notch between the tab and side edge, and a slot extending into the body of the shingle from the base of said notch.

2,004,880
MIXED ESTER RESIN
Israel Rosenblum, Jackson Heights, N. Y.
No Drawing. Application December 14, 1933, Serial No. 702,366
6 Claims. (Cl. 260—8)

1. The method of producing a homogeneous, fusible, oil soluble resin which comprises reacting simultaneously glycerol, phthalic acid, maleic acid in a substantial amount up to approximately 1 mol for every mol of phthalic acid, and an amount of acids obtained on hydrolysis of a fatty triglyceride sufficient to make the product oil-soluble.



2,004,881
COUNTER
Edward A. Slye, East Hartford, Conn., assignor to Veeder-Root Incorporated, a corporation of Connecticut
Application July 5, 1932, Serial No. 620,822
31 Claims. (Cl. 235—144)

1. In a counter, a plurality of number wheels having a longitudinally fixed axial resetting shaft, internal transfer mechanism between said wheels having positive locking mechanism, driving mechanism for said wheels, and mechanism

for disconnecting said driving mechanism and resetting said wheels while said transfer mechanism is locked.

2,004,882
APPARATUS FOR DELIVERING FLAT ELEMENTS ONE AT A TIME, MORE ESPECIALLY FOR DELIVERING ENVELOPES TO AN OBLITERATING MACHINE
Armand Vorms, Paris, France, assignor to Societe de l'Outillage R. B. V. (Société Anonyme français), Paris, France
Application January 30, 1933, Serial No. 654,286
In Luxemburg February 2, 1932
2 Claims. (Cl. 271—32)

1. A device to distribute previously stacked envelopes to an obliterating machine which comprises: a cylinder provided with only one end, a piston alternately movable in said cylinder, a suction cup connected rigidly to this piston and establishing communication thereof, through a continuous passage, with the interior of the cylinder behind the piston, a shutter disposed behind the stack of envelopes, said shutter being movable parallel with the plane of the opening of the suction cup and toward said opening through the action of a cable drawn by a counterweight, a second cable attached to this shutter, in opposition to the first-mentioned cable, said second cable being attached at the other end to a fixed point after having passed over a pulley mounted on an oscillating lever, and a pedal connected by a transmission to said lever to oscillate the latter in a direction which produces traction on the second cable through the movement of the pulley carried by this lever, so as to bring the shutter to the rear for placing a new stack of envelopes in position.

2,004,883
BEVERAGE POT OR THE LIKE
Frank E. Wolcott, West Hartford, Conn., assignor to Hartford Products Corporation, a corporation of Delaware
Application April 26, 1932, Serial No. 607,573
9 Claims. (Cl. 53—3)

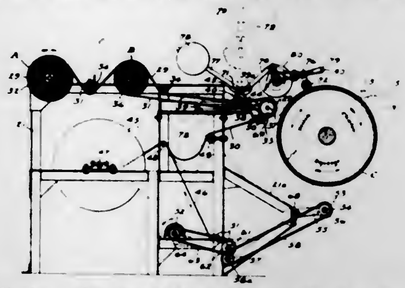
1. A pouring cover for a receptacle having a bell-mouth pouring neck comprising a cover member having a pouring outlet at the periphery thereof and having one wall of said outlet open to provide a pouring outlet defined partly by the cover and partly by the bell-mouth of the receptacle, seating flange means extended around the remainder of the periphery of said cover member engageable with the sloping wall of said bell-

mouth, and means on said cover member having resilient portions extending below said cover

member for releasably engaging the inside of said neck below said mouth and seating said seating flange means in said bell-mouth.

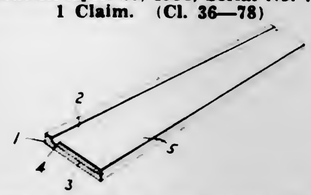
2,004,884
PRODUCTION OF ACENAPHTHYLENE
Carl Wulff, Ludwigshafen-on-the-Rhine, Otto Nicodemus, Frankfort-on-the-Main-Hochst, and Max Treppenhauer, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application November 3, 1933, Serial No. 696,536. In Germany July 22, 1932
4 Claims. (Cl. 260—168)

1. The process for the production of acenaphthylene which comprises passing vapors of acenaphthene at between about 550° and about 850° C. over a solid dehydrogenation catalyst selected from the group consisting of carbon and silicon in the elemental state at a pressure up to atmospheric pressure.



2,004,885
ROTAPLANE
Edward L. Yanchus, Masontown, Pa., assignor of one-half to Isidore Rothstein
Application March 6, 1933, Serial No. 659,862
10 Claims. (Cl. 244—14)

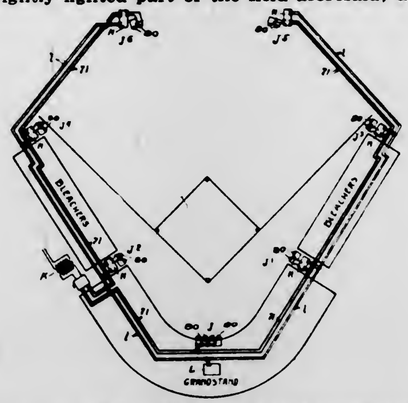
1. In an aircraft having a fuselage and propelling means, a lifting device including an element rotating on an axis transverse of said fuselage, said element consisting of a plane substantially diamond shaped in cross section, said axis passing thru said plane longitudinally thereof in the region of the thickest part of the plane.



2,004,886
TIRE BUILDING MACHINE
Walter James Breth and Max Leo Engler, Akron, Ohio, assignors to The General Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Original application September 4, 1931, Serial No. 561,894. Divided and this application March 29, 1933, Serial No. 663,334
8 Claims. (Cl. 154—10)

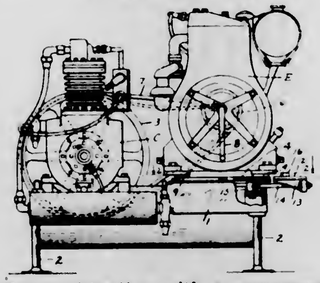
1. In a tire building machine having a rotatable tire assembly drum, means for feeding squeegee stock to a partially built tire carried by said drum, said means comprising a rotatably mounted cylinder positioned adjacent and parallel to said drum, a supply roll of squeegee stock having a liner interposed between adjacent layers of the squeegee stock, said liner being arranged to pass over said cylinder, a pair of horizontally arranged fixed guide supports, guide elements supporting the ends of said cylinder, said guide elements being slidably supported on said supports, means for bodily moving said guide elements toward said drum relative to said guide supports to provide driving engagement between the partially built tire on said drum and the liner carried by said

cylinder, whereby said drum during its rotation causes the liner and squeegee stock to be unwound from the roll and the squeegee stock to be fed to the partially built tire, and means for creating pressure between said cylinder and the partially built tire on said drum.



2,004,887
GOODYEAR WELTING
William Brown, Quakertown, Pa., assignor to McAdoo & Allen Welting Company, Quakertown, Pa., a partnership consisting of Henry M. McAdoo, William McAdoo, Jr., and George H. Allen
Application April 20, 1934, Serial No. 721,522
1 Claim. (Cl. 36—78)

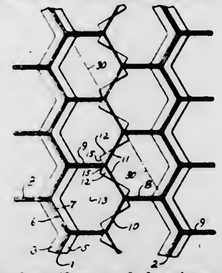
Goodyear welting for light weight soles comprising a strip of leather generally rectangular in cross section and having on one face a stitch groove, said strip being thin yet stiff enough to go properly through machine guides, and said strip having a split ranging crosswise of the strip leaving an uncut portion sufficient to hold it together in its passage through the guides and providing at one of its edges a weakened line along which the split portion can be torn off after the upper has been sewed on.



2,004,888
SPORTS ARENA AND THE ACCESSORIES THERETO
George F. Cahill, New York, N. Y.
Application September 6, 1934, Serial No. 742,908
31 Claims. (Cl. 240—3)

15. The method of manipulating the illumination of a field for the playing of games of ball at night, repeatedly during the progress of the game, which consists in (*a*) lighting brightly that part of the field on which action involving the ball is taking place or is about to take place, and lighting another part of the field less brightly when no action involving the ball is taking place upon said less brightly-lighted part of the field; (*b*) lighting more brightly said less brightly-lighted part of the field when the ball has moved thereto, or may be about to move thereto, from the brightly-lighted part of the field aforesaid; and

(*c*) lighting again less brightly said formerly less brightly-lighted part of the field when action involving the ball has ceased to take place thereon.

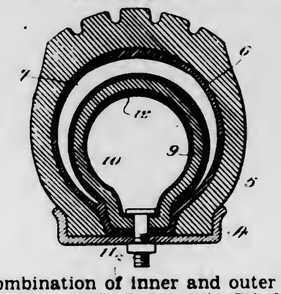


2,004,889
COMPRESSION UNIT
Philip A. Celander, Bloomington, Ill., assignor to Williams Oil-O-Matic Heating Corporation, Bloomington, Ill., a corporation of Illinois
Application April 25, 1934, Serial No. 722,294
1 Claim. (Cl. 230—56)

The combination with a compressor mounted upon a base of an internal combustion engine mounted to travel to and from the compressor upon the same base having a belt drive for the compressor, coil springs between the compressor and engine anchored at the ends adjacent the compressor to the base and pressing upon the engine to maintain the belt tight, an adjustable bracket mounted on the engine end of the base and extending therebeyond, and a handle terminating in a flat circular end eccentrically pivoted upon the bracket to cause the cam surface thereof to engage the engine and upon rotation of the handle to move the engine to compress the springs and loosen the belt to lessen the load in starting the engine.

2,004,890
RADIATOR CORE
Nicholas S. Diamant, Highland Park, Mich., assignor to Chrysler Corporation, Detroit, Mich., a corporation of Delaware
Application March 19, 1932, Serial No. 599,891
6 Claims. (Cl. 257—130)

1. In a radiator core structure, a pair of plates having edge portions sealed together and spaced intermediate portions providing a liquid course, spaced fins extending outwardly from said liquid course, and an imperforated corrugated spacer plate having the adjoining portions of the sides of its ridges contacting continuously with the side edges of said fins throughout substantially

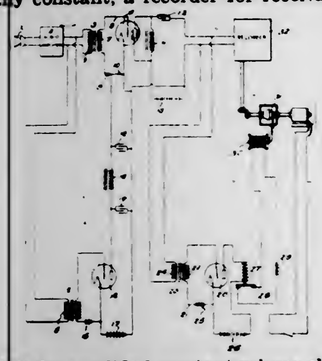


their entire lengths and having closed turbulence producing protuberances projecting from the sides of said ridges beyond the adjoining portions thereof and extending laterally of said sides of said ridges throughout the major portions of their widths.

2,004,891
ANÆSTHETIC COMPOSITION
Samuel D. Goldberg, Brooklyn, N. Y., assignor to Novocol Chemical Mfg. Co. Inc., Brooklyn, N. Y., a corporation of New York
No Drawing. Application December 8, 1931, Serial No. 579,828
7 Claims. (Cl. 167—52)

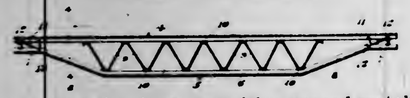
1. A buffered anæsthetic solution containing an alkaline buffer, procaine acetate and epinephrin, and having a pH value of about 5.7 to about neutral.

2,004,892
PNEUMATIC TIRE
William A. Grieshaber, Riverside, Calif.
Application September 11, 1934, Serial No. 743,596
1 Claim. (Cl. 152—22)



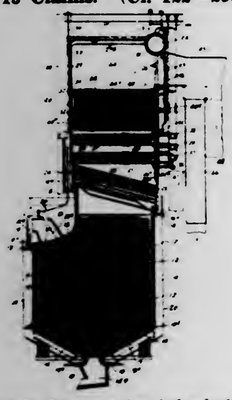
The combination of inner and outer inflatable tubes, the inner tube being interfitted with the outer tube at the inner periphery of the latter, a shoe between the tubes and extending entirely about said inner tube, and a casing separably fitted about the outer tube, the inner and outer tubes being formed with thickened portions at their outer peripheries.

2,004,893
CONTROLLING SYSTEM FOR SOUND RECORDING DEVICES
Ferguson Hall, Shenandoah, Iowa
Application July 20, 1933, Serial No. 681,388
14 Claims. (Cl. 179—100.4)



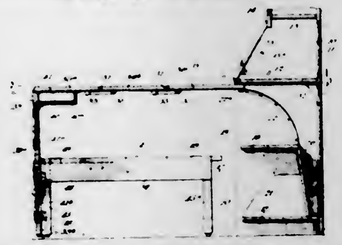
1. In a sound recording system, means for utilizing the sound waves of the sound to be recorded for producing electrical pulsations, means

for amplifying said electrical pulsations, means controlled by the sound waves for maintaining the volume level of the amplified pulsations substantially constant, a recorder for receiving and



recording the amplified constant volume electrical pulsations, means for operating the recorder, and means responsive to the amplified constant volume electrical pulsations for governing said operating means.

2,004,894
STRUCTURAL BEAM
Grover A. Hughes, Youngstown, Ohio, assignor to Truscon Steel Company, Youngstown, Ohio, a corporation of Michigan
Application January 7, 1933, Serial No. 650,727
3 Claims. (Cl. 189—37)



1. A joist structure comprising spaced metallic chord members and a metallic connector between the chord members having a higher melting point than the chord members, said connector being embedded in and welded to the chord members.

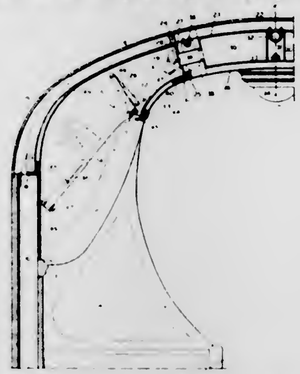
2,004,895
BOILER
Howard J. Kerr, Westfield, N. J., assignor to The Babcock & Wilcox Company, Bayonne, N. J., a corporation of New Jersey
Application August 19, 1932, Serial No. 629,471
13 Claims. (Cl. 122—299)

1. In a high drum water tube boiler, a furnace chamber, fuel burning means in said chamber, a vertical heating gas pass arranged above said furnace chamber, a bank of steam generating tubes positioned in said gas pass, a steam and water drum positioned at a level substantially above the uppermost portion of said tube bank, a row of circulators at each end of said tube bank connecting said steam and water drum and tube bank to form a natural circulation steam generating section, an economizer positioned in said gas pass in the space bounded by said tube bank and circulators and below said steam and water drum and comprising a plurality of superposed tube sections, each formed by return bend tubes arranged in parallel, means providing a serial flow through said economizer sections, and means for independently supporting said economizer sections from one of said rows of circulators.

2,004,896
FOLDING FURNITURE
George Albert Knott, Washington, D. C.
Application March 25, 1933, Serial No. 662,796
14 Claims. (Cl. 155—124)

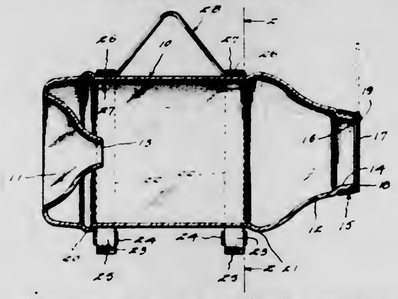
5. An article of furniture including a stationary support and casing structure having an open front, a sectional table top collapsible into said structure, a front panel for said structure connected to said table top for supporting the same, and benches pivoted to said panel for movement to and from nested position when the top is in extended position.

2,004,897
SHOE
Joseph A. Lussier, Watertown, Mass., assignor to Hood Rubber Company, Inc., Watertown, Mass., a corporation of Delaware
Application January 5, 1935, Serial No. 543
3 Claims. (Cl. 36—54)



1. A shoe comprising a tongue member anchored at its lower end, and a binding embracing the margin of the tongue member in a free portion of the latter but lying wholly on one side of the tongue member in an anchored portion of the latter.

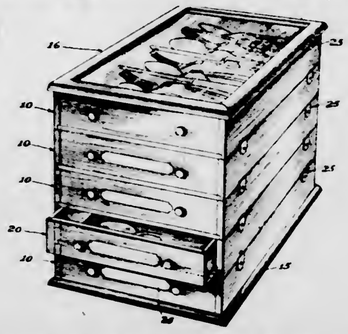
2,004,898
SLEEPING CAR CEILING
Lawrence E. Marchant, Hamilton, Ontario, Canada, assignor to National Steel Car Corporation, Limited, Hamilton, Ontario, Canada, a corporation of Canada
Application January 4, 1934, Serial No. 705,192
32 Claims. (Cl. 105—321)



1. A sleeping car, a curved multiple part continuous ceiling beneath and spaced from the roof

to form a chamber therebetween, said ceiling including a fixed aisle portion, the underside of an upper berth bunk and a bridge portion be-

tween the upper edge of the bunk when in elevated position and the adjacent edge of the fixed aisle portion.

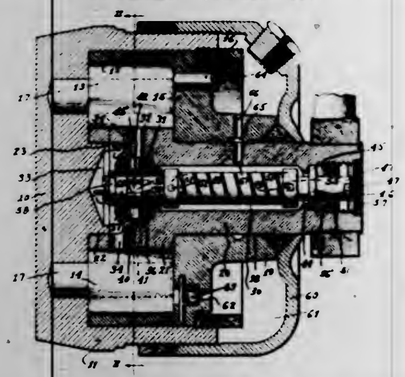


2,004,899
MINNOW TRAP
Melvin E. McSwain, Memphis, Tenn.
Application January 18, 1934, Serial No. 707,188
4 Claims. (Cl. 43—65)

1. A minnow trap as set forth comprising a substantially cylindrical body, a substantially truncated cone integral with one end of the body and disposed with the smaller end thereof inwardly of the body and provided with an entrance opening, a threaded reduced portion on the opposite end of the body, a cap engaging said threaded end, a pair of annular ribs integral with the body and disposed in spaced relation to each other, a pair of relatively narrow flat bands engaging about the body between said ribs, looped members for securing said bands about the body in spaced relation to each other, extensions carried by said bands and constituting base portions, a loop integral with each band and a bail engaging the loop of each band.

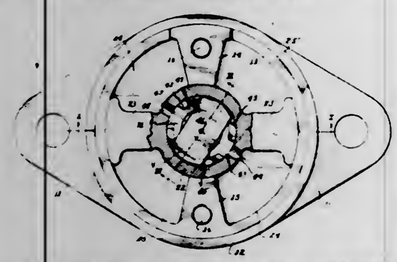
2,004,900
PATTERN SELECTION CABINET
Harold E. Nock, Newburyport, Mass., assignor to Towle Manufacturing Company, Newburyport, Mass., a corporation of Massachusetts
Application October 14, 1932, Serial No. 637,751
1 Claim. (Cl. 312—107)

A pattern selection cabinet composed of a stack of open front sections each consisting of a floor, two side walls and a rear wall, the top edges of said three walls being all in one plane and the bottom of the section being wholly in a single parallel plane, whereby said sections are devoid of interfitting construction and in any order in which they may be piled the upper section will present a plane top face, a drawer fitting into each section the front of each drawer closing the open front of its section and the floor of the section above forming a cover for each drawer



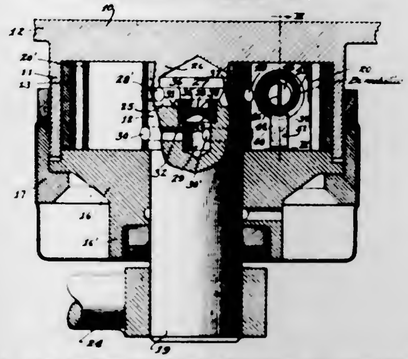
except for the drawer in the top section, a transparent cover for said top drawer consisting of a glass adapted to display the contents of the drawer and a frame holding said glass laid upon the edges of the top section, and means for holding said sections and top frame from relative movement when stacked, said sections all being of the same size whereby the top drawer may be replaced by any other drawer and vary the pattern displayed beneath the transparent cover.

2,004,901
ELECTRICAL CONDUCTOR
Dwight R. G. Palmer, South Orange, N. J., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey
Application December 18, 1925, Serial No. 76,182
7 Claims. (Cl. 173—267)



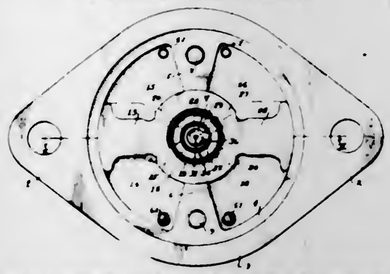
7. An electrical cable comprising, in combination, a flexible conductor, an insulating covering for said conductor, a bare neutral conductor adapted to be connected with the grounded side of a circuit wound helically around the insulated conductor, and a flexible, helically wound metallic armor of shorter lay than the bare neutral conductor surrounding the insulated and bare neutral conductors, the bare neutral conductor and the metallic armor being of the same electrical potential.

2,004,902
HYDRAULIC SHOCK ABSORBER
Ralph F. Peo and Carl F. Lautz, Buffalo, N. Y., assignors to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application February 28, 1934, Serial No. 713,247
12 Claims. (Cl. 188—89)



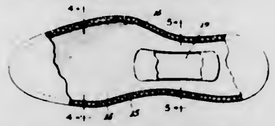
1. In combination, a hydraulic shock absorber having formed therein a passage through which hydraulic fluid is adapted to be forced, a longitudinally wound thermostat coil adapted to wind and unwind due to temperature changes, a valve seat, a rotary valve in said seat, one end of said thermostat coil being secured to said valve, and a support for the other end of said thermostat coil arranged to hold said end against rotational movement but allowing axial movement thereof whereby said coil may expand or contract axially without axially moving said valve while turning said valve by its winding or unwinding action.

2,004,903
HYDRAULIC SHOCK ABSORBER
Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application March 19, 1934, Serial No. 716,251
13 Claims. (Cl. 188—89)



1. In a hydraulic shock absorber, a passageway for the flow of displaced hydraulic fluid, a valve chamber interposed in said passageway, a valve in the form of a plate in said valve chamber bodily movable therein, abutments for engagement by the outer portion of said valve for limiting the bodily movement thereof, means forming a seat for the inner portion of said valve and an orifice through said valve at said inner portion for inclusion in said passageway, said valve being inherently thermostatic whereby to distort under temperature change to thereby control the cooperation of the valve with said seat.

2,004,904
HYDRAULIC SHOCK ABSORBER
Ralph F. Peo and John Sullivan, Buffalo, N. Y., assignors to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application May 7, 1934, Serial No. 724,288
14 Claims. (Cl. 188—89)



1. In a hydraulic shock absorber, the combination of a housing forming a chamber for hydraulic fluid, a piston structure operable within said chamber to displace the fluid therein, a passageway for the flow of hydraulic fluid from one side of the piston structure to the other, a thermostat element having a portion thereof formed to provide a valve extending transversely of said passageway, said valve portion having a restricted port arranged for variable exposure to said passage as said thermostat element responds to temperature changes.

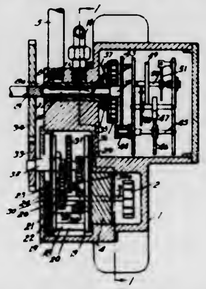
2,004,905
HYDRAULIC SHOCK ABSORBER
Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application August 25, 1934, Serial No. 741,402
10 Claims. (Cl. 188—89)

1. In a hydraulic shock absorber, a housing for hydraulic fluid, a piston structure operable in said housing to displace the fluid, means defining a path for the flow of the displaced fluid, a wall defining a valve chamber, a seat member in said valve chamber having an opening therethrough included in said path, a flap valve whose inner end covers said opening and has an orifice in registration with said opening, said wall having a recess in which the outer end of said valve engages to be held thereby against lateral displacement, and means for holding said valve against said seat for movement of the inner end of said valve to permit flow in one direction through said opening and closure of said opening by said valve to confine the flow to said orifice.

2,004,906
PNEUMATIC SHOE
Louis W. Simister, New York, N. Y., assignor of one-half to Joseph Farese, New York, N. Y.
Application March 5, 1934, Serial No. 713,989
3 Claims. (Cl. 36—29)

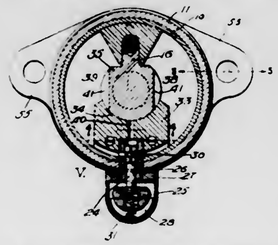
1. A shoe sole having an inflatable chamber substantially co-extensive with the area of the surface of the sole, and a secondary inflatable chamber securely positioned therein in the plane of the first named member.

2,004,907
COMPOSITE STRUCTURE
Arthur C. Wallen, Bronxville, N. Y., and Thomas J. Crawford, Youngstown, Ohio; said Wallen assignor to said Crawford
Application May 30, 1930, Serial No. 457,598
2 Claims. (Cl. 189—37)



1. A composite structure comprising three longitudinal members arranged at the apices of a triangle, each member comprising a plurality of structural metal sections of graded thicknesses, joined together in end to end relation by butt welding the ends of each section to adjacent ends of the next sections according to the graded relationship, each of said sections comprising a channel beam having its web bent along a longitudinal line to present two portions at an obtuse angle to each other, while the channel flanges remain each at a right angle to the adjacent web portion, and diagonally positioned rods welded to said web portions and joining said three longitudinal members to form a triangular column of varying strength.

2,004,908
FOLDING CARTON
Earl B. Whitehead, Norwich, Conn., assignor to Atlantic Carton Corporation, Norwich, Conn., a corporation of Connecticut
Application July 31, 1933, Serial No. 683,041
2 Claims. (Cl. 206—45)

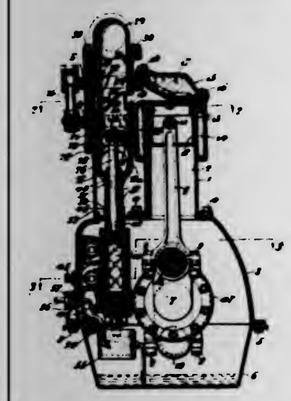


1. A foldable shipping and display box of the class described comprising in combination, vertically-extending front and rear walls of equal width hingedly connected by side walls of equal width, a bottom closure flap member substantially equal in width to said front and rear walls having a main body portion for extending in a substantially horizontal position between the lower marginal edges of said walls and a tab portion for lying adjacent the inside of said front wall, said body portion being provided with an opening therein, and a foldable tier-forming member hingedly connected to the lower marginal edge of said front wall and scored along certain lines parallel with said lower marginal edge of the front wall to include successively a connecting section adjacent said front wall for lying adjacent the outside of said bottom flap member, a spacer section for extending upwardly within said opening at substantially right angles to said bottom flap member, a supporting section for extending in substantial parallelism with and above said bottom flap and another spacer section for extending in parallelism with said first spacer section.

2,004,909
CLOCK
Arthur F. Benson, Erie, Pa., assignor to American Meter Company, New York, N. Y., a corporation of Delaware
Application April 16, 1932, Serial No. 605,589
6 Claims. (Cl. 58—46)

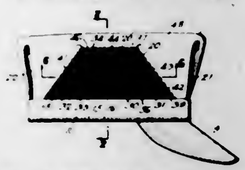
1. In a clock, the combination of a time controlling escapement; means driving the escapement comprising a fluid-actuated motor; and devices controlled by the action of the escapement relatively to the motor controlling the rate of flow of fluid to the motor to maintain the speed of the motor in conformity with the speed of the escapement.

2,004,910
INERTIA CONTROLLED HYDRAULIC SHOCK ABSORBER
Michael Fieldman, Philadelphia, Pa., assignor, by direct and mesne assignments, to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application January 27, 1933, Serial No. 653,912
35 Claims. (Cl. 188—89)



1. In a hydraulic shock absorber, a working chamber, a piston and a partitioning element dividing said chamber into compartments, passage means connecting the compartments, inertia-controlled valve means controlling said passage means, and means to apply generated pressure to close the valve means.

2,004,911
HYDRAULIC SHOCK ABSORBER
Michael Fieldman, Chicago, Ill., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application June 25, 1934, Serial No. 732,231
10 Claims. (Cl. 188—89)



1. A hydraulic shock absorber comprising a housing for hydraulic fluid, a partition member in said housing, a piston structure oscillatable in said housing, said piston structure and partition member dividing said housing into working chambers, said partition member having a passage therethrough for flow of fluid between said working chambers, a valve chamber included in said passage, a valve movable in said valve chamber normally positioned to open said passage, ports leading from said valve chamber at opposite sides of said valve, and means adapting said piston structure to operate as a valve for connecting said valve chamber ports with the working chambers for flow of fluid under pressure to said valve chamber for shifting said valve for closure of said passageway after a predetermined distance of movement of said piston structure.

2,004,912
REVOLUBLE VALVE FOR INTERNAL COMBUSTION ENGINES
Howard C. Heinel, Philadelphia, Pa., assignor to Amy B. Heinel, Philadelphia, Pa.
Application November 30, 1932, Serial No. 645,055
2 Claims. (Cl. 123—190)

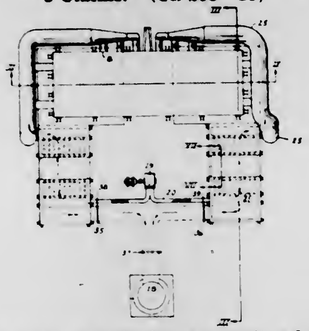
1. The combination with an internal combustion engine having a plurality of cylinders and pistons operable therein, of a cylindrical valve chamber including a plurality of combustion chambers connecting the cylinders and the valve chamber, said valve chamber having upper and lower spaced stationary thrust bearing oil rings, a cylindrical hollow revoluble valve interposed endwise between the thrust bearing oil rings, the exterior surface of the valve having diagonal grooves for the collection of oil received from a source supplying it to said valve chamber, said valve having upper and lower exhaust and intake chambers and provided with intake and exhaust ports alternately communicating the intake and exhaust chambers of the valve with said combustion chambers, exhaust and intake passages above and below the valve and communicating with the upper and lower exhaust and intake chambers of the valve, said stationary thrust bearing oil rings being serviceable to prevent seepage of oil into the exhaust and intake passages and the chambers, and means to rotate the valve.

2,004,913
VENTILATED ENGINEER'S CAP
Robert Klein, Brooklyn, N. Y., assignor to Bell Cap Company, New York, N. Y., a co-partnership composed of Abraham Herskowitz, Samuel Bell, Morris Goldberg, and Robert Klein
Application December 11, 1934, Serial No. 756,923
8 Claims. (Cl. 2—195)

1. In a cap, a sweatband comprising a pair of separate similar sections, a pleated crown of closely woven fabric, said crown having an opening therein, and a pleated section of loosely woven fabric providing interstices therein arranged in the opening and secured along one edge thereof to and between the sweatband sections and along the other edge thereof to the edge of the opening in the crown.

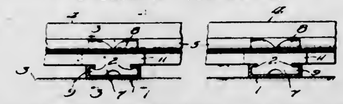
2,004,914
AMINO DERIVATIVE OF HYDROXY DIPHENYLS
William D. Wolfe, Akron, Ohio, assignor to Wingfoot Corporation, Wilmington, Del., a corporation of Delaware
No Drawing. Application December 18, 1930, Serial No. 503,233
9 Claims. (Cl. 260—128)

1. The addition product of a mono hydroxy diphenyl and an amine of the group consisting of primary aliphatic mono- and diamines, primary aromatic mono amines of the benzene and naphthalene series, benzyl amine, cyclohexyl amine and hexamethylene tetra amine.



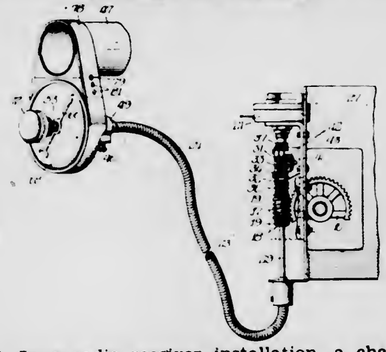
2,004,915
TOY TRANSPORTATION SYSTEM
John J. Clark, Clinton, Iowa
Application February 25, 1935, Serial No. 8,031
6 Claims. (Cl. 46—48)

1. A toy transportation system comprising a base, a rocking support therefor, a representation of a mountain on said base, a length of track on said base extending to said mountain, up the side thereof and down and around the same in loops, and a vehicle on said track, whereby said base may be rocked to cause any portion of said track occupied by said vehicle to be inclined downwardly temporarily and thus propel said vehicle continuously along successive portions of said track and cause it to appear to travel up said



mountain, down which it may travel without further manipulation of said base.

2,004,916
RECUPERATOR FOR OPEN HEARTH FURNACES
William H. Fitch, Plainfield, N. J.
Application July 28, 1933, Serial No. 682,654
3 Claims. (Cl. 263—15)

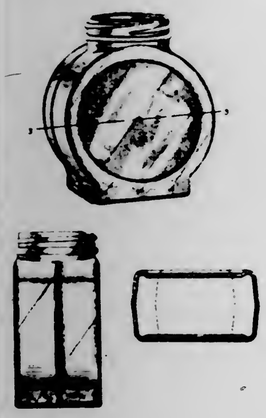


1. An open hearth furnace unit adapted to continuous operation at very high temperatures for extended periods, said furnace unit comprising a combustion chamber disposed over an elongated hearth, burner inlets distributed along the back and end walls of said combustion chamber, a recuperator chamber disposed near each end of the combustion chamber and in front of the same, a slag chamber at each end of the combustion chamber, a plurality of burned gas outlets from each end of the combustion chamber and below the same, said outlets discharging downwardly into their corresponding slag chambers, an outlet from the upper end of each slag chamber to the adjacent recuperator chamber, horizontally disposed tubes of highly conducting refractory supported terminally by walls in each recuperator chamber and heated exteriorly by the flow of burned gases in a vertically upward or downward direction, and means for compelling a flow of air through the interior of said recuperator tubes and thence to the burner inlets.

2,004,917
MEANS FOR ATTACHING FLOOR BOARDS
Oscar L. Johnson, Chicago, Ill., assignor, by mesne assignments, of one-half to Lug-Lox Flooring Company, Chicago, Ill., a corporation of Illinois, and one-half to Leon F. Urbain, Chicago, Ill.
Application May 4, 1932, Serial No. 609,059
8 Claims. (Cl. 20—8)

1. In a floor, a foundation, boards laid edge to edge on said foundation and joined by tongues and grooves, clips rising from the foundation and interlocked therewith for sliding movements at right angles to said tongues and grooves and against vertical movements, each clip having a hook part at the upper end embracing the edge of and biting into the top of one of said tongues and nested in the groove in which that tongue is engaged, and the effective length of each clip from the upper face of said foundation to the clip of the hook being such that, when the hook is forced upon the edge of a tongue, the tip of the hook is compelled to sink into the tongue after the board has been firmly seated on the foundation.

2,004,918
CONTROL DEVICE
Donald H. Mitchell, Chicago, Ill., assignor to Galvin Manufacturing Corporation, Chicago, Ill., a corporation of Illinois
Application November 10, 1932, Serial No. 642,061
13 Claims. (Cl. 250—20)



1. In a radio receiver installation, a chassis, a frequency selector secured on the chassis having a rotatable shaft, a power control device having a rotatable shaft, a flexible shaft having one end disposed adjacent said two shafts, a pair of clutch members operably associated with one end of said flexible shaft, a pair of clutch members operably connected to the frequency selector shaft and power control shaft respectively, and means for moving the flexible shaft longitudinally to connect the same operably either to the condenser shaft or power control shaft whereby said connections are effected with only a relatively short longitudinal movement of said shaft, said flexible shaft being rotatable to rotate either of said shafts.

DESIGNS

JUNE 11, 1935

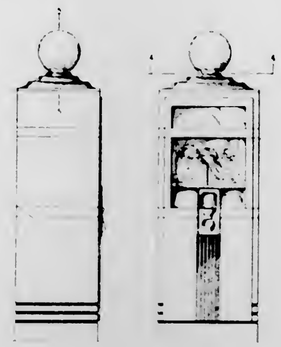
95,888
DESIGN FOR A JAR
Willis Burton Adams, Oak Park, Ill., assignor to Adams Bros. & Co., Chicago, Ill., a firm composed of Lysle E. Adams and Willis B. Adams
Application November 27, 1934, Serial No. 54,183
Term of patent 14 years

The ornamental design for a jar as shown.

95,889
DESIGN FOR A VANITY CONTAINER
George H. Beck, Chicago, Ill., assignor to Marion Lambert, Inc., St. Louis, Mo., a corporation of Missouri
Application April 1, 1935, Serial No. 56,142
Term of patent 3½ years

The ornamental design for a vanity container, substantially as shown.

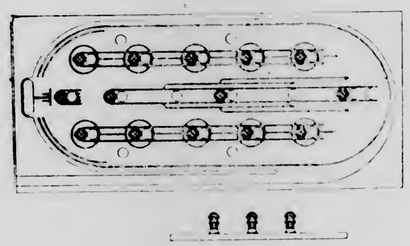
95,890
DESIGN FOR A SHOE
Benjamin Benjamin, Freeport, N. Y.
Application April 29, 1935, Serial No. 56,624
Term of patent 3½ years



The ornamental design for a shoe, as shown and described.

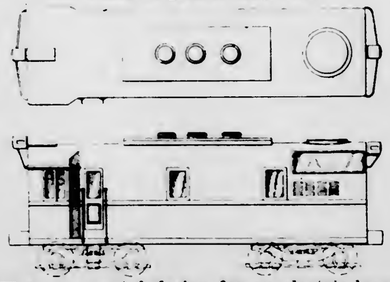
95,891
DESIGN FOR A VENDING MACHINE CABINET
Rowland Bentley, Mount Airy, and Benedict Bentley, Gladwyn, Pa.
Application March 25, 1935, Serial No. 56,043
Term of patent 14 years

95,891—Continued



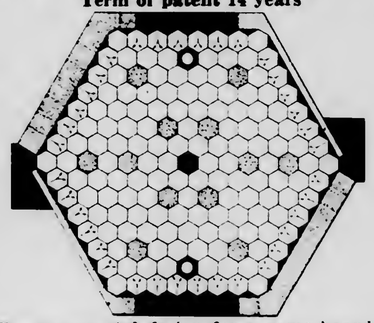
The ornamental design for a vending machine cabinet, substantially as shown.

95,892
DESIGN FOR A LADY'S SWEATER
Hans Boepple, New York, N. Y.
Application April 19, 1935, Serial No. 56,463
Term of patent 3½ years



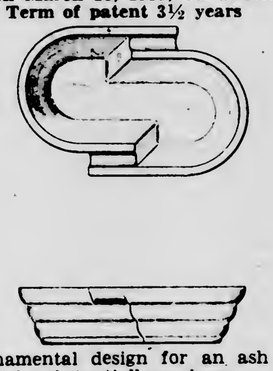
The ornamental design for a lady's sweater, substantially as shown.

95,893
DESIGN FOR A GAME BOARD FOR PIN BALL GAMES
Herbert G. Breitenstein, Chicago, Ill., assignor to Raymond T. Moloney, Chicago, Ill.
Application March 20, 1935, Serial No. 55,971
Term of patent 3½ years



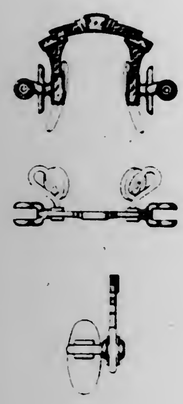
The ornamental design for a game board for pin ball games, as shown.

95,894
DESIGN FOR AN ELECTRIC LOCOMOTIVE
Conrad C. C. Burkhardt, Philadelphia, Pa.
Application June 2, 1934, Serial No. 52,020
Term of patent 14 years



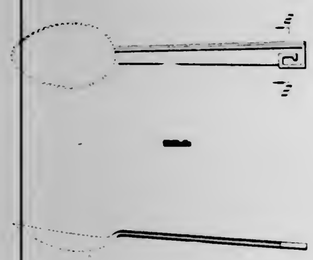
The ornamental design for an electric locomotive, substantially as shown and described.

95,895
DESIGN FOR A GAME BOARD
Ralph J. Byrnes, Chicago, Ill.
Application March 11, 1935, Serial No. 55,807
Term of patent 14 years



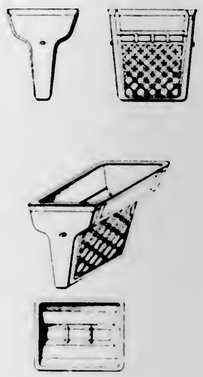
The ornamental design for a game board substantially as shown and described.

95,896
DESIGN FOR AN ASH TRAY OR SIMILAR ARTICLE
Jeddiah B. Clark, Dunkirk, Ind., assignor to Indiana Glass Company, Dunkirk, Ind., a corporation of Indiana
Application March 18, 1935, Serial No. 55,924
Term of patent 3½ years



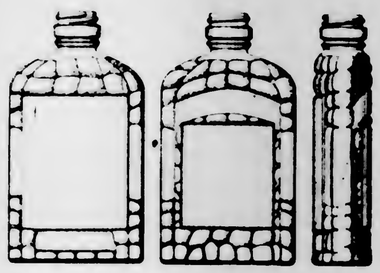
The ornamental design for an ash tray or similar article substantially as shown.

95,897
DESIGN FOR A SPECTACLE BRIDGE
Herbert Clements, Geneva, N. Y.
Application April 22, 1935, Serial No. 56,516
Term of patent 7 years



The ornamental design for a spectacle bridge substantially as shown.

95,898
DESIGN FOR A SPOON OR OTHER ARTICLE OF FLATWARE
Virginia M. Conner, New York, N. Y.
Application March 20, 1935, Serial No. 55,964
Term of patent 3½ years

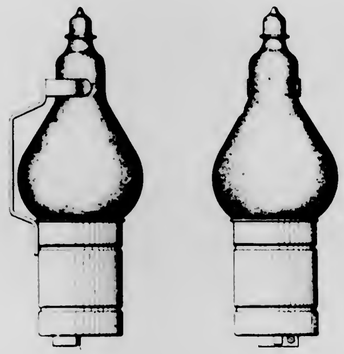


The ornamental design for a spoon or other article of flatware substantially as shown and described.

95,899
DESIGN FOR AN EDIBLE CUP
Hyman Dicker, Jersey City, N. J.
Application December 27, 1934, Serial No. 54,609
Term of patent 7 years

The ornamental design for an edible cup, as shown.

95,900
DESIGN FOR A BOTTLE
John L. Dunnock, Baltimore, Md., assignor to Swindell Brothers, Incorporated, Baltimore, Md.
Application April 17, 1935, Serial No. 56,444
Term of patent 7 years

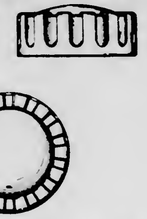


The ornamental design for a bottle, substantially as shown.

95,901
DESIGN FOR A SHOE
Ferdinand W. Ellington, Jamaica, N. Y., assignor to Delman, Inc., a corporation of New York
Application February 25, 1935, Serial No. 55,602
Term of patent 3½ years

The ornamental design for a shoe, as shown and described.

95,902
DESIGN FOR A FIRE EXTINGUISHER
Powell Evans, Haverford, Pa.
Application April 12, 1935, Serial No. 56,351
Term of patent 14 years

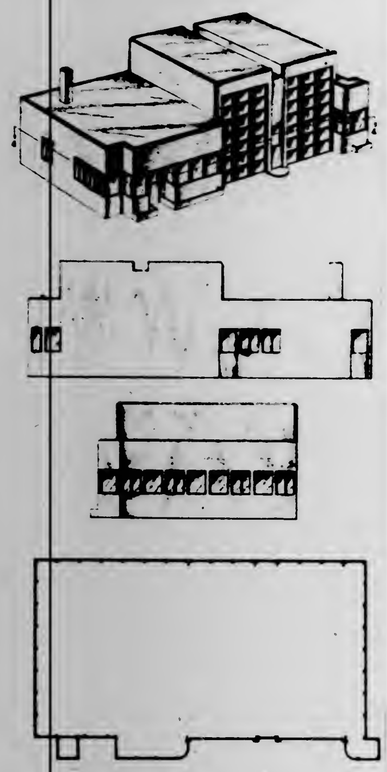


The ornamental design for a fire extinguisher, substantially as shown.

95,903
DESIGN FOR A WHISKY GLASS
Frank L. Fenton, Williamstown, W. Va.
Application August 24, 1934, Serial No. 53,035
Term of patent 3½ years

The ornamental design for a whisky glass, as shown.

95,904
DESIGN FOR A BOTTLE CAP
Edwin W. Fuerst, Toledo, Ohio, assignor to The Closure Service Company, Toledo, Ohio, a corporation of Ohio
Application December 7, 1934, Serial No. 54,335
Term of patent 14 years

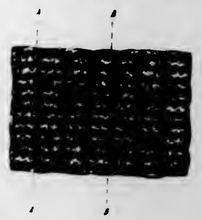


The ornamental design for a bottle cap substantially as shown.

95,905
DESIGN FOR A HAT
Oscar Friedman, New York, N. Y.
Application May 2, 1935, Serial No. 56,657
Term of patent 3½ years

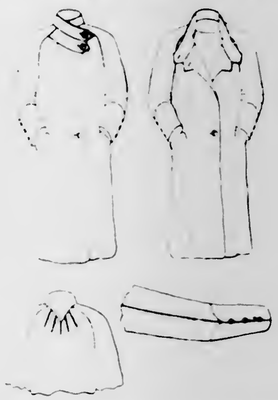
The ornamental design for a hat, substantially as shown and described.

95,906
DESIGN FOR A BUILDING
Norman Bel Geddes and Carl Landefeld, New York, N. Y., assignors to Socony-Vacuum Oil Company, Incorporated, New York, N. Y., a corporation of New York
Application April 3, 1935, Serial No. 56,197
Term of patent 14 years



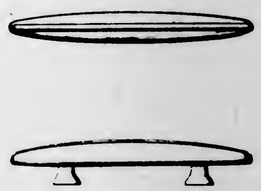
The ornamental design for a building as shown.

95,907
DESIGN FOR A TEXTILE FABRIC
David F. Greenawalt, Huntingdon Valley, Pa.
Application April 16, 1935, Serial No. 56,412
Term of patent 3½ years



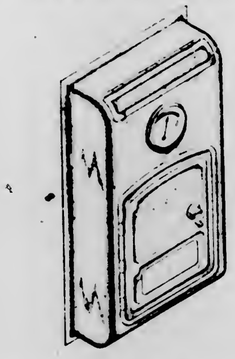
The ornamental design for a textile fabric as shown and described.

95,908
DESIGN FOR A TEXTILE FABRIC
David F. Greenawalt, Huntingdon Valley, Pa.
Application April 16, 1935, Serial No. 56,413
Term of patent 3½ years



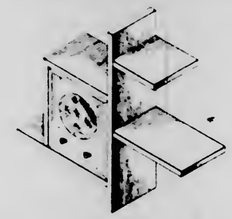
The ornamental design for a textile fabric as shown and described.

95,909
DESIGN FOR A COAT
Morris Hiller, Long Beach, N. Y.
Application April 24, 1935, Serial No. 56,528
Term of patent 7 years



The ornamental design for a coat substantially as shown and described.

95,910
DESIGN FOR A HANDLE OR SIMILAR ARTICLE
Isaac S. Keeler, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich.
Application December 7, 1934. Serial No. 54,328
Term of patent 3½ years



The ornamental design for a handle or similar article, as shown and described.

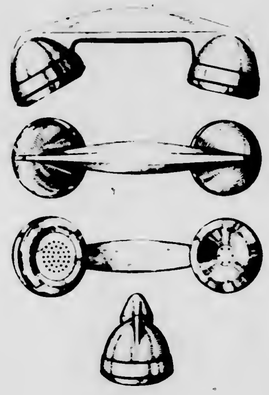
95,911
DESIGN FOR A HOUSE LETTER BOX
Julius Kim, Cheswick, Pa.
Application March 15, 1935, Serial No. 55,883
Term of patent 3½ years

The ornamental design for a house letter box. as shown.

95,912
DESIGN FOR A COMBINED WALL SHELF AND RADIOCABINET
Delwin W. Kussman, Racine, Wis.
Application April 10, 1935, Serial No. 56,295
Term of patent 7 years

The ornamental design for a combined wall shelf and radio cabinet, as shown.

95,913
DESIGN FOR A GLOVE
George U. Larom, Brightwaters, and Alfred L. Russo, Astoria, N. Y.
Application March 6, 1935, Serial No. 55,758
Term of patent 7 years

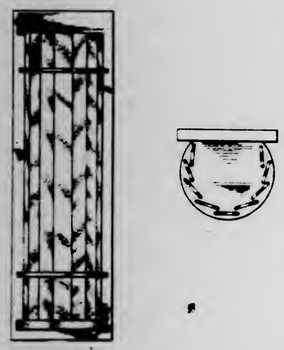


The ornamental design for a glove, as shown and described.

95,914
DESIGN FOR A FINGER RING
Jack M. H. Le Bolt, Chicago, Ill., assignor to Lebolt and Company, Chicago, Ill., a corporation of Delaware
Application March 11, 1935, Serial No. 55,838
Term of patent 7 years

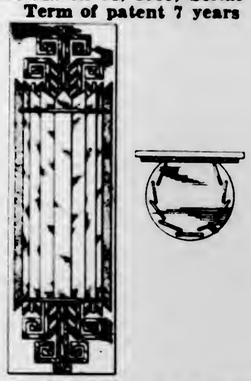
The ornamental design for a finger ring, as shown.

95,915
DESIGN FOR A HAND TELEPHONE
George R. Lum, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application April 25, 1935, Serial No. 56,548
Term of patent 14 years



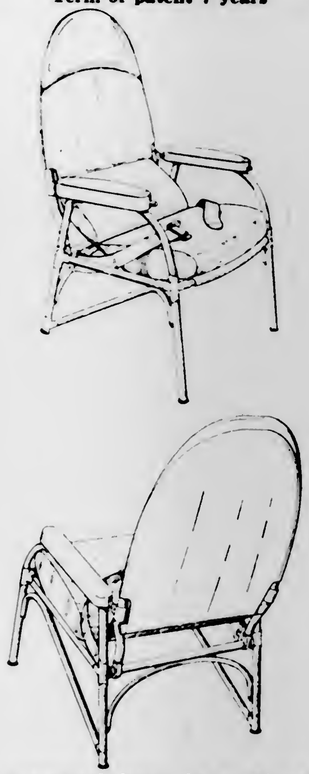
The ornamental design for a hand telephone, as shown.

95,916
DESIGN FOR A TIRE
Charles Edgar Maynard, Northampton, Mass., assignor to The Fisk Rubber Corporation, Chicopee Falls, Mass., a corporation of Delaware
Application April 4, 1935, Serial No. 56,214
Term of patent 14 years



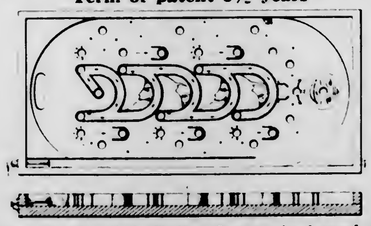
The ornamental design for a tire as shown.

95,917
DESIGN FOR A LIGHTING FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application March 13, 1935, Serial No. 55,875
Term of patent 7 years



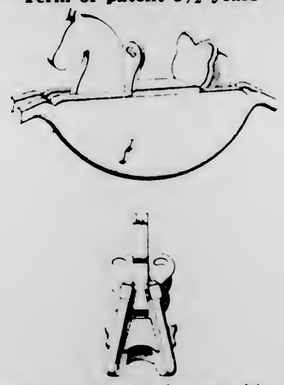
The ornamental design for a lighting fixture substantially as shown.

95,918
DESIGN FOR A LIGHTING FIXTURE
Clyde D. McCann, Des Moines, Iowa
Application March 18, 1935, Serial No. 55,927
Term of patent 7 years



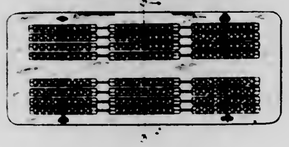
The ornamental design for a lighting fixture substantially as shown.

95,919
DESIGN FOR AN AIRCRAFT CHAIR
Lewis C. McCarty, Jr., Towson, and Drew M. Helwig, Baltimore, Md., assignors to The Glenn L. Martin Company, Baltimore, Md.
Application August 18, 1934, Serial No. 52,988
Term of patent 7 years



The ornamental design for an aircraft chair substantially as shown and described.

95,920
DESIGN FOR A PIN BOARD GAME DEVICE
Albert Stith Moorman, New York, N. Y.
Application January 25, 1935, Serial No. 55,062
Term of patent 3½ years



The ornamental design for a pin board game device, as shown.

95,921
DESIGN FOR A ROCKING HORSE
Ilonka Karasz Nyland, Brewster, N. Y., assignor to Larkin Company, Inc., Buffalo, N. Y.
Application March 16, 1935, Serial No. 55,902
Term of patent 3½ years

The ornamental design for a rocking horse as shown.

95,922
DESIGN FOR A CARD GAME SCORING BOARD
William Andrew O'Brien, San Pedro, Calif.
Application April 3, 1934, Serial No. 51,305
Term of patent 14 years

The ornamental design for a card game scoring board substantially as shown.

95,923
DESIGN FOR A TABLE TOP
William Andrew O'Brien, San Pedro, Calif.
Application April 3, 1934, Serial No. 51,306
Term of patent 14 years

The ornamental design for a table top substantially as shown.

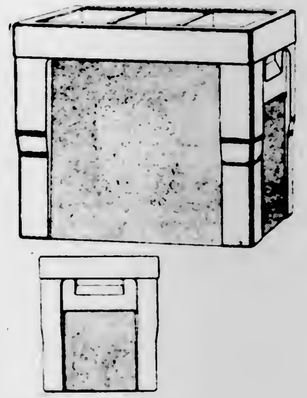
95,924
DESIGN FOR A LIP STICK HOLDER
Arnold L. Ogden, New York, N. Y., assignor to Mary Dunhill, Inc., New York, N. Y., a corporation of New York
Application January 15, 1935, Serial No. 54,865
Term of patent 7 years

The ornamental design for a lipstick holder, as shown.

95,925
DESIGN FOR A COCKTAIL SHAKER OR SIMILAR ARTICLE
Howard F. Reichenbach, Waterbury, Conn., assignor to The Chase Companies, Incorporated, Waterbury, Conn., a corporation
Application April 10, 1935, Serial No. 56,296
Term of patent 7 years

The ornamental design for a cocktail shaker or similar article substantially as shown.

95,926
DESIGN FOR A HANDLE OR SIMILAR ARTICLE
Kurt Bettich, Grand Rapids, Mich., assignor to Keeler Brass Company, Grand Rapids, Mich.
Application December 7, 1934, Serial No. 54,327
Term of patent 3½ years

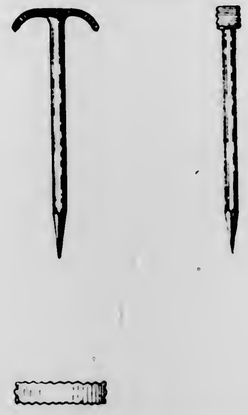


The ornamental design for a handle or similar article as shown and described.

95,927
DESIGN FOR A SWEATER
Daniel Rheinauer, New York, N. Y.
Application December 10, 1934, Serial No. 54,384
Term of patent 14 years

The ornamental design for a sweater, as shown and described.

95,928
DESIGN FOR A STORAGE BATTERY CASE
Oliver O. Rieser, Oak Park, Ill., assignor to The Richardson Company, Lockland, Ohio, a corporation of Ohio
Application March 28, 1935, Serial No. 56,098
Term of patent 7 years



The ornamental design for a storage battery case, as shown and described.

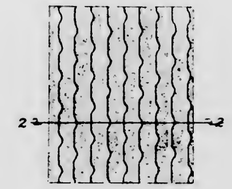
95,929
DESIGN FOR A PALL-BEARER'S BADGE
Carl D. Roberts, Kirbyville, Tex.
Application April 2, 1935, Serial No. 56,185
Term of patent 7 years

The ornamental design for a pall-bearer's badge, as shown.

95,930
DESIGN FOR A NAIL
Manuel G. Rodriguez, Haiku, Territory of Hawaii
Application February 25, 1935, Serial No. 55,619
Term of patent 3½ years

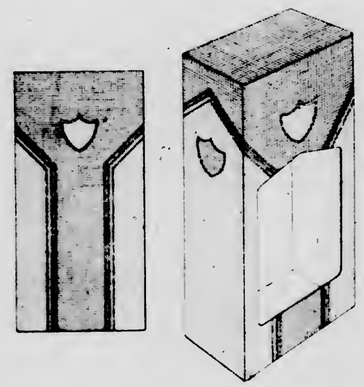
The ornamental design for a nail, substantially as shown.

95,931
DESIGN FOR A WAFFLE IRON
John A. Salvia, Rochester, N. Y., assignor to Samson-United Corporation, Rochester, N. Y.
Application February 19, 1935, Serial No. 55,495
Term of patent 7 years



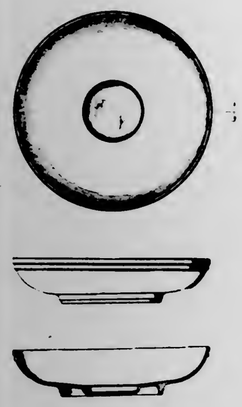
The ornamental design for a waffle iron, as shown and described.

95,932
DESIGN FOR AN EMBLEM OR SIMILAR ARTICLE
Max E. Schwalbe, New York, N. Y.
Application October 12, 1934, Serial No. 53,600
Term of patent 3½ years



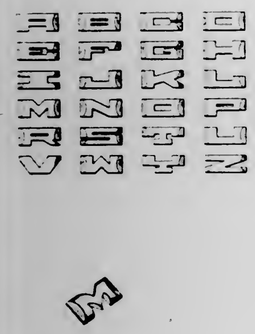
The ornamental design for an emblem or similar article, as shown and described.

95,933
DESIGN FOR A TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE
Albert Schumacher, Passaic, N. J., assignor to Botany Worsted Mills, Passaic, N. J., a corporation of New Jersey
Application February 7, 1935, Serial No. 55,294
Term of patent 14 years



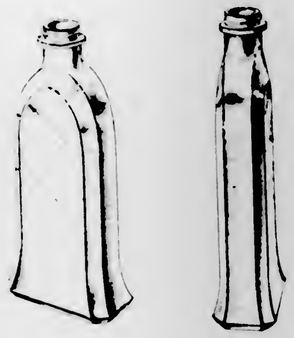
The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

95,934
DESIGN FOR A CARTON
Margery M. Smith, Brooklyn, N. Y., assignor to Container Corporation of America, Chicago, Ill., a corporation of Delaware
Application April 25, 1935, Serial No. 56,543
Term of patent 14 years



The ornamental design for a carton, as shown.

95,935
DESIGN FOR A DISH
Eugene L. Snyder, Canton, Ohio
Application March 25, 1935, Serial No. 56,034
Term of patent 14 years

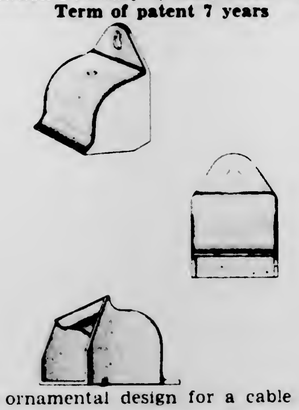


The ornamental design for a dish, substantially as shown.

95,936
DESIGN FOR AN ALPHABET FOR FORMING MONOGRAMS OR THE LIKE
Leo K. Stupell, New York, N. Y.
Application April 1, 1935, Serial No. 56,162
Term of patent 14 years

The ornamental design for an alphabet for forming monograms or the like, substantially as shown and described.

95,937
DESIGN FOR A BOTTLE
Lewis M. Sutton, Jr., Minneapolis, Minn., assignor to Hazel-Atlas Glass Company, Wheeling, W. Va., a corporation of West Virginia
Application February 18, 1935, Serial No. 55,486
Term of patent 14 years

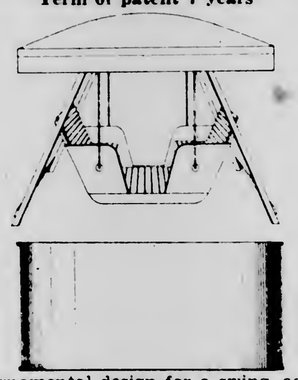


The ornamental design for a bottle, as shown.

95,938
DESIGN FOR A FOUNTAIN PEN CLIP OR SIMILAR ARTICLE
Milford Guy Sypher, Belleville, N. J., assignor to The Chilton Pen Company, Inc., Long Island City, N. Y., a corporation of New York
Application April 13, 1935, Serial No. 56,357
Term of patent 14 years

The ornamental design for a fountain pen clip or similar article, substantially as shown.

95,939
DESIGN FOR A CABLE CLAMP
Cyril H. Thomas, Chicago, Ill.
Application February 1, 1935, Serial No. 55,202
Term of patent 7 years



The ornamental design for a cable clamp as shown.

95,940
DESIGN FOR A SHOE
Abraham Turiansky, New York, N. Y.
Application May 2, 1935, Serial No. 56,658
Term of patent 3½ years

The ornamental design for a shoe, substantially as shown.

95,941
DESIGN FOR A SWING
Earl L. Weaver, Goshen, Ind., assignor to The Goshen Manufacturing Company, Goshen, Ind.
Application January 26, 1935, Serial No. 55,073
Term of patent 7 years

The ornamental design for a swing, as shown.

95,942
DESIGN FOR A DRESS
Cecile Weinberg, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y.
Application February 16, 1935, Serial No. 55,468
Term of patent 3½ years

The ornamental design for a dress, substantially as shown.

95,943
DESIGN FOR AN ELECTRIC LANTERN
Lee M. Wiley, Marion, Ind., assignor to Delta Electric Company, a corporation of Indiana
Application March 13, 1935, Serial No. 55,868
Term of patent 7 years

The ornamental design for an electric lantern as shown and described.

Patents Nos. 2,004,919 to 2,005,717

THE OFFICIAL GAZETTE OF THE United States Patent Office

Vol. 455—No. 3 TUESDAY, JUNE 18, 1935 Price—$16 per year

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $16.00 per annum, including annual index, $18.75; single numbers, 35 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notice

U. S. Patent Office, *Washington, May 22, 1935.*

Mervin A. Hunt, his assigns or legal representatives, take notice:

An interference has been declared by this Office between the application of Joseph William Simoneau, Nashua, New Hampshire, for registration of a trade-mark, and trade-mark registered October 29, 1929, No. 263,099, to Allison Drug Stores, Incorporated, 109 West 64th Street, New York, N. Y. The records of this Office show that Mervin A. Hunt, New York, N. Y., is the assignee of said registrant. A notice of such proceeding sent by registered mail to said Mervin A. Hunt at the said address, having been returned by the Post Office as undeliverable, notice is hereby given that unless said Mervin A. Hunt, his assigns or legal representatives shall enter an appearance within 30 days from the first publication of this order, the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

RICHARD SPENCER,
First Assistant Commissioner.

Adjudicated Patents

(C. C. A. Ill.) Troyer patent, No. 1,772,820, for can-body-making machine, claims 2, 8, 9, 12, 15, 16 and 17 *Held* invalid. *Continental Can Co. v. Cameron Can Machinery Co.*, 76 F.(2d) 173.

Adverse Decisions in Interference

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,911,228, Emil Gathmann, Method of producing ingots, decided May 16, 1935, claims 1 and 4.

Pat. 1,978,364, J. R. Hotchkin, Spring nut, decided May 21, 1935, claims 1, 2, 3, 4, 5, 6 and 7.

Pat. 1,983,182, R. J. Needham and H. C. Woodbridge, Boller construction, decided May 23, 1935, claims 1, 2, 3, 4, 5, 6, 7, 8, 9 and 10.

Drawings

Rule 38

38. When there are drawings, the description will refer to the different views by figures and to the different parts by letters or numerals (preferably the latter).

Rule 52—Extract

(f) The different views should be consecutively numbered. Letters and figures of reference must be carefully formed. They should, if possible, measure at least one-eighth of an inch in height, so that they may bear reduction to one twenty-fourth of an inch; and they may be much larger when there is sufficient room. They must be so placed in the closed and complex parts of drawings as not to interfere with a thorough comprehension of the same, and therefore should rarely cross or mingle with the lines. When necessarily grouped around a certain part, they should be placed at a little distance, where there is available space, and connected by short lines with the parts to which they refer and by short broken lines when the number or letters refer to parts shown in dotted lines. They should not be placed upon shaded surfaces, and when it is difficult to avoid this, a blank space must be left in the shading where the letter occurs, so that it shall appear perfectly distinct and separate from the work. If the same part of an invention appear in more than one view of the drawing is must always be represented by the same character, and the same character must never be used to designate different parts.

It is suggested that numerals or letters be used without exponents.

Erratum

Reissue Pat. 16,870 in the Official Gazette of May 14, 1935, should read, Reissue Pat. 18,492, E. H. Friedrich, Metal flashing, decided March 11, 1935, claim 9.

Condition of Applications Under Examination at Close of Business June 1, 1935

(Total number of applications awaiting action, excluding Trade-Mark Division, 33,670; Trade-Mark Division, 1,271. Oldest new case, February 1, 1935; oldest amended, February 1, 1935.)

DECISIONS IN PATENT AND TRADE-MARK CASES

Supreme Court of the United States

THE STELOS COMPANY, INC., v. HOSIERY MOTOR-MEND CORPORATION ET AL. HOSIERY MOTOR-MEND CORPORATION ET AL. v. THE STELOS COMPANY, INC.

Nos. 588 and 653. Decided April 29, 1935

PATENTABILITY—METHOD OF REPAIRING RUNS IN A KNITTED FABRIC.

A claim for a method of repairing runs in a knitted fabric *Held* invalid for want of proper disclosure and as lacking invention.

Judgment affirmed.

Mr. Henry Gilligan and *Mr. Vernon E. Hodges* (*Mr. J. Preston Sweecker* with them on the brief) for The Stelos Company, Inc. *Mr. Hugh M. Morris* and *Mr. Noah A. Stancliffe* (*Mr. Julian S. Wooster* and *Mr. Donald Malcolm* with them on the brief) for Hosiery Motor-Mend Corporation et al.

Mr. Justice ROBERTS delivered the opinion of the Court.

This cause presents issues as to validity and infringement of claim 23 of the Stephens reissue patent, No. 16,360, for "an improvement in needles and its [sic] method of use." The Stelos Company, owner of the patent, sued Hosiery Motor-Mend Corporation and others for infringement. The District Court adjudged the claim invalid by reason of failure to make proper disclosure of the alleged invention, and anticipation; and also thought that if the claim were sustained the defendants did not infringe, and dismissed the bill.[1] The Circuit Court of Appeals held the prior art required so narrow a construction of the claim as to exclude the method charged as an infringement and affirmed the decree.[2] We granted certiorari [3] to resolve a conflict with a decision of the Court of Appeals of the District of Columbia.[4] In support of the judgment the defendants might have urged the point as to invalidity, decided against them in the Circuit Court of Appeals, without applying for a cross-writ of certiorari.[5] Out of excess of caution, however, they prayed for the writ. Since both writs would run to but one judgment, and bring up the same record, we granted the prayer in No. 653.[6]

To knit is to form a fabric by the interlacing of a single yarn or thread in a series of connected loops. In knitted articles, of which a silk stocking is an example, a break in the thread anywhere in the fabric will cause a number of loops to pull out, leaving in their place parallel threads. The consequent defect is called a ladder or a run. The only possible method of repair consists in picking up the thread at the end of the run and reknitting by reforming the loops throughout the ladder, fastening the thread upon the completion of the operation. It has long been known that this could be accomplished by the use of a needle having a hook at the end resembling an ordinary crochet needle, but the task involved difficulties and the result was often unsatisfactory.

Stephens' patent is for an improved latch needle for this work, and for a method of executing the repair. Twenty-two claims for the needle are not in issue. Claim 23, which covers the method, is the basis of the suit. The method is stated in the patent to consist:

"in stretching the fabric over a suitable holder, inserting a repairing device having a book and pivoted latch through a loop formed in the run or raveling, continuing this movement on through the fabric while holding the device laterally out of alignment with the run or raveling until the loop has slid back over the end of the latch and beneath the latter, then reversing the movement of the device through the loop, catching the next forward thread in the hook while the loop is being pulled over the latch causing the latch to close over the thread, and the loop to be cast off over the end of the device, the thread caught in the hook thereupon forming a new loop, taking the place of the first-described loop, then reinserting the device into the fabric as before, and repeating the operation until the run or raveling has been repaired, and finally fastening the thread."

In the commercial method practiced by the owner of the patent and its licensees, the fabric is stretched over the top of a china or porcelain egg-cup held in the left hand. The degree of stretching can in this way be adjusted for the first step in the process and increased or relaxed as the work progresses. The needle is held in the right hand at an angle to the plane of the fabric and worked back and forth through the material. Whether the needle is also inclined laterally out of the line of the run is disputed. The patentee says this is unnecessary and is not in fact practiced. The defendants disagree, and contend that a pivoted latch needle will not otherwise perform its function. The alleged infringers employ a metal holder shaped like an egg-cup and a sliding latch needle, which they punch through the material and draw back at approximately a right angle to the fabric.

Stephens, while in Mexico in 1921 or 1922, noticed a Mrs. De Marr repairing runs by stretching stockings over her finger and reforming the loops with a latch needle. On her behalf he forwarded to a patent attorney a description and specification in his own handwriting and an application for patent was filed by Mrs. De Marr. A half interest was assigned to Stephens. Certain prior patents were cited against the claims and the application was abandoned. Shortly thereafter Stephens filed in his own name an application for patent of an improved pivoted latch needle and for an improved method of repairing runs. The method claim called for the use of a pivoted latch needle having all the features of that described in the application, and was accordingly rejected, inter alia because it was not a method claim since it required Stephens' specific construction of the needle. The applicant redrafted the claim to call merely for a pivoted latch needle and added

[1] 60 F.(2d) 1009.
[2] 72 F.(2d) 405.
[3] 294 U. S. —.
[4] *Finch Corp.* v. *Stelos Co.*, 60 App. D. C. 25; 46 F.(2d) 606.
[5] *Langnes* v. *Green*, 282 U. S. 531, 535.
[6] 294 U. S. —.

the element that the needle should be held laterally out of alignment with the run. We think the method claim is bad for want of proper disclosure and as lacking invention.

1. The first step is described as "stretching the fabric over a suitable holder." It is now said that an egg-cup or something of like construction is the only suitable holder, because no other device affords a rest for the operator's hand and permits continuous stretching in varying degree during the repair operation. The patent drawings show no holder of any sort. The specifications merely say:

"In other methods the fabric is stretched over the finger tip, making it difficult to insert the hook beneath the thread. This objection is obviated in the present invention by stretching the fabric over a porcelain dish, allowing sufficient depth for the free use of the needle."

Obviously the phrase "a porcelain dish" is not descriptive of an egg-cup. There is nowhere any reference to the control of the degree of stretching which is now said to be essential and to be afforded only by such a holder. The patentee testified on the trial that he tried and discarded many types of holder until he hit upon this one. If so, why did he not describe or claim it? He did so in an application for patent filed much later. He is upon the horns of a dilemma; he either discovered this form of holder and its virtues prior to the application for this patent or he found it later. If the first supposition be correct his application violated R. S. 4888[1]; if the second his patent does not cover the egg-cup holder.

Nowhere does the claim or the specification disclose the element that the fabric must not be tautly stretched over the holder, or that it must be so held that the tension can be varied. It is said that the use of the present participle "stretching" rather than the past participle "stretched" makes the matter clear; but scrutiny of both claim and specification discloses no teaching as to the stretching of the fabric, or any regulation of the tension, or that it may not be tightly stretched over the holder and secured in that condition prior to commencing the repair. The specification of a "suitable" holder certainly covers none of these alleged essentials. These omissions emphasize the failure to make the fair disclosure demanded by R. S. 4888.

The patentee says that in the old finger method the needle necessarily was held nearly in the plane of the fabric, whereas in his method it is approximately at a right angle thereto, and operated by a punching motion. The description of the operation in the patent is almost identical with that of Mrs. De Marr's abandoned application, drawn in Stephens' own hand, which was for the finger as contrasted with the punch method; and, so far as the angle at which the needle is to be held, is very similar to Pogson's disclosure in 1921, which Stephens says does not describe the punch method. When we come to the claim, we find the phrase "while holding the device laterally out of alignment with the run." This, we are told, is novel, and means that the needle is not to be used in or nearly parallel with the plane of the fabric, but at an angle thereto. "Laterally out of alignment to the run" is not equivalent to "at an angle to the plane of the fabric." That the applicant did not intend it to be so understood is shown by his repeated use of the word laterally, in the specifications, as the equivalent of off to one side; and by this sentence: "The clearance . . . makes it possible to hold the needle down closer to the fabric. . . ." There is no disclosure of any up and down punch system, such as the defendants use.

2. Pivoted latch needles are old in the art. Holders which have an opening to give room for the insertion of a needle such as that of an egg-cup are old for use in darning. The method of re-forming loops in knitted goods with pivoted latch needles was known prior to the application for this patent. The combination of the use of the egg-cup type holder and the pivoted latch needle did not entitle Stephens to a patent and the addition of the element that the needle should be held at an angle to the plane of the fabric, if that is in fact what the claim means, is insufficient to raise the method to the dignity of invention.

Judgment affirmed.

[1] U. S. C. Tit. 35, § 33. Notice that defendants would defend on this ground was given in accordance with R. S. 4920: U. S. C. Tit. 35, § 69.

U. S. Court of Appeals for the District of Columbia

THERMOLIZED COAL CORPORATION AND CHARLES M. BUCK v. CONWAY P. COE, COMMISSIONER OF PATENTS

No. 6,261. Decided May 13, 1935

PATENTABILITY—METHOD OF PREPARING COAL FOR SUBSEQUENT USE AND THE ARTICLE.

Claims for a method of preparing coal of the softer grades for its subsequent use and claims for the article produced by that method *Held* unpatentable, assuming the sufficiency of the specification, as defining nothing novel over the prior art.

Mr. Harvey L. Lechner for Thermolized Coal Corporation.

Mr. T. A. Hostetler and *Mr. R. F. Whitehead* for the Commissioner of Patents.

Before Martin, Chief Justice, and Robb, Van Orsdel, Hitz, and Groner, Associate Justices.

ROBB, *A. J.:*

Appeal from a decree in the Supreme Court of the District of Columbia dismissing appellants' bill, filed under sec. 4915, R. S., as amended (35 U. S. C. A. sec. 63), seeking to authorize the issuance of a patent to appellant Buck.

The alleged invention covers a method of treating coal and the resulting product. The object of the process is to obtain a pulverized coal product free from occluded inflammable gases. All the claims (claims 50 to 53, inclusive, for a method; and 57 and 61 for the result of the method) were rejected. We reproduce 50 and 57 as illustrative:

"50. A method of preparing coal of the softer grades for its subsequent use which comprises crushing the coal to comparatively small pieces, and heating the coal, in the presence of inert gas sufficiently free from air to prevent combustion, until it has reached a temperature substantially throughout of from substantially above that of the boiling point of water to not above that at which thermal decomposition of the particular coal begins."

"57. As a new article of manufacture, pulverized coal of the softer grades freed from a substantial portion of its occluded inflammable gases and having its structure expanded to render it porous and charged with an inert gas such as flue gas."

In practicing the method the coal is crushed into small pieces—a conventional step not involving novelty. It is then heated in the presence of inert or noncombustible gases. In the original specification the maximum temperature to which the coal is heated was not stated in degrees, but it was stated that the coal is heated to the point of thermal decomposition.

In the Patent Office the Primary Examiner and the Board of Appeals both criticized the specification as too vague to satisfy the requirements of sec. 4888, R. S. (35 U. S. C. A. sec. 33), that a patent specification shall be so clear

"as to enable any person skilled in the art or science to which it appertains, or with which it is most nearly connected, to make, construct, compound, and use the same."

In the Buck specification it is stated that his process consists in crushing and heating coal or other carbonaceous material of a similar nature in the absence of air and in the presence of noncombustible gases "up to the temperature of the thermal decomposition and gasification of the substances of said materials." At what temperature thermal decomposition begins is not stated. By an amendement to the specification, the maximum temperature was stated to be 250° C.

The Bone patent, No. 1,594,994, August 3, 1926, discloses a "treatment of certain fuels to improve their calorific value." According to the Bone specification,

"when brown coals and lignites, which have been completely freed from mechanically held water by drying them at temperatures below 110° C., are heated to higher temperatures which are below that *at which destructive distillation begins*, they undergo a chemical change that begins to be important at temperatures between 250° C. and 400° C."

Coal is heated to a temperature between 250 and 400° C. As to this reference the Examiner said:

"Attention is particularly called to the remarkable similarity of Bone to the applicant's process with the single exception that applicant has now set the temperature of operation to one just below that at which Bone operates."

The Board stated that the process carried out in the Bone patent is strikingly similar to that of the application.

"An inert gas is used [by Bone] for heating the coal and the coal is heated to such a high temperature that all the free water and the occluded inflammable gases are driven off. The product obtained would have high calorific value and would be expanded and porous and charged with inert gases. * * * The final product obtained in any case would be expected and would differ merely in the degree of volatiles retained. It would without doubt be obvious to anyone skilled in working with coal if he had the Bone patent before him that a product having more volatiles in it could be obtained if the temperature used be lowered below 250 degrees. We fail to find, therefore, that these claims define patentably over the Bone patent."

We agree with the Patent Office tribunals that the publications cited by applicant[1] do not sustain the contention that a definite point exists at which thermal decomposition of coal begins.

But assuming the sufficiency of the specification, we agree with the Patent Office that there is nothing novel in the process.

The article claims are for pulverized coal freed from a substantial portion of its occluded gases, which simply means that the coal when heated in an inert gas absorbs some of it during the cooling step in place of inflammable gases that have been driven out. The heated inert gas treatment disclosed by Bone would impart like qualities to the coal so treated.

It results that the decree should be and, therefore, is affirmed.

Affirmed.

U. S. Court of Appeals for the District of Columbia

METROPOLITAN ENGINEERING COMPANY v. CONWAY P. COE, COMMISSIONER OF PATENTS

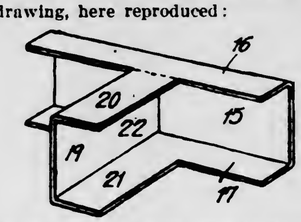
No. 6,281. Decided May 6, 1935

PATENTABILITY—INVENTION—SUBSTITUTION OF ELECTRIC WELDING FOR RIVETING.

Claims for an automobile frame reciting a joint between a longitudinal member of channel shape and a cross member of the same shape, in which the corresponding flange portions of the members are electrically welded edge to edge and the end of the web of the cross member is butt-welded to the web of the longitudinal member, *Held* unpatentable over a patent disclosing similar parts connected by rivets and otherwise meeting every feature of the claims.

Decree affirmed.

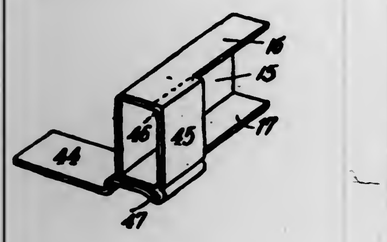
Mr. Joseph H. Milans, Mr. Needham C. Turnage, and *Mr. D. A. Usina*, for Metropolitan Engineering Company.



Mr. T. A. Hostetler, Solicitor of the Patent Office, for Conway P. Coe, Commissioner of Patents.

Before MARTIN, Chief Justice, and ROBB, VAN ORSDEL, HITZ, and GRONER, Associate Justices

ROBB, *A. J.:*



Appeal from a decree in the Supreme Court of the District dismissing appellant's bill, filed under sec. 4915, Revised Statutes, as amended (35 U. S. C. A. sec. 63), seeking to authorize the reissue (to appellant as assignee of applicant Murray) of patent No. 1,723,518, dated August 6, 1929.

The claimed invention relates to a chassis frame for automobiles, comprising longitudinal side members made from sheet metal bent to provide a central vertical portion and parallel horizontal flange portions at the top and bottom. These members are connected by transverse braces or cross members having similar vertical and horizontal portions. The horizontal portions of the side members and the cross members lie in the same plane, and are butt-welded edge to edge. The vertical portions of the side and transverse members also are welded together. This construction is disclosed in Fig. 4 of the drawing, here reproduced:

A so-called bracket of sheet metal is welded to the edges of the horizontal portions of the side mem-

bers. This feature is disclosed in Fig. 12 of the drawing, here reproduced:

All fourteen of the claims have been rejected. We here reproduce claims 1 and 5 as illustrative:

"1. A frame for automobiles having longitudinal members the cross-section of each of which is composed of a single piece of sheet metal bent to hollow shape with horizontal portions and transverse braces having portions in the plane of the horizontal portions of said longitudinal members and butt-welded edge-to-edge thereto."

"5. A frame for automobiles having longitudinal members the cross section of each of which is of channel shape with the flanges extending inward, and transverse braces having vertical edges butt-welded to the inner faces of the vertical portions of said channels, and having horizontal portions in the plane of the flanges of said channels and butt-welded edge to edge thereto."

The patent to Schmidt, No. 924,941, dated June 15, 1909, on a "Frame for motor-vehicles" discloses a frame having every feature of the claims of the issue, except the particular means of attachment of the side and cross members. Transverse braces of inverted U-shape have flanges at their ends riveted to the vertical portions of the side members. Gusset plates are used for the ends. These plates do not lie in the plane of the flange of the side member, nor are the parts butt-welded together. It is common knowledge that electric welding has largely superseded riveting in many types of metal structure work. *Thomson Co.* v. *Ford Motor Co.*, 265 U. S. 445, 328 O. G. 11. Therefore, to employ welding in place of riveting does not constitute novelty. Should welding take the place of riveting, it would be obvious to arrange the gusset plates in the plane of the flange.

Certain claims contain the added limitation that the vertical edges of the cross members are butt-welded to the vertical faces of the side members. This feature is disclosed in Fig. 4 above. The tongue 22 (an extension of web 19 of the cross member) extends to the web of the channel side member 15 and is welded thereto. Should the horizontal portions of the side members and the cross members be butt-welded edge to edge, it would be obvious, particularly in view of the disclosure of Schmidt, to extend the tongue 22 to the channel of side member 15 and weld it thereto.

We have with painstaking care considered the contentions advanced in appellant's brief in the light of the argument at the bar, but we are unable to discover that novelty has been disclosed.

The decree therefore will be affirmed.

Affirmed.

U. S. Court of Customs and Patent Appeals

IN RE CRABTREE

No. 3,401. Decided February 4, 1935

[74 F.(2d) 998]

1. PATENTABILITY—PILE FABRIC—SUFFICIENCY OF DISCLOSURE.

A claim for a pile fabric *Held* improperly rejected as not reading on applicant's original disclosure.

2. SAME—SAME.

Certain claims for a pile fabric *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Modified.

Mr. E. Clarkson Seward for Crabtree.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

GRAHAM, *P. J.*:

This appeal is from the decision of the Board of Appeals of the United States Patent Office, rejecting claims 23, 24, 25, and 26 of the appellant's application for a patent on claimed improvements in pile fabrics.

The application herein was originally filed August 10, 1926. It has had a rather tortuous course in the Patent Office, has been involved in an interference, and various actions have been taken thereon by the tribunals of the Patent Office.

It seems unnecessary here to go into a discussion of these various steps, as, in our mind, the necessity for so doing has been obviated by the statement of the issues here made by counsel.

In rejecting the claims of appellant, the Examiner, in the first instance, invoked the rule of estoppel against the appellant. However, in a supplemental statement of May 12, 1933, he rejected the claims on the prior art, citing three references, as follows: Hill, 28,484, May 29, 1860; Goodall, 209,805, November 12, 1878; Bartlett, 1,271,005, July 2, 1918.

Claim 23 was also rejected on the ground that it was not supported by appellant's original disclosure.

While the Examiner states that this reason is supplemental, the Board of Appeals made this comment thereon:

We note that the Examiner has submitted two statements, the first filed presenting a rejection of the claims on the ground of estoppel. The second statement as we read it seems to withdraw the first ground of rejection. For that reason we will not consider the ground of estoppel raised by the Examiner.

Following this, the Solicitor for the Patent Office, in his argument before this court, also makes this statement:

• • • The Board of Appeals for that reason (R. 75) considered only the grounds of rejection given in the second statement, and those alone will be considered here. • • •

No further attention, therefore, will be given by us to the question of estoppel, and the rejected claims will be examined in view of the prior art cited.

The rejected claims are fairly represented by claims 23 and 24, which are as follows:

23. A textile pile fabric intended for frictional wear comprising, a ground of interwoven warp and weft threads, rows of substantially uniform and substantially uniformly spaced interwoven loose warp pile V's each looped about a single weft thread but not interlaced with the ground so as to be thereby firmly held therein, said weft threads being spaced no further apart than substantially the diameter of the pile threads and alternate weft threads being substantially in contact with the ends of intermediate pile V's, said fabric being devoid of extra or additional threads which would normally be necessary to secure the V's therein and to render the fabric suitable for frictional wear, whereby, due to the absence of said extra threads, the V's would be liable to assume a less erect and less uniform position and to pull or push out of the ground when subjected to frictional wear, said fabric embodying a thin application of cementitious binding material on the back of the ground which penetrates the interwoven threads but does not conceal the weave and unites the loops of the V's with the interwoven ground warp and weft threads to anchor the V's against pulling or pushing out of the ground or assuming a less erect or less uniform position, whereby the fabric is rendered suitable for frictional wear and its uniformity and appearance are improved without sacrificing its folding and rolling characteristics.

24. A method of making in the piece textile pile fabric for frictional wear comprising, machine weaving threads consisting of ground warp, ground weft, and pile warp only to constitute a single layer, passing the pile warp around single weft threads to form substantially uniform and substantially uniformly spaced pile loops, causing the weft threads substantially to contact with the ends of the intervening pile loops, severing the loops to form cut V-pile, and cementing the loops to the weft threads around which they pass.

Claim 23 was rejected by the Examiner and by the Board of Appeals on the theory that said claim embraced this element,

"said fabric being devoid of extra or additional threads which would normally be necessary to secure the V's therein and to render the fabric suitable for frictional wear,"

and that this statement of construction was not supported by appellant's original disclosure.

Appellant's application involved and described an alleged invention in and by which the appellant proposed to construct pile fabrics, in which he used the ordinary number of warp and weft threads, in which he proposed to use the V-type of pile threads, and in which, in order to secure these pile threads, he proposed to fasten them in place by the application of a cementitious layer applied to the back of the fabric. Much of the argument concerns the construction which the appellant disclosed. However, we think it is clearly shown by the specification and drawings that the appellant intended to make a pile fabric in which there were no extra warp and weft threads, and where the V-shaped pile threads were looped about only one weft thread. In other words, the fabric proposed by him was of the so-called "loose pile fabrics," and, while the appellant alludes to the fact in his specification that certain features of his improvement will be beneficial to a fast pile fabric, we think it is clear from the entire application and specification that the invention has to do with loose pile fabrics of the V-type in which no extra threads are used, and by means of which a fast pile fabric may be constructed at small cost and with greater celerity and ease.

In referring to the objects of his invention, the appellant stated in his specification that the difficulty with loose woven pile fabrics of the ordinary type was that the loops would pull out and the fabric would not resist wear, but that by use of his invention, the ordinary loose pile fabric might be made a fast pile material which would stand wear, and from which the pile threads could not be pulled. Various other advantages are claimed for the product, as, for instance, that it is waterproof, and that it can be used in automobile manufacture without a stiffening support.

There is some discussion as to a feature found in claims 23, 25, and 26, namely, that the coating on the back of the fabric "does not conceal the weave." A careful examination of the specification of appellant, and his drawings, fails to disclose any such feature.

The Board of Appeals, in its decision here, refers to its discussion of the matter in the interference No. 58,407, heretofore referred to. The proceedings in this interference are not incorporated in the record here, and are not now before us; hence they cannot be considered. If they are important to the issue, they should have been submitted by the appellant and certified by the Patent Office, and incorporated into this record. However, this is deemed somewhat immaterial, in view of our conclusion as to the merits of the rejection by the Board of said claim 23. The Board seems to have been under the impression that the appellant was making claims for a fabric having less than the normal number of threads. On the contrary, he was not making this claim in his specification, nor in said claim 23, but was stating that he was not using the type of weave that was usually made when a fast pile fabric was to be made with a V-shaped pile thread; that is, by adding extra threads in the warp or weft to hold the loop in position. Therefore, in making his said claim 23, he deemed it important to indicate that he used no extra threads, but the usual number that were found in a loose pile fabric with a V-shaped pile thread.

[1] We are of opinion that the rejection of claim 23 for the reason given by the Board of Appeals was improper. It was conceded by the Solicitor for the Patent Office on the hearing here, that if the subject matter of said claim 23 were disclosed by appellant's application, the claim was patentable. In our view, it was so disclosed, and, therefore, the claim should not have been rejected for the reason stated.

Claims 24, 25, and 26 were rejected by the Board of Appeals in view of the prior art as shown by Hill, Goodall, and Bartlett. Hill disclosed an invention comprising a pile fabric in which the pile was composed of locks of wool, hair, or other material. These locks were applied while the web was being woven, by inserting the same at intervals—

"so as to leave both ends upon the upper surface, and of about an equal length, while the middle portion of each lies under two or three of the upper threads of the warp, and parallel with the woof."

The appellant argues that these locks of hair, etc., do not extend under the warp of the web, but that the cloth evidently has several warp threads and that the locks extend under some of them only. This has some justification in the following language appearing in Hill's specification, where, in describing the use of glue or cement which he uses on the back of his fabric, he says:

"The varnish being applied hot or thin insinuates itself between the fibers which compose the pile and they become glued or cemented to those threads of the warp which overlie the tufts on the back, where they are interwoven with the web."

The patent to Goodall, contrary to the appellant's views, is relied upon by the Board of Appeals. This patent shows an improvement in nap or plush goods. In this patent, Goodall does not introduce pile

threads into his fabric, but uses a loosely twisted thread in his web, by means of which the nap is made by gigging with teasels. The back of this fabric is treated with paste or adhesive substance by which means the nap is held in its gigged-up condition.

The patent to Bartlett shows a floor covering wherein a textile fabric is partially embedded in and surfaced upon one side with a flexible waterproof material. The drawing with the application shows the web to be made with the ordinary number of warp and weft threads and the pile threads are of the V-type surrounding one weft thread. The patentee states:

"While I have shown the fabric to be a cut pile texture, I in no sense wish to be limited to this form of fabric as I contemplate the use of fabric with loosely woven woof or weft strands as well as fabrics having a nap."

The flexible covering on the back of the fabric is shown to enter the interstices of the fabric, partially embedding the pile, and with an undulated surface on the lower or back side of such covering so that the article will not slide easily on a smooth surface, and for other useful purposes. Claim 24 is unpatentable over the prior art cited.

[2] Claims 25 and 26 have the additional feature hereinbefore mentioned, namely, that the cementitious layer "does not conceal the weave." Even if this be disclosed by the appellant, these claims, we believe, are fully anticipated by the cited references. Hill shows a pile fabric in which the weave is not concealed after the application of his cementitious covering.

In all other respects, also, said claims 25 and 26 are thought to be properly rejected on the references cited.

We express no opinion as to the patentability of said claim 23, that question not having been passed upon by the Patent Office tribunals and not being in issue here.

The decision of the Board of Appeals is reversed as to said claim 23, and affirmed as to claims 24, 25, and 26.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE MERRIMAN

No. 3,364. Decided February 4, 1935

[74 F.(2d) 944]

1. APPEAL—CLAIMS PRESENTED AFTER DECISION BY BOARD OF APPEALS.

Where, upon reopening of the prosecution before the Examiner, after decision by the Board of Appeals, the Examiner refused to act on the merits of the claims then presented as being for an invention different from that originally claimed and rejected other claims, *Held* that the Board of Appeals, on a second appeal, properly refused to consider the former claims, since applicant's remedy was by petition to the Commissioner from the Examiner's refusal to consider them.

2. PATENTABILITY—MANHOLES.

Claims for a manhole cover and a seat therefor including chill rings to provide true and accurate engaging surfaces, *Held* patentable and claims for the cover seat alone *Held* unpatentable over the prior art.

APPEAL from the Patent Office. Modified.

Messrs. Kwis, Hudson & Kent, Mr. Watts T. Estabrook, and *Mr. S. J. Boughton* for Merriman.

Mr. T. A. Hostetler and *Mr. Howard S. Miller* for the Commissioner of Patents.

HATFIELD, *J.*:

This is an appeal from the decision of the Board of Appeals of the United States Patent Office affirming the decision of the Primary Examiner rejecting claims 4, 7, 8, 9, 10, and 11, and refusing to consider claims 5 and 6, in appellant's application for a patent for an alleged invention relating to improvements in manhole frames and covers therefor, and a process for making the same.

Claims 4, 5, 6, 7, and 9 are illustrative. They read:

4. In combination, a frame comprising an annular cover seat of chilled iron, an enclosing wall surrounding said seat, said wall being spaced from the seat, and a cover having an annular chilled iron surface formed for engagement with said seat, whereby hardened, accurate engaging surfaces may be provided.

5. A method of providing a true and accurate cover seat in a manhole frame, which consists in casting said frame in a sand mold containing a chill ring against which the cover seat is to be cast, and providing in the mold an annular bead of sand surrounding said chill to form a groove in the casting surrounding said cover seat.

6. A method of providing a true and accurate cover seat in a manhole frame, which consists in casting said frame in a sand mold containing a chill ring against which the cover seat is to be cast, said chill ring having an edge beveled away from the joint between the cover seat and frame wall, and providing in the mold an annular bead of sand surrounding said cover seat.

7. In combination, a cast metal frame comprising an annular cover seat of chilled metal, an enclosing wall surrounding said seat, said wall being spaced from the seat with a groove intervening.

9. A method of providing true and accurate engaging surfaces in an iron frame and cover, which consists in casting said frame and cover in sand molds containing chills with accurately formed surfaces complementary to the engaging surfaces of the castings.

The references are: Tellander, 246,694, September 6, 1881; Conolly et al (Br.), 1,384, January 30, 1886; Candee, 366,455, July 12, 1887; Muckle et al., 392,877, November 13, 1888; Steele, 681,995, September 3, 1901; Howe, 736,102, August 11, 1903; Craig, 835,012, November 6, 1906; Boykin, 1,296,751, March 11, 1919; Rust, 1,475,199, November 27, 1923; Needham (Br.), 203,230, September 6, 1923; Anderson, 1,771,201, July 22, 1930.

The involved claims are sufficiently descriptive of appellant's product and process.

Prior to appellant's alleged invention, it was the practice to employ the machining process in order to secure accurately engaging surfaces of cover seats of manhole frames and covers therefor.

We quote from the brief of counsel for appellant, wherein the involved invention, and its advantages over the prior art, is explained:

The chill rings for each of these two surfaces are made in one piece, being steel rings, the active surfaces of which are carefully inspected after each casing operation and resurfaced when necessary so as to be maintained perfectly flat. A somewhat similar result can be obtained by machining the two surfaces of the castings, which method has been followed at times prior to the present invention, but machining is an expensive operation, and the present invention effects a large saving in this respect.

It is also more desirable for another reason, namely, that the chilled surfaces are more wear resisting than machined surfaces. The latter result, however, is merely incidental and is not relied upon to lend patentability to the invention.

The invention, then, consists in providing in the frame an annular cover seat which has a perfectly true surface, in providing a cooperating true surface on the cover, and in accomplishing this result by the use of accurately surfaced chill rings. It consists further, as described in some of the claims, of spacing such chilled annular seat away from the surrounding frame wall, by virtue of which it is possible to employ a one-piece chill ring in forming the seat (a multiple-piece ring could not be relied upon to produce a perfectly flat seat in every instance). The invention further includes the idea of separating the seat from the surrounding wall by a groove, which has a valuable function in that it removes any possibility of deflection of the chill ring during contraction of the frame casting upon cooling.

The patent to Tellander relates to an apparatus for casting hollow articles in metallic molds. The patentee stated that the object of his invention was to—

"cast all kinds of cylindrical, conical, or other hollow articles in metallic molds in such manner that * * * smooth and hardened surfaces are obtained directly in casting,"

and thus avoid the time and expense required for turning them in a lathe. The patentee employed in his apparatus a metallic core for carrying out his invention.

The patent to Candee relates to a mold for axle boxes, and discloses such articles having interior chilled metal surfaces produced in the process of casting.

The patent to Muckle et al. relates to a cover for manhole chambers of underground conduits, and discloses in the drawing a groove between the cover seat and the side wall.

The patent to Steele relates to manhole frames and covers, and particularly to "reinforcing both the frame and cover during formation or casting by the application of strengthening devices," etc. Although the Board of Appeals did not discuss this patent, the Primary Examiner stated that it disclosed manhole frames and covers of the conventional type, the engaging surfaces "being fitted" accurately. We may say at this point that we find nothing in the reference to suggest the improvements claimed in appellant's application.

The patent to Howe relates to molding car wheels. It was cited by the tribunals of the Patent Office as showing that it was "old and well known to chill parts of iron castings during the process of casting to obtain hard and tough wearing surfaces."

The patent to Craig relates to improvements in manhole construction, and discloses a groove between the flanges on which the cover rests and the side wall of the manhole casing.

The patent to Boykin relates to a method of casting valve seats, and particularly a "one-piece seat the active face of which is hardened" by means of metallic chills during the casting operation, in order to increase its resistance to wear.

The patent to Rust relates to improvements in manhole covers. The patentee stated that it was preferable, in order to secure accurate engagement between the cover and the cover seat, to machine their surfaces.

The patent to Anderson relates to a "green sand core," and, among other things, to a means adapted to permit the pouring of molten metal into the mold without destroying the core.

The British patent to Conolly relates to improvements in manhole doors for drains, sewers, and the like, and discloses a groove between the seat on which the cover rests and the side wall of the frame.

The British patent to Needham et al. also relates to manhole covers, and discloses a groove between the seat for the cover and the side wall of the manhole frame.

As originally presented, appellant's application contained four claims, Nos. 1 to 4, inclusive. All of those claims were rejected by the Primary Examiner on the patents to Rust, Howe, Boykin, and Steele.

On appeal, the Board of Appeals affirmed the decision of the Primary Examiner as to claims 1, 2, and 3, but reversed his decision as to claim 4. The Board stated that as claim 4 contained the feature of spacing the seat from the wall, and as no reference had been cited showing that feature, it deemed the claim patentable.

Subsequent to that decision, the Examiner cited the patents to Muckle et al., Craig, Needham, and Conolly et al. for the purpose of showing that the feature of spacing the seat from the wall, referred to in claim 4, was old in the art, and requested that the case be reopened for further prosecution of that claim in accordance with Rules 139 and 140 of the Rules of Practice in the United States Patent Office.

Thereafter, the affidavits of George B. Sowers and Michael W. Merriman, appellant, were introduced in evidence. Appellant also presented, in addition to claim 4, supra, claims 5 to 11, inclusive.

It appears from the affidavit of George B. Sowers that as an engineer in the Division of Engineering and Construction, Department of Public Service, of the city of Cleveland, Ohio, he was familiar with the specifications for manhole frames and covers used by that city prior to 1929; that the manhole frames and covers made in accordance with such specifications and the then-known methods of manufacture, except those whose surfaces were machined, were not satisfactory; that the covers seldom fitted the frames with sufficient accuracy to prevent a rocking movement, which caused considerable noise when vehicles passed over them; that, due to such inaccurate fitting, there was considerable loss due to breakage of the covers; that, during the year 1929, affiant learned of appellant's product and the method of constructing it; that after the matter had been given thorough consideration, the specifications of the city were changed so as to require the purchase and use of manhole frames and covers made in accordance with appellant's method of construction; that since the change in 1929 in its specifications (the affidavit is dated May 16, 1932) the city purchased for replacement purposes approximately twelve hundred manhole frames and covers of the type disclosed in appellant's application; that during the same period, approximately seven thousand of such manhole frames and covers were purchased and used by contractors "in new work upon the streets and roads" of the city of Cleveland; that such frames and covers have given entire satisfaction; that the breakage of covers, and the noise hereinbefore referred to, has been almost entirely eliminated; that appellant's product is superior in wearing qualities not only to the ordinary manhole frames and covers in use prior to the advent of appellant's product, but to those which are machined in order to make accurate engaging surfaces; and

that they cost much less, due to the cheaper process of construction, than the machined articles.

In his affidavit, appellant Michael W. Merriman, stated that he had been engaged in the foundry business for thirty-five years; that prior to his alleged invention—

> • • • manhole frames and covers were made either as plain iron or steel castings; that the noise caused by covers rocking or slapping upon the frame seats when vehicles passed over them, due to poor fit, and the breakage of covers resulting from the continued hammering thus applied to them, *were well known and well recognized evils for a great many years prior to the said invention;* that, in some instances, cover seats on the frames, as well as the covers themselves, were machined in an effort to cure this difficulty, but that such practice was expensive, the labor expense involved ranging somewhere between one dollar and a half and two dollars and a half ($1.50 and $2.50) per frame and cover, depending upon the wage scale at the time; that deponent's invention, as covered by the said application for patent, came about after he had devoted a great deal of time and thought to the problem; that the chilling of iron surfaces in castings was well known generally and was old and common shop practice, at the time deponent made his invention, where hard surfaces were necessary or desired, but that chilling, for the purpose of producing true and accurate meeting surfaces to take the place of machined surfaces, was a new thought with deponent, and, when applied to the cover seats for manhole frames, met with almost instant success, being recognized by all engineers familiar with such matters, to whom deponent explained the invention, as an important step forward in the art; that the cost of producing such a plane chilled surface for a cover seat of a two foot diameter in a manhole frame, amounts at the present time to about five cents (.05¢) and provides a perfectly true seat with better wearing qualities than machined seats at approximately one fifteenth (1/15) of the cost; that the provision of a groove, to separate the chilled seat from the wall of the frame, is an essential feature of the invention, inasmuch as the shrinkage of an iron casting, of two feet or more in diameter, amounts to practically one fourth (¼) of an inch, and the sand, which forms the groove in question, acts as a cushion between the frame wall and the chill ring to prevent the contraction of the casting wall against the ring from causing cracks and breakage in the casting • • •. [Italics ours.]

The Primary Examiner rejected claims 4, and 7 to 11, inclusive, on the references of record, but declined to consider the patentability of claims 5 and 6 on the ground that they related to subject-matter which had not been previously presented by appellant. Although the Examiner stated, in his decision, that he had carefully considered the argument of appellant relative to the patentability of the claims considered by him, he did not refer to the affidavits of record.

On appeal, the Board of Appeals agreed with the decision of the Primary Examiner holding that claims 4, and 7 to 11, inclusive, were not patentable over the prior art. With reference to claims 5 and 6, the Board said:

> The Examiner did not pass upon the patentability of claims 5 and 6, but holds that they are for subject matter not involved in the previous prosecution of the case and would require a new consideration and an examination in a different division in the Office. In support of his ruling the Examiner cited the Commissioner's decision in *Ex parte* Comstock 1923 C. D., 82. This decision was rendered on a petition upon the refusal of the Examiner to act on the merits of certain newly made claims. Appellant's remedy would appear to be by a similar procedure, since, as admitted by appellant, on page 7 of his brief, "These two claims have never had any real action upon the merits."

The Primary Examiner declined to consider the patentability of claims 5 and 6 on the ground that they referred to subject-matter not involved in the other appealed claims, and specifically suggested to appellant that the remedy provided in such cases was an appeal to the Commissioner of Patents in accordance with Rules 68, 139, and 140 of the Rules of Practice in the United States Patent Office.

The Board of Appeals, as will be noted from the quoted excerpt from its decision, agreed with the Examiner that appellant's remedy was an appeal to the Commissioner of Patents.

Appellant states in his brief that he did not elect to follow the suggestions of the Patent Office tribunals, and now insists that claims 5 and 6 differ from claim 9 in "scope" only, and that the subject-matter is substantially the same.

It is conceded by counsel for appellant, however, that—

> Claim 5 adds to claim 9 the limitation that an annular bead of sand is provided in the mold.
>
> Claim 6 adds to claim 5 the limitation that the chill ring has an outer beveled surface.

We are not disposed to enter upon a discussion of the nature or extent of the differences between claims 5 and 6 and the other appealed claims.

Counsel for appellant contends in this court that the decision of the Primary Examiner relative to claims 5 and 6, affirmed by the Board of Appeals, amounted to a requirement of division, and that, therefore, Rules 68 and 140 of the Rules of Practice in the United States Patent Office are not applicable.

The record discloses that subsequent to the final decision of the Primary Examiner, appellant appealed to the Board of Appeals, claiming that the Examiner

> "erred in requiring cancellation of claims 5 and 6 *instead of requiring division between those claims and claim 4.*" [Italics ours.]

In his reasons of appeal in this court, appellant contends that the Board of Appeals erred in affirming the decision of the Primary Examiner

> "as to the rejection of claims 5 and 6 upon the ground that they are for subject matter not involved in the previous prosecution of the case."

It is true that, in refusing to consider those claims, the Primary Examiner stated that

> "they set forth active steps in an art distinctly different from that belonging to pavements and features of a cover and its seat,"

and that the claims were examinable in a different division of the Patent Office. Nevertheless, he refused to consider the claims, because he was of opinion that the case was reopened solely for the further prosecution of claim 4 and claims to "substantially the same subject matter."

[1] We think it is clear that his decision did not amount to a requirement of division, and that appellant was afforded a remedy by Rules 68 and 140 of the Rules of Practice in the United States Patent Office. It may be that the Primary Examiner erred in refusing to consider those claims. However, as to that question, we express no opinion. If it be assumed that he did err in that respect, appellant was afforded a remedy by the rules mentioned, which he declined to pursue. We are of opinion, therefore, that the Board of Appeals was clearly right in affirming the decision of the Examiner refusing to consider the patentability of those claims.

It is conceded by counsel for appellant that the chilling of iron surfaces for the purpose of making them hard was a well known expedient in the prior art. Appellant contends, however, that the application of chill rings in a casting operation to the surfaces of manhole seats and covers, in order to provide true and accurate engaging surfaces, amounts to invention.

In his second decision, the Primary Examiner stated that it was old in the art to machine "surfaces" in order to secure true and accurate engagement thereof, and that it was also old to chill such "surfaces" for a like purpose.

It is true that the patent to Tellander taught that hollow articles might be cast in metallic molds having a metallic core so that their surfaces would be smooth and hard. It may be, now that appellant has solved the problem confronting those engaged in the production of manhole frames and covers, that it seems simple to combine the references of record so as to produce appellant's claimed invention. However, the patent to Tellander was issued in 1881, and the last issued patent of record having any bearing on the subject, the British patent to Needham, was issued in 1923. Accordingly, it seems strange indeed, considering the facts of record, that those skilled in the art should, for many years, resort to the expensive operation of machining in order to secure accurately engaging surfaces of manhole cover seats and covers, if appellant's claimed process and product were obvious to them.

It is evident from the record that appellant's product was commercially successful because it not only provided hardened durable surfaces of cover seats and covers, but also true and accurate engagement of such surfaces, and because the cost of producing such articles was greatly reduced by eliminating the machining operation theretofore considered necessary in order to produce accurate engaging surfaces.

[2] We are of opinion that appellant's process, as defined in claim 9, and his product, as defined in claims 4, 10, and 11, were not obvious to those skilled in the art, and are, therefore, patentable.

Claims 7 and 8, however, do not relate to the accurate engagement of the covers and cover seats, but are limited to annular chilled cover seats, having enclosing walls spaced therefrom by grooves. Those claims do not define appellant's real invention, and, in view of the references, are obviously not patentable.

For the reasons stated, the decision of the Board of Appeals is affirmed as to claims 5 to 8, inclusive, and reversed as to claims 4, 9, 10, and 11.

Modified.

U. S. Court of Customs and Patent Appeals

IN RE BRONSON

No. 3,383. Decided Jan. 28, 1935

[74 F.(2d) 762]

PATENTABILITY—VALVE INSIDES.

A claim for valve insides *Held* patentable over the prior art.

APPEAL from the Patent Office. Reversed.

Messrs. Kicis, Hudson & Kent, Mr. Watts T. Estabrook, and *Mr. Arthur J. Hudson* for Bronson.

Mr. T. A. Hostetler and *Mr. H. S. Miller* for the Commissioner of Patents.

LENROOT, *J.*:

This is an appeal from a decision of the Board of Appeals of the United States Patent Office, affirming a decision of the Examiner, rejecting claim 8 of appellant's application for lack of invention in view of the prior art. Claims 9 and 10 of said application were allowed.

Said claim 8 reads as follows:

> 8. A valve insides comprising a cylindrical barrel having a longitudinal bore therethrough, a valve pin extending through said bore and having a valve proper secured to the pin, said valve cooperating with a seat upon the barrel, and a bar of greater depth than width freely rotatable on the pin and rotatable with respect to the barrel, said bar having two ends threaded and serving as the means by which the valve insides may be screwed into and retained in a valve stem.

The references cited are: Kraft, 1,307,980, June 24, 1919; Royer, 1,473,938, November 13, 1923; Shaw, 1,744,338, January 21, 1930; Land (British), 9,867, July 7, 1915.

Appellant's alleged invention is described by the Board of Appeals in its decision as follows:

> This application relates to a valve insides for a tire valve, the valve insides comprising a seat member provided at its lower end with a valve seat and with a packing which is adapted to fit an inclined shoulder in a standard valve stem. Passing through the seat member is a valve stem bearing a valve at its lower end and a bar at its upper end, the bar being of greater depth than width and free from the seat member. The bar is threaded at its outer edges to cooperate with an interior thread in the valve stem and when threaded downwardly contacts with the upper end of the seat member forcing the seat member into place. Applicant alleges that the structure designed by him provides the maximum area of air passage and maximum strength and at the same time properly guides the valve stem.

Kraft is the principal reference relied upon, in connection with the other references. Kraft's invention is described in his patent as follows:

> The invention is particularly directed to the well-known Schrader valve and is designed to provide a top guide for the valve whereby to insure that the latter shall be properly seated.
>
> In this type of valve a plug member is provided which screws into the open-ended socket of the valve shell and holds the valve seat in position therein. Such plug member may be formed separately from the seat or may be an integral part thereof. According to the preferred form of the invention the plug member is utilized as a guide for the valve, through the medium of the so-called deflating pin which extends through it. In the usual construction the hole or bore through the plug must be sufficiently large to admit proper quantities of air through the valve in inflating the tire or other device to which the valve is applied. Hence the deflating pin cannot fit so closely as to make a very accurate guide for the valve. In the present invention the plug is formed with a bridge which is provided with a hole of smaller diameter than the main portion of the hole through the plug so that the pin may make a close guiding fit with the bridge, while suitable passages for the air are provided in the sides of the bridge which connect with the main hole through the plug, thus retaining the maximum passage through the latter.

The patent to Royer relates to a device adapted to be screwed on the end of a tire valve stem. It does not purport to disclose valve insides within the valve stem; it does show a bar or upper head with threaded ends to cooperate with threads cut on the inside of a cap, and the bar has greater depth than width.

The patent to Shaw and the British patent to Land relate to valve insides. Shaw discloses a seat member and an integral bar, the bar being of greater depth than width. This bar is not "freely rotatable with respect to the barrel."

The Land patent discloses a threaded nut which is flattened on two sides. It is situated in about the center of the structure shown and is described as a "bush • • • provided with flats • • • to

allow air to pass from the nipple 2 into the valve body 1." The specification also states that this "bush" also serves as a guide to a spindle described. The flattened sides of this nut or bush appear from the drawings to have greater depth than width.

It was the opinion of both the Examiner and the Board that, in view of the references Royer, Shaw, and Land, it would not require invention so to modify the structure disclosed by Kraft as to read upon appellant's claim 8, here involved. Upon this point the Board in its decision said:

> Claim 8 appears to distinguish from Kraft only by the limitation of a bar of greater depth than width and would appear to involve only the forming of the bridge in the plug in the device of Kraft of a greater depth than the depth shown. In view of the bars disclosed in the other references of greater depth than width it does not appear to us that it would be a matter of invention to increase the depth of the bridge in the device of Kraft, and we must agree with the examiner that this claim should not be allowed.

Upon the same point the Examiner stated as follows:

> To alter the structure of Kraft by making the nut member entirely flat as by cutting away the lower round portion is not invention in view of the other patents showing the use of such flat bars for the same or similar purposes.

It will be observed that the Board was of the opinion that the only modification of Kraft necessary to meet the claim here involved would be to increase the depth of the bridge discolsed by him, while the Examiner went somewhat more into detail, stating that the structure of Kraft could be altered by making his plug, or nut as it is called by the Examiner, entirely flat, as by cutting away the lower round portion thereof, and that such alteration would not involve invention.

Both the Board and the Examiner appear to have overlooked the fact that either "to increase the depth of the bridge" of Kraft, or to make the plug entirely flat by cutting away the round portion thereof would prevent the bridge shown by Kraft from being considered a "bar" as called for by claim 8, here involved. While the bridge shown by Kraft might be termed a bar, to deepen it, as suggested by the Board to read on appellant's claim 8, would, it seems to us, prevent it from coming within the term "bar," for it would merely lengthen the legs of the bridge to such an extent that the term "bar" could no longer be applied. The same observation will apply to the statement of the Examiner that the plug of Kraft might be made flat. If that were done, the same result would follow as by increasing "the depth of the bridge," as suggested by the Board. There would be no "bar" left, but there would be a structure with two legs connected across the top, the legs being longer than the connection between them.

In the brief of the Solicitor for the Patent Office we find the following:

> • • • Appellant seems to suggest that the Board of Appeals proposed putting longer legs on the bridge J of Kraft, in which case the legs might be less resistant to torque as argued, but it is not seen that the Board of Appeals made any such proposal. The Board of Appeals proposed making the part J thicker or deeper in its vertical dimension as shown in cross section (Fig. 3, R. 15) and it is certainly not seen how such *adding of material* would "weaken the structure," as alleged. [Italics ours.]

We find nothing in the decision of the Board or in the decision of the Examiner suggesting the "adding of material" to the plug disclosed by Kraft. The Board merely suggested the increase of "the depth of the bridge" and the Examiner explicitly suggested cutting away a part of the plug of Kraft, without any intimation that anything should be added thereto. We do not think that the flat nuts shown in the other references would suggest to one skilled in the art modifying the plug shown by Kraft so that it would then read upon appellant's claim 8, and it seems clear to us that the modifications suggested by the Patent Office tribunals would prevent the structure as modified from being read on appellant's claim 8.

We are in doubt upon the question of whether claim 8 adequntely defines appellant's alleged invention. It may be that it is so broad that, upon that ground, it should be rejected; but the claim was not rejected upon that ground, and we may not here consider it. *In re Tucker and Reeves*, 19 C. C. P. A. (Patents) 810, 54 F.(2d) 815, 416 O. G. 286. The Patent Office tribunals apparently considered that claim 8 adequately points out the "part, improvement, or combination" which appellant claims as his invention disclosed in his specification, but held that the invention claimed lacked patentability in view of the prior art.

We are also in doubt as to whether the bridge shown by Kraft may properly be said to be "freely rotatable on the pin," as required of the bar in claim 8 here involved. As a matter of fact, the bridge of Kraft is an integral part of the plug disclosed by him, and the bridge is not rotatable on the pin separately from the part of the member described by Kraft as a plug. However this may be, we think that on the whole it is manifest that there is at least well-founded doubt with respect to the patentability of the claim, and, in accordance with the well-established rule in such cases, this doubt should be resolved in favor of appellant.

For the reasons stated, the decision of the Board of Appeals upon said claim 8 is reversed.

Reversed.

1,414,527. R. E. Schurtz, Automatic continuous refrigerator; 1,627,808, 1,796,410, 1,891,028, 1,905,308, same, Refrigeration system; 1,890,531, same, Automatic weak liquor control, filed Apr. 25, 1935, D. C., N. D. Ill., E. Div., Doc. 14,434. *R. E. Schurtz* v. *Serrel, Inc., et al.*

1,429,207. (See 1,987,525.)

1,432,867. M. J. Kelly, Electron discharge device and method of making same; 1,456,528, H. D. Arnold, Electric discharge device; 1,459,412, A. M. Nicolson, Thermionic translating device; 1,479,778, H. J. Vander Bijl, Vacuum tube device; 1,672,233, W. J. Skinner, Radio grid and filament spacer; 1,811,095, H. J. Round, Thermionic amplifier and detector; 1,850,981, H. P. Donle, Rectifier, D. C., R. I., Doc. 455. *Radio Corp. of America et al.* v. *A. S. Friedman (Blackstone Radio Tube Mfg. Co.).* Dismissed Apr. 30, 1935.

1,435,062. (See 1,266,021.) 1,445,780. (See 1,987,525.)

1,456,528. (See 1,432,867.)

1,457,680, W. A. Whitaker, Flotation process; 1,467,354, N. C. Christensen, Process of concentrating oxidized ores and minerals, D. C., Del., Doc. E 1084. *Phosphate Recovery Corp.* v. *Southern Phosphate Corp.* Dismissed Nov. 23, 1934. Same, filed Nov. 15, 1934, D. C., Del., Doc. E 1086. *Phosphate Recovery Corp.* v. *Southern Phosphate Corp.*

1,459,412. (See 1,432,867.) 1,467,354. (See 1,457,680.)

1,479,778. (See 1,432,867.) 1,514,851. (See 1,890,365.)

1,537,708, W. Schottky, Thermionic vacuum tube; 1,736,815, W. J. Albersheim, Audion tube; Re. 15,278, 1,558,437, I. Langmuir, Electron discharge apparatus; 1,211,217, same, Electron discharge apparatus and method of operating same; 1,748,026, L. E. Mitchell, Electron discharge device; 1,374,679, J. R. Pratt, Degasifying process; 1,855,885, A. W. Hull, Electron discharge device, D. C., R. I., Doc. 456. *Radio Corp. of America et al* v. *A. S. Friedman (Blackstone Radio Tube Mfg. Co.).* Dismissed April 30, 1935.

1,558,437. (See 1,537,708.) 1,618,417. (See 1,361,143.)

1,627,808. (See 1,414,527.) 1,654,167. (See 1,411,786.)

1,658,594. (See 1,361,143.)

1,662,712, 1,949,970, C. F. Mensing, Golf club, filed April 30, 1935, D. C., S. D. N. Y., Doc. E 80/183. *Limbershaft Golf Club Co. et al.* v. *A. G. Spaulding & Bros.*

1,672,233. (See 1,432,867.)

1,706,471, Woodman & Smith, Removable head for metal containers; 1,792,280, 1,792,281, V. E. Cornell, Metallic receptacle and closure therefor, filed April 13, 1935, D. C., N. D. Ill., E. Div., Doc. 14,411. *Cornell Securities Corp. et al.* v. *Wilson & Bennett Mfg. Co.*

1,718,245, 1,718,246, J. T. McGarry, Railway water column, D. C., S. D. Ohio, W. Div., Doc. E 910. *J. T. McGarry* v. *The American Valve & Meter Co. et al.* Bill and counter-claim dismissed (notice May 1, 1935).

1,718,246. (See 1,718,245.)

1,722,944, 1,904,077, B. C. Place, Securing trim panels, filed April 29, 1935, D. C., E. D. Mich. (Detroit), Doc. 6955. *G. E. Gagnier et al.* v. *Woodall Industries, Inc., et al.*

1,724,542, J. Zabel, Fur brushing and ironing machine; 1,776,114, S. Friedman, Fur treating method and apparatus, D. C., S. D. N. Y., Doc. E 79/324. *Reliable Machine Works, Inc.*, v. *H. Shapiro et al.* Consent decree for plaintiff (notice April 30, 1935).

1,725,556. (See 1,361,143.) 1,725,574. (See 1,361,143.)

1,736,815. (See 1,537,708.) 1,748,026. (See 1,537,708.)

1,776,114. (See 1,724,542.)

1,778,352, F. E. Bruce, Wood flooring; 1,925,068, M. Gray, Floor; 1,925,070; W. F. Livezey, Laying wood block flooring, filed April 17, 1935, D. C. Del., Doc. E 1113. *Daniels & Schuck, Inc.*, v. *E. L. Bruce Co.*

1,784,523. (See 1,411,786.) 1,792,280. (See 1,706,471.)

1,792,281. (See 1,706,471.) 1,796,410. (See 1,414,527.)

1,811,095. (See 1,432,867.) 1,816,574. (See 1,411,786.)

1,850,981. (See 1,432,867.) 1,855,885. (See 1,537,708.)

1,890,365, R. L. Blanchard, Full collapsible panic proof revolving door; 1,514,851, F. L. Gormley, Speed control for revolving doors, C. C. A., 2d Cir., Doc. 13,531-2, *Van Kannel Revolving Door Co.* v. *General Bronze Corp.* Decree reversed (notice May 6, 1935).

1,890,531. (See 1,414,527.) 1,891,028. (See 1,414,527.)

1,891,136, 1,891,137, Beck & Whittaker, Street illumination; 1,977,612, 1,977,613, same, Street lighting luminair; 1,977,614, same, Electric street lighting bulb, filed Mar. 29, 1935, D. C. Del., Doc. E 1108. *Duro Test Corp.* v. *Welsbach Street Lighting Co. of America et al.*

1,891,137. (See 1,891,136.) 1,904,077. (See 1,722,944.)

1,905,308. (See 1,414,527.) 1,919,652. (See 1,266,021.)

1,925,068. (See 1,778,352.) 1,925,070. (See 1,778,352.)

1,949,970. (See 1,662,712.) 1,977,612. (See 1,891,136.)

1,977,613. (See 1,891,136.) 1,977,614. (See 1,891,136.)

1,987,525. M. P. Chaplin, Fragile article support; 1,429,207, Koppelman & Cooper, Packing for fragile articles; 1,445,780, Mann & Koppelman, Packing for eggs, suit for declaratory judgment filed Mar. 21, 1935, D. C. Del., Doc. E 1104. *Keyes Fibre Co.* v. *Patent Royalties Corp. et al.*

Re. 15,140. (See 1,247,540.)

Re. 15,278. (See 1,537,708.)

Disclaimers

1,850,047.—*Eugene P. Bachman* and *Willy H. Lasch*, Philadelphia, Pa. METHOD AND APPARATUS FOR TREATING OR MOISTENING YARN. Patent dated March 15, 1932. Disclaimer filed May 29, 1935, by the assignee, *The Atwood Machine Company.*

Hereby disclaims:

(1) Claim 5 in its entirety; and

(2) From the scope of claims 1 to 3, inclusive, all methods of conditioning yarn except those wherein the liquid conditioning medium is fed under pressure and continuously to the inner surface of the yarn package until penetration of the package by the liquid has been completed as indicated by the appearance of moisture on the outer surface of the package.

1,899,426.—*Winfield Scott*, Nitro, W. Va. AGE RESISTING VULCANIZED RUBBER PRODUCT. Patent dated February 28, 1933. Disclaimer filed May 31, 1935, by the assignee, *The Rubber Service Laboratories Company.*

Hereby disclaims that part of the claim in said specification which appears therein as claims 1, 2, 5, 6, and 8.

Your petitioner further says that the subject matter not herein and hereby disclaimed is definitely distinguish-

able from the part or parts disclaimed herein and is truly and justly the invention of said Winfield Scott and is a material and substantial part of the thing patented.

1,901,296.—*Hakon H. Hagland*, Flushing, N. Y. MULTIPLEX TELEGRAPH SYSTEM. Patent dated March 14, 1933. Disclaimer filed June 1, 1935, by the patentee, the assignee, *The Western Union Telegraph Company*, assenting.

Hereby disclaims the system defined in claim 47 of said patent, No. 1,901,296, except when limited to read upon the disclosure of said patent and wherein "said resistance element" is arranged to be connected in both the input and output circuits of the electric discharge device.

1,923,866.—*Ingenuin Hechenbleikner*, Charlotte, N. C. SULPHUR BEARING ORE FURNACE. Patent dated August 22, 1933. Disclaimer filed May 21, 1935, by the assignee, *Chemical Construction Corporation*.

Hereby enters this disclaimer to claims 3, 7, 13, and 14 of said patent reading as follows:

"3. A furnace for burning sulphur bearing ore to produce sulphur dioxide for sulphuric acid manufacture comprising a combustion chamber, means for introducing a spray of sulphur bearing ore fines into said combustion chamber, means for heating an oxidising medium to relatively high temperatures, and means for introducing the said heated oxidizing medium into co-mixing relation with said spray for combustion of said spray and for the production of sulphur dioxide gases."

"7. A furnace for burning sulphur bearing ore to produce sulphur dioxide for sulphuric acid manufacture comprising a vertically elongated combustion chamber including top, intermediate, and bottom portions, a spray nozzle arranged at the top portion of said combustion chamber, means for feeding a stream of sulphur bearing ore fines, means for inter-mixing a heated oxidizing medium with said stream of ore fines for combustion of said spray and for the production of sulphur dioxide gases, means at the intermediate portion of said combustion chamber defining an exit for the combustion gases, and the bottom portion of said combustion chamber being arranged for collecting and discharging the ore cinders."

"13. A furnace for burning sulphur bearing ore to produce sulphur dioxide for sulphuric acid manufacture comprising a vertically elongated combustion chamber including top, intermediate, and bottom portions, a spray nozzle arranged at the top portion of said combustion chamber, means for feeding a stream of sulphur bearing ore fines into said spray nozzle and producing a spray of said ore fines, means for feeding a stream of air with said stream of ore fines, means for feeding a stream of air with said stream of ore fines for combustion of said spray in order to produce sulphur dioxide gases, means at the intermediate portion of said combustion chamber defining an exit for the desired combustion gases, the bottom portion of said combustion chamber being arranged for collecting and discharging the ore cinders and impurities remaining after the combustion of the sulphur.

"14. A furnace for burning sulphur bearing ore to produce sulphur dioxide for sulphuric acid manufacture, comprising a vertically disposed greatly elongated combustion chamber including top, intermediate, and bottom portions, means at the top portion of said combustion chamber for feeding sulphur bearing ore fines into said combustion chamber, means for introducing a stream of an oxidizing medium into said chamber for combustion of said ore and for the production of sulphur dioxide gases, an exit duct for the combustion gases at the intermediate portion of the chamber, the bottom portion of said chamber being shaped to act as a hopper for the collection and discharge of ore cinders."

1,961,154.—*William A. MacDonald*, Little Neck, N. Y. WAVE SIGNALING SYSTEM. Patent dated June 5, 1934. Disclaimer filed May 29, 1935, by the patentee, the assignee, *Hazeltine Corporation*, assenting.

Enters this disclaimer to claims 2, 8, 9, 10, 21, 22, 23, and 25 of said patent which are in the following words:—

"2. A high frequency electrical coupling system having input and output terminals for interconnecting successive portions of a multi-stage thermionic radio receiver, comprising, at least one resonant circuit tunable throughout a frequency range, and fixed impedance means included in said coupling system producing effects so variable with frequency as to render the selectivity of said coupling system when tuned to a frequency adjacent the upper limit of said tunable range substantially equal to the selectivity of said coupling system tuned to a frequency adjacent the lower limit of said tunable range."

"8. A high frequency electrical coupling system including at least one resonant circuit tunable throughout a frequency range, and fixed impedance means included in said resonant circuit producing effects so variable with frequency as to minimize changes in selectivity of said coupling system as the tuning is adjusted throughout said frequency range.

"9. A high frequency electrical coupling system including at least one resonant circuit tunable throughout a frequency range, and energy dissipating impedance means decreasing in dissipative effect with increase in frequency included in said resonant circuit for reducing variations in selectivity of said coupling system throughout said tunable range.

"10. A high frequency electrical coupling system including at least one resonant circuit tunable throughout a frequency range, and fixed impedance means comprising resistance shunted by capacity serially interposed in said resonant circuit for reducing variations in selectivity of said coupling system as the tuning is adjusted throughout said frequency range."

"21. A high frequency electrical coupling system comprising a resonant circuit, means for variably tuning said system over a range of frequency and means for causing the power factor of said system to increase when the frequency to which said system is tuned decreases.

"22. A high frequency electrical coupling system comprising a resonant circuit, means for variably tuning said system over a range in frequency and means for introducing resistance into said circuit which effectively increases in magnitude with decreasing frequency.

"23. A high frequency electrical coupling system comprising a tunable circuit, means for variably tuning said circuit over a range in frequency, means introducing resistance into said circuit and means automatically varying the effective magnitude of said resistance inversely with respect to the tuning frequency, whereby a substantially constant degree of selectivity is maintained over said frequency range."

"25. A high frequency electrical coupling system tunable throughout a range in frequency, adapted to interconnect successive portions of a multi-stage amplifier, said system comprising a primary circuit and a tunable resonant secondary circuit inductively coupled to said primary circuit and means associated with said secondary circuit for introducing losses therein which vary as said circuit is tuned throughout said range, to maintain substantially constant the selectivity of said system throughout said tunable frequency range."

1,982,566.—*Alexander G. Belford*, Laconia, N. H. TWO-FEED CIRCULAR KNITTING MACHINE. Patent dated November 27, 1934. Disclaimer filed May 29, 1935, by the assignee, *Scott & Williams, Incorporated*.

Hereby enters this disclaimer to that part of the claim in said specification which is in the following words, to wit:

"3. In a circular knitting machine having independent needles, two needle cams having conflicting operating positions, in combination with means to shift said cams into and out of their operative positions."

"5 In a circular knitting machine having independent needles, a plurality of needle operating cams having conflicting operating positions and means operating said cams on relatively angularly disposed paths to replace one cam by the other."

1,994,835. *Charles F. Bowen*, Hillsboro, Ohio. MAKING FILLED SURFACE PAPER. Patent dated January 23, 1934. Disclaimer filed May 29, 1935, by the assignee, *The Champion Coated Paper Company*.

Hereby enters this disclaimer to claim 7 which is in the following words, to wit:

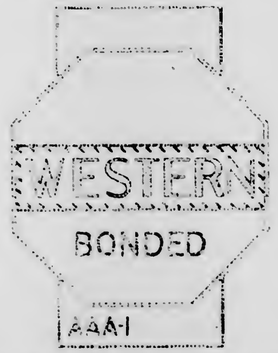
"7. In paper treating apparatus, means for applying an excess of aqueous mineral coating composition to a web of paper, means for moving the paper longitudinally and a rounded leveling device to contact with the coated side of the paper to remove excess coating composition and leave residual coating composition in the surface of the paper, said leveling device having a radius of curvature of not more than 5/32 inch at the point where the paper leaves the scraper and a greater radius of curvature at the point where the paper first contacts the leveling device."

TRADE-MARKS

OFFICIAL GAZETTE, JUNE 18, 1935

[VOL. 455. No. 3]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.



Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 1 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1

Raw or Partly-Prepared Materials

Ser. No. 362,276. TROPPE BROTHERS, New York, N. Y. Filed Mar. 8, 1935.

"Bonded" and "AAA-1" are disclaimed apart from the mark as shown.

For Fur Skins.

Claims use since February, 1935.

Ser. No. 363,367. LEWMAC FURS, INC., New York, N. Y. Filed Apr. 3, 1935.

The words "Seal Dyed Coney" are disclaimed apart from the mark.

For Chemically Prepared Skins of Coney, Rabbit, Marmot, and Muskrat, Natural, Dressed, and Dyed, for Use in the Manufacture and Fashioning of Coats and Like Wearing Apparel.

Claims use since Oct. 1, 1934.

Ser. No. 363,368. LEWMAC FURS, INC., New York, N. Y. Filed Apr. 3, 1935.

The words "Seal Dyed Coney" are disclaimed apart from the combined features as shown.

For Chemically Prepared Skins of Coney, Rabbit, Marmot, and Muskrat, Natural, Dressed, and Dyed, for Use in the Manufacture and Fashioning of Coats and Like Wearing Apparel.

Claims use since Oct. 1, 1934.

Ser. No. 363,734. RICHARD YOUNG COMPANY, New York N. Y. Filed Apr. 13, 1935.

No claim is made to the word "Tanned" apart from the mark.

For Leather.

Claims use since Dec. 19, 1934.

Ser. No. 364,598. SHAWINIGAN PRODUCTS CORPORATION, New York, N. Y. Filed May 6, 1935.

GELVA

For Synthetic Resinous Material.

Claims use since Sept. 7, 1929.

CLASS 2

Receptacles

Ser. No. 363,407. SCHNEFEL BROTHERS, INC., Newark N. J. Filed Apr. 4, 1935.

La Cross

For Empty Vanity Cases of Leather, Cellulose, Fibre, Imitation Leather, and Base Metal and Containers for Same.
Claims use since 1922.

Ser. No. 363,774. VORTEX CUP COMPANY, Chicago, Ill. Filed Apr. 15, 1935.

TO YOUR HEALTH

For Paper Cups.
Claims use since Jan. 3, 1935.

Ser. No. 364,661. BRUNT & COMPANY, Chicago, Ill. Filed May 8, 1935.

TITAN

For Crates Constructed of Plain or Corrugated Fiber Board and Reinforced by Wood Cleats, Wires, and Other Material.
Claims use since Dec. 10, 1934.

CLASS 4

Abrasive, Detergent, and Polishing Materials

Ser. No. 362,894. S. WHITE & CO., INC., Stamford, Conn. Filed Mar. 22, 1935.

"C"Sharp

For Stropper Dressing.
Claims use since Mar. 13, 1935.

Ser. No. 363,282. FREDERICK GUMM CHEMICAL CO. INC., Union City, N. J. Filed Apr. 1, 1935.

CLEPO — OUR SERVICE IS AN INVESTMENT

The words "Our Service Is an Investment" are disclaimed apart from the mark. The letters CLEPO form the word "Clepo."
For Industrial Surface Cleaning Preparation—Namely, Chemical Cleaning Compound for the Walls and Surfaces of Buildings.
Claims use since Apr. 24, 1933

Ser. No. 363,555. COLGATE-PALMOLIVE-PEET COMPANY, Jersey City, N. J. Filed Apr. 9, 1935

PALMOLIVE

Applicant is the owner of Registered Trade-Mark No. 102,862. The representation of a cake of soap is disclaimed per se. The drawing is lined for shading.
For Toilet Soap.
Claims use since June, 1890.

Ser. No. 363,594. LESTER E. MAX, doing business as Sparkling Company, Cincinnati, Ohio. Filed Apr. 10, 1935.

SPARKLING METAL POLISH

Applicant disclaims the words "Metal Polish" and "Trade Mark" except as shown.
For Metal Polish.
Claims use since Apr. 6, 1935.

Ser. No. 363,863. THE JARED HOLT CO., Albany, N. Y. Filed Apr. 17, 1935.

Slik

For Polishes, Dressings, and Cleaners for Shoes.
Claims use since Dec. 17, 1934.

CLASS 5

Adhesives

Ser. No. 358,647. GEORGE LITTIG, Sacramento, Calif. Filed Nov. 26, 1934.

G. LITTIG'S

WON'T LET GO
GRIP HOLD

The words "Grip Hold" are disclaimed apart from the mark
For Adhesive Paste.
Claims use since Oct. 1, 1934.

Ser. No. 362,501. ERNEST WHITEMAN, doing business as Firestone Mendal Cement Co., Detroit, Mich. Filed Mar. 13, 1935.

Firestone MENDAL

No claim is made to the word "Mendal" apart from the mark shown.
For Adhesive Cement for Mending China, Glass, Crockery, Leather, Bakelite, Bric-a-Brac, Furniture, and Woodwork.
Claims use since Feb. 15, 1935.

CLASS 6

Chemicals, Medicines, and Pharmaceutical Preparations

Ser. No. 345,983. SEIDLAX COMPANY OF AMERICA, Vineland, N. J. Filed Jan. 12, 1934.

SEIDLAX

For Alkaline Laxatives.
Claims use since July 15, 1933.

Ser. No. 350,797. ALEXANDRE GIMONET, Arrochar, Staten Island, N. Y. Filed May 2, 1934.

CREAM TEX

The word "Cream" is disclaimed apart from the mark as shown.
For Cosmetics—Namely, Lipsticks.
Claims use since Mar. 19, 1934.

Ser. No. 357,382. ARTHUR A. MARTY, doing business as Selene Laboratories, Inc., Milwaukee, Wis. Filed Oct. 22, 1934.

SELENE

For Toilet Water, Cosmetics—Namely, Cleansing and Tissue Creams, Skin Tonic, and Permanent Wave Solution.
Claims use since Oct. 11, 1934.

Ser. No. 359,198. E. T. BEDFORD, Long Island City, N. Y. Filed Dec. 12, 1934.

SILVER SENTRY

For De-Hydrating Atmosphere Desiccating Compound for Preventing Silver from Tarnishing.
Claims use since Nov. 5, 1934.

Ser. No. 359,915. WILLIAM KAUFMAN, doing business as Kay Laboratories, New York, N. Y. Filed Jan. 4, 1935.

IOPINE

For Pharmaceutical Preparations, to-wit, Nose Drops for Nasal Catarrh and Colds.
Claims use since Dec. 7, 1934.

Ser. No. 360,101. MILDRED MANES, Chicago, Ill. Filed Jan. 10, 1935.

Lucia Deraine

For Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity

Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Skin Whitener in Liquid and Solid Form, Face Packs, Eyebrow and Eyelash Grower, Eye Drops, Eyebrow Pencils, Chemical Preparations Suitable for the Darkening of Eyelashes and Eyebrows, Hand Lotions, Skin Lotions, After Shaving Lotions, Pomades, Face Powders, Talcum Powders, Body Powders, Sachets, Hair Salves, Hair Elixirs, Dandruff Preparations, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Depilatories, Tooth Pastes, Nail Creams, Nail Powders, Nail Bleaches, Nail Polishes, Witch Hazel, Peroxide, Petroleum Jellies, Witch Hazel Salves, Camphor Creams, Foot Powders, Corn Salves, Deodorants, Disenfectants, Bay Rum, Perfumes and Toilet Waters.

Claims use since Nov. 16, 1934.

Ser. No. 360,525. THE COLORADO FUEL AND IRON PRODUCTS COMPANY, Denver, Colo. Filed Jan. 22, 1935.

SILVER TIP

For Toluol, Xylol, Benzol, and Creosote Obtained in the Process of Coal Tar Distillation.

Claims use since Aug. 14, 1934.

Ser. No. 361,004. HENRY M. FAUCETTE, Durham, N. C. Filed Feb. 4, 1935.

NATURES TONIC

OCCONEECHEE

BLOOD PURIFYER

Applicant makes no claim to the words "Natures Tonic Blood Purifyer" apart from the mark shown.

For Blood Purifying Tonic Recommended for the Treatment of Cancer, Eczema, Pellagra, Ulcers and Skin Infections.

Claims use since March, 1881.

Ser. No. 361,241. FRIEDRICH MERZ, doing business as Merz & Co., Frankfort-on-the-Main, Germany. Filed Feb. 9, 1935.

Vagiserol

For Vaginal Ointment Used in the Treatment of Leukorrhea.

Claims use since since December, 1934.

Ser. No. 361,679. MABLE I. HOOD, doing business as Arborol Chemical Company, San Francisco, Calif. Filed Feb. 21, 1935.

ARBOROL

For Medicinal Preparation in Ointment or Liquid Form for Treating Certain Diseases and Conditions, Such as Spraying the Nose, Throat and Ears, in the Treatment of Colds, Hay Fever, Catarrhal Deafness and the Like.

Claims use since Jan. 15, 1935.

Ser. No. 362,444. MORRIS STEIN, New York, N. Y. Filed Mar. 12, 1935.

TRYKO

For Medicated Liquid Foot Preparation for Athlete's Foot and Similar Foot Ailments.

Claims use since Feb. 14, 1935.

Ser. No. 362,457. DET DANSKE MEDICINAL-& KEMIKALIE-KOMPAGNI A/S, Copenhagen, Denmark. Filed Mar 13, 1935.

PYLORIN

For Preparation for Use in the Treatment of Pernicious Anemia.

Claims use since December, 1933

Ser. No. 362,541. THE WARREN TEED PRODUCTS CO., Columbus, Ohio. Filed Mar. 14, 1935.

Di-O-Chrome

Applicant disclaims the expression "Chrome" apart from the form and association shown.

For Antiseptic Solution Usable as a Gargle and Mouthwash

Claims use since June 22, 1931.

Ser. No. 362,634. THE SCHOLL MFG. CO., INC., Chicago, Ill. Filed Mar. 16, 1935.

Dr Scholl's Double Duty Corn Kit

No rights are claimed for the words "Korn Kit" apart from the mark shown.

For Medicated Corn Plasters and Pads, and Corn Salve.

Claims use since Jan. 3, 1928.

Ser. No. 362,859. MAX AGNUSS, New York, N. Y. Filed Mar. 22, 1935.

MYL

For Cosmetics Such as Facial Packs

Claims use since Feb. 1, 1935

Ser. No. 363,184. PITMAN-MOORE COMPANY, Indianapolis, Ind. Filed Mar. 29, 1935.

HEPA-FERRIN

No claim is made to the word "Ferrin" alone.

For Liquid Medicinal Tonic for Stimulating Formation of Red Blood Corpuscles and Supplying Iron for Increasing Hemoglobin.

Claims use since Feb. 25, 1935.

Ser. No. 363,187. SMITH, KLINE AND FRENCH LABORATORIES, Philadelphia, Pa. Filed Mar. 29, 1935.

FESOFOR

For Preparation for the Relief of Anemia.

Claims use since Mar. 12, 1935.

Ser. No. 363,189. S CONY-VACUUM OIL COMPANY, INCORPORATED, New York, N. Y. Filed Mar. 29, 1935.

Hydrotone

For Composition for Preventing Corrosion and Scale in Engine Cooling Systems.

Claims use since Mar. 21, 1935.

Ser. No. 363,211. THE FARGASON COMPANY, INC., Evansville, Ind. Filed Mar. 30, 1935.

PASCO

For Cleansing Compound Having Incidental Properties as a Water Softener.

Claims use since 1905.

Ser. No. 363,242. JOHN SUNSHINE CHEMICAL CO., INC., Chicago, Ill. Filed Mar. 30, 1935.

MITEE

For Drain Pipe Cleaner, Closet Bowl Cleaner Having a Chemical Action Similar to a Drain Pipe Cleaner, Soot Destroyer Preparation, Boiler Scaling Compound, Boiler Cleaner, Boiler Liquid, and Soldering Paste.

Claims use since Jan. 20, 1933.

Ser. No. 363,298. SOCIÉTÉ DE RECHERCHES ET D'EXPLOITATIONS PÉTROLIFÈRES, Paris, France. Filed Apr. 1, 1935.

ACTICARBONE

For Activated Carbon or Activated Charcoal for Absorbent or Decolorizing Purposes.

Claims use since Sept. 2, 1927.

Ser. No. 363,350. FRANK H. VORHEES, doing business as Vor-Sal Laboratories, Chicago, Ill. Filed Apr. 2, 1935.

VOR-SAL

The drawing is lined for red.

For Tooth Powder.

Claims use since Aug. 15, 1934

Ser. No. 363,459. HILLIARD PRODUCTS COMPANY, INC., Wilmington, Del. Filed Apr. 6, 1935.

MINESE

For Antiseptic Solutions and Compounds.

Claims use since Mar. 10, 1935.

Ser. No. 363,750. WILLIAM H. DUDLEY, doing business as Myrnol Products Company, Santa Monica and Los Angeles, Calif. Filed Apr. 15, 1935.

MYRNOL

For Nose Drops.

Claims use since Mar. 8, 1935.

Ser. No. 363,753. GABRIELEEN COMPANY, INC., Chicago, Ill. Filed Apr. 15, 1935.

GLO-TONE

For Permanent Waving Compound.

Claims use since September, 1924.

Ser. No. 363,877. MERRIMAC CHEMICAL COMPANY, Everett, Mass. Filed Apr. 17, 1935.

FERRISUL

For Water Soluble Salts of Iron Sulfate Capable of Use in the Filtering of Water, Congulation of Sewage, etc.

Claims use since Dec. 20, 1932.

Ser. No. 363,878. MERRIMAC CHEMICAL COMPANY, Everett, Mass. Filed Apr. 17, 1935.

NERTANOL

For Chemicals in the Tanning and Treatment of Leather.

Claims use since Sept. 10, 1931.

Ser. No. 363,965. BLOOMINGDALE BROS., INC., New York, N. Y. Filed Apr. 19, 1935.

SHOO-MOTH

For Insecticide.

Claims use since Mar. 23, 1935.

Ser. No. 363,985. RARE CHEMICALS, INC., Nepera Park, N. Y. Filed Apr. 19, 1935.

SILCHROME

For Diagnostic and Quantitative Reagent for the Determination of Chlorine in Milk and Other Liquids Containing Chlorides.

Claims use since Mar. 12, 1935.

Ser. No. 364,086. THE CENTRAL PHARMACAL COMPANY, Seymour, Ind. Filed Apr. 23, 1935.

ORBIMIN

For Medicinal Preparation for Syphilis.

Claims use since Mar. 15, 1935.

Ser. No. 364,244. PACIFIC COAST BORAX COMPANY, New York, N. Y. Filed Apr. 26, 1935.

For Borax, Boric Acid, Boric Acid Spangles, Borax Compounds Used for Antiseptic Purposes, and Talcum Powder.

Claims use since 1904 on talcum powder; September, 1891 on remaining goods.

CLASS 8

Smokers' Articles, Not Including Tobacco Products

Ser. No. 362,684. INTERNATIONAL LATEX CORPORATION, Rochester, N. Y. Filed Mar. 18, 1935.

No claim is made to the bung or roll of wire cloth per se. The mark consists of a yellow disc.

For Wire Cloth.

Claims use since December, 1915.

CLASS 14

Metals and Metal Castings and Forgings

Ser. No. 360,200. AUSTENAL LABORATORIES, INC., New York, N. Y. Filed Jan. 14, 1935.

For Cobalt, Chromium Alloy.

Claims use since July 8, 1933.

Ser. No. 362,824. I. C. I. METALS, LIMITED, London, England. Filed Mar. 21, 1935.

KUNIAL

For Nonferrous Alloys in Which Copper Predominates, in Sheets, Rods, Bars, and Tubes.

Claims use since Nov. 30, 1933.

Ser. No. 364,102. P. R. MALLORY & CO., INCORPORATED, Indianapolis, Ind. Filed Apr. 23, 1935.

MALLORY 3

For Alloys Comprising Copper Alloys and Metal Alloys Generally Having a Base of a Highly Conductive Metal.

Claims use since Apr. 13, 1935.

CLASS 16

Paints and Painters' Materials

Ser. No. 358,334. THE PURE OIL COMPANY, Chicago, Ill. Filed Nov. 17, 1934.

Purol

For Dry, Paste and Ready Mixed Paints, Paint Enamels, Lacquers, and Varnishes.

Claims use since March, 1932.

Ser. No. 363,148. ANDERSON-STOLZ CORPORATION, Kansas City, Mo. Filed Mar. 29, 1935.

ESTERITE

For Ready Mixed Paints.

Claims use since Mar. 14, 1935.

Ser. No. 363,233. THE RESINOUS PRODUCTS & CHEMICAL COMPANY, INC., Philadelphia, Pa. Filed Mar. 30, 1935.

AQUAPLEX

For Paint Paste.

Claims use since Mar. 11, 1935.

Ser. No. 363,842. BAER BROTHERS, New York, N. Y. Filed Apr. 17, 1935.

ELECTRA

For Paint Enamels.

Claims use since Apr. 1, 1935.

CLASS 17

Tobacco Products

Ser. No. 364,282. J. GORDON FISHER ESTATE, doing business as Fisher Brothers, Hanover, Pa. Filed Apr. 27, 1935.

BIG DIAMOND

For Chewing and Smoking Tobacco.

Claims use since May 8, 1934.

Ser. No. 362,249. AUSTIN TRAILER EQUIPMENT CO., Muskegon, Mich. Filed Mar. 8, 1935.

GRAVITY CUSHIONED

The word "Cushioned" is disclaimed apart from the mark shown.

For Tractor-Trailer Fifth Wheels.

Claims use since Feb. 1, 1934.

CLASS 21

Electrical Apparatus, Machines, and Supplies

Ser. No. 336,633. AUBURN SPARK PLUG COMPANY, INC., Auburn, N. Y. Filed Apr. 11, 1933.

VICTOR

For Spark Plugs.

Claims use since Apr. 1, 1932.

Ser. No. 357,790. WASHINGTON INSTITUTE OF TECHNOLOGY, Washington, D. C. Filed Nov. 1, 1934.

K-A-X

For Electrical Apparatus for Maintaining Constant Phase and Amplitude Relations Between Currents and/or Voltages in Interconnected Elements of Electric Circuits.

Claims use since Oct. 23, 1934.

Ser. No. 363,576. BOND ELECTRIC CORPORATION, Jersey City, N. J. Filed Apr. 10, 1935.

FRANCO

For Electric Lanterns, Electric Flashlights, Electric Searchlights, Electric Candles, Flashlight Batteries, Dry "A", "B", "C" Batteries for Radio, Wet "A", "B", "C" Batteries for Radio, Storage Batteries for Radio, Storage Batteries for Automobiles, Radio Power Units, "A", "B", and "C" Eliminators, Dry Cells for Radio, Dry Cells for Ignition, Dry Cells for Telephones, Dry Cells of Multiple Types, Radio Electron Tubes, Condensers, and Storage-Battery Chargers.

Claims use since 1908.

Ser. No. 364,461. WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed May 1, 1935.

INERTEEN

For Electrical Condensers.

Claims use since Feb. 2, 1935.

Ser. No. 364,472. DELCO PRODUCTS CORPORATION, Dayton, Ohio. Filed May 2, 1935.

Delco

For Dynamo Electric Machines, Motors, Condensers, Switches, and Circuit Breakers, and Parts Thereof, Other Than Those Used with Electrical Equipment for Vehicles and with Internal Combustion Engines.
Claims use since February 1931.

CLASS 22

Games, Toys, and Sporting Goods

Ser. No. 363,008. MOLLY-'ES DOLL OUTFITTERS, INC., Philadelphia, Pa. Filed Mar. 26, 1935.

RAGGEDY ANN

For Dolls, Doll Clothes, Toys, and Novelties.
Claims use since November 1934.

[ACT OF MARCH 19, 1920, SEC. 1 (b)]

THESE REGISTRATIONS ARE NOT SUBJECT TO OPPOSITION

325,383. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ALBERS PACKING COMPANY, Riverside, Calif. Filed Apr. 30, 1934. Serial No. 350,673

Flavor Cured

For Canned Olives.
Claims use since Mar. 5, 1934.

325,384. (CLASS 39. CLOTHING.) MAY-HOLL SALES CORPORATION, Los Angeles, Calif. Filed Apr. 30, 1934. Serial No. 350,741.

MODE O'DAY

For Ladies' and Girls' Dresses, Frocks, Coats, Suits, Petticoats, Slips, Underwear, and Hosiery, Made Wholly or in Part of Cotton, Silk, Linen, Woolens or Rayon.
Claims use since Apr. 2, 1934.

325,385. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE VONEIFF-DRAYER CO., Baltimore, Md. Filed July 13, 1934. Serial No. 353,867.

KOOL KOATED

For Candies.
Claims use since May 10, 1934

325,386. (CLASS 32. FURNITURE AND UPHOLSTERY.) UNITED STATES CABINET BED CO., Brooklyn, N. Y. Filed Aug. 27, 1934. Serial No. 355,498.

Smoothedge COIL SPRING

For Bed Coil Springs.
Claims use since December, 1933.

325,387. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE QUAKER MAID CO., INC., New York, N. Y. Filed Sept. 14, 1934. Serial No. 356,048.

COCONOG

For a Chocolate Malted Food Drink.
Claims use since May 2, 1934.

325,388. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NATIONAL MINERAL COMPANY, Chicago, Ill. Filed Sept. 24, 1934. Serial No. 356,362.

Helene Curtis

For Whipped Cleansing Cream, Liquifying Cleansing Cream, Circulation Cream, Throat Cream, and Tissue Builder, Acne Cream, Liquid Lemon Cleansing Cream, Turtle Oil, Skin Freshener, Face Powder, Paste Rouge, Lipstick, Astringent Lotion, Dry Rouge, Eye Shadow, Mascara, Cream Nail Polish, Cuticle Oil, Nail Bleach, Permanent Wave Oil, and Brilliantine.
Claims use since Sept. 20, 1932.

325,389. (CLASS 49. DISTILLED ALCOHOLIC LIQUORS.) BON-TON INCORPORATED, Chicago, Ill. Filed Oct. 17, 1934. Serial No. 357,188.

Old Paducah

For Whiskey.
Claims use since May 8, 1934.

325,390. (CLASS 38. PRINTS AND PUBLICATIONS.) CHAIN PATTERN CORPORATION, New York, N. Y. Filed Nov. 28, 1934. Serial No. 358,722.

Claire Tilden

For Fashion Release Sheets of a Periodical Nature.
Claims use since Apr. 21, 1934.

325,391. (CLASS 38. PRINTS AND PUBLICATIONS.) HOUSEHOLD ARTS, INC., New York, N. Y. Filed Nov. 28, 1934. Serial No. 358,735.

Alice Brooks

For Pattern Release Sheets of a Periodical Nature. Claims use since Nov. 1, 1933.

325,392. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) REIMERS ELECTRIC APPLIANCE COMPANY, West New York, N. J. Filed Jan. 12, 1935. Serial No. 360,182.

THE REIMERS

For Electric Pressing Irons, Electric Steam Irons, Electric Heating Elements or Refills for Sad-Irons; Electric Heating Pads Designed for General Bed Heating Purposes, Electric Die Heaters, Electric Hot Plates, Electric Hat Heaters for Use by Hat Cleaners, Electric Bottle Warmers and Special Electrically Heated Apparatus Such as Candy Heaters, Glue Pot Heaters, Heaters for Soldering Irons.

The trade-mark has been continuously used and applied to electric pressing irons since the year 1908; to electric die heaters since the year 1912; to electric hot plates since the year 1912; to electric hat heaters since the year 1927; to electric bottle warmers since the year 1928; to electric heating pads since the year 1925, and to electric steam irons since April, 1930.

325,393. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) NAT P. STECKLER, doing business as United States Pharmaceutical Company, New York, N. Y. Filed Feb. 11, 1935. Serial No. 361,288.

Sure Test

For Pharmaceutical Preparations, as for Instance Ephedrine Sulphate, Ephedrine Inhalant Pink, Ephedrine Inhalant Plain, Ephedrine Nose Drops, Ephedrine Sulphate 3% Solution, Ephedrine Inhalant Compound, Ephedrine Alkaloid.

Claims use since Mar. 1, 1930.

325,394. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) I. N. FAGG, doing business as I. N. Fagg Company, Elgin, Tex. Filed Feb. 21, 1935. Serial No. 361,672.

FAGG'S

Wire Cut Liniment

For a Preparation for Use in the Treatment of Wire Cuts, Sore Shoulders, Galds, Saddle Sores, Sore Teats, and Any Surface Sore Where the Flesh is Cut or Torn. Claims use since June 1, 1932.

325,395. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOHN STEWART HOPKINS, doing business as Copper Hill Distributing Co., Butte, Mont. Filed Mar. 28, 1935. Serial No. 363,101.

HOPKINS

COOKEVEN

For Dry Soup Mixture Consisting of Vegetables and Cereals Packed in Cellophane.

Claims use since Jan. 15, 1934.

325,396. (CLASS 39. CLOTHING.) S. GOURSE & SONS, Fall River, Mass. Filed Apr. 3, 1935. Serial No. 363,363.

"Blackstone Worsteds"

For Men's Suits and Overcoats.

Claims use since 1925.

325,397. (CLASS 39. CLOTHING.) IRVING STEMPEL AND CO., INC., New York, N. Y. Filed Apr. 15, 1935. Serial No. 363,771.

MAN-TAILORED BY IRVING STEMPEL & CO.

For Ladies' Shirts and Shirtwaists, Dresses, Skirts, and Coats.

Claims use since October, 1933.

TRADE-MARK REGISTRATIONS RENEWED

101,618. A PREPARATION FOR THE DESTRUCTION OF RATS AND MICE. Registered January 5, 1915. BOTANICAL MANUFACTURING COMPANY, Wilmington, Del., and Philadelphia, Pa. Renewed January 5, 1935, to Essential Manufacturing Co., Philadelphia, Pa., a firm, successor.

101,728. CERTAIN NAMED HARDWARE SUPPLIES. Registered January 12, 1915. ANDREWS WIRE AND IRON WORKS, Rockford, Ill. Renewed January 12, 1935, to The Washburn Company, Worcester, Mass., a corporation of Massachusetts, assignee.

102,800. A PUBLICATION PUBLISHED PERIODICALLY. Registered February 23, 1915. INTERNATIONAL ASSOCIATION OF ROTARY CLUBS. Renewed February 23, 1935, to Rotary International, Chicago, Ill., a corporation of Illinois, assignee.

103,146. LINIMENTS, SALVES, AND DECOCTIONS MANUFACTURED FROM HERBS. Registered March 16, 1915. V. BAUDENDISTEL & SON. Renewed March 16, 1935, to Chas. D. Baudendistel, West New York, N. J., successor.

103,371. COFFEES, TEAS, RICE, SPICES, TAPIOCA, COCOA, AND FLAVORING EXTRACTS FOR USE IN FOODS. Registered March 30, 1915. C. F. BONSOR & CO., INC., Philadelphia, Pa., a corporation of New Jersey. Renewed March 30, 1935.

104,159. CERTAIN MALTED FOODS, IN PASTE FORM OR A DRY STATE. Registered May 4, 1915. THOMPSON'S MALTED FOOD COMPANY, Phoenix, Ariz., and Waukesha, Wis. Renewed May 4, 1935, to Borden's Milk Products Company, Inc., New York, N. Y., a corporation of Delaware, assignee by mesne assignments.

LABELS

REGISTERED JUNE 18, 1935

45,827.—*Title:* RELAXATION—NON-SLIP CORN PADS. For Corn Pads. ALLEN CHEMICAL CO. INC., New York, N. Y. Published February 1, 1935.

45,828.—*Title:* RELAXATION—ADHESIVE MOLESKIN. For Adhesive, Medicated Moleskin for Relieving Pressure on Corns, Calluses, Bunions, and Tender Parts of the Feet Caused by Tight Shoes. ALLEN CHEMICAL CO. INC., New York, N. Y. Published February 1, 1935.

45,829.—*Title:* DWIN STAINLESS FLY KILLER. For a Liquid Preparation for Killing Flies. BALDWIN LABORATORIES, INC., Saegertown, Pa. Published April 3, 1935.

45,830.—*Title:* COOKIE COAT. For Coats. BARMON BROTHERS COMPANY, INC., Buffalo, N. Y. Published May 22, 1935.

45,831.—*Title:* STAMP-VIEWS. For Miniature Views in Poster Stamp Form. JESSE L. BERNSTEIN, doing business as Stamp Guild, New York, N. Y. Published April 1, 1935.

45,832.—*Title:* NON-SHATNESS KOSHER CLOTHES. For Clothes. COMBINE CLOTHING EXCHANGE INC., New York, N. Y. Published March 2, 1935.

45,833.—*Title:* DIXIE BELLE. For Gin, Gin Compounds, and Gin Cocktails—Namely, Sloe Gin, Distilled Old Tom Gin, Enchu Gin Compounds, Vermouth Cocktail, and Bronx Cocktail. CONTINENTAL DISTILLING CORPORATION, Philadelphia, Pa. Published January 14, 1935.

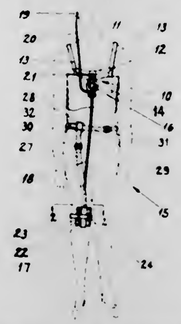
REISSUES



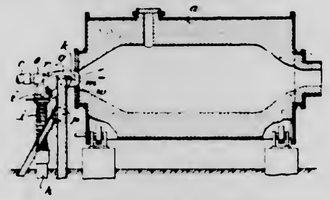
JUNE 18, 1935

19,609
HEARING DEVICE SUPPORT

Minnie Albert, Brooklyn, N. Y.

Original No. 1,910,875, dated May 23, 1933, Serial No. 651,752, January 14, 1933. Application for reissue January 14, 1935, Serial No. 1,826

6 Claims. (Cl. 179—107)



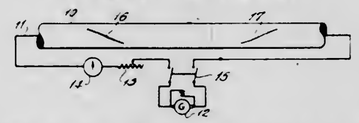
1. An appliance for supporting an electrical hearing device on a person, comprising a strap fixed at both ends to the shoulder straps and adapted for hanging a transmitter intermediate said ends and centrally of said person and apportioning the weight of said transmitter equally to both shoulders, a belt having means for attachment to the waist, a bag and battery supporting-strap having means for attachment to a thigh, said bag serving to house said battery therein and being fixed to and depending from said waist belt and in slidable relation with said thigh strap, whereby said bearing device is supported without hampering the movements of said person.

19,610
PROCESS AND DEVICE FOR THE PRODUCTION OF IRON ALLOYS FREE FROM GASES, ESPECIALLY OXYGEN

Carl Brackelsberg, deceased, late of Milspe, Germany, by Augusta Brackelsberg, administratrix, Milspe, Germany

Original No. 1,807,468, dated May 26, 1931, Serial No. 337,747, February 6, 1929. Application for reissue May 22, 1933, Serial No. 672,330. In Germany February 16, 1928

8 Claims. (Cl. 75—45)



1. The process for the production of ferrous metals substantially free from gases and oxygen, which consists in melting a charge of metal in a rotary furnace by means of the direct heat of the combustion gases from coal dust applied directly on the charge and after the surface of the metal has become covered with a thin unbroken layer of slag, continuing the heating of the liquid metal by transmission of heat thereto through the walls of the furnace while the thin interposed layer of slag protects the metal from direct contact with the furnace gases.

19,611
MAGNETIC TESTING METHOD AND MEANS

Alfred V. de Forest, Cambridge, Mass., assignor, by mesne assignments, to Magnaflux Corporation, a corporation of Pennsylvania

Original No. 1,960,898, dated May 29, 1934, Serial No. 375,984, July 5, 1929. Application for reissue March 23, 1935, Serial No. 12,714

14 Claims. (Cl. 175—183)

1. The method of detecting defects in a metallic object, which consists in subjecting the object to the action of a magnetic field, spraying upon the object finely divided paramagnetic particles individually coated with lubricating material, and noting adherence of the particles to the object.

19,612
COATING COMPOSITION

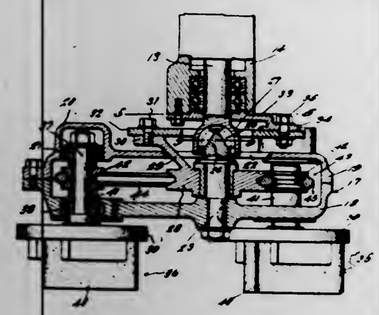
William Koch, Wilmington, Del., assignor to Hercules Powder Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original No. 1,957,786, dated May 8, 1934, Serial No. 626,226, July 29, 1932. Application for reissue April 27, 1935, Serial No. 18,691

23 Claims. (Cl. 134—17)

1. A coating composition including chlorinated rubber and an abietic acid ester of the group alkyl and aralkyl esters and a solvent.

19,613
PLANETARY TYPE SURFACING MACHINE



Harry L. Myers, Toledo, Ohio, assignor to The American Floor Surfacing Machine Company, Toledo, Ohio, a corporation of Ohio

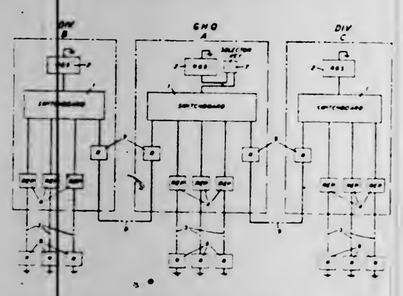
Original No. 1,919,389, dated July 25, 1933, Serial No. 614,182, May 28, 1932. Application for reissue April 1, 1935, Serial No. 14,960

13 Claims. (Cl. 51—177)

1. In a machine of the class described, a fixed guide, a power actuated drive shaft mounted for rotation in said guide, a revoluble head, a plurality of rotary surfacing units mounted on said head, a driven shaft in alinement with said drive shaft, a universal joint securing said shafts together for simultaneous rotation, said driven shaft being keyed to said head to revolve the head, a flexible annular web, means fixedly securing said web to the guide, a fixed friction drive member surrounding said driven shaft and connected

with said web, the web being interposed between said member and guide, and operating means for

said rotary units cooperable with said fixed driving member.



19,614

TELEGRAPH COMMUNICATION SYSTEM

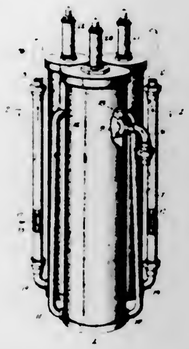
Donald B. Perry, Maplewood, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York

Original No. 1,856,224, dated May 3, 1932, Serial No. 442,890, June 21, 1930. Application for reissue March 21, 1934, Serial No. 716,728

15 Claims. (Cl. 178—2)

1. A printing telegraph system of the type used for broadcasting messages from a central station to a plurality of remote stations, said remote stations in turn rebroadcasting the messages to a plurality of branch stations local to each remote station characterized in this, that the remote stations are normally not in condition to rebroadcast messages received by them and that a special circuit arrangement is utilized at the remote stations for conditioning apparatus at said stations for automatically rebroadcasting, said circuit arrangement being responsive to code signals from said central station.

19,615



LIQUID COOLING APPARATUS

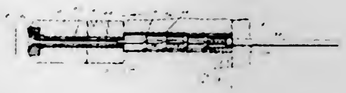
Leo Samel, Irvington, N. J.

Original No. 1,985,263, dated December 25, 1934, Serial No. 696,582, November 3, 1933. Application for reissue April 4, 1935, Serial No. 14,638

13 Claims. (Cl. 225—40)

1. A liquid cooling apparatus comprising a main container, a plurality of auxiliary containers, means providing communication between the bottom of the main container and the top portion of the respective auxiliary containers, means for directing liquid into the main container, a pipe for directing liquid from the bottom of the

auxiliary containers, a housing surrounding and spaced from said pipe, said housing acting in the double capacity of protecting means and insulating means, and a vent valve provided at the highest point in each of said containers.



19,616

METHOD OF AND APPARATUS FOR FORGING UPSET ARTICLES

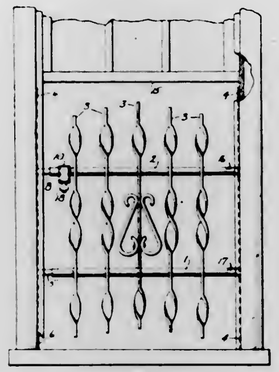
William Henry Spire, Cleveland, Ohio, assignor, by mesne assignments, to The National Machinery Company, Tiffin, Ohio, a corporation of Ohio

Original No. 1,856,440, dated May 3, 1932, Serial No. 358,032, April 25, 1929. Application for reissue February 25, 1933, Serial No. 658,633

9 Claims. (Cl. 78—17)

1. In an apparatus of the character described, the combination of a reciprocating die head, an ejector member adapted to eject work pressed into a cavity formed in the die head, said ejector member at all times disposed within and forming the end of the die cavity and receiving the thrust of the blank when subjected to working strains, means shiftable relative to the die for laterally supporting the ejector member when said member is subjected to working strains, and means for repositioning said shiftable means.

19,617



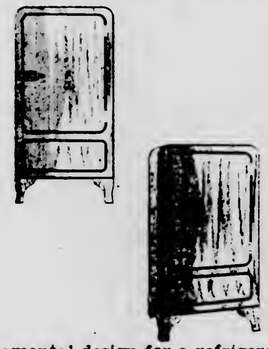
WINDOW GUARD

Huntington van Dresser, Memphis, Tenn., assignor to William van Dresser, Lincolnton, N. C.

Original No. 1,873,229, dated August 23, 1932, Serial No. 558,372, August 20, 1931. Application for reissue May 23, 1934, Serial No. 727,170

6 Claims. (Cl. 20—71)

1. A device of the class described comprising a number of tubular members, spaced bars supported by the members, a pair of plates for engaging sash guides in the window, and lugs carried by the plates for entering the ends of the



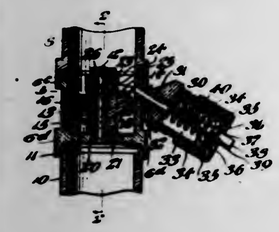
tubular members, and means for locking one of the tubular members to one of said lugs.

19,618

DESIGN FOR A REFRIGERATOR CABINET

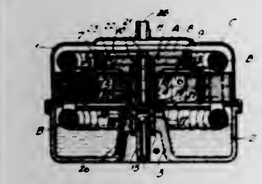
Clarence Wexelberg, Detroit, Mich., assignor, by mesne assignments, to General Household Utilities Company, Chicago, Ill., a corporation of Delaware

Original No. 93,314, dated September 11, 1934, Serial No. 46,312, December 5, 1932, for 14 years. Application for reissue February 15, 1935, Serial No. 55.455. Term of patent 14 years



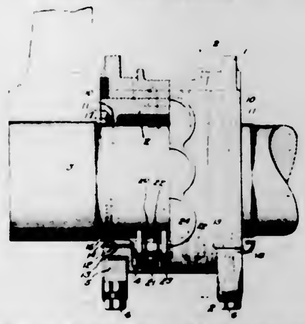
The ornamental design for a refrigerator cabinet substantially as shown.

PATENTS



GRANTED JUNE 18, 1935

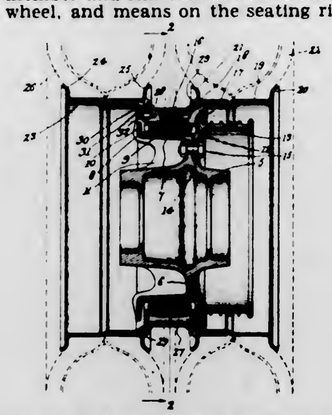
2,004,919
GASOLINE VAPOR AND AIR MIXING DEVICE
William S. Alvey and John M. Mikkelsen, Philadelphia, Pa.
Application May 20, 1933, Serial No. 671,998
1 Claim. (Cl. 48—180)



A gas mixing device comprising a tubular member; a cross bar spanning one end of said member; a fixed post coaxially arranged with respect to said member; a unitary casting shaped to form propeller and breaker blades mounted on said post; a nut engaging the end of said post remote from said cross bar; and ball bearings between one end of said casting and said cross bar and between the other end of said casting and said nut, whereby said casting is rotatively supported at both ends on a post supported at one end only.

2,004,920
ROTARY COMPRESSOR
Edward H. Belden, Detroit, Mich.
Application July 18, 1932, Serial No. 623,174
3 Claims. (Cl. 230—140)

1. The combination with a tight housing having an oil receptacle in its lower portion of an electric motor and a compressor in said housing, said housing having the middle of its bottom portion arranged to receive a vertically disposed stub spindle and a horizontal annular shoulder, a vertically disposed stub spindle fixed in said bottom portion with a helical groove on its outer surface and having its topmost portion arranged to form an eccentric spindle, said motor having an armature sleeve journaled on said spindle with its lower end supported by said shoulder, said compressor comprising a casing concentric with said armature and with its bottom directly connected with said armature sleeve, a circular impeller in said casing mounted on said eccentric spindle, and a vertically slidable spring-pressed sleeve mounted in the main spindle and bearing against the top of said casing, said housing having a passageway extending from the lower portion of the oil receptacle and communicating with the outer surface of said spindle.

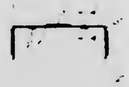


2,004,921
BOX AND BEARING FOR RAILWAY VEHICLES
Joseph Norton Blue, Big Spring, Tex.
Application August 22, 1933, Serial No. 686,277
1 Claim. (Cl. 308—80)

A journal for railway vehicles comprising a box to receive therein an axle and having semi-circular packing grooves each arranged adjacent an end of the box and located in the lower half of said box, a bearing in the upper half of the box and engaging the axle and having semi-circular packing grooves aligning with and communicating with said first packing grooves, annular packing housings mounted in said grooves about the axle and having channels in the inner peripheries thereof and provided with lubricant drain openings extending through the outer peripheries to communicate the channels with the packing grooves and the latter being in communication with the lower half of the box, sectional packing rings mounted in the channels of the housing and having spring grooves in their outer peripheries, and coiled springs encircling the rings and resting in the spring grooves to urge the rings against the axle to prevent escape of lubricant from the box in an endwise direction of the axle.

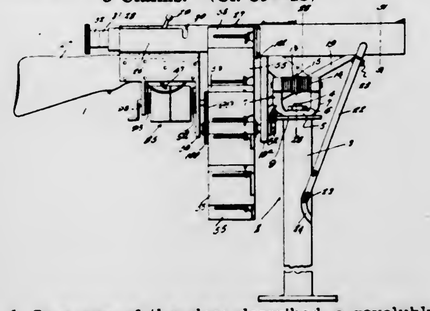
2,004,922
TWIN TIRE CONSTRUCTION FOR VEHICLES
Pierre Marcel Bourdon, Paris, France, assignor to Michelin et Cie, Clermont-Ferrand, France, a corporation of France
Application April 7, 1934, Serial No. 719,571
5 Claims. (Cl. 152—36)

1. In a twin-tire mounting construction, a hub having a hub flange, a seating ring carried by the hub flange, a resilient member supported by said seating ring, a twin-tire carrier supported for laterally shiftable movement on said resilient member, a brake drum having a flange secured to said hub flange for confining the resilient member and rim carrier at the inner side of the wheel, and means on the seating ring for



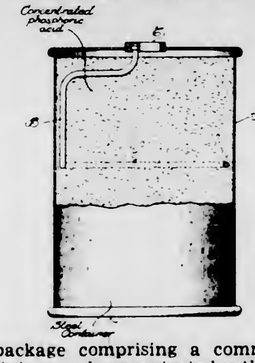
confining the tire carrier and resilient member at the outer side of the wheel.

2,004,923
MEANS FOR MOUNTING LENSES
Frederick A. Braucht, Chicago, Ill., assignor to Belgard-Spero, Inc., a corporation of Delaware
Application April 13, 1932, Serial No. 605,063
4 Claims. (Cl. 88—47)



1. In a pair of eyeglasses having a lens with a hole formed therethrough, a pair of metal discs engaging opposite sides of said lens and extending over said hole, means connecting said discs, and a mounting member having arms straddling said lens and equipped with pockets aligned with said metal discs, and solder within said pockets connecting said arms and said discs.

2,004,924
PERMANENT MARKER FOR COTTON BALES
Milton L. Brown and Samuel Brown, Mobile, Ala.
Application February 7, 1935, Serial No. 5,478
1 Claim. (Cl. 40—20)

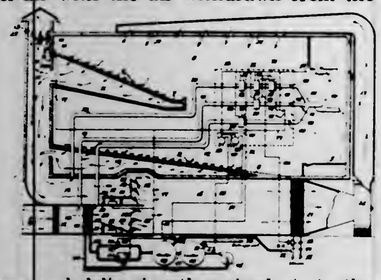


In combination with a bale of fibrous material, an identification member therefor comprising a metal band extending through the bale with its ends projecting therefrom, said band having identifying indicia thereon arranged at the center and the ends of the band, said indicia being embossed in the band and an intermediate part of the band having holes therein, the metal from which forms projections, said projections extending from that face of the band which is opposite the face having the projections formed by the embossing thereon.

2,004,925
MACHINE GUN
Leopoldo A. Carrillo, Big Wells, Tex.
Application January 16, 1934, Serial No. 706,883
5 Claims. (Cl. 89—13)

1. In a gun of the class described, a revolubly mounted magazine disk provided on its periphery with a series of arcuate recesses, a groove inwardly from each of the recesses and a slot connecting each groove with its recess, and cartridge holders arranged within said recesses, each cartridge holder being provided with a projection extending into said slot, and an enlarged head on said projection extending into the groove for holding the cartridge holder in position on the magazine disk.

2,004,926
ACID-CONTAINING PACKAGE
Howard Adler and Willard H. Woodstock, Chicago Heights, Ill., assignors to Victor Chemical Works, Chicago Heights, Ill., a corporation of Illinois
Application October 12, 1933, Serial No. 693,346
7 Claims. (Cl. 23—239)

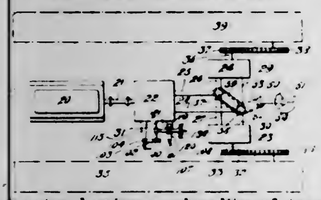


1. A package comprising a common iron or steel container and concentrated orthophosphoric acid having an H_3PO_4 content of 89 to 100%, within said container.

2,004,927
METHOD AND APPARATUS FOR VENTILATING BUILDINGS
Claude A. Bulkeley, Kenmore, N. Y., assignor to Niagara Blower Company, Buffalo, N. Y., a corporation of New York
Application September 18, 1930, Serial No. 482,822
15 Claims. (Cl. 98—33)

14. The method of ventilating an enclosure which includes withdrawing air from said enclosure, cooling fresh air before mixture with the

air in the enclosure to obtain a constant differential between its temperature and the temperature of the air in the enclosure, mixing said cooled fresh air with the air withdrawn from the en-



closure and delivering the mixed air to the enclosure and varying the proportions of fresh air in the mixture under all conditions of operation in accordance with changes in the dry-bulb temperature in the enclosure.

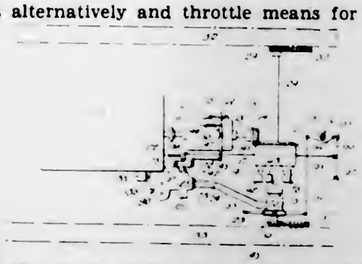
2,004,928

CONTROL MECHANISM FOR HYDRAULIC POWER SYSTEMS

Hugo A. Centervall, New York, N. Y., assignor to Manly Corporation, New York, N. Y., a corporation of Delaware

Application July 25, 1931, Serial No. 553,146
7 Claims. (Cl. 180—9.2)

1. A tractor having a plurality of tracks and hydraulic means for varying the relative speed of said tracks when said tractor is in motion comprising a motor for each of said tracks, separate means for transmitting power from each of said motors to its respective track, a pump, and passages for delivery and return of fluid between said pump and each of said motors, a plurality of valves in each of said passages controlling the flow of fluid between said pump and each of said respective motors, and means for actuating simultaneously the valves in each passage which are associated with the same motor.



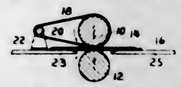
2,004,929

CONTROL MEANS FOR VARYING THE RELATIVE SPEEDS OF MEMBERS DRIVEN THROUGH A COMMON DIFFERENTIAL MECHANISM

Hugo A. Centervall, New York, N. Y., assignor to Manly Corporation, New York, N. Y., a corporation of Delaware

Application November 25, 1931, Serial No. 577,264
Renewed February 23, 1934
20 Claims. (Cl. 180—9.2)

5. A device for varying the relative speeds of members driven through a common differential mechanism, comprising a hydraulic pump, a hydraulic motor operatively connected to one of said driven members and to the compensating element of said differential mechanism, a valve member having alternative fluid circuits, means for circulating fluid through either of said circuits alternatively and throttle means for cut-



ting off said circulation and preventing the escape of fluid from said valve member.

2,004,930

METHOD OF REMOVING LIQUIDS FROM HIDES, SKINS, AND LEATHER

John H. Connor, Newton, Mass., assignor to The Tanning Process Company, Boston, Mass., a corporation of Massachusetts

Application June 28, 1932, Serial No. 619,678
11 Claims. (Cl. 149—5)

1. That improvement in methods of removing liquids from hides, skins, and leather which comprises the step of passing a hide or skin or other piece of leather between presser rolls at a relatively high pressure and at a relatively low rate of speed timed to permit the liquid content of the hide or skin to escape in the desired amount.

2,004,931

FLUORINATION OF CARBON COMPOUNDS

Herbert Wilkens Daudt and Edwin Lorenzo Mattison, Wilmington, Del., assignors, by mesne assignments, to Kinetic Chemicals, Incorporated, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 20, 1931, Serial No. 524,214
33 Claims. (Cl. 260—162)

1. The process of preparing fluorinated acyclic compounds which comprises reacting a compound containing an acyclic carbon atom having joined thereto a halogen having an atomic weight greater than 19 and a heavy metal fluoride other than antimony trifluoride in the presence of a fluorination catalyst.

2,004,932

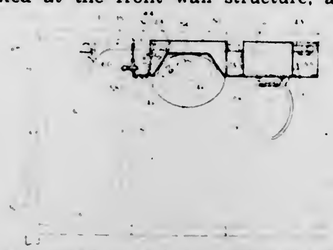
PRODUCTION OF FLUORINE COMPOUNDS

Herbert Wilkens Daudt, Mortimer Alexander Youker, and Harold La Belle Jones, Wilmington, Del., assignors, by mesne assignments, to Kinetic Chemicals, Incorporated, Wilmington, Del., a corporation of Delaware

No Drawing. Application March 24, 1931, Serial No. 525,026
28 Claims. (Cl. 260—162)

1. The process of preparing mixed halogen derivatives of methane containing fluorine which comprises reacting carbon bisulphide with an inorganic fluoride and antimony penta-chloride.

2,004,933



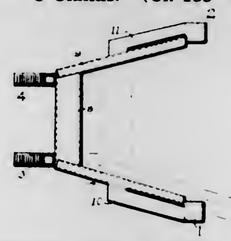
BATHROOM UNIT

Robert L. Davison, New York, N. Y., assignor to John B. Pierce Foundation, New York, N. Y., a corporation of New York

Application November 21, 1932, Serial No. 643,589
3 Claims. (Cl. 4—3)

1. As an improved article of manufacture, a wall structure comprising oppositely disposed uni-

planar plate members serving respectively as the front and rear wall structure and affording therebetween an open space, a wash basin fixture located at the front wall structure, a unitary



frame secured to and supporting the front and rear wall structure and the wash basin fixture, and supply piping and waste piping for the stated fixture disposed within the spacing between the front and rear wall structure.

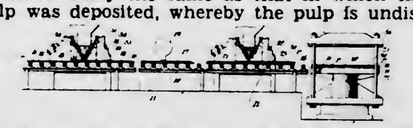
2,004,934

CHAIR

Louis Dellert, Brooklyn, N. Y.

Application November 13, 1933, Serial No. 697,731
3 Claims. (Cl. 155—2)

2. A nestable chair including a substantially U shaped seat frame open at the front, a pair of rear legs attached to said seat frame, a pair of front legs spaced further apart than said rear legs and attached to said U shaped frame, and a seat resting on said seat frame and mounted movably to permit the packing of two or more chairs in a nested relationship, said U shaped frame consisting of two downwardly extending tubular side members that converge towards the rear and are securely attached to a connecting transverse member, said transverse member having a width approximately equal to the combined width of both of said downwardly extending tubular side members, the wider transverse member rigidly holding and preventing weave or wobble in said tubular side members and said front legs, and the said transverse member occupying a minor portion at the rear end of the space between said side members, leaving the central and forward area open and unobstructed, providing ample space for the nesting therein of the rear portions of two or more chairs of identical size and shape, without raising the legs of said chairs from the floor during the nesting operation.



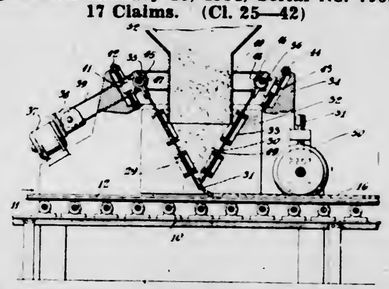
2,004,935

CEMENTITIOUS SHEET

René Dorn and Martin Willis, New Orleans, La.

Application April 28, 1932, Serial No. 607,970
17 Claims. (Cl. 154—55)

1. A corrugated structural sheet made from a pulp containing cementitious material in which the form of the cross section of the finished sheet is substantially the same as that in which the pulp was deposited, whereby the pulp is undis-



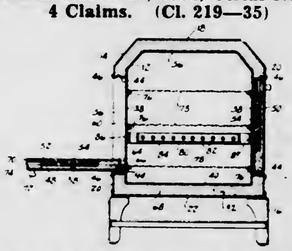
turbed and the sheet is relatively free from internal stresses.

2,004,936

APPARATUS FOR THE MANUFACTURE OF CEMENTITIOUS SHEETS

René Dorn and Martin Willis, New Orleans, La.

Application January 16, 1934, Serial No. 706,814
17 Claims. (Cl. 25—42)



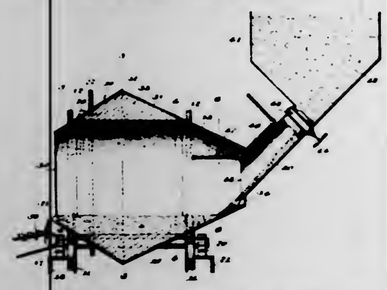
1. A hopper comprising opposite side walls, each adapted to reciprocate, one end of each of said walls being arranged with respect to the adjacent end of the other of said walls so as to define an opening therebetween through which to issue material from said hopper.

2,004,937

PORTABLE ELECTRIC COOKER

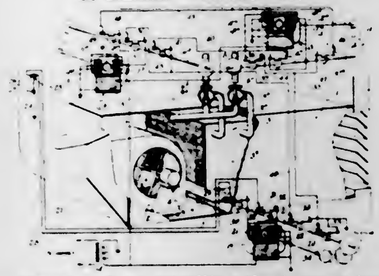
John Fletcher, New York, N. Y., assignor to Electric Trading Corporation, New York, N. Y., a corporation of New York

Application March 16, 1934, Serial No. 715,802
4 Claims. (Cl. 219—35)



1. Apparatus for the electrical heat treatment of food and the like, comprising a casing with an access door and providing an oven chamber which is close when the door is shut, electrical heating means within the oven chamber whereby heat is directly applied to food placed inside the chamber, fixed insulation about the casing with a recessed portion therein exposing a relatively heat conductive part of the oven wall which is away from the access door, and an outside heater usable separately or in conjunction with the oven heater, and comprising electric heating means on an insulation base, and adapted in one position to occupy said recessed portion with the heating means toward the casing wall and the insulation base facing outwardly whereby to complete the casing insulation, and projecting in another position substantially horizontally from the casing beneath the exposed wall portion and with the heating means uppermost.

2,004,938
TYPEWRITER ATTACHMENT
David Friesel, United States Army, Washington, D. C.
Application July 3, 1933, Serial No. 678,898
1 Claim. (Cl. 197—127)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

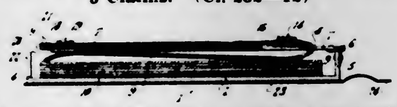


The combination with a typewriting machine having a carriage, a platen and a paper guide provided with an upturned portion, of a guard consisting of a supporting member removably mounted on said upturned portion adapted to occupy a position with relation to the left hand edge of the paper, regardless of its width, said member extending in an upright direction, a guard arm hingedly mounted at the upper end of said supporting member and adapted to extend over said platen to cause the paper to extend rearwardly upon leaving the platen, or be swung free of the machine to release said paper, and means carried by said supporting member to prevent the arm falling below a horizontal line while over the machine.

2,004,939
GOLD RECOVERING DEVICE AND METHOD
James B. Girand, Phoenix, Ariz.
Application February 9, 1932, Serial No. 591,875
6 Claims. (Cl. 233—27)

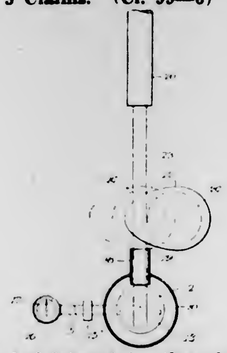
1. A device for recovering metallic particles from materials which include gangue comprising a drum rotating on a horizontal axis having an intermediate portion of greater diameter than the remaining portions and forming an annular pocket, cushioning material consisting of gangue and free metal and being retained in the annular pocket, the cushioning material being subjected to rapid alternations of forces due to the change in direction of the centrifugal force on the individual particles thus keeping the cushion soft and preventing packing, said cushioning material being in a plane which is at an angle to the horizontal, means for feeding metal bearing material to the drum, means for revolving the drum at a critical speed so that the cushioning material will be retained in the pocket and receive and retain the metallic particles in the cushion, and means for supplying a liquid to the materials being fed to the drum.

2,004,940
CONTROL FOR AIR CONDITIONING SYSTEMS
Theodore K. Greenlee, Rockford, Ill., assignor to Howard D. Colman
Application October 23, 1931, Serial No. 570,613
Renewed August 16, 1934
22 Claims. (Cl. 236—38)



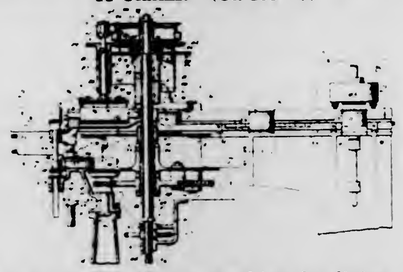
1. A system for controlling the temperature of an air current passing through a circulating duct comprising, in combination, a heater in said duct, a by-pass around said heater, a damper controlling said by-pass to determine the proportion of the air current subjected to said heater, a power operator for said damper having electric motor driving means with two windings selectively energizable to determine the direction and extent of movement of said damper between open and closed positions, a thermostat responsive to the temperature of the heated air and having switches controlling circuits through said windings, a valve controlling the amount of heat delivered to said heater, a power operator for said valve having electric motor driving means with two windings selectively energizable to determine the direction and extent of movement of said valve, and two switches actuated by said damper operator and controlling circuits for said last mentioned windings, one switch being closed when said damper reaches closed position and the other switch being closed when the damper reaches open position.

2,004,941
EXPLOSIVE
George C. Hale, Dover, N. J.
No Drawing. Application March 15, 1934, Serial No. 715,663
4 Claims. (Cl. 52—13)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)



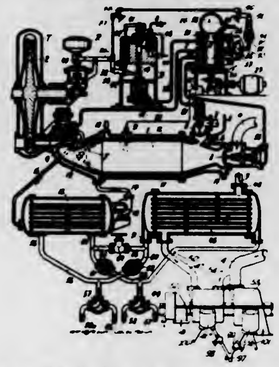
3. A liquid, explosive solvent or colloiding agent for nitrocellulose consisting of nitroglycerine in admixture with one or more of the nitro derivatives of ethylbenzene.

2,004,942
COUNTER SALES BOOK
Edward Hano, George U. Lacroix, and George Hogan, Holyoke, Mass.
Application July 10, 1934, Serial No. 734,518
5 Claims. (Cl. 282—12)



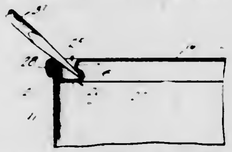
1. In combination, in a counter sales book, a shallow box-like member for receiving a pack of folded manifold forms, a writing and cover plate hinged at its upper edge to the box-like member and formed with a slot adjacent and parallel to its upper edge, through which the manifold forms may be drawn, means for removably attaching transfer sheets to the cover, and means for retaining the forms in place on the writing and cover plate.

2,004,943
METHOD OF TESTING COLOR OF EGG YOLKS
Raymond R. Haugh, Chicago, Ill., assignor, by mesne assignments, to Kraft Egg Machine Company, Chicago, Ill., a corporation of Delaware
Application December 30, 1932, Serial No. 649,498
5 Claims. (Cl. 99—6)



1. A method of determining the color or opacity of an egg yolk in the shell, comprising passing a light beam through an egg so as to avoid the yolk and also passing a light beam through said egg including the yolk, obtaining by electrical indicating means an index of the light transmitted on the two occasions, and computing the difference in energy involved in the two operations, said difference in energy being an index of the color of the egg yolk.

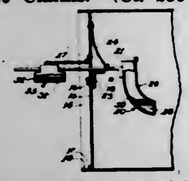
2,004,944
FLANGE LINING MACHINE
William M. Holloway, Oak Park, Ill., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Application November 28, 1933, Serial No. 700,132
11 Claims. (Cl. 113—7)



1. In combination, a machine for lining can flanges with a lining material, comprising a support for a can to be lined, a lining pad movable into aligned position over said can while on said support, rotary means for applying lining material to said pad, means for causing said pad to engage the said can flange and to deposit lining material thereon, and means for rotating said pad during said application to give a wiping action and to evenly distribute the applied material on the said can flange.

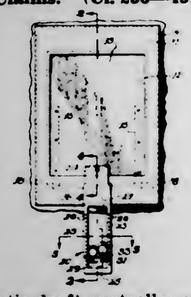
2,004,945
METHOD AND APPARATUS FOR IGNITING EXPLOSIVE CHARGES
Hans Holzwarth, Dusseldorf, Germany, assignor to Holzwarth Gas Turbine Co., San Francisco, Calif., a corporation of Delaware
Application April 25, 1933, Serial No. 667,820
In Germany April 27, 1932
21 Claims. (Cl. 60—41)

1. The method of operating elongated constant volume explosion chambers suitable for use in explosion turbines and having air and fuel inlet members arranged at one end thereof, and an outlet member at the opposite end thereof, said method comprising confining a gaseous medium between the outlet member of the chamber and a new charge of air and fuel entering and occupying the chamber, closing the chamber when the charge of air and fuel has been admitted into the chamber, and causing said medium to assume such a temperature that at the surface of contact between such medium and the said charge the ignition temperature of the combustible mixture formed in the chamber prevails and directly initiates the combustion of such mixture.



2,004,946
CONTAINER
John M. Hothersall, Brooklyn, N. Y., assignor to American Can Company, New York, N. Y., a corporation of New Jersey
Original application August 22, 1931, Serial No. 558,745. Divided and this application September 8, 1933, Serial No. 688,680
4 Claims. (Cl. 220—48)

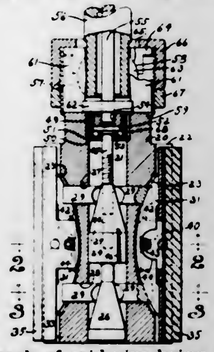
1. A container cover for an easy open container, comprising a drawn central portion having an annular upwardly and outwardly projecting shoulder and an encircling score line formed in the cover adjacent the base of said shoulder, and an annular rim spaced from said shoulder and adapted to be secured to a container body



and to support a prying tool which engages under said shoulder above said score line to remove said central portion by tearing along said score line in the opening of said container.

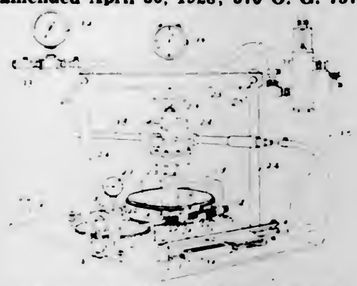
2,004,947
AUTOMATIC DRAFT CONTROLLER
George J. Irsch, Harvey, and William B. Stephenson, Chicago, Ill.
Application April 11, 1932, Serial No. 604,390
20 Claims. (Cl. 236—45)

3. A draft controller comprising, in combination, an air inlet, a plate pivotally mounted on a transverse horizontal axis in said inlet, and a counterweight mounted on said plate, said counterweight acting in a direction to close said plate and comprising a container, a body of mercury in said container and shiftable therein upon pivotal movement of said plate, and a mass of metal balls floating on said mercury.



2,004,948
AUTOMATIC DRAFT CONTROLLER
George J. Irsch, Harvey, and William B. Stephenson, Chicago, Ill.
Application April 25, 1932, Serial No. 607,464
17 Claims. (Cl. 236—45)

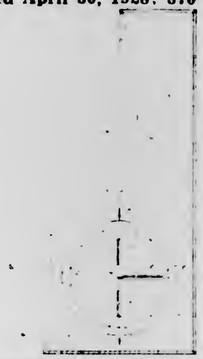
1. An automatic draft controller comprising, in combination, a hood having a vertical wall formed with an air inlet opening, a damper plate for closing said opening, antifriction roller-bearings supporting said plate at its lower end for pivotal movement about a horizontal axis into and out of closed position, a depending arm pivotally mounted at its upper end on said plate, said arm extending substantially below said plate, means for adjusting the angular position of said arm relative to said plate, and a weight on the free end of said arm.



2,004,949
GRINDING APPARATUS
Benjamin O. Isom, Detroit, Mich., assignor to Hutto Engineering Company, Inc., Detroit, Mich., a corporation of Michigan
Application July 23, 1928, Serial No. 294,668
14 Claims. (Cl. 51—184.3)

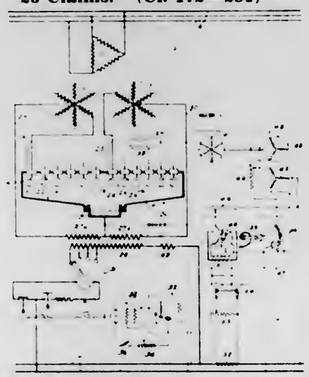
1. In a device of the type described, in combination, a body provided with an axially extending bore, a pair of spaced cone members slidably received in said bore, means for controlling the position of said cones in said bore, said body being provided with two series of radially extending openings, a pin slidably received in each of said openings, the outer surface of said body being provided with grooves each of which extends between an opening of each of

said series, each of said pins being provided with a groove in line with the first mentioned grooves, a plate member positioned in each of the first mentioned grooves provided with a curved edge bearing against the bottoms of the grooves in the corresponding of said pins, and an abrasive element bearing against the outer edge of each of said plate members.



2,004,950
TORQUE-MEASURING DEVICE
Bernard F. Jenkins, United States Navy
Application March 12, 1932, Serial No. 598,360
2 Claims. (Cl. 265—24)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

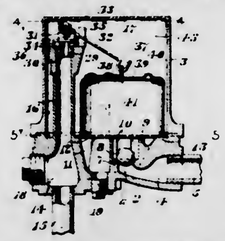
1. In a torque-measuring device, a base, a brake drum rotatably mounted thereon, a brake beam mounted between said drum and said base, guides in which said beam is oscillatably slidable, a brake band disposed around said brake drum, a brake anchor fixed to said beam and connected to said brake band, a brake shaft anchor on said beam, a brake shaft having a portion seated in said brake shaft anchor and having oppositely threaded portions on the opposite sides of said portion, suitably internally threaded lugs attached to said brake band adjacent the ends thereof and respectively engaged with the said threaded portions, a bracket carried by said base, a member attached to said drum and journalled in said bracket, said member having a polygonal recess in its upper face, standards fixed to said base, a beam slidable on said standards and passing over



the center of said member to hold in place a device to be tested with a rotating portion thereof connected to said member, and a spring balance having one end fixed and the other connected to an end of said beam.

2,004,951
NAVIGATIONAL INSTRUMENT
Henry M. Jensen, United States Navy
Application May 26, 1933, Serial No. 673,035
7 Claims. (Cl. 33—76)
(Granted under the act of March 3, 1883, as amended April 30, 1928; 370 O. G. 757)

4. A navigational instrument, comprising head and stem portions and a member movable with respect to both the said portions rotatably mounted in said head portion with its center aligned with an edge of said stem, there being in said member a radially extending slot settable to represent the wind vector in a triangle whereof the other sides are respectively the track and ground speed, and the heading and air speed, of an air craft one of which latter vector quantities may be simultaneously defined by an edge of said stem.

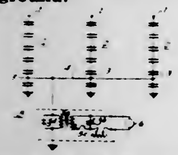


2,004,952
ELECTRON DISCHARGE DEVICE CONTROL SYSTEM
Didier Journeaux, Wauwatosa, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a corporation of Delaware
Application August 25, 1933, Serial No. 686,700
23 Claims. (Cl. 172—281)

17. In a bi-directional electric current converting system, an alternating current line, electron discharge means having a plurality of anodes, means for connecting said discharge means with said line, a second alternating current line, means for connecting said discharge means with the second said line, discharge controlling means operable to release and to interrupt the flow of current through said anodes, means controlling operation of said discharge controlling means to cause the flow of energy in either direction between said lines, and means for controlling the operation of the third said means to control the direction of the flow of reactive energy between said lines.

23. In a bi-directional electric current converting system, an electric current line, an electron discharge device of the vapor type having a plurality of anodes with associated control electrodes operable to interrupt the flow of current through said device, a transformer connecting said line and said discharge device, a second electric line, a tapped transformer connecting said discharge device with the second said line, a tap changing mechanism for changing the connections of the last said transformer with the second line in response to the potential condition of the second said line, means operable only in one direction to energize the control electrodes to release energy flow in either direction between said lines, and means automatically responsive to the magnitude of the energy flow in the second said line to control the second said means.

2,004,953
STEAM TRAP
James W. Kaye, West Orange, N. J., assignor to Kaye & MacDonald, Inc., West Orange, N. J., a corporation of New Jersey
Application February 27, 1933, Serial No. 658,863
4 Claims. (Cl. 137—103)

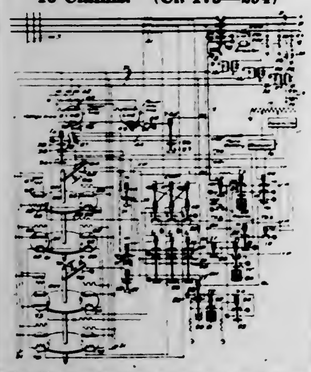


1. A steam trap of the class described comprising a base having an inlet port, a check valve for automatically preventing the return flow through said inlet port when pressure is released therefrom, said base also having a sediment chamber formed adjacent said inlet port, a strainer screen extending over said sediment chamber and over the end of said inlet port, an outlet tube formed upon said base and projecting above the top of the base, a casing for housing said tube, a bucket valve mounted within said casing, said tube having a valve seat at its upper end, a lever connected to said bucket and provided with a valve for closing said last mentioned valve seat as said bucket is raised, and drain out means for said outlet tube.

2,004,954
POTENTIAL DEVICE
Paul O. Langguth, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application November 11, 1933, Serial No. 697,676
14 Claims. (Cl. 171—97)

1. In combination with a grounded-neutral polyphase alternating current circuit, apparatus

responsive to a zero sequence component of voltage of said circuit comprising a plurality of capacitance means each coupling a phase conductor of said circuit to ground, said capacitance means having conducting elements which divide their respective capacitive reactances in the same predetermined ratio, a conductor connecting said conducting elements directly together, and an electroresponsive device connected between said conductor and ground.



12. A zero-sequence capacitor-potentiometer coupling device for a polyphase transmission line, comprising an individual capacitor-potentiometer connected between each phase-conductor of the transmission line and ground, a common intermediate-tap conductor for all of said capacitor-potentiometers, and a tuned-circuit adjustable voltage-network assembly connected between said common tap conductor and ground for providing a low-voltage source substantially responsive, in predetermined manner, and in phase and magnitude, to the zero-sequence component of the transmission-line voltage.

2,004,955

CONTINUOUS CARRIER RELAYING

Lester B. Le Vesconte, Irwin, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania

Application December 22, 1933, Serial No. 703,611
16 Claims. (Cl. 175—294)

1. Protective relaying equipment for effecting a control of line-sectionalizing circuit-interrupter means for a transmission line-section, comprising, at each end of the line-section being protected, relaying means including means for obtaining both a directional response to a fault-current power-flow into the protected line-section and also a response to a voltage-change which indicates the presence of a fault on the transmission-line under conditions when there is no corresponding current-flow of fault-magnitude, said relaying means also including fault-indicating means for securing an indication of the actual presence of a fault on the transmission-line, a communicating-channel between the two ends of the line-section being protected, a transmitter means disposed at each end of the line-section for normally continuously transmitting a signalling current through said communicating channel to the other end of the line-section, transmitter-controlling means, responsive both to said directional response of the relaying means and the response to the voltage-indication of fault without corresponding fault-current, for causing said transmitter to cease transmitting effective signalling current, a receiver disposed at each end of the line-section and associated with said communication channel, receiver-means at each end, responsive to a failure of the receiver to receive a sufficient signalling current, and responsive also to the direction of power-current-flow into the line-section being protected, for quickly energizing a control circuit for the circuit-interrupter means at that end, and means responsive jointly to a failure of the receiver to receive a sufficient signalling current and a failure of an indication of the actual presence of a fault on the transmission-line, for thereafter interposing a slight time-hesitation in the tripping functions of the protected line-section.

2,004,956

PLASTIC COMPOSITION

John J. Martin, Brooklyn, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

No Drawing. Application January 29, 1932, Serial No. 589,771
6 Claims. (Cl. 106—22)

1. The method of forming a plastic composition from cotton in the form of threads which consists in partially esterifying the cotton threads without altering the physical structure of their individual fibers, commingling the esterified threads with a thermoplastic binder, reducing said threads to small lengths, placing said lengths of thread in a mold and subjecting to heat and pressure.

2,004,957

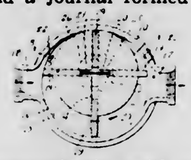
CAPSULE

Arthur J. Messner, Rochester, N. Y., assignor of one-half to Elmer L. Schumacher, Southbridge, Mass.

Application April 25, 1934, Serial No. 722,301
2 Claims. (Cl. 167—82)

1. A hollow and sealed chewable paraffin capsule containing a liquid mouth medicament in the hollow portion thereof.

2,004,958



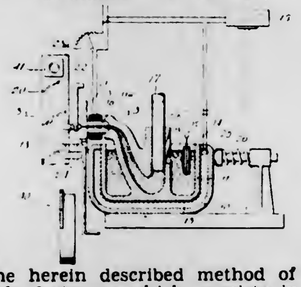
ROTARY PUMP

Bryce Mitchell, Seattle, Wash.

Application August 22, 1931, Serial No. 558,672
Renewed September 17, 1934
3 Claims. (Cl. 103—138)

2. A rotary pump having a cylindrical stator and a cylindrical rotor eccentrically disposed therein, said rotor having normally intersecting slots passing entirely through same and intersecting at the axis of the rotor, each slot having a pair of slidable blades mounted therein,

the blades of each pair having springs extending across the space between same for urging same apart, said springs engaging opposite blades at adjacent ends thereof and having a substantially uniform compression throughout the cycle, and a journal formed in the end of



said rotor communicating with the intersecting blade slots and with the pressure side of the pump whereby a constant pressure is maintained within the axis of the rotor at all times for the purpose of urging all of the blades outwardly and with uniform force throughout the complete revolution of the rotor.

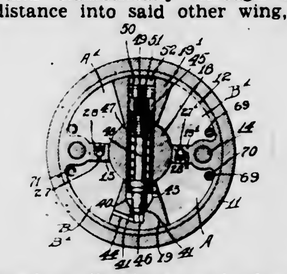
2,004,959

METHOD OF MANUFACTURING FASTENER STRINGERS

Louis H. Morin and Davis Marinsky, New York, N. Y., assignors to Whitehall Patents Corporation, New York, N. Y., a corporation of New York

Application December 7, 1933, Serial No. 701,290
18 Claims. (Cl. 22—202)

1. The herein described method of forming separable fasteners which consists in arranging a core member and mounting strip between adjacent surfaces of opposed die parts with portions of said member and strip within the mold chamber thereof and in spaced relation to each other, supporting a discharge nozzle in engagement with the die parts, discharging molding material through said nozzle and a passage arranged between the die parts into the mold chamber under the action of a pressure element to form a coupling element on that part of the strip and core within the chamber of said die parts with a gate on said coupling element formed by said passage, and feeding the formed coupling element and strip by said core member to position said strip for the next successive element to be formed thereon and then removing the core from said element.



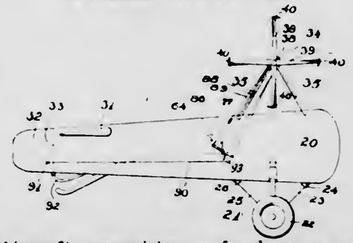
2,004,960

SHOCK ABSORBER

Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York

Application August 12, 1931, Serial No. 556,483
Renewed June 7, 1934
5 Claims. (Cl. 188—89)

1. In a shock absorber, the combination of a cylinder frame having partition extensions extending radially from opposite sides thereof, a piston structure comprising a hub centered between the inner ends of said partitions and having piston wings extending therefrom in diametrically opposite directions and bearing at their ends against the cylinder wall, said piston structure having a bore extending radially through one of said wings from the outer end thereof and diametrically through said hub and a distance into said other wing, a valve

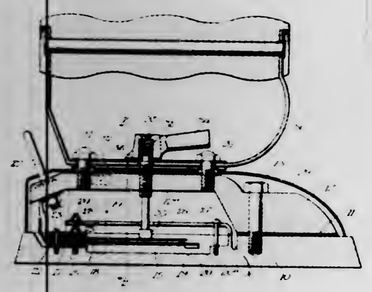


seat formed at the inner end of said bore, there being ports connecting said cylinder space at opposite sides of said piston wing with said bore at opposite sides of said seat, a valve in said bore for cooperating with said seat, and a thermostat element in said bore secured to said valve and adjustably anchored at its outer end in said bore, said cylinder wall closing the outer end of said bore against access to said valve from the exterior of the shock absorber.

2,004,961

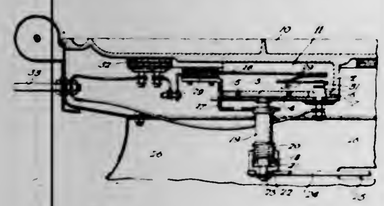
AIRCRAFT

Haviland H. Platt, New York, N. Y., assignor to Frederick W. Wilkening, Philadelphia, Pa.



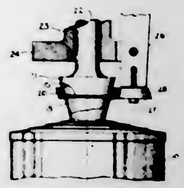
Application April 17, 1931, Serial No. 533,232
Renewed September 13, 1932
10 Claims. (Cl. 244—11)

1. Aircraft comprising a fuselage, a pair of rotors, each of said rotors comprising a plurality of pivotally mounted aerofoil blades, extending generally transversely of the normal direction of travel of the aircraft and adapted to revolve in an orbit about the axis of the rotors, means for automatically oscillating each of said aerofoil blades, in succession, about its respective pivot during each revolution of the rotors, said angular oscillations or deflections of the aerofoil blades about their respective pivots being confined between angles substantially less than 360 degrees, means for varying the amplitude of said angular blade oscillations, means for varying the event of said oscillations in the orbit of said aerofoil blades, and a universally deflectable control stick in the fuselage, operatively connected to said amplitude and event varying means, which stick, when deflected in the longitudinal median plane of the craft, acts equally upon the two rotors to vary the event of the blade oscillations thereof,



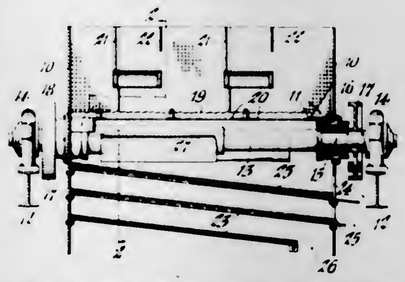
and which stick when deflected transversely of the aircraft, acts differentially upon the rotors, differentially to vary the event of the oscillations thereof.

2,004,962
ELECTRIC IRON
Frank W. Scharf, Chicago, Ill., assignor, by mesne assignments, to McGraw Electric Company, Chicago, Ill., a corporation of Delaware
Application November 27, 1931, Serial No. 577,499
10 Claims. (Cl. 219—25)



9. In an electric iron or the like, a sole plate, a heating element for heating the sole plate, said sole plate having a slot and a groove adjacent the slot forming a fin for intercepting heat rays and for transferring this heat to the lower portion of the sole plate, and a thermostat for controlling the heating element located in the slot.

2,004,963
THERMOSTATIC SWITCH AND MOUNTING FOR SAME
Frank W. Scharf, Chicago, Ill., assignor to McGraw Electric Company, Chicago, Ill., a corporation of Delaware
Application June 13, 1932, Serial No. 616,947
9 Claims. (Cl. 200—139)

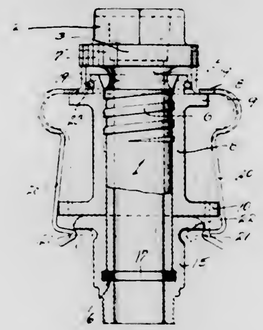


1. In a thermostatic switch, a fixed contact, a support therefor, a first bimetal strip carried at one end by said support, the opposite end carrying a second bimetal strip arranged to move when the two are heated in the opposite direction from that of the first bimetal strip, an electric contact carried on the second bimetal strip and adapted to engage the fixed contact, the second bimetal strip overlying the outer end portion of the first bimetal strip and spaced therefrom, and an offset connecting member extending between the two bi-metal strips, said member being secured to the outer end of the first bimetal strip and to the inner end of the second bimetal strip.

2,004,964
METHOD OF MAKING CONTAINER SEALS
Ralph S. Westgate, Bloomfield, N. J., and Harry C. A. Behr, York, Pa., assignors to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
Application January 11, 1928, Serial No. 246,008
Renewed September 29, 1933
5 Claims. (Cl. 113—121)

1. The method of mechanically sealing a sheet-metal container to adapt it to hold ether secure against escape, and of simultaneously providing the container with a readily pierceable closure, which comprises successively superposing upon the neck of the container a soft-metal cap and a hard-metal ring, each having a depending flange, and, by means of revolving and rotating rollers pressing against substantially the entire width of the ring flange, gradually spinning the flanges concomitantly towards the neck until they are closely juxtaposed thereto, thereby tightly confining the entire circumference and substantially the entire width of the cap flange between the ring flange and the neck and thus providing a vapor-impervious packing, the neck of the container retaining substantially its initial form and size.

2,004,965
MACHINE FOR TREATING GRAVEL, SAND AND LIKE MATERIALS
William L. Wettlaufer, Buffalo, N. Y., assignor to The W. S. Tyler Company, Cleveland, Ohio, a corporation of Ohio
Application August 19, 1933, Serial No. 685,862
7 Claims. (Cl. 209—12)



1. A machine for washing and scrubbing gravel and the like, comprising a gyrating body including a substantially trough-shaped scrubbing deck for the material to be treated disposed at one side of its gyrating axis, said deck extending generally in the direction of the body-axis and having openings in its bottom for the discharge of wash-water and foreign matter and a discharge at one end for the washed and scrubbed material, and grading decks for such material mounted on said gyrating body and disposed at the opposite side of its gyrating axis below the scrubbing deck.

2,004,966
CONDUIT CAP
Ralph G. Whitlock, Los Angeles, and Lewis Sharp, Huntington Park, Calif., assignors to Federal Foundation, Inc., Las Vegas, Nev., a corporation of Nevada
Application March 7, 1934, Serial No. 714,538
15 Claims. (Cl. 221—100)

1. In a conduit cap the combination of: a fill pipe; a head on said pipe; a pipe closure member movably mounted on said head and having a position closing said pipe and a position freeing said pipe to permit access thereto; and means operated by movement of said closure and provided on said head for discharging a token for each cycle of actuation of said member to permit access to said fill pipe.

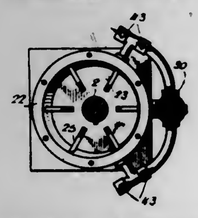
2,004,967
HOSE COUPLING
Philip H. Williams, Spokane, Wash., assignor to Ideal Hose Coupling Company, Coeur d'Alene, Idaho
Application July 24, 1934, Serial No. 736,701
5 Claims. (Cl. 285—174)

1. In a hose coupling, a tubular body having attaching means at its upper end and adjacent the said end being externally threaded, an outstanding collar being provided between the attaching means and the threaded portion and formed with seats in its peripherial edge face, a sleeve fitting about said body and internally threaded to engage threads of the body and mount the sleeve for adjustment longitudinally of the body, said sleeve having flanges at its upper and lower ends and above the upper flange being formed with a circumferentially extending groove, the lower flange constituting a cam, a handle to revolve the sleeve upon the body, said body having its lower portion projecting from the lower end of said sleeve, a nipple fitting about the projecting lower end portion of said body and abutting the lower end of said sleeve, said nipple having an internal seat formed therein, a gasket resting upon said seat with the lower end of said body in compressing engagement therewith, a disk resting upon the upper flange, tongues extending upwardly from said disk and engaged in the sides of said collar, a ring fitting about said body and resting upon said disk to hold the disk upon the upper flange, and resilient arms extending downwardly from said disk across the marginal edge of the cam forming lower flange with their lower ends bent to form hooks for engaging under an outstanding flange of said nipple to hold the nipple in place about the lower portion of said body.

2,004,968
GOLF CLUB
Leonard A. Young, Detroit, Mich.
Application June 17, 1933, Serial No. 676,291
11 Claims. (Cl. 273—77)

2. A golf club head comprising a wood body having a plurality of spaced parallel longitudinal kerfs in the top thereof and a plurality of spaced parallel longitudinal kerfs in the bottom thereof, the top and bottom kerfs being disposed in alternating relation and overlapping within the body, flat plates fitting and fixedly secured within said kerfs, the outer edges of said plates being conformed to and flush with the surface of the head, and a sole plate disposed transversely below the bottom plates.

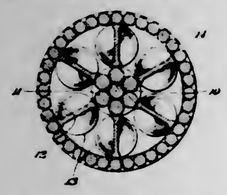
2,004,969
WEATHER STRIPPING
David Abernethy, Philadelphia, Pa.
Application January 6, 1934, Serial No. 705,483
3 Claims. (Cl. 20—69)



1. The combination with a window frame, having a slot with a bead in the slot, and the window sash, of a weather strip of spring material comprising a rear flat flange merging into a flat front flange deflected over it, with said flanges inserted between the bead and a side wall of the slot, said front and rear flanges being bendable to seal the space between the bead and the juxtaposed wall of its slot, said front flange merging into an outwardly extending flange at right angles to it and contacting with the window frame to effect a seal with a wall of the window frame, said rear flange effecting a seal with the window sash, said right angle flange merging into an inwardly extending spring flange disposed at an angle to it and bearing against the outer wall of the sash.

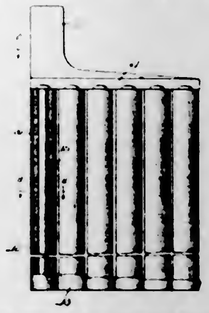
2,004,970
MANUFACTURE OF UREA-FORMALDEHYDE CONDENSATION PRODUCTS AND ARTIFICIAL MATERIAL THEREFROM
René Armengaud, Paris, France, assignor of one-half to Fabriques de Produits de Chimie Organique de Laire, Societe Anonyme, Issy, France, a company of France
No Drawing. Application February 18, 1932, Serial No. 593,925. In France February 23, 1931

2 Claims. (Cl. 260—3)



1. Method of producing a moldable powder which comprises agitating approximately 4 parts of precipitated zinc carbonate in an aqueous mixture of 100 parts of urea and 100–120 parts of formaldehyde, removing the undissolved zinc carbonate, allowing the reaction mixture to stand at room temperature for 24–36 hours to obtain a greasy, crystalline mass, drying said mass, and comminuting same to give a moldable powder.

2,004,971
TURNSTILE
Daniel R. Bacon and Leon H. Downs, Goshen, N. Y., assignors to Perey Manufacturing Company, Inc., New York, N. Y., a corporation of New York
Application August 6, 1930, Serial No. 473,382
11 Claims. (Cl. 39—3)

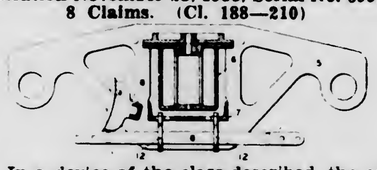


1. The combination of a turnstile, a liquid circulating system including a container for the liquid, a pump operated by the turnstile for imparting movement to the liquid, and means for automatically creating back pressure on the pump for a predetermined period of time to check the movement of the turnstile during each operation thereof.

2,004,972
HOLLOW CONDUCTOR
William H. Bassett, Jr., Scarsdale, N. Y., assignor to Anaconda Wire & Cable Company, New York, N. Y.
Application October 5, 1931, Serial No. 566,868
3 Claims. (Cl. 173—13)

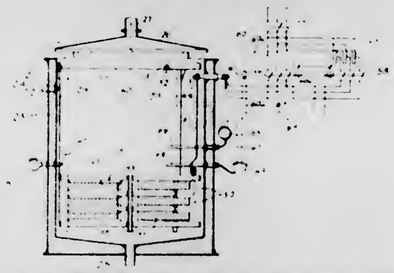
1. A hollow electric conductor comprising a series of wires formed into a hollow cylindrical structure, each wire having continuous contact with adjacent wires and arranged helically about the axis of said conductor to form a substantially continuous surface and a plurality of strands supporting said cylindrical structure, each strand being formed of a flat strip twisted about its own longitudinal axis so that the long dimension of the cross section of each strip is in a diametric relation to its own strand at all points along its length, said wires being of a diameter substantially less than the diameter of said strand.

2,004,973
POROUS SEPARATOR
Abraham Sidney Behrman, Chicago, Ill., assignor to A. S. Behrman, trustee of Porous Rubber Products Trust, Chicago, Ill.
Application December 13, 1930, Serial No. 502,118
8 Claims. (Cl. 136—146)



4. A porous separator comprising comminuted hard rubber particles held together by an autogenous bond to form a rigid member composed of distinct rubber particles attached to each other by said autogenous bond and having substantial and continuous voids between said particles, and a porous inert filler material distributed in the voids between the distinct particles of said rubber mass.

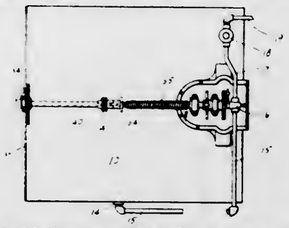
2,004,974
COMBINATION BOTTLE OPENER
John Bordener, Detroit, Mich.
Application August 23, 1933, Serial No. 686,371
2 Claims. (Cl. 65—47)



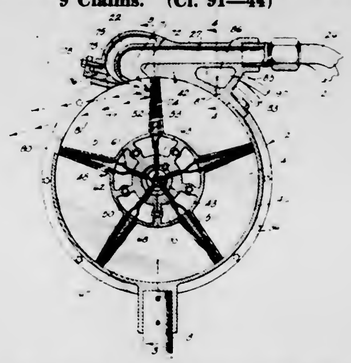
1. A device of the class described, comprising a flat plate-like supporting body; laterally extending wings on opposite edges of one end of said body; a flange projecting outwardly of one face of said body at the marginal edges thereof and extending around said wings; and an extracting blade pivotally mounted at one end on one end of said body and swingable thereon into operative and inoperative position, said body forming a shield for said blade, said blade in its movement from one position to another riding over said flange.

2,004,975
BRAKE BEAM SAFETY SUPPORT
Sterling H. Campbell and Frank H. Pietzsch, St. Louis, Mo., assignors to Western Railway Equipment Company, St. Louis, Mo., a corporation of Missouri
Application November 23, 1933, Serial No. 699,361
8 Claims. (Cl. 188—210)

1. In a device of the class described, the combination with a spring plank having an opening in its web, of a safety device in said opening, said safety device including a loop member operatively positioned by rotation on an axis perpendicular to the plane of the web of the spring plank the greatest dimension of the opening in the web being less than the width of the loop, and a beam extending through said loop member.



2,004,976
ELECTRIC FLUID HEATER
Robert A. Carleton, Brooklyn, N. Y., assignor to National Electric Heating Company, Inc., New York, N. Y., a corporation of New Jersey
Application August 7, 1931, Serial No. 555,801
8 Claims. (Cl. 219—38)

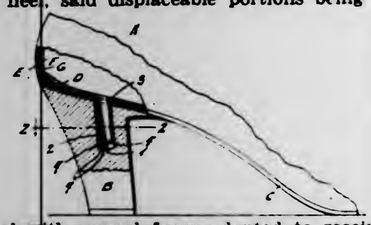


1. In a fluid heating apparatus, the combination of a receptacle for containing the fluid, a heating element consisting of a long narrow ribbon of high electrical resistance material wound in a spiral having a diameter substantially greater than its width, means supporting the element substantially horizontally in the receptacle, and a source of electrical heating current connected to the element for heating the same.

2,004,977
OVEN CONTROL
Alden P. Chester and Dewey H. Hill, Kokomo, Ind., assignors to Globe-American Corporation, Kokomo, Ind., a corporation
Application November 9, 1931, Serial No. 573,748
4 Claims. (Cl. 126—39)

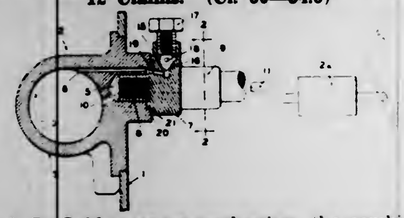
3. In a cook stove, the combination of an oven, a burner for heating the same, a supply pipe for supplying fuel to said burner, a valve in said supply pipe for controlling the flow of fuel therethrough, a heat-responsive device in said oven, mechanism connecting said heat-responsive device and said valve and operable to close said valve when the temperature within the oven has reached a predetermined maximum, and a pressure regulator in said supply pipe located at a position to control the pressure at said valve exclusively in such manner as to insure an approximately uniform predetermined fuel pressure at said burner, whereby an approximately uniform amount of heat per unit of time is supplied to said oven for a given setting of said valve and said pressure regulator.

2,004,978
APPARATUS FOR APPLYING PROTECTIVE COATINGS
Hugh A. Conley, Lynwood, Calif., assignor to Conley Plastering Machine Company, Inc., Compton, Calif., a corporation of California
Application November 7, 1930, Serial No. 494,063
9 Claims. (Cl. 91—44)



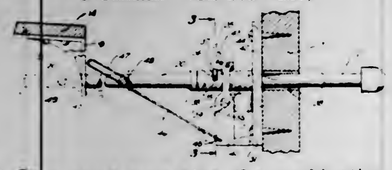
1. A device of the character described, including: a head; means for supporting said head; means for moving a viscous mixture of granular solids from said head to an object to be coated; and a delivery member for delivering the ingredients of said mixture to said head, said delivery member having an air passage for carrying a stream of air and an ingredient of said viscous mixture into said head, a passage for carrying another ingredient of said viscous mixture into said head, and a passage for a flow of fluid to lubricate said means for moving said mixture from said head.

2,004,979
MEANS FOR ATTACHING HEELS TO SHOES
David E. Cool, St. Louis, Mo.
Application February 4, 1933, Serial No. 655,153
4 Claims. (Cl. 36—34)



1. A device for attaching a heel to a shoe comprising a hollow element which is arranged in alined openings formed in the sole portion and the heel of the shoe, a flange at one end of said hollow element adapted to engage the sole portion of the shoe, said flange being countersunk in the sole portion of the shoe so that the top face of the flange is substantially flush with the

top face of the sole portion of the shoe, and displaceable portions adapted to be forced outwardly so as to be embedded in the material of the heel, said displaceable portions being pro-



vided with curved faces adapted to receive in contact therewith a tool which is moved through said hollow element for the purpose of moving said displaceable portions outwardly.

2,004,980
FLUID PRESSURE MECHANISM
Burns Dick, Ferguson, Mo., assignor to Wagner Electric Corporation, St. Louis, Mo., a corporation of Delaware
Application September 13, 1933, Serial No. 689,200
12 Claims. (Cl. 60—54.6)

1. In fluid pressure mechanism, the combination of a fluid receiving chamber, a fitting secured to the wall of the chamber and provided with a pair of passages, said fitting forming no part of the wall of the chamber, a fluid supply conduit secured to the fitting and communicating with one of said passages, a valve carried by the fitting for controlling the other passage, and means providing communication between said chamber and each of the passages in the fitting.

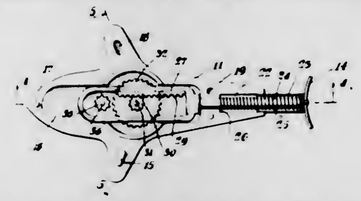
2,004,981
GAME APPARATUS
John B. Firestone, Brooklyn, N. Y., assignor to John F. Meyer, Chicago, Ill.
Application December 24, 1934, Serial No. 758,957
9 Claims. (Cl. 273—121)

1. In a game apparatus, the combination of: a cabinet including an inclined playing board having ball exit openings formed therein; means for propelling balls one at a time onto the upper portion of said inclined playing board so that they may gravitate thereover and enter into the said ball exit openings; an inclined runway arranged below said inclined playing board and in communication with said exit openings for conducting spent balls from said exit openings to a point adjacent to but below said propelling means; a member slidably mounted in said cabinet between the said inclined playing board and the said runway for temporarily retaining therein balls which enter into certain of said exit openings; a handle member slidably mounted in a wall of said cabinet for moving said first named member into ball-releasing position; means normally latching said handle member against operation; and means including a device actuated by a ball passing through a preselected one of said exit openings for moving said latching means out of latching engagement with said handle member so as to permit operation of the latter.

2,004,982
COVER FOR SEAT SIDE ARMS
Walter L. Fry, Scarsdale, N. Y., assignor, by mesne assignments, to Milton Loewe, New York, N. Y.
Application May 22, 1930, Serial No. 454,787
1 Claim. (Cl. 155—182)

A seat side arm cover shaped to the contour of a side arm so as to cover three sides thereof and having edge portions adapted to lie adjacent the wall to which the side arm is secured; a stiffening element carried by said edge portions and of substantially U-shape to conform to the contour of the edges of the arm at its junction with said wall; and fasteners for securing said stiffening element to said side arm to attach said cover thereto.

2,004,983
PLANT SUPPORT
Lilian Goldberg, Madison, N. J.
Application January 18, 1934, Serial No. 707,058
7 Claims. (Cl. 47—47)



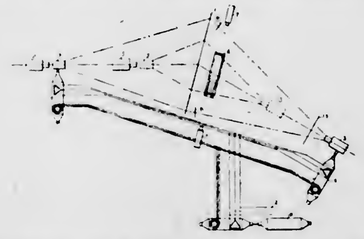
1. A plant support for the stem or a bough of a plant, to be erected adjacent the plant, and a flexible strand connected to the support to be wound around said plant, said support comprising a wire standard having U-shaped projections disposed laterally thereof and spaced apart longitudinally of the same to straddle said stem or a bough at different points, respectively, and to serve as a reel for winding up said strand when the support is not in use.

2,004,984
FAN
Heinrich G. Herion, New York, N. Y.
Application June 8, 1934, Serial No. 729,596
5 Claims. (Cl. 230—261)

1. A pocket fan comprising a bi-partite slotted casing having substantially the form of an aero-

plane, each casing part formed with suitable depressions supplementing one another, a propeller, a spindle carrying a pinion and means in the depressions of said casing parts to operate said propeller said means comprising a

spindle displaceably journaled in the slots of said casing, a gear on said spindle, a rack bar in said depressions, a means integral with said gear and in mesh with said rack bar, and means to alternately engage said gear with the pinion on said propeller spindle.



2,004,985
BEACH GARMENT
Celia Mary Hogan, Chicago, Ill.
Application July 9, 1934, Serial No. 734,324
2 Claims. (Cl. 2—74)

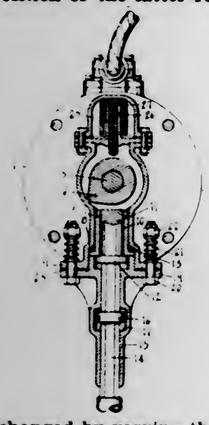
1. A loose fitting coat-like dress of washable material open at one side having an inner garment of comparatively light weight moisture resisting material constituting a lining extending from immediately below the arm holes of the dress to approximately the bottom of the dress and substantially from edge to edge at the open side of the dress, said inner garment reenforced about the edges thereof and detachably secured to the dress on the inner side thereof at the top corners and at an intermediate point at the top of the inner garment and along the side edges, and provided with shoulder straps each of which is secured intermediate its ends to the outer garment at the shoulders thereof.

2,004,986
COMPOSITE MOTION PICTURES
Fred W. Jackman, Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware
Application May 25, 1931, Serial No. 539,818
4 Claims. (Cl. 88—16)

1. The method of producing composite pictures which comprises projecting a background scene onto a translucent screen, photographing action before said screen, changing the field of view of the camera employed for said photographing, changing the size of the projected field

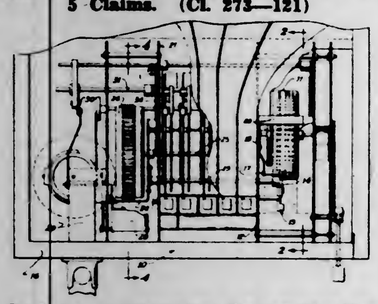
a corresponding amount and photographing the action with the changed projected field whereby "close-ups" and "long shots" of the action are obtained before the same background.

2,004,987
COMPOSITE MOTION PICTURES
Fred W. Jackman, Beverly Hills, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware
Application January 8, 1934, Serial No. 705,655
2 Claims. (Cl. 88—16)



1. The method of producing composite pictures which comprises projecting onto a translucent screen a background scene representing a real background scene outside of the locus of said screen, photographing action before said screen, changing the magnification of the image of said action in said camera, changing the magnification of the projected background scene a different amount to compensate for said change of magnification of the image of said action in said camera, said different amount of change of magnification being of such an extent that the background on the camera film is of the same size as if the real background had been photographed directly, and photographing the action with the magnification of said action and of said projected background scene thus changed.

2,004,988
TAMPER AND LIKE IMPACT TOOL
Corwill Jackson, Chicago, Ill.
Application August 20, 1930, Serial No. 476,606
5 Claims. (Cl. 125—33)



5. In a structure of the class described, the combination of a casing having an elongated bore provided with an enlarged end portion forming a shoulder, an elongated bushing fitting said bore and having an end flange fitting said enlarged end portion thereof, shims disposed between said shoulder and flange; a tool holder mounted on said casing and having an internally shouldered socket telescoped within said enlarged end portion of the bore and engaging said end flange of the bushing, and a tappet disposed through said bushing and having a flange in said socket coacting with the shoulder thereof and the end

flange of said bushing to limit the travel of the tappet, the position of the latter relative to the

casing being changed by varying the number of said shims.

2,004,989
GAME APPARATUS
Claude R. Kirk, Oak Park, and Edward E. Collison, Chicago, Ill., assignors to Standard Ticket Games Corporation, Chicago, Ill., a corporation of Illinois
Application November 30, 1934, Serial No. 755,267
5 Claims. (Cl. 273—121)

1. In a game apparatus, the combination of: a cabinet; a score-indicating or registering dial in said cabinet and normally visible from a point outside said cabinet; a coin slide having a coin receiving aperture; a member movable over the peripheral surface of said registering dial and adapted when in effective position to render the latter invisible from outside said cabinet; means automatically moving said member into effective position when and if said cabinet is tilted from its normal and proper operating position; and means coacting with said coin slide and necessitating the insertion of a coin of proper denomination into the said coin aperture of the same to reset the said member back into its initial or ineffective position.

2,004,990
GAME APPARATUS
Claude R. Kirk, Oak Park, and Edward E. Collison, Chicago, Ill., assignors to Standard Ticket Games Corporation, Chicago, Ill., a corporation of Illinois
Application December 3, 1934, Serial No. 755,681
5 Claims. (Cl. 273—121)

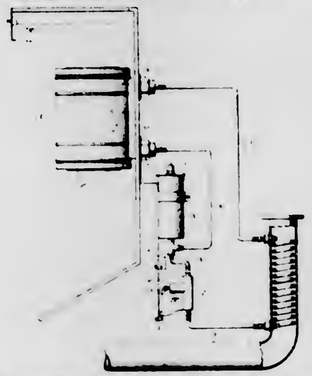
1. In a game apparatus, the combination of: a cabinet including a member providing a ball playing surface having a ball exit or scoring opening formed therein; a ball return runway arranged below said playing surface and having communication with said ball exit or scoring opening; a score-recording or printing device arranged in the cabinet including a rotary printing drum and a gear for timing the operation and duration of rotation of said printing drum; an auxiliary timing gear carriage pivotally mounted in the said cabinet; said carriage having an auxiliary timing gear rotatably mounted thereon and the latter being movable into en-

gagement with the first-named timing gear; an electromagnetic circuit including an electromagnetic device coacting with said timing gear carriage to pivot the said auxiliary timing gear carried thereby into engagement with the said main timing gear; and a circuit opening and closing device arranged in said ball return runway and operable by a ball traveling therealong to close the said electromagnetic circuit and pivot the said auxiliary timing gear into engagement with the said first-named timing gear so as to allow the said printing drum to rotate a predetermined circumferential distance.

2,004,991
PRECAST CONCRETE JOIST AND SLAB CONSTRUCTION
Henry O. Klotz, Bethel, Conn., assignor to The Redding Marble Company, New Haven, Conn., a corporation of Connecticut
Application September 22, 1934, Serial No. 745,079
10 Claims. (Cl. 72—68)

1. A roof or floor construction comprising supporting joists, precast cementitious slabs on said joists, a pair of said slabs having their adjacent edges rabbeted providing a groove, stirrups anchored by and extending above said joists and entering said groove, a member in and extending longitudinally of said groove, and means on said stirrups to clamp said member against the portions of the slabs forming the bottom of the groove and clamping said slab portions against the joists.

2,004,992
COMPOSITE MOTION PICTURE
Hans F. Koenekamp, Los Angeles, Calif., assignor to Warner Bros. Pictures, Inc., New York, N. Y., a corporation of Delaware
Application October 30, 1933, Serial No. 695,789
5 Claims. (Cl. 88—16)

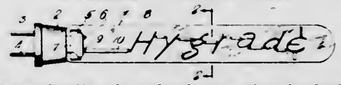


2. Photographic apparatus comprising the combination of a camera having film advancing mechanism, a synchronous motor therefor, a projector having film advancing mechanism, a synchronous motor therefor, indicia individual to said film advancing mechanisms for indicating the positions thereof, a circuit for operating said motors in synchronism, means for changing the driving relation between the film advancing mechanism for said projector and its associated motor to adjust the film advancing mechanism

of said projector in relation to its associated indicia to correspond with the start position indicated by the film advancing mechanism of said camera and its associated indicia, a casing for

said camera, and means comprising an aperture in said casing for permitting an observer to read the indicia for said film advancing mechanism for said camera when said casing is closed.

2,004,993
AUTOMOBILE HEATER
William Karsel, Chicago, Ill., and Charles W. Taylor, St. Louis, Mo.; said Taylor assignor to said Karsel
Application October 28, 1931, Serial No. 571,588
18 Claims. (Cl. 257—241)

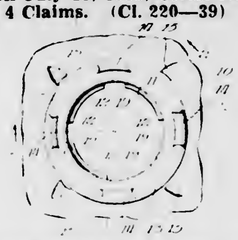


1. In a heater of the class described, the combination with a steam generator associated with the exhaust of an explosive motor to utilize the exhaust gases thereof for generating the steam therein, of a heat distributing element located in the space to be heated, means for conveying steam from said generator to said heating element, pulsating means for feeding water to said generator, a feed-water supply to which said feeding means is connected and from which the water is fed to the generator in accordance with the pulsations of the feeding means, and means for returning water of condensation from the heating element to said feed-water supply.

2,004,994
AMIDINES
John Lee, Zurich, Switzerland, assignor to E. R. Squibb & Sons, New York, N. Y., a corporation of New York
No Drawing. Application September 6, 1933, Serial No. 688,359
4 Claims. (Cl. 260—105)

4. Compounds selected from the group consisting of N-(2-ethoxy-5-xenyl) N'-(p-phenetyl) acetamidine; N, N'-di-(2-ethoxy-5-xenyl) acetamidine; N-(2-ethoxy-5-xenyl) N'-(p-carbethoxy-phenyl) acetamidine; and N-(2-ethoxy-5-xenyl) N'-(2-carbethoxy-5-xenyl) acetamidine.

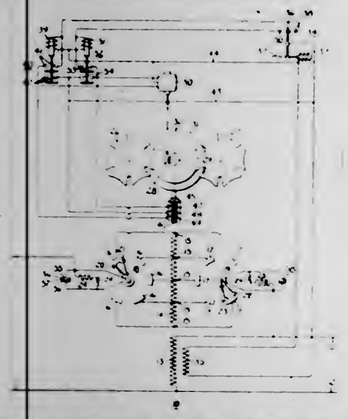
2,004,995
GLOW DISCHARGE SIGN
Clarence J. Le Bel, Lynn, Mass., assignor to Hygrade Sylvania Corporation, Salem, Mass., a corporation of Massachusetts
Application October 30, 1931, Serial No. 572,089
9 Claims. (Cl. 176—124)



8. A cathodic glow discharge sign including an anode, a cathode in the form of an elongated design positioned in end-on relation with respect to the anode so that successive portions of the cathode are progressively more remote from the anode, and means including an elongated hollow insulator closely confining the cathode and a source of varying current for causing the cathode glow to progress in length along the elongated cathode from the portion nearest the anode and in synchronism with variations of said source.

2,004,996
PROCESS FOR CONDENSING UREA WITH FORMALDEHYDE OR THE POLYMERIC BODIES THEREOF AND THE PRODUCT OBTAINED THEREFROM
Julien Malet and René Armenault, Paris, France, assignors of one-half to Fabriques de Produits de Chimie Organique de Laire, Societe Anonyme, Issy-les-Moulineaux, France
No Drawing. Application December 2, 1929, Serial No. 411,212. In France December 6, 1928
4 Claims. (Cl. 260—3)

1. A process for condensing urea with formaldehyde to give a product adapted to be hardened upon application of heat, which process comprises reacting approximately 60 parts of urea with 220–250 parts of a 30% aqueous formaldehyde solution in the presence of 1–2 parts of zinc carbonate as a condensation agent, heating the mixture to boiling, filtering to remove excess condensation agent, and evaporating the filtrate to a syrupy consistency in a vacuum at a temperature not exceeding 50° C.



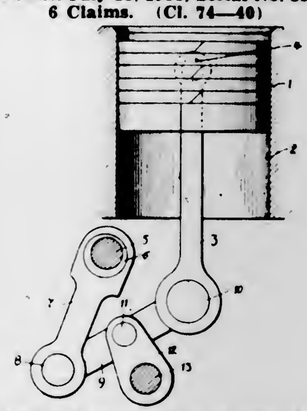
2,004,997
SEALING DEVICE
Frank E. McCabe, Shaker Heights, Ohio, assignor to The Grabler Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application July 13, 1932, Serial No. 622,264
4 Claims. (Cl. 220—39)

1. In combination, a metal barrel wall provided with a bung opening, a bung adapted to be threaded into said opening, a gasket adapted to be ap-

plied between the bung and the barrel wall, said gasket being provided with projections, projections formed on said barrel wall adjacent said opening adapted to engage the projections of said gasket and hold same against rotation, and sealing means adapted to connect the bung and gasket to prevent surreptitious rotation of the bung.

2,004,998
TRANSFORMER TAP CHANGING MECHANISMS
Orin P. McCarty, Pittsfield, Mass., assignor to General Electric Company, a corporation of New York
Application November 29, 1933, Serial No. 700,239
4 Claims. (Cl. 171—119)

1. The combination with a transformer winding provided with taps, of a switch having fixed contacts connected to said taps and two contacts insulated from each other and movable along said fixed contacts, means for moving said movable contacts alternately from one fixed contact to another, an impedance and a circuit interrupter connected in series between said movable contacts, and a normally open cutout connected in parallel with said impedance and interrupter, said circuit interrupter being responsive after a predetermined interval of time to open the circuit through said switch, whereby substantially full circuit voltage is impressed across said cutout, and said cutout being responsive to said voltage to close said circuit.

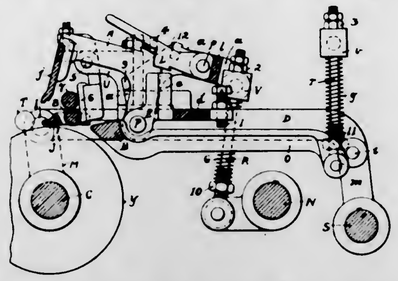


2,004,999
GROUND ROD
William J. McIlvane, Bellerose, N. Y., assignor to Bridgeport Brass Company, Bridgeport, Conn., a corporation of Connecticut
Application August 24, 1932, Serial No. 630,202
5 Claims. (Cl. 173—31)

1. In a device for connecting electrical apparatus to ground, the combination of a ground rod body adapted to be driven into the ground, said body being made of ferrous material and resistant to bending, a clamping block located adjacent the upper end of the rod body and extending parallel to said body in the plane thereof and presented edgewise to said body and curved to conform to the periphery thereof, said block having at the side face thereof a non-ferrous surface adapted to be engaged by ground wires for preventing electrolysis, means of connection between the edge portion only of said block and the rod body for securing the block to the rod body in rigid relation thereto, a clamping member of non-ferrous material located at one of the side faces of said block and adapted

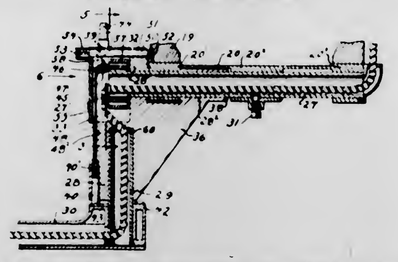
to clamp ground wires against said block, and a bolt extending into said block and clamping member for holding said clamping member in clamping relation to the wires.

2,005,000
DIFFERENTIAL MOTOR
Lauritz N. Miller, Eugene, Oreg., assignor to L. N. Miller Engineering Corporation, a corporation of Delaware
Application July 18, 1931, Serial No. 551,715
6 Claims. (Cl. 74—40)



1. In combination, a piston, a member, a pitman connected to said piston and to one end of said member, an eccentric, a link supported by said eccentric, means operatively connecting said link to said member, a driven crank, and a crank pin directly connecting said member and crank.

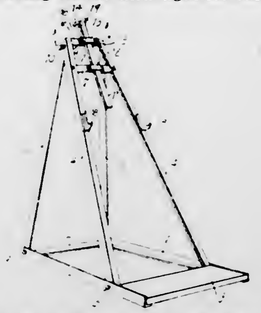
2,005,001
COMBING MACHINE
John William Nasmith, Manchester, England
Application January 24, 1933, Serial No. 653,301
In Great Britain March 2, 1932
5 Claims. (Cl. 19—121)



1. In a combing machine of the type referred to, a combing cylinder, a lower nipper jaw pivotally borne, means combined therewith for limiting its movement in two directions, that is to say, to and from the combing cylinder; a pivoted upper nipper jaw, and means combined therewith for limiting its movement towards the combing cylinder, compressible spring means between the lower nipper jaw and its upwardly limiting stop, actuating means to cause descent

of the upper nipper jaw, and a spring compressible by such actuating means, this spring be-

ing stronger than the herein first mentioned spring, for the purposes hereinbefore set forth.



2,005,002
FOLDING STANDARD
George K. Parsons, Detroit, Mich., assignor to Unitor Corporation, Detroit, Mich., a corporation of Michigan
Application February 23, 1932, Serial No. 594,680
7 Claims. (Cl. 248—13)

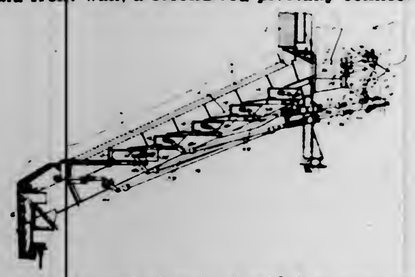
5. In a foldable supporting standard, a base, a frame carried thereby and swingable about a substantially vertical axis, a sub-base carried by said frame and independently swingable about a substantially horizontal axis, and locking means substantially centered in an extended plane common to both axes for locking both the frame and sub-base against swinging movement, including an operating handle for the locking means movable in one direction to release the sub-base for horizontally swinging movement and in another direction to release said sub-base for vertical swinging movement.

2,005,003
WHEEL HOLDER
Louis J. Patton and Horace J. Terrill, Benton Harbor, Mich.
Application August 16, 1934, Serial No. 740,032
4 Claims. (Cl. 144—288)

4. In a device for supporting the rim of an automobile wheel for tire repair work, the combination of a slanting support against which a rim may be laid, said support having a pair of spaced upwardly facing hook members projecting therefrom to engage in the edge of the peripheral groove of a rim lying against said support to cooperate with said support in supporting said rim, and a downwardly facing hook member projecting from said support and mounted above and for movement to or away from said first mentioned hook members along the plane of said support and adapted to engage in the edge of the peripheral groove of a rim supported in said upwardly facing hooks and against said support,

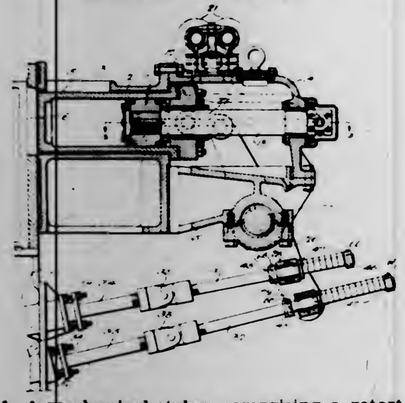
and means for holding said downwardly facing hook in engagement with a rim thus supported.

2,005,004
LINK
Ralph F. Peo, Buffalo, N. Y., assignor to Houde Engineering Corporation, Buffalo, N. Y., a corporation of New York
Application March 12, 1932, Serial No. 598,356
5 Claims. (Cl. 287—85)



3. A link comprising a pair of shells secured together to define end sockets and an integral connecting portion extending therebetween, at least one of said sockets having an elongated opening therein, a resilient bushing member encased in said socket having a narrow slot therein in alignment with the shorter axis of said elongated socket opening, a stud member having a flat head associated with said socket and locked in the slot in said bushing, said flattened head of said stud member having a diameter slightly less than the longer axis of the socket opening.

2,005,005
STOKER DRIVE MECHANISM
Herbert E. Preston, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application September 17, 1930, Serial No. 482,617
6 Claims. (Cl. 110—44)

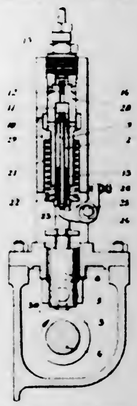


1. In a stoker, the combination with a retort including a plurality of fuel feeding elements, of a ram for feeding fuel into said retort, a front wall, a lever mounted outwardly of said wall, a

link connecting said lever to said ram at a point substantially along the longitudinal center line of the latter, said parts being so disposed that upon oscillation of said lever a substantially straight line motion is imparted to said ram, an actuating rod for each of said fuel feeding elements, said rods extending through bearings provided in said front wall, a second rod pivotally connected

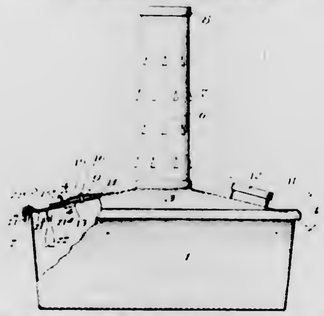
to the outer end of each of said first mentioned rods, a member pivotally mounted in said lever on an axis transversely to the plane in which the lever oscillates, apertures provided in said member through which said last mentioned rods extend, means for preventing displacement of said rods from said apertures, and means for actuating said lever.

2,005,006
DRIVE MECHANISM FOR MECHANICAL STOKERS
Herbert E. Preston, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a corporation of Pennsylvania
Application June 5, 1931, Serial No. 542,383
5 Claims. (Cl. 110—44)



1. A mechanical stoker comprising a retort, a cylinder associated with said retort, a ram operating in said cylinder for feeding fuel to said retort, said ram projecting at one end from said cylinder, a plurality of fuel feeding pushers located in the bottom of said retort, hydraulic mechanism for actuating the ram, a plurality of rods, and fixed guides therefor supporting the rods for longitudinal reciprocation, links connecting said rods individually with said pushers, a lever operatively connected to the projecting end of said ram at a point substantially midway between the top and bottom thereof and adapted for oscillation by reciprocation of the latter, and adjustable means for operatively connecting said lever with the rods, said adjustment providing for relative variation of the movements of said pushers.

2,005,007
SHOE
Jacob Sandler, Brookline, Mass.
Application January 19, 1935, Serial No. 2,454
2 Claims. (Cl. 36—58.5)

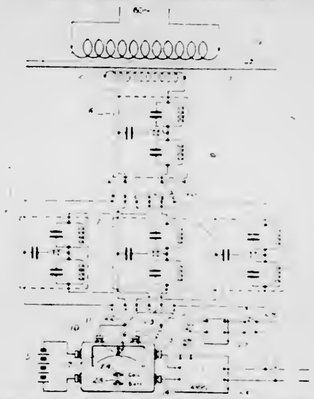


1. A shoe having a lace-receiving pocket extending along the top edge of the upper at each side from the rear end to the vamp portion at the front of the shoe opening, and a lacing having each half portion thereof extended through said pockets at each side from the rear to the front, then through said vamp portion, then obliquely crosswise and rearward and through each side of the shoe upper adjacent the front of the heel portion, to permit the lace end portions to be drawn forwardly and tied together at the front of the foot of the wearer.

2,005,008
FUEL INJECTION PUMP
Charles Schaer, Winterthur, Switzerland, assignor to Sulzer Freres Societe Anonyme, Winterthur, Switzerland
Application June 30, 1934, Serial No. 733,154
In Switzerland July 10, 1933
2 Claims. (Cl. 103—40)

1. In a fuel injection pump for internal combustion engines, a cylinder, a plunger therein forming a pump chamber therewith, means for reciprocating said plunger, a fuel supply chamber, a valve within said plunger controlling communication between said pump chamber and said fuel supply chamber, said valve having a stem passing through said fuel supply chamber and extending exteriorly of the same and of the plunger, a stop for engaging the exposed end of said valve stem to actuate said valve during reciprocation of said plunger, and means providing a continuous supply of fuel to said fuel supply chamber.

2,005,009
FLAME STABILIZING ATTACHMENT FOR ORCHARD HEATERS
Willis L. Scheu, Ontario, Calif., assignor to Scheu Products Company Limited, Ontario, Calif., a corporation of California
Application September 19, 1932, Serial No. 633,754
12 Claims. (Cl. 158—91)



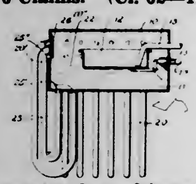
1. In combination with a liquid-fuel orchard heater having a receptacle provided with a side wall, a removable cover engaging the upper edge of said side wall and provided with an air-admitting opening located adjacent one edge thereof, a combustion stack communicating with the interior of said receptacle, and a regulating plate adjustably mounted on said cover and provided with aperture means movable into and out of position of registration with said air-admitting opening to provide for admission of air to maintain a generating flame within said receptacle adjacent said opening, said side wall and said regulating plate constituting enclosing members normally in substantially tight engagement with said cover so as to cause the interior of said receptacle to be substantially enclosed from the atmosphere except through said aperture means; a flame stabilizing device secured to said heater and having a portion extending between said cover and one of said enclosing members so as to separate said one member from said cover and provide for admission of additional air to the interior of said receptacle between said cover and said one member, at a point adjacent the position of said generating flame.

2,005,010
HAND GRILL
Benjamin H. Smith, Niles, Mich., assignor to Michgan Wire Goods Company, Niles, Mich.
Application March 19, 1934, Serial No. 716,369
10 Claims. (Cl. 53—5)

1. A grill of the character set forth for cooking hamburgers and the like, comprising in combination a pair of opposed imperforate plates upstruck to provide coacting spring flanges adapted to constitute a peripheral seal for the contents when the grill is closed, one of said plates having a pair of slots spaced from its outer edge, and the other plate having integral hinge members projecting from its outer edge and looped upwardly and inwardly through said slots to provide a hinged connection between said plates, and resilient handles for said plates consisting of pieces of wire bent on themselves to provide loop-like grips, extended shanks and diverging arms welded to inner corners of said plates at the back of said flanges, said handles being oppositely arched relative to each other so that the outer ends of the grips coact to provide a fulcrum facilitating the clamping of the plates together when said grips are sprung toward each other with the hand.

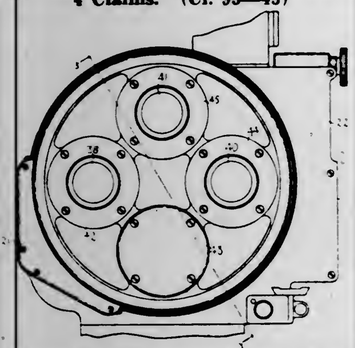
2,005,011
MAGNETIC TESTING APPARATUS AND METHOD
Sigfrid Specht, Fieldston, N. Y., assignor to Ferrous Magnetic Corporation, New York, N. Y., a corporation of New York
Application September 29, 1933, Serial No. 691,432
15 Claims. (Cl. 175—183)

1. Apparatus for magnetic testing comprising a single primary coil, a secondary coil in the field thereof, and filtering means in the circuit of said secondary coil comprising a filter for intercepting the fundamental component of current in said secondary and a separate filter for passing only a single selected harmonic component of said secondary current.



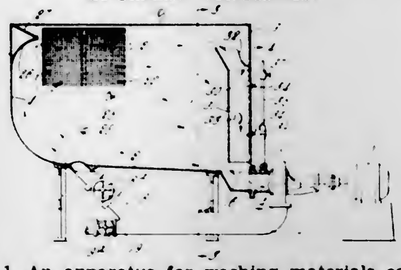
2,005,012
COMBINED SHADE ROLLER AND CURTAIN ROD SUPPORT
Paul E. Sprinkel, Baltimore, Md.
Application August 27, 1934, Serial No. 741,678
2 Claims. (Cl. 248—255)

1. In a device of the class described, a flat bracket, uprightly disposed members thereon with sides substantially parallel and situated near the top portion of the bracket, said members being adapted to be embraced by the walls of the end portions of curtain rods, and a tongue stamped out of each member and bent to form a compressible hump and resiliently press against the



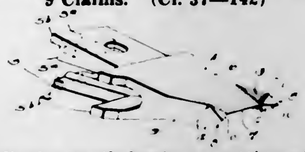
side walls of the said end portions, the tongues being disposed with the open or loose ends towards the insertion direction of the rods and adapted to frictionally engage therewith relatively far up the same.

2,005,013
EVAPORATOR FOR REFRIGERATION MACHINES
Alfred Teves, Frankfort-on-the-Main, Germany
Application January 29, 1932, Serial No. 589,737
In Germany February 26, 1931
6 Claims. (Cl. 62—126)



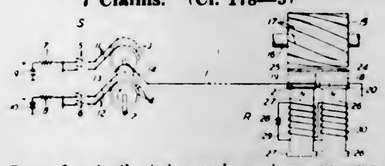
1. An evaporator for refrigerators comprising a reservoir for liquid refrigerant, a plurality of refrigerating tubes connected thereto each having a portion below but both ends arranged above the normal level of liquid refrigerant, whereby they are normally empty of liquid refrigerant, and at least one refrigerating tube connected to said reservoir with its inlet end below the normal liquid level.

2,005,014
FOCUSING DEVICE FOR A MOTION PICTURE CAMERA
Albert W. Tondreau, Hollywood, Calif., assignor to Warner Brothers Pictures, Inc., New York, N. Y., a corporation of Delaware
Application April 19, 1932, Serial No. 606,084
4 Claims. (Cl. 95—45)



1. A motion picture camera, comprising a lens holder having a plurality of lens apertures circularly arranged therein, said holder having a peripheral groove, a stationary ring fixed to the casing of said camera and surrounding said lens holder, the exterior surface of said stationary ring being provided with a cam surface, a movable ring having a co-operating cam surface and surrounding said stationary ring, a shoe fixed to said movable ring and adapted to ride in said groove in said lens holder, said stationary ring having a slot through which said shoe extends, means for locking any one of the lens apertures in photographing position for permitting longitudinal movement thereof while preventing rotation thereof, and means for rotating said movable cam ring.

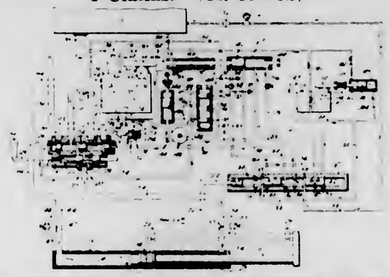
2,005,015
APPARATUS FOR WASHING OR TREATING MATERIALS
William F. Traudt, Buffalo, N. Y.
Application November 28, 1934, Serial No. 755,207
11 Claims. (Cl. 141—12)



1. An apparatus for washing materials comprising a tank adapted to contain the material in a fluid mixture, means for supplying the washing fluid to the tank, a circulator for the fluid mixture having a suction connection opening into the tank adjacent one end thereof, and a discharge connection arranged to discharge into the lower portion of the tank toward its opposite end, a deflector extending across and upwardly and inwardly from said last mentioned end of the tank, whereby the fluid mixture is deflected upwardly and inwardly and caused to flow away from said end lengthwise in the upper portion of the tank, an overflow chamber communicating with said tank by an opening covered by a stationary screen and located between said suction and discharge connections and past which the fluid mixture flows, and an overflow outlet for discharging to waste the soiled fluid from said overflow chamber located approximately in a horizontal plane tangential to the upper edge of said deflector.

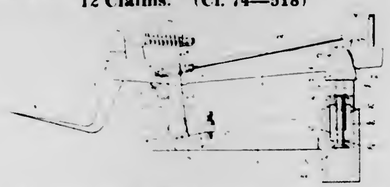
2,005,016
DIGGING TOOTH
Lesher W. Van Buskirk, Easton, Pa.
Application June 27, 1932, Serial No. 619,561
9 Claims. (Cl. 37—142)

1. A digging tooth having a cutting edge having an increase in cross-section at its outer edges, providing forwardly jutting cutting portions extending from the cross-sectionally increased side portions beyond said cutting edge.



2,005,017
FACSIMILE TELEGRAPH SYSTEM
Edward Fisk Watson, Larchmont, N. Y., assignor to American Telephone and Telegraph Company, a corporation of New York
Application September 26, 1933, Serial No. 691,044
7 Claims. (Cl. 178—5)

1. In a facsimile telegraph system, means for recording successive series signal impulses which



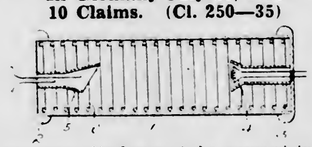
represent elemental areas of symbols in any one of a plurality of rows on a single tape which comprises a plurality of receiving mechanisms each of which comprises impulse receiving means, a platen member controlled thereby, and printing means for receiving and recording impulses representing symbols in the respective rows, and circuit instrumentalities connecting said mechanisms to the telegraph system for controlling said mechanisms in accordance with received signal impulses.

2,005,018
HYDRAULIC ACTUATING MECHANISM FOR PLANERS
Donald H. West, Marlboro, and Kenneth C. Monroe, Hudson, Mass., assignors to The Lapointe Machine Tool Company, Hudson, Mass., a corporation of Maine
Application September 28, 1931, Serial No. 565,420
6 Claims. (Cl. 60—52)

3. Hydraulic actuating mechanism for a reciprocated member comprising a variable delivery reversible discharge pump and devices controlled from said member for varying and reversing the discharge of said pump, said devices including a control cylinder and piston connected to reverse said pump, and means by which the relative rates of movement of said control piston in different parts of its stroke may be separately varied and controlled during said pump reversal.

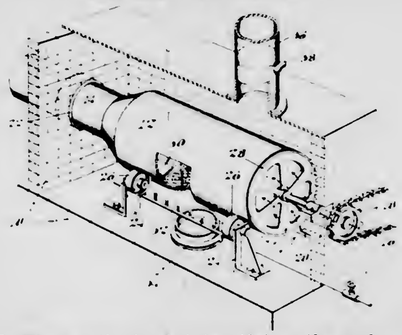
2,005,019
ACTUATING MECHANISM
Frederic E. Bertrand, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application September 7, 1934, Serial No. 743,036
12 Claims. (Cl. 74—518)

1. An actuating mechanism comprising a lever, a plurality of fulcra therefor, a support for one of the fulcra, said support including a displaceable fluid, and means for controlling the displacement of the fluid.



2,005,020
BOOKKEEPING MACHINE
Fritz Bossert, Mannheim, Germany
Application January 13, 1930, Serial No. 420,610
In Germany December 22, 1928
2 Claims. (Cl. 235—3)

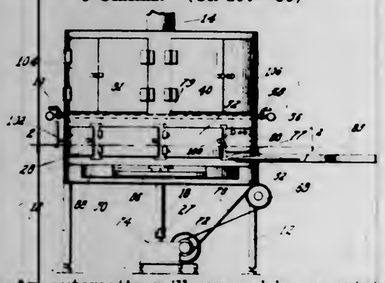
1. In a machine of the class described, a kind of operation lever, a total and subtotal position for said lever, an entrance slot for introducing ledger cards of small and of large sizes, printing means, stop means operated by said kind of operation lever and partially blocking said entrance



slot in said subtotal position, said stop means preventing the large size ledger cards from being introduced, but allowing said ledger cards of smaller size to be introduced for coaction with said printing means.

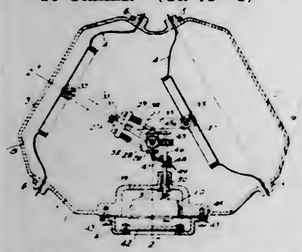
2,005,021
VACUUM TUBE
Arno Brasch and Fritz Lange, Berlin, Germany
Application September 13, 1930, Serial No. 481,654
In Germany July 23, 1929
10 Claims. (Cl. 250—35)

1. A vacuum discharge tube comprising an envelope, a cathode and an anode mounted therein and spaced to form a relatively long discharge-path therebetween for the desired discharge between cathode and anode, a plurality of closely spaced, electrically conductive rings within the envelope, said rings extending along said entire discharge-path and being electrically insulated from each other and from the exterior of said envelope.



2,005,022
PROCESS OF IMPROVING CARBON BLACK
Edward H. Damon, Skellytown, Tex., assignor, by mesne assignments, to Cabot Carbon Company, Pampa, Tex., a corporation of Massachusetts
Application June 15, 1931, Serial No. 544,647
5 Claims. (Cl. 134—60)

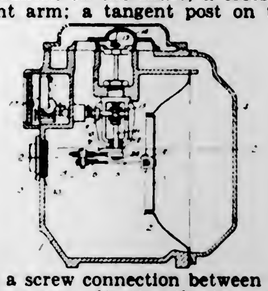
5. The method of intensifying the color of carbon black, which consists in continuously agitating a measured charge thereof and subjecting



the same to a slow oxidation at a temperature below that at which calcining takes place but sufficiently high to increase the stable oxygen content of the carbon black.

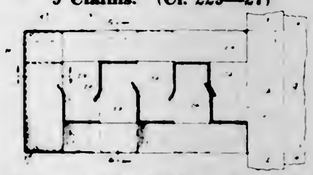
2,005,023
AUTOMATIC CIRCULAR OVEN
Sidney Dawson, Chicago, Ill., assignor to Eloise R. Stalle, Chicago, Ill., administratrix of the estate of Albert P. Stalle, deceased
Application April 28, 1933, Serial No. 668,363
9 Claims. (Cl. 107—60)

1. An automatic grill, comprising a rotatable table, a source of heat above the table, the table adapted to have placed thereon a plurality of casseroles for exposing articles of food to the heat for a predetermined length of time, together with means for automatically removing the casseroles from the table at the end of said predetermined length of time, said means comprising an ejecting disk, and a common source of power for operating the rotating table and the ejecting disk.



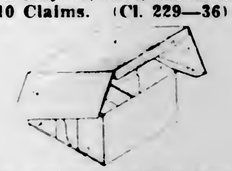
2,005,024
GAS METER
John C. Diehl, Erie, Pa., assignor to American Meter Company, New York, N. Y., a corporation of Delaware
Application February 24, 1933, Serial No. 658,287
10 Claims. (Cl. 73—1)

1. In a meter, the combination of a case; diaphragms mounted in the case in planes inclined to each other and forming measuring chambers responsive to the action of the diaphragms on the outer sides of the diaphragms and a chamber between the inner sides of the diaphragms extending from diaphragm to diaphragm; and means actuated by said diaphragms controlling the filling and discharging of said chambers.



2,005,025
TANGENT
John C. Diehl, Erie, Pa., assignor to American Meter Company, New York, N. Y., a corporation of Delaware
Application August 25, 1933, Serial No. 686,803
8 Claims. (Cl. 73—1)

1. In a tangent, the combination of a shaft; a cross arm fixed on the shaft; a tangent arm rotatively mounted on the shaft; a cross head on the tangent arm; a tangent post on the cross



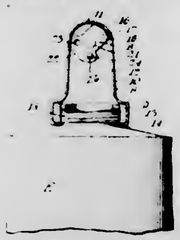
head; and a screw connection between the head and the cross arm adjusting the tangent arm.

2,005,026
PACKAGE FOR BOTTLES
Charles K. Ellsworth, Detroit, Mich.
Application September 11, 1933, Serial No. 688,964
9 Claims. (Cl. 229—27)

1. A box comprising a blank of material having marginal portions at opposite edges of the blank standing perpendicular to the original plane of the blank, said portions being apertured to receive bottle necks, the apertures in one of said portions being staggered relatively to those in the other portion, parts of said blank being formed to enclose said marginal portions.

2,005,027
BOX CONSTRUCTION
Charles K. Ellsworth, Toledo, Ohio
Application July 19, 1934, Serial No. 736,034
10 Claims. (Cl. 229—36)

1. In a box, a sheet of single-face corrugated stock creased to present the corrugations outward, a tuck under one of the sides of the box with its corrugated side facing inward of the box, a flap formed on another wall of the box and positioned to be inserted in surface engagement with said tuck and with its corrugations parallel to and in mesh with those of the tuck.

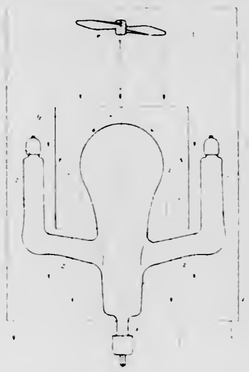


2,005,028
MEANS FOR LUBRICATING CONNECTIONS BETWEEN CONNECTING ROD, PISTON, AND CRANKSHAFT
James H. Eynon, Bath, N. Y.
Application April 27, 1934, Serial No. 722,652
2 Claims. (Cl. 74—587)

1. A rod for connecting the pin of a piston with the crank of a shaft, having upper and lower bearings which receive said pin and crank, respectively, two lubricant storage chambers arranged side by side fore and aft of the rod or circumferentially of said pin and crank and between the axes thereof, ports leading from opposite ends of each of said storage chambers to each of said bearings, and two lubricant catch

basins arranged side by side fore and aft of the rod or circumferentially of said upper bearing and above the axis thereof and each having a lubricant catch inlet in its top and a lubricant discharge outlet in its bottom leading to the upper bearing.

2,005,029
DISPENSER
Ethel A. Field, New York, N. Y.
Application August 28, 1933, Serial No. 687,085
17 Claims. (Cl. 221—60)

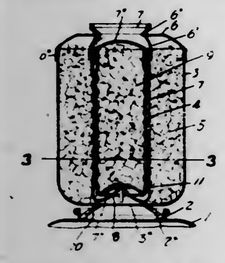


1. A dispensing device attachable to a receptacle comprising a cap member, a dispensing opening therein, a closure for said opening rotatably mounted within said cap member and insertable into said cap member through the receptacle attaching end thereof, manipulating means external to said cap member and operably connected to said closure, and means for releasably locking said closure in closed position.

2,005,030
VENEER FASTENING MEANS
Nelson O. Geisinger, Dover, Ohio
Application January 16, 1935, Serial No. 2,080
9 Claims. (Cl. 72—19)

1. In veneer wall construction, a wall, spaced strips on the wall, means attaching the strips to the wall, each strip being U-shaped in cross section and having longitudinally spaced projections, a plurality of veneering units each fitting between a pair of said projections, and there being slots in the sides of each strip in which said veneering units are received and supported in alignment with other units on the wall.

2,005,031
AIR-COOLING OF GLASS BULB RECTIFIERS
Franz Geyer, Vienna, Austria, assignor to "Elin" Aktiengesellschaft für elektrische Industrie, Vienna, Austria
Application May 14, 1930, Serial No. 452,496
In Austria August 28, 1929
13 Claims. (Cl. 250—27.5)



1 In combination with a glass bulb rectifier having a cooling head, anode arms, and a cathode, means for generating a current of air, and means for directing said current of air against the top of said cooling head and causing said current to flow along the entire outer surface of said cooling head and across said anode arms in the direction of said cathode.

2,005,032
KITCHEN UTENSIL LIFTER
Oscar Haemmerle, Union City, N. J.
Application September 28, 1934, Serial No. 745,980
2 Claims. (Cl. 294—31)

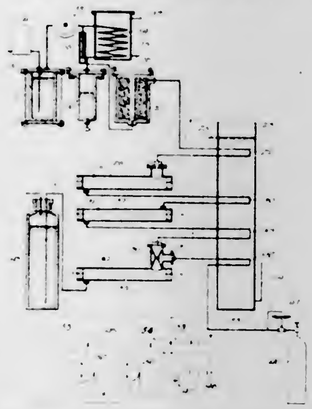
1. A device of the class described comprising an L-shaped handle member the shorter arm of which has outwardly extending portions merging into right angularly extending plates with concave-arcuate engaging edges, and a second handle member of L-shaped formation, means pivotally connecting the members at a point on the second member intermediate its longer arm and adjacent its shorter arm and at a point on the first mentioned member at the juncture of its shorter and longer arm, and a pivoted engaging element on the end of the shorter arm of said other member.

2,005,033
MILK COOLER
Edward Percival Hocking, Toronto, Ontario, Canada, assignor of one-half to Bert Grant, Toronto, Ontario, Canada
Application May 16, 1934, Serial No. 725,864
2 Claims. (Cl. 62—142)

1. A milk cooler comprising an outer annular ice chamber, a supporting flange extending around the open centre of the chamber at its lower end and adapted to fit the mouth of a milk can, a cylindrical ice chamber having a segmental spherical recess at its lower end, a spider carried by the outer chamber and extending upward at its centre into the recess to centre the lower end of the inner chamber, and spacing means between the upper end of the inner and outer chambers to permit a film of milk passing downward in contact with the walls of the inner and outer chambers to pass into a milk can when poured into the upper end of the open centre.

2,005,034
ROOF DEMONSTRATOR
Annon W. Holt, Long Beach, Calif.
Application April 30, 1931, Serial No. 534,117
6 Claims. (Cl. 35—16)

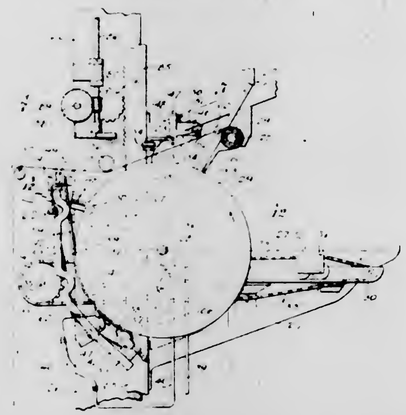
1. The combination in a roof demonstrating device of a body construction consisting of four side walls, a central post supported within said body, radial arms hinged at their inner ends to said post, pins on each arm intermediate its length and near its inner end, and roof sections each having a pair of openings so located that one of said openings will engage an intermediate pin when the section is assembled on a raised arm and the other of said openings will engage an inner pin when the section is assembled on the arm in its lowered position.



2,005,035
X-RAY APPARATUS
Jacobus Marinus Houtman, Eindhoven, Netherlands, assignor, by mesne assignments, to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands, a Dutch company
Application May 22, 1933, Serial No. 672,328
In Germany May 20, 1932
6 Claims. (Cl. 250—34)

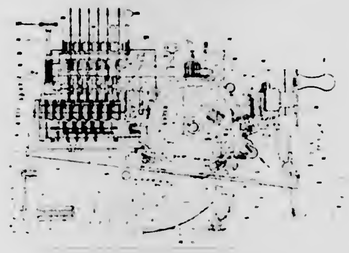
1. A device for examining a body by means of penetrative rays, comprising a source of penetrative rays and a magnet associated with said source, a receiver for said rays and a magnetizable member for said receiver, said magnet being

adapted to hold said source in fixed relation with said body on one side thereof and to hold said ray-receiver on the opposite side of said body.



2,005,036
METHOD AND APPARATUS FOR GAS ANALYSES
Alonzo H. Don Howe, Chicago, Ill.
Application February 3, 1932, Serial No. 590,725
4 Claims. (Cl. 23—232)

1. The method of testing flue gases for their oxygen content which consists in removing carbon dioxide from the gases, maintaining the gases at constant pressure and temperature, passing the gases over heated catalytic agents to cause combustion of any combustible constituent thereof with any oxygen present, determining the temperature increase in the agents caused by the combustion, adding a gaseous combustible to the gaseous residue, passing the combined mixture over the other heated catalytic agents to cause combustion of the remaining oxygen, and determining the temperature increase in said last mentioned agents caused by the latter combustion.

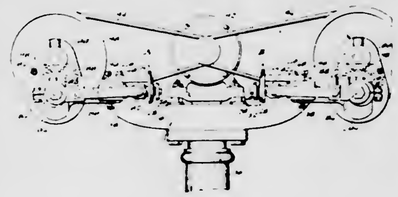


3. A continuously operating gas analyzing apparatus, in combination, a plurality of combustion tubes, a graduated orifice for admitting the gas at a constant pressure to the first of said tubes and connections for passing the gas through the remaining of the tubes, a second graduated orifice associated with the last of said tubes for admitting a combustible at a constant pressure thereto, catalytic wires located in the tubes and having connection to a Wheatstone bridge, means for heating said wires, means for maintaining the gas and combustible at a substantially constant temperature prior to the admission of the gas to the tubes, and means forming part of said bridge for measuring the change in resistance in said wires caused by the combustion in the tubes.

2,005,037
PAPER WEB CONNECTING MECHANISM FOR PRINTING PRESSES
Thomas Johancen, deceased, late of Linthicum Heights, Md., by The Fidelity Trust Company, administrator, Baltimore, Md., and John Alfred Jones, Baltimore, Md.
Application April 19, 1934, Serial No. 721,358
11 Claims. (Cl. 242—58)

3. In a paper feeding device for printing presses the combination with means for sustaining an expiring roll of paper while the latter is being fed to the press, of means for sustaining a fresh roll of paper, means for revolving the fresh roll, a device for bringing the web of the expiring roll and the periphery of the revolving fresh roll together, means revolving with the fresh roll and a solenoid-actuated device coacting with said revolving means for operating the device that brings the expiring web and the fresh roll together.

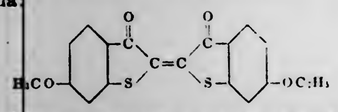
2,005,038
VALUE STAMPING DEVICE
Márton Kálmán, Budapest, Hungary, assignor to Universal Postal Frankers, Limited, London, England, a corporation of Great Britain
Application July 18, 1930, Serial No. 468,929
In Great Britain July 19, 1929
23 Claims. (Cl. 101—91)



1. In a machine of the character specified, a set of omni-value printing wheels provided with gears, a set of omni-value setting up devices including manually operable levers and gears operated by said levers, a set of laterally movable shafts extending from said gears to said value printing wheels, pinions on said shafts adapted to mesh with the lever actuated gears and other pinions on said shafts adapted to mesh with the value printing gears; means for shifting the shafts to bring the gears thereon into mesh with the value printing gears and the setting gears, whereby the value printing gears may be shifted by said levers, and means for moving said shafts to disengage the gears.

2,005,039
CIGAR PACKAGE
Morris S. Kayner, New York, N. Y.
Application November 10, 1933, Serial No. 697,486
16 Claims. (Cl. 206—44)

2. A package for cigars and the like having in combination, end sections formed of endless bands of generally elliptical configuration to encompass the cigars in the package, and connected to each other in spaced relation by longitudinally extending struts, and means extending transversely of, and entirely across one of said end sections, to provide separators for the cigars in the package.

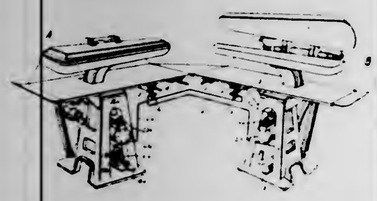


2,005,040
MACHINE FOR SLITTING COVERS ATTACHED TO HEELS
Norwood H. Knowlton, Rockport, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application March 25, 1932, Serial No. 601,096
29 Claims. (Cl. 12—42)

1. A machine of the class described having, in combination, a plurality of cutting edges, means for guiding each of the edges in a path spaced from the paths of movement of the others, a gage for positioning the projecting margin of a cover attached to a heel with respect to the paths of movement of said cutting edges, and mechanism constructed and arranged to move said cutting edges simultaneously along their respective paths thereby to slit the margin of the cover simultaneously at a plurality of places to facilitate the folding of the cover around the heel.

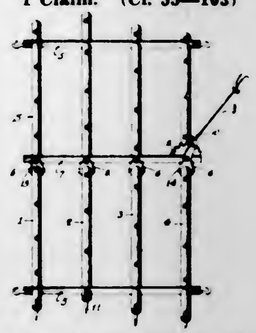
2,005,041
6-METHOXY-6'-ETHOXYTHIOINDIGO
Carl Krauss and Walter Brunner, Frankfort-on-the-Main-Fechenheim, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application August 2, 1934, Serial No. 738,138. In Germany August 25, 1933
1 Claim. (Cl. 260—53)

The 6-methoxy-6'-ethoxy-thioindigo of the formula:



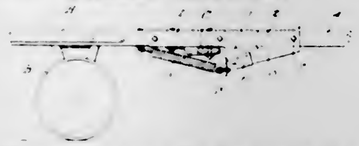
which dyestuff dissolves in concentrated sulfuric acid with a blue color and dyes vegetable fibers from a yellow vat bright reddish orange shades of a good fastness to light and boiling soap solutions.

2,005,042
PROCESS FOR THE MANUFACTURE OF COMPOUNDS OF THE ETHYLENE SERIES SUBSTITUTED BY AN AROMATIC RESIDUE
Willi Krey, Uerdingen, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application January 11, 1932, Serial No. 586,083. In Germany January 17, 1931
23 Claims. (Cl. 260—168)



1. The process which comprises heating α-chloro-ethyl-benzene with an organic acid-reacting compound containing oxygen.

2,005,043
CONTROL ARRANGEMENT FOR TANDEM OPERATION PRESSING MACHINES
Edwin A. Mall, Norwood, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application August 24, 1933, Serial No. 686,561
1 Claim. (Cl. 68—9)

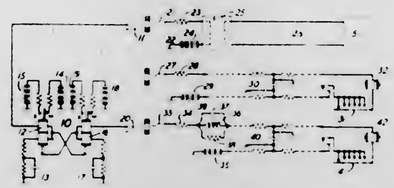


In combination, right and left hand pressing machines associated for tandem operation, each thereof including relatively movable cooperating pressing members narrowing toward one end, said machines being located at an angle to each other with the narrow ends of their pressing members closely adjacent the vertex of said angle, whereby both machines open toward and are controllable by an operator standing within the angle, power operating means for each machine, pressure-producing control means for each power means, and pressure-releasing control means for each power means, the control means for each machine being grouped and located nearer to its narrow than to its wider end, whereby an operator working adjacent the vertex of said angle can operate both groups of controls with minimum effort.

2,005,044
AGRICULTURAL IMPLEMENT
Frederick H. Muntzel, Boonville, Mo.
Refiled for abandoned application Serial No. 693,117, September 15, 1933. This application November 19, 1934, Serial No. 753,776
1 Claim. (Cl. 55—103)

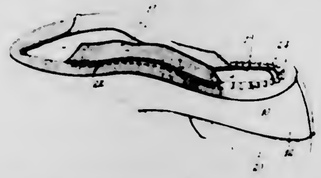
In a harrow, a plurality of bars provided with depending teeth out of trailing alinement with respect to each other, end bars through which the toothed bars are rotatably disposed, an upstanding yoke on each of the toothed bars, a connecting member to which the upper ends of the yokes are pivotally connected, one of said yokes being provided with an upstanding hand lever, said connecting member being provided with a rack, and a detent on the lever for engagement with said rack.

2,005,045
RELIEF ATTACHMENT FOR CULTIVATORS
Harry W. Nelson, Brownville, Nebr.
Application March 6, 1934, Serial No. 714,306
4 Claims. (Cl. 97—199)



1. The combination with the tongue of a cultivator or the like having a tongue truck, of a box-like extension projecting forwardly from said tongue, a draft tongue fulcrumed within and projecting forwardly from the extension, said extension being proportioned to permit downward movement of that end of the draft tongue within the extension, and a spring connecting the tongues for resisting said movement and holding them normally in alinement.

2,005,046
PRINTING APPARATUS
Edward R. Newcomb, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a corporation of Pennsylvania
Application May 19, 1933, Serial No. 671,850
9 Claims. (Cl. 101—420)

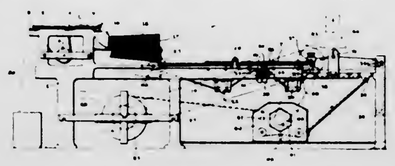


4. A printing accessory comprising a granular coated fabric in which the grain size is of the order of magnitude of .05 millimeter in diameter and in which the granular layer is approximately one grain deep while the lateral spaces between the grains are 4 grain diameters.

2,005,047
SIGNALING CIRCUIT
Harry Nyquist, Millburn, N. J., assignor to American Telephone and Telegraph Company, a corporation of New York
Application January 24, 1933, Serial No. 653,326
6 Claims. (Cl. 178—71)

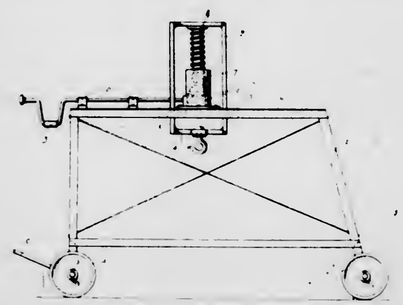
1. In a telegraph system, a plurality of subscribers' lines, a telegraph repeater having a fixed balancing network for balancing the impedance characteristics of each of said plurality of lines with which said repeater may be connected, means connected to said lines for neutralizing the capacity reactance of said lines, said means comprising an electrical network containing an inductance element.

2,005,048
SHOE AND THE MANUFACTURE THEREOF
Martin H. Randall, Beach Bluff, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application December 16, 1932, Serial No. 647,607
21 Claims. (Cl. 12—142)



1. That improvement in methods of manufacturing shoes which comprises making a shoe upper fuller than normal by a width substantially equal to the lasting allowance of the upper, assembling the shoe upper and an insole upon a last, working the upper into lasted relation to the insole and securing it thereto, and turning back the excess material and securing it by an adhesive to the lasting allowance of the upper, thereby reinforcing the marginal portion of the upper.

14. A shoe having a multi-ply upper, one of the layers of the upper being turned back and cemented to the overlasted marginal portion of the upper, thereby reinforcing the marginal portion of the upper.

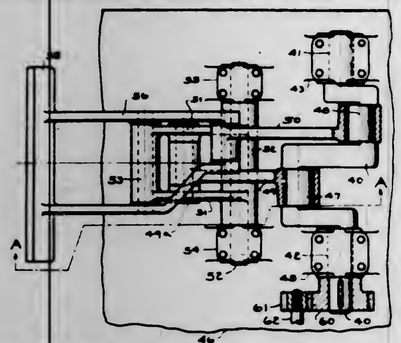


2,005,049
APPARATUS FOR MAKING IMITATION ASTRAKHAN FUR
Georges Romane, St. Mande, France
Original application April 22, 1929, Serial No. 357,089. Divided and this application February 10, 1934, Serial No. 710,705. In France June 30, 1928
4 Claims. (Cl. 154—1)

1. Apparatus for making imitation astrakhan fur, comprising means for feeding a continuous strip of backing material and a strip of previously gibboused chenille toward each other in opposite directions; means for automatically coating with adhesive material a face of the backing material during its feed movement; mechanism for automatically cutting the chenille sheet into

bits of suitable size and shape and depositing them upon the coated face of the backing strip; means for applying powder upon the said coated face of the backing strip to fill the interstices between adjacent chenille bits; and means for winding up the powdered backing strip.

2,005,050
PORTABLE HOIST
William J. Ross, Tarrant, Ala.
Application November 7, 1934, Serial No. 751,895
1 Claim. (Cl. 254—7)



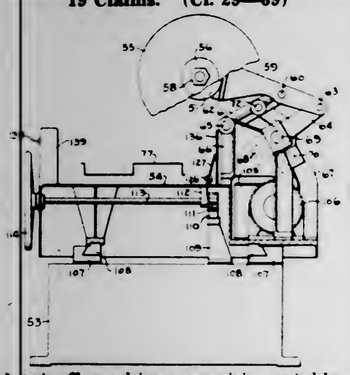
A portable hoist comprising a wheeled supporting structure including a horizontal beam, guides mounted on the sides of said beam, a vertically movable hoisting frame slidably mounted on the beam and operable in the guides, said beam extending through said hoisting frame, a screw jack mounted on the beam and rising therefrom within the hoisting frame, said screw jack being operatively connected to the hoisting frame for actuating the latter, means for connecting the hoisting frame to the work and a hand crank rotatably mounted on the beam and operatively connected to the screw jack for actuating said screw jack.

2,005,051
MECHANICAL MOVEMENT
Norbert C. Rubin, Cleveland, Ohio, assignor to The McKinney Tool and Manufacturing Company, Cleveland, Ohio, a corporation of Ohio
Application April 15, 1933, Serial No. 666,337
23 Claims. (Cl. 74—1)

1. In a linkage system, a crank shaft having cranks, means to rotate the shaft and cranks, a driven member, linkage connecting the said cranks with the said driven member operable

upon the rotation of the crank to impart motion to the driven member, the said motion having

only one position of dwell for each revolution of the crank.



2,005,052

CUT-OFF MACHINE

Norbert C. Rubin, Cleveland, Ohio, assignor to The McKinney Tool and Manufacturing Company, Cleveland, Ohio, a corporation of Ohio

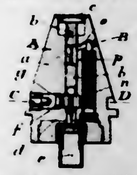
Application May 27, 1933, Serial No. 673,133

19 Claims. (Cl. 29—69)

1. A cut-off machine comprising a table, a cutting element movably mounted thereon, means to move the element in one transverse direction across the table while in operating relation thereto and to return the element through a reverse transverse direction in an elevated position, the said means comprising a crankshaft having a plurality of differently related cranks, and linkage connecting the cranks with the cutting element.

2,005,053

FUSE FOR PROJECTILES AND PARTICULARLY FOR SMALL CALIBER HIGH EXPLOSIVE PROJECTILES



Valentin Schläfer, Sommerda, Germany, assignor to Rheinische Metallwaaren- und Maschinenfabrik, Duesseldorf-Derendorf, Germany, a corporation of Germany

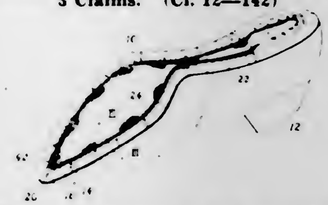
Application December 26, 1933, Serial No. 704,022

In Germany July 13, 1932

3 Claims. (Cl. 102—37)

1. In a time and percussion fuse for projectiles, a detonating pin consisting at least partially of explosive material, a percussion member cooperating with said pin, means preventing actuation of the detonating pin by the percussion member, means for releasing the detonating pin from the preventing means at a predetermined in-

terval after firing the projectile, and means for igniting the explosive material of the detonating pin at an interval after firing the projectile greater than said first mentioned interval.



2,005,054

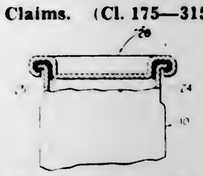
METHOD OF MANUFACTURING SHOES

John K. Smith, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey

Application November 14, 1931, Serial No. 574,954

3 Claims. (Cl. 12—142)

1. That improvement in the manufacture of welted shoes having cement-attached soles which comprises separating the portion of the welt outside of the inseam from the shoe upper at the forepart of the shoe before the outsole is attached but letting the welt at the shank portion of the shoe lie against the shoe upper in substantially the position in which it is left by the welting operation, rolling the inseam and the adjacent stock in such a manner as to tend to force the welt against the shoe upper at the shank but to flatten the inseam at the forepart without forcing the outer marginal portion of the welt against the shoe upper, and cement attaching an outsole to the shoe.



2,005,055

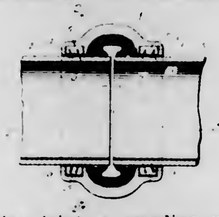
ELECTROLYTIC DEVICE

Robert C. Sprague and John F. McCann, Williamstown, Mass., assignors to Sprague Specialties Company, North Adams, Mass., a corporation of Massachusetts

Original application April 22, 1932, Serial No. 606,943, now Patent No. 1,997,185, dated April 9, 1935. Divided and this application May 8, 1934, Serial No. 724,592. In Canada September 19, 1932

2 Claims. (Cl. 175—315)

1. An electrolytic condenser comprising a metallic container open at one end, a film-forming electrode in said container, and a liquid electrolyte in said container in which gases are developed during the operation of the condenser, a cap member for the closure of said open end of the condenser, and a finely meshed cloth washer impregnated with wax between said cap and said container, said washer permitting the escape of the gases, but being impermeable for the liquid electrolyte.



2,005,056

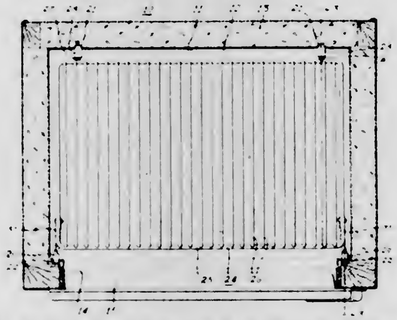
PIPE COUPLING

Joseph F. Stephens, Kansas City, Mo., assignor to Gustin-Bacon Manufacturing Co., Kansas City, Mo., a corporation of Missouri

Application May 26, 1934, Serial No. 727,596

6 Claims. (Cl. 285—194)

1. In a pipe joint, a coupling member constructed to receive the end of a pipe member, and a gripping element of circular section rotatably confined between said members and having its circular surface in positive bearing upon both; said gripping element having upon its said surface means through which it interengages with at least one of said members, positioned to translate a force in the direction of the axis of the joint into a rotation of the circular surface in contact with both members, thereby rendering said gripping element sluggishly rotatable in response to said force.



2,005,057

REFRIGERATING APPARATUS

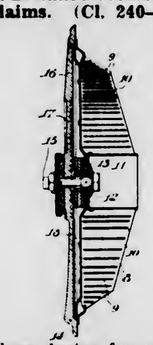
Otto M. Summers, Dayton, Ohio, assignor to General Motors Corporation, Dayton, Ohio, a corporation of Delaware

Application January 19, 1934, Serial No. 707,299

5 Claims. (Cl. 211—153)

1. A shelf for a refrigerator cabinet comprising, opposed supporting portions on said shelf adapted to fit against opposed walls of a compartment in the cabinet, certain of said supporting portions being pivotally secured to said shelf and forming a toggle device, said toggle device being so constructed and arranged that when in substantially horizontal alignment with the shelf the opposed shelf supporting portions are adapted to tightly engage the opposed walls of the compartment to firmly hold the shelf in position therein and when moved out of said substantially horizontal alignment with the shelf certain of said shelf supporting portions will be released from the compartment walls to permit free movement of the shelf relative to the walls, and certain of said shelf supporting portions being adjustable horizontally relative to said shelf.

2,005,058



HEAD LAMPS INCORPORATING GLARE-PREVENTING DEVICES

Stanley Edward Talbot, London, England

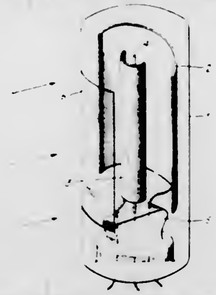
Application November 22, 1933, Serial No. 699,157

In Great Britain November 26, 1932

3 Claims. (Cl. 240—48.4)

1. An anti-glare device for vehicle headlamps comprising in combination a beam-constricting device composed of a plurality of concentrically disposed circular rings for dividing the beam into a number of sections and a front glass positioned in front of and adjacent the said constricting device, said glass being formed with a horizontally disposed medial area which is formed at one side of the vertical center of the glass with a horizontally concave depression to effect spreading of the rays and on the other side of the said center with vertically disposed prisms of wedge-section having their thicker portions innermost to project the beam sections towards the axis of the lamp, and with top and bottom areas which are ribbed and forwardly inclined in the downward direction to effect downward deflection and lateral spreading of the rays which pass through said upper and lower areas.

2,005,059



LIGHT SENSITIVE APPARATUS

William Francis Tedham, London, England, assignor to Electric and Musical Industries Limited, Hayes, England, a company of Great Britain

Application October 27, 1933, Serial No. 695,381

In Great Britain November 11, 1932

5 Claims. (Cl. 250—27.5)

1. A photo-electric device comprising a primary cathode adapted to emit electrons when

subjected to illumination, a secondary cathode adapted to emit secondary electrons when electrons from the primary cathode impinge thereon, and an anode disposed between said primary and secondary cathodes, both of said cathodes being curved and mounted with their concave sides directed toward each other and towards the anode.

2,005,060

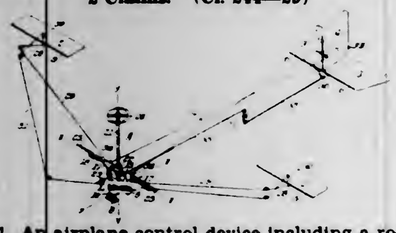
SHELLAC SOLUTION FOR THE PRODUCTION OF ETCHED PHOTOGRAPHIC PRINTING FORMS AND METHOD OF PREPARING IT

Max Taimann, Cologne-Braunsfeld, Germany, assignor to firm Dr. Bekk & Kaulen Chemische Fabrik G. m. b. H., Leevenich, near Cologne, Germany

No Drawing. Application February 24, 1933, Serial No. 658,431. In Germany March 19, 1931

3 Claims. (Cl. 95—7)

1. A method for preparing a shellac solution to be employed for the production of etched photographic printing forms, consisting in that shellac is dissolved by means of a non-volatile water soluble alkaline substance of the class consisting of the hydroxides and carbonates of the alkali metals, and that the shellac solution thus obtained then is sensitized by a water soluble chromate of a non-volatile alkali.



2,005,061

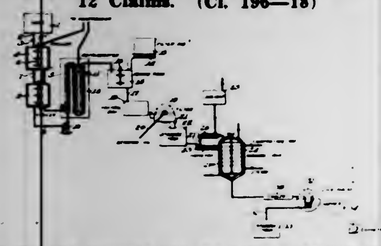
AIRPLANE CONTROL

Frank W. Thomas, Lincoln Place, Pa.

Application July 27, 1932, Serial No. 624,997

2 Claims. (Cl. 244—29)

1. An airplane control device including a rockable shaft, a yoke member secured to said shaft and rotatable about an axis at right angles to the axis of said shaft, said yoke member having spaced-apart bearings, a transverse shaft in said bearings, a control stick for said transverse shaft, a control arm in alinement and movable with said stick, and a pair of foot treadles secured to said transverse shaft.



2,005,062

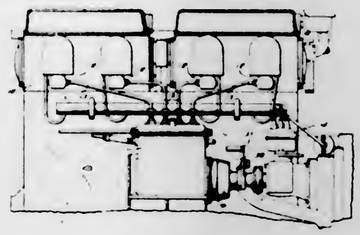
METHOD OF DEWAXING OILS

James W. Weir, Los Angeles, Calif., assignor, by mesne assignments, to The Texas Company, New York, N. Y., a corporation of Delaware

Application July 26, 1928, Serial No. 295,464

12 Claims. (Cl. 196—18)

7. In the removal of wax from wax-containing oil the improvement that comprises chilling the oil, then mixing the same while chilled with a filter-aid material, and filtering the wax and filter-aid material from the oil.



2,005,063

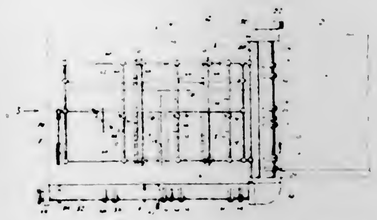
METHOD OF OPERATING INTERNAL COMBUSTION ENGINES

Julius E. Wild and Hans Hogeman, Springfield, and Wolfgang E. Schwarzmann, Longmeadow, Mass., assignors to United American Bosch Corporation, Springfield, Mass., a corporation of New York

Application March 13, 1934, Serial No. 715,258

4 Claims. (Cl. 123—139)

1. The method of operating an internal combustion engine of the type in which fuel is injected into the working cylinder and ignited by an electric spark, which consists in injecting the fuel during the compression stroke for initial operation, and advancing said injection to occur during the suction stroke after initial operation has been effected.



2,005,064

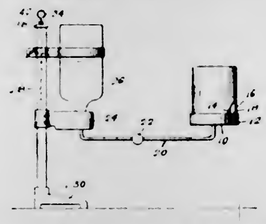
BLANK CUTTING AND CREASING MACHINE

Linwood Wismer, Audubon, N. J., assignor to Louis Wolf, Howard A. Wolf, and Elias Wolf, copartners doing business as National Metal Edge Box Company, Philadelphia, Pa.

Application January 5, 1932, Serial No. 584,762

7 Claims. (Cl. 164—62)

7. A blank cutting and creasing machine including a table, means for cutting into sections blanks fed towards the table, means for cutting the sections so formed when moved at an angle to their original movement, means for so moving the sections in succession from the table, said last means including a pusher having a range of movement sufficient to introduce the last trailing section to the second cutting means, means for preventing movements of sections overlying the pusher during retracting movements of the pusher, and means acting at certain times for preventing introduction of a blank to the first named cutting means but permitting the feeding of a blank to the first mentioned cutting means during the retracting movements of the pusher.



2,005,065

IGNITING DEVICE FOR OIL BURNERS

Ivan V. Abadjieff, Auburn, Mass., assignor to Leland-Gifford Company, Worcester, Mass., a corporation of Massachusetts

Application August 13, 1932, Serial No. 628,708

3 Claims. (Cl. 158—10)

1. An igniting device for oil burners comprising a long slender rod having a handle at the upper end and a porous mass at the lower end, and a snuffing device for the flame of said porous mass, said device being freely slidable on said rod and retained against detachment therefrom at one end by said handle and at the other end by said mass and having means providing a recess which is adapted to enclose and closely confine said mass and extinguish the flame thereof, the length of said rod between said handle and said mass being much greater than that of said snuffing device.

2,005,066

OIL SUPPLY APPARATUS FOR OIL BURNERS

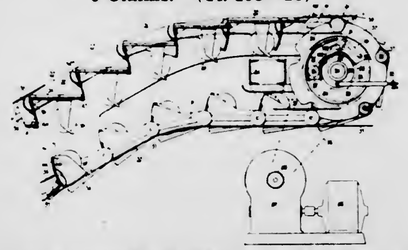
Ivan V. Abadjieff, Auburn, Mass., assignor to Leland-Gifford Company, Worcester, Mass., a corporation of Massachusetts

Application December 9, 1932, Serial No. 646,426

2 Claims. (Cl. 158—40)

1. An oil supply for range type oil burners comprising a constant level oil reservoir, a supporting standard therefor, an inverted bottle having its neck seated upon and opening into said reservoir, a tube carried by said reservoir and extended upwardly thereabove alongside said bottle and having its lower end open to the interior of said reservoir, a bottle supporting device carried by said tube and engaged with said bottle, and an igniting device located removably within said tube and having it lower end immersed in the oil in said reservoir.

2,005,067



MOVING STAIRWAY

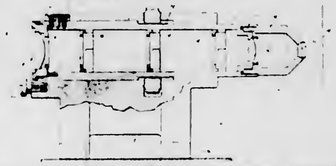
William Sebastian Graff-Baker, Kensington, London, England, assignor to Otis Elevator Company, New York, N. Y., a corporation of New Jersey

Application July 6, 1934, Serial No. 733,975

In Great Britain July 10, 1933

9 Claims. (Cl. 198—16)

1. In a moving stairway; an endless series of movable step units each having a step tread pivoted at its nose to the corresponding step unit; and means for maintaining the step tread of each step unit horizontal while such step unit is traversing the working run of the stairway.



2,005,068

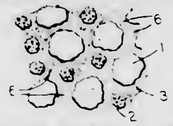
SOUND REPRODUCING APPARATUS

Max Carter Batsel, Yonkers, N. Y., assignor to Radio Corporation of America, a corporation of Delaware

Application June 15, 1931, Serial No. 544,439

6 Claims. (Cl. 88—24)

1. A mounting for optical systems including means forming a linear image in predetermined orientation relative to the body of the optical system for film-type phonographic apparatus including a center-plate, comprising a base member having a surface adapted to contact with the center-plate and thereby maintain the base member accurately parallel to the plane of the axis of the film and co-operating fixed means on said base and said optical system for maintaining an optical system of circular cross-section in predetermined oriented relation to the said base member.

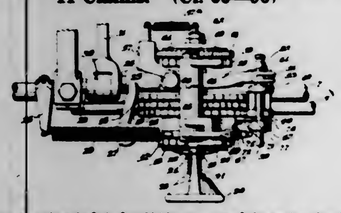


2,005,069

ACOUSTICAL PLASTER OR TILE AND METHOD OF MAKING THE SAME

Napoleon M. Bernier, Cambridge, Mass.

Application April 28, 1932, Serial No. 608,039



4 Claims. (Cl. 106—24)

1. The method of making a sound-absorbing material for walls which consists in forming a cementitious mixture in which is incorporated gran-

ules of pumice and cork in proportions of approximately three to one, causing the generation of gas within the mixture thereby to produce voids and producing a chemical reaction on the cementitious substance which destroys a portion thereof and thereby produces additional voids.

2,005,070
LACE ATTACHMENT FOR FULL FASHIONED KNITTING MACHINES
Gottlob Ritzer, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application May 4, 1933, Serial No. 669,290
11 Claims. (Cl. 66—96)

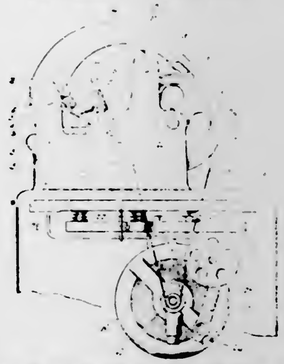
3. In a straight knitting machine including a series of needles, a point bar arranged to dip toward the needles, a unitary pattern control mechanism including an axle supporting a series of pattern cams capable of unitary movement, a normally inactive control cam, also supported by said axle, each said control cam and pattern cams capable of movement relative to each other, and separate racks operating said pattern cams and said control cam, and deriving their actuating motion from the same source.

2,005,071
SHOE
Frederick P. Wagner, St. Louis, Mo., assignor of one-half to Arthur J. Brauer, St. Louis, Mo.
Application March 3, 1934, Serial No. 713,785
7 Claims. (Cl. 36—45)

2. A shoe of the kind described having an exterior upper portion continuing about the throat, a part of said upper portion being folded under and formed to yield at the fold, and means cooperating with said yielding portion arranged to retract the same lengthwise of the fold.

2,005,072
BREATHING MASK
Leo Y. Booharin, San Francisco, Calif., assignor of one-third to William H. Lea and one-third to Bertram Werner
Application October 15, 1934, Serial No. 748,335
16 Claims. (Cl. 128—141)

1. In a breathing mask provided with a body portion adapted to fit over the nose and mouth of the wearer, said body portion having an air intake and an exhaust tube, said air intake including a disk valve adapted to open upon inhalations of the wearer and to close upon exhalations, and a strip of moisture-absorbent ma-

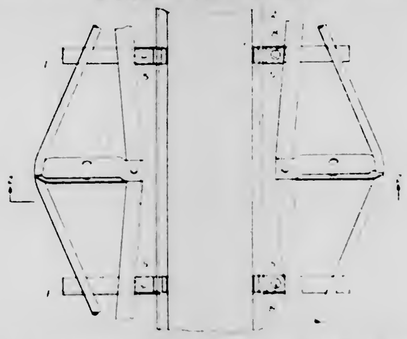


terial extending from a point adjacent the disk of the disk valve and into the exhaust tube for draining moisture into the exhaust tube.

2,005,073
SHOWER BATH SPRAY HEAD
Robert C. Boyd, Louisville, Ky., assignor to Standard Sanitary Manufacturing Company, a corporation of New Jersey
Application June 30, 1934, Serial No. 733,253
11 Claims. (Cl. 299—144)

1. A shower bath spray head comprising a shell or casing having a water inlet and an elongated rectangular water outlet, a flow obstructing member mounted for oscillation within said casing over the outlet and provided with two rows of jet forming grooves.

2,005,074
PHONOGRAPH
Thomas C. Brown, San Francisco, Calif., assignor to Thomas A. Edison, Incorporated, West Orange, N. J., a corporation of New Jersey
Application July 12, 1932, Serial No. 622,054
13 Claims. (Cl. 274—21)



9. In a phonograph having motive means for driving the same and a mandrel, a feed screw and a sound box carriage all operable by said motive means, back-spacing means for said carriage, means independent of said motive means and comprising an electro-magnet for operating said back-spacing means, a control switch in the circuit of said electro-magnet, and a switching device comprising a member operable by said motive means to make and break said circuit intermittently.

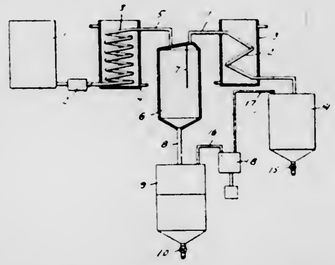
2,005,075
LAMINATED GLASS AND PROCESS OF MAKING THE SAME
Brook J. Dennison, Tarentum, Pa., assignor to Duplate Corporation, Allegheny County, Pa., a corporation of Delaware
Application August 18, 1934, Serial No. 740,450
11 Claims. (Cl. 49—81)

1. A method of compositing a sheet of cellulose nitrate plastic and a glass sheet which consists in coating the face of the glass sheet with a cement comprising a water soluble plasticizer of the plastic, a water soluble silicate and water, assembling the sheets and applying heat and pressure.

2,005,076
RAILWAY BRAKE BEAM SUPPORT
Harold C. Dixon, Chicago, Ill., assignor to Pressed Steel Car Company, Pittsburgh, Pa., a corporation of New Jersey
Application January 12, 1932, Serial No. 586,126
1 Claim. (Cl. 188—210)

In a railway car truck a spring plank, a brake beam safety support beneath said spring plank, oppositely disposed angular members mounted on said safety support and aligned slots in said spring plank for receiving said angular members, one of said members being rigidly secured to said support and the other being movably mounted to permit attachment of said safety support.

2,005,077
COAL TAR OIL AND PITCH
John V. E. Dickson, Yonkers, N. Y., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application June 12, 1931, Serial No. 543,777
10 Claims. (Cl. 196—149)



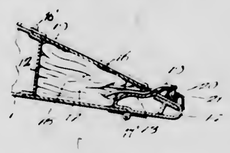
1. Coal tar oils comprising distillate obtained by the distillation of high temperature tar to pitch while minimizing decomposition of pitch and conducting the distillation to obtain a percentage oil yield by volume which bears the relationship to the average melting point of the resultant pitch, in degrees Fahrenheit, such that x is equal to not less than approximately

$$87-\frac{128}{2^{\frac{y}{100}}}$$

and not more than approximately

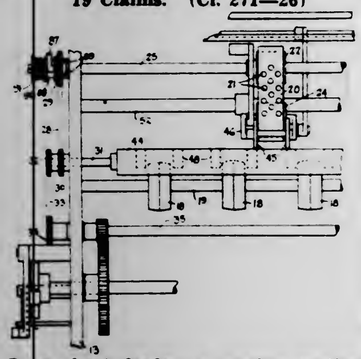
$$90-\frac{128}{2^{\frac{y}{100}}}$$

in which x equals the oil yield in percent by volume and y equals the meltinig point of the pitch in degrees Fahrenheit.



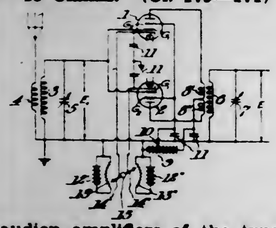
7. Coal tar pitch obtained as a residue of the distillation of high temperature coal tar resulting in the production of a percentage oil yield by volume which bears such relationship to the melting point of the resultant pitch, expressed in degrees Fahrenheit, that x is equal to not less than

$$87-\frac{128}{2^{\frac{y}{100}}}$$



in which x equals the oil yield in percentage by volume and y equals the melting point of the pitch in degrees Fahrenheit and the oil yield is not more than 80 per cent by weight of the tar distilled.

2,005,078
AEROPLANE
Harry A. Douglas, Bronson, Mich.
Application March 5, 1930, Serial No. 433,308
Renewed December 2, 1931
3 Claims. (Cl. 244—21)

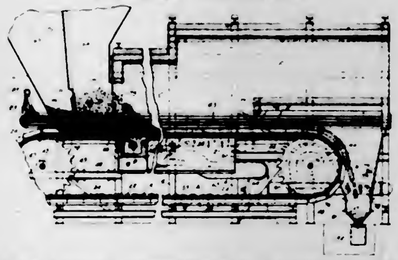


1. In combination with an aeroplane; a parachute attached thereto for checking its descent; a plurality of air chute defining members pivotally mounted on said aeroplane for releasably confining said parachute in a deflated condition; linkage mechanism for shifting said chute defining members in unison to an acute angle to the planing surface of said aeroplane to cause air to discharge said parachute from said air chute in a rearward direction; said linkage mechanism embodying a toggle connection for preventing the accidental operation of said mechanism.

2,005,079
SHEET FEEDER
Harry Ehlig, Pearl River, N. Y., assignor to Dexter Folder Company, New York, N. Y., a corporation of New York (1934)
Original application September 13, 1928, Serial No. 305,643. Patent No. 1,829,984, November 3, 1931. Divided and this application July 14, 1931, Serial No. 550,673
19 Claims. (Cl. 271—26)

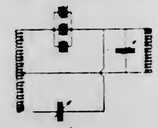
1. In a sheet feeder, a moving suction feed belt for separating and feeding sheets from a supply thereof, said belt having perforations therein formed in groups extending longitudinally of the belt and spaced apart lengthwise thereof to provide imperforate longitudinally extending belt portions that close the source of suction to atmosphere at predetermined intervals and thereby intermit the separation and feeding of said sheets, each group of perforations serving with the belt to separate and feed a single sheet from said supply during one cycle of operation of the belt and each group including a plurality of perforations extending lengthwise of said belt and acting one after another therewith on the single sheet.

2,005,080
AUDION AMPLIFIER
Paul O. Farnham and Raymond Asserson, Boonton, N. J., assignors, by mesne assignments, to Radio Corporation of America, New York, N. Y., a corporation of Delaware
Application October 3, 1929, Serial No. 397,123
13 Claims. (Cl. 179—171)



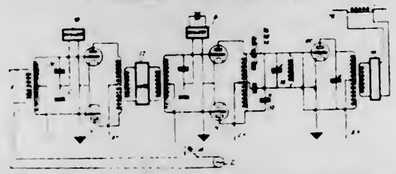
1. In audion amplifiers of the type in which distortion occurs at low amplification and in which means are provided for controlling over a wide range the amplitude of pulsations in the output circuit resulting from pulsations impressed upon the input circuit of the amplifiers, means for effecting linear amplication throughout the controlling range, which comprises means for impressing the signal energy across the input terminals of a pair of audions, means for adjusting the energizing potentials upon the respective audions to effect non-linear amplification at different rates, and means for delivering the amplified outputs from said audions to a common output circuit in phase opposing relation.

2,005,081
FISHING ROD
Bruce O. Gephart, Chicago, Ill.
Application September 8, 1934, Serial No. 743,228
7 Claims. (Cl. 43—23)



1. A guard ferrule for fishing rods in which the rod is detachably secured to the handle, said ferrule telescoping with the end of the handle and extending beyond the extremity of the handle for a substantial distance and secured to the rod at a point remote from said extremity, said ferrule being detachable from the handle with the rod section, and interlocking means between the ferrule and the handle for releasably securing them together.

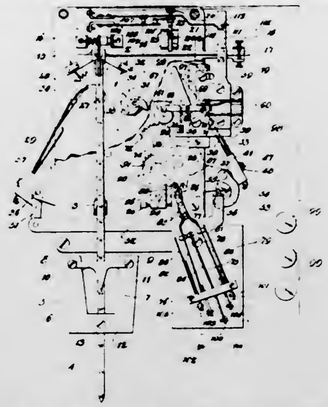
2,005,082
INCINERATOR FURNACE
John E. Greenawalt, New York, N. Y.
Application June 17, 1931, Serial No. 544,973
4 Claims. (Cl. 110—8)



3. A furnace comprising a stationary section and a traveling section subjacent thereto, said stationary section enclosing a combustion chamber, said traveling section comprising a movable grate having side walls collectively forming the lower part of the furnace walls, driving means and supporting means outside the furnace walls for moving said grate through the combustion chamber, means for feeding material onto the grate at one end of the combustion chamber, means for dumping the grate at the opposite end of the combustion chamber, a stationary igniter beneath said grate near the inlet end of the combustion chamber and means for causing a supporter of combustion to traverse the grate and material thereon.

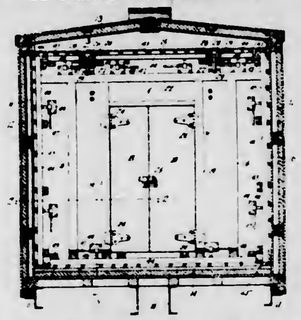
2,005,083
FILTER
Clarence W. Hansell, Rocky Point, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Application July 7, 1927, Serial No. 203,901
10 Claims. (Cl. 178—44)

1. A band pass filter comprising, a plurality of piezo-electric crystals electrically connected in parallel and having different adjacent resonance frequencies, and means for neutralizing the inter-electrode capacity of the crystals.



2,005,084
TRANSMISSION SYSTEM
Clarence W. Hansell, Port Jefferson, N. Y., assignor to Radio Corporation of America, a corporation of Delaware
Original application July 20, 1927, Serial No. 207,114. Divided and this application March 9, 1932, Serial No. 597,754. In Germany June 18, 1928.
3 Claims. (Cl. 178—44)

2. A communication system for transmitting keyed modulated energy having, in combination, a pair of push-pull connected electron discharge devices for combining oscillations of different frequencies and whose corresponding anode electrodes are connected together by an inductance coil, said coil comprising the input of a balanced bridge circuit, one leg of which comprises a piezo-electric filter, a second leg of which comprises a variable condenser adjacent said piezo-electric filter, and the other two legs of which constitute said inductance coil, and an output circuit connected between the midpoint of said inductance coil and the junction of said piezo-electric filter and variable condenser, whereby said filter enables the passage of selected energy for utilization by said system.

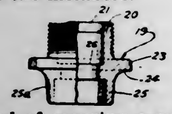


2,005,085
TIME CONTROLLED SWITCH
Paul Hungerbühler, Zug, Switzerland, assignor to Landis & Gyr, A. G., a corporation of Switzerland
Application December 5, 1930, Serial No. 500,326
In Switzerland December 17, 1929
9 Claims. (Cl. 200—30)

1. A switching mechanism including in combination a pair of levers, one of said levers being provided with a fixed pivot, the second lever being medianly pivoted on the first with their ends in substantial alinement, an actuating cam, means for normally pressing one end of the levers

against the cam, and a switch operated by the free end of the second lever.

2,005,086
MOVABLE PARTITION FOR VEHICLES
Les Jones, Peoria, Ill., assignor to Premier-Pabst Corporation, Chicago, Ill., a corporation of Delaware
Application July 21, 1934, Serial No. 736,360
11 Claims. (Cl. 105—376)

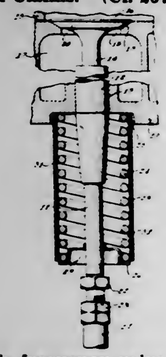


1. In a refrigerator car, a rigid transverse wall partition bodily adjustable lengthwise of the car, said partition being of only slightly lesser overall height and width than the inside height and width of the car; means for fixedly retaining the partition in adjusted position, said partition having a door embodied therein of sufficient size to provide access of a workman to both sides of the partition while the latter is retained in any adjusted position thereof within the car.

2,005,087
METHOD AND MEANS OF SECURING SPUDS AND SIMILAR FITTINGS IN RANGE BOILERS AND OTHER VESSELS, PIPES, ETC.
Henry W. Kamack, Waterbury, Conn., assignor to The American Brass Company, Waterbury, Conn., a corporation of Connecticut
Application April 30, 1932, Serial No. 608,442
13 Claims. (Cl. 29—148.2)

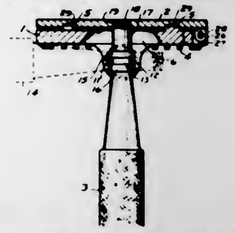
2. In combination, a body including a wall having an opening therethrough, an inturned flange member about said opening, a backing member embracing the flange, a spud including a hollow neck extending through said opening, the inner end portion of said neck tapering outwardly to overlie the end of one of said members and provide a tapered outer wall on the neck to secure

the spud in the opening, and solder sealing the surfaces between the members.



10. The method of securing a spud in a body having a wall, comprising forming an opening in a wall of the body, drawing a flange about said opening at the inner side of the wall, disposing a backing-up member at the inner side of said wall and about said flange, passing the neck of a spud through said opening and flange, expanding the inner end portion of the neck to a diameter greater than the diameter of the inner end portion of the flange, and providing an inclined outer wall on said neck portion engaging the flange to retain the spud in the opening.

2,005,088
DOLL
Abraham M. Katz, Brooklyn, N. Y., assignor to Ideal Novelty & Toy Co., Brooklyn, N. Y., a corporation of New York
Application January 9, 1933, Serial No. 650,751
8 Claims. (Cl. 46—40)



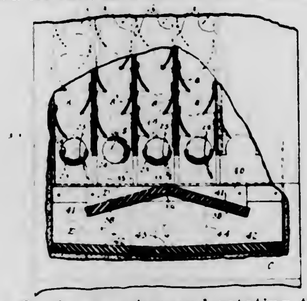
1. A doll's head made of bendable rubber, said head having a rigid reinforcement which is located at the interior of the front wall of said head, said reinforcement having an open part between which the eyes of the head are located, said reinforcement having side means which are vulcanized to the side walls of the head and which are at least partially imbedded in said side walls of the head.

2,005,089
VALVE SPRING
Henry Krebs, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application December 31, 1932, Serial No. 649,697
11 Claims. (Cl. 267—1)

1. In a high frequency valve operating structure, the combination with a coil spring for normally seating a valve, of resilient means restraining surge movements of the several coils of the spring relatively in high frequency operation.

2,005,090
ONE PIECE FOLDING RAZOR
Adolf W. Krieger, Brooklyn, N. Y.
Application March 6, 1934, Serial No. 714,281
7 Claims. (Cl. 30—12)

1. A safety razor of the one-piece type in which one end of the guard is hinged to one end of the comb, having a handle, said handle being adapted to hold securely together said guard and comb pieces with the blade between them, said comb having projections from the lower side thereof, said projections having bushings therein, said bushings being adapted to turn therein and having pins adapted to co-operate with a groove in the shank of said handle, said pins and groove forming a semi-universal joint allowing the handle to be rotated about its axis and also in a plane perpendicular to the comb, said comb having a slot adapted to permit said handle to rotate in a plane perpendicular to said comb when said handle is released from the guard plate.

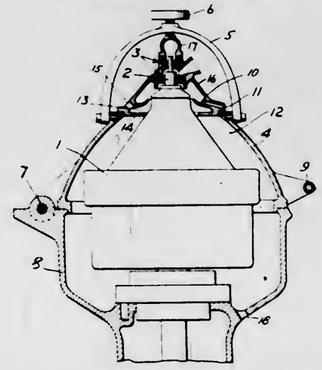


2,005,091
BOTTLE CAP AND SPREADING DEVICE
Walter E. Kuenstler, Grantwood, N. J.
Application April 7, 1934, Serial No. 719,455
4 Claims. (Cl. 91—67.3)

1. A device of the class described comprising, a bottle cap, an integral tubular downward extension thereon forming a spreader, both the cap and spreader being made of hard rubber, and a soft rubber bulb integrally formed on the cap and extending upwardly therefrom and communicating with the spreader.

2,005,092
BOTTLE DISPENSING DEVICE
Anthony Kuhn and Charles H. Heitman, New York, N. Y.; said Heitman assignor to Andrew D. Reid, Weehawken, N. J.
Application August 31, 1932, Serial No. 631,129
5 Claims. (Cl. 312—36)

3. In combination, means forming an upright passage chamber for bottles and the like, said chamber having its opposite sides respectively formed with staggered series of guide projections having upper soft highly frictional cushioned frictional guide faces respectively; each guide face engaging a bottle rolling down said face, to give it a spinning movement to project it to the opposite side of the chamber with the advance face of the bottle moving downwardly relative to its following face, and adapted while thus moving, to engage the next lower guide face on the opposite side of the chamber; the downward movement of said advance face, when it engages said next lower face tending to raise the bottle to retard its fall, said next lower face then fric-



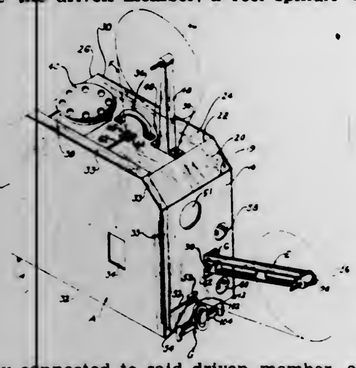
tionally firmly engaging and rotating the bottle in the opposite direction and again projecting it; the frictional quality of the face giving to the face enough frictional hold on the bottle, to give high speed rotation to the bottle as it leaves one face; said high speed rotation and the frictional hold of said next lower face being sufficient to cause a pause in the bottle when received, thereby to temporarily nullify and therefore retard the downward movement of the bottle, whereby breakage is prevented no matter how far a bottle may fall upon another in said space.

2,005,093
KNITTED FABRIC
Karl Richard Lieberknecht, Oberlungwitz, Germany, assignor to Kalio Inc., New York, N. Y., a corporation of New York
Application November 29, 1932, Serial No. 644,784
In Germany October 3, 1932
4 Claims. (Cl. 66—169)

2. A run resisting knitted fabric consisting of a course in which alternate loops are very short and intervening loops are very elongated, a second course composed of short alternate loops linked to short alternate loops of the first course and tightly held thereby and of elongated intervening loops, a third course composed of very elongated alternate loops linked to the short alternate loops of the second course and tightly held thereon, the intervening loops being floated between the elongated alternate loops, a fourth course composed of elongated alternate loops and short intervening loops linked to the elongated intervening loops of the first and second courses, a fifth course composed of very elongated intervening loops linked to the short intervening loops of the fourth course and tightly held thereon, the alternate loops being floated between the intervening elongated loops, a sixth course composed of short alternate loops linked to the elongated alternate loops of the third and fourth courses and elongated intervening loops, the short alternate loops being linked to very elongated alternate loops of the seventh course to begin a new similar series of courses.

2,005,094
CENTRIFUGAL SEPARATOR
Hans Olof Lindgren, Appelviken, Sweden, assignor to The De Laval Separator Company, New York, N. Y., a corporation of New Jersey
Application January 20, 1933, Serial No. 652,745
In Sweden January 25, 1932
7 Claims. (Cl. 233—46)

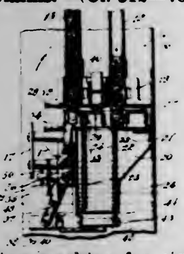
6. In a centrifuge of the "closed" type, the combination with a bowl and its neck, a packing box engageable with the bowl neck and subject to leakage and an enclosure for the bowl, of a leak collecting trough, liable to be heated by conduction from the bowl neck, spaced from it and completely surrounding it below the packing box and provided with a liquid outlet and means providing for a flow of cooling air in contact with the bottom of said trough.



2,005,095
PROCESS OF MAKING JELLY
Gordon MacLean, Flushing, N. Y.
No Drawing. Application November 26, 1932, Serial No. 644,489
3 Claims. (Cl. 99—11)

1. The process of making jelly from fruit or the like without the addition of extraneous pectin which comprises forming a pulp of said fruit, subjecting said fruit to a violent mechanical agitation to disrupt the cellular particles of the pulp and separate them into finer particles so as to render available the pectin present in the original fruit material and to thoroughly mix it with the natural acids contained in the fruit juices, adding sugar to the material at a temperature sufficient to dissolve it, and allowing the mixture to set and form a jelly.

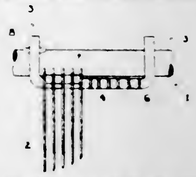
2,005,096
REEL ARM FOR MOTION PICTURE PROJECTORS
Philip S. Malickson, Bala, Pa.
Application September 29, 1934, Serial No. 746,088
14 Claims. (Cl. 242—55)



14. A take-up reel support for a motion picture projector comprising a demountable support arm; means at each end of said support adapted to be rotated, said means comprising a driving member and a driven member, means between

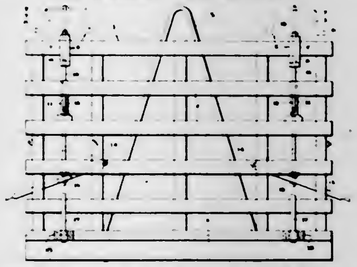
said driving member and said driven member whereby the rotation of the driving member will rotate the driven member, a reel spindle oper-

atively connected to said driven member, all of said means being retained in the same position irrespective of whether the arm is mounted or demounted.



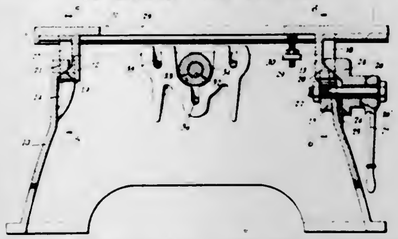
2,005,097
VENDING MACHINE
Samuel M. Malkin, Newark, N. J., assignor to Malkin-Illion Corporation, Newark, N. J., a corporation of New Jersey
Application June 17, 1933, Serial No. 676,299
6 Claims. (Cl. 312—78)

4. In a vending machine for cigars, said machine being adapted to support a forward column and a rear column of horizontally positioned cigars, an ejecting device comprising a plate with a transverse slot therein, a forward cross-member and a rear cross-member spaced therefrom, means to connect said cross-members so that they move in unison, a freely movable cross-member positioned between the first mentioned cross-members, said cross-members being slidable on the plate and having downturned flanges, each of said flanges having a pair of spaced vertical ribs, means to move the forward and rear cross-members rearwardly and backwardly on the plate, movement of said cross-members allowing a cigar to fall from the rear column and be ejected through the slot in the plate, at the same time preventing movement of the cigars in the forward column.



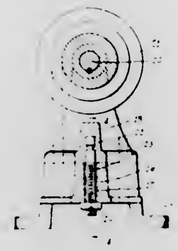
2,005,098
VARIABLE CONDENSER
Carl August Mayer, Springfield, Mass., assignor to United American Bosch Corporation, Springfield, Mass., a corporation of New York
Application July 6, 1933, Serial No. 679,151
1 Claim. (Cl. 175—41.5)

A condenser comprising a supporting member, a rigid yoke thereon, the base of said yoke being parallel to said member and having slots in its opposite edges, conductor plates having recesses, the edges of which are received in said slots, the



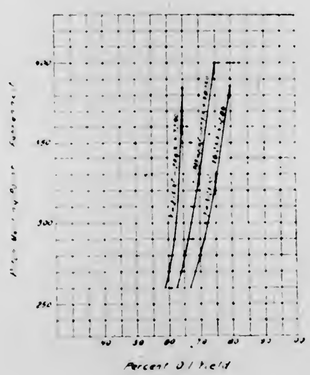
portions of the base of the yoke between the slots being bent so that the plates are rigidly secured to the yoke.

2,005,099
GLASS RACK
John D. McLeod, Oakmont, Pa., assignor to Pittsburgh Plate Glass Company, a corporation of Pennsylvania
Application July 7, 1933, Serial No. 679,374
4 Claims. (Cl. 49—14)



1. The combination with a glass rack, of a member of U-shape adapted to engage glass upon both sides of the rack simultaneously and a cam mechanism to support the member whereby it may be raised and rotated to an inoperative position in one operation.

2,005,100
TILTABLE TABLE TOP
William J. Merrigan, Los Angeles, Calif., assignor to Herberts Machinery Company, Ltd., Los Angeles, Calif., a corporation of California
Application August 27, 1934, Serial No. 741,641
10 Claims. (Cl. 311—38)

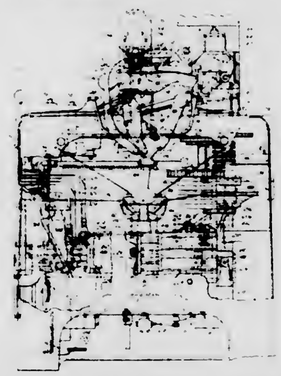


3. A tilting table top construction comprising a support, a table top movable for inclination thereon, arcuate trunnions rigidly carried by the table top, bearings for the trunnions on the support, stationary means adjacent one bearing engageable by the side of its trunnion, and movable means adjacent the other bearing engageable with the side of its trunnion to bodily shift the table top and trunnions to cause the stationary means to be engaged and the table top to be held in adjusted position.

2,005,101
LATHE
William J. Merrigan, Los Angeles, Calif., assignor to Herberts Machinery Co., Ltd., Los Angeles, Calif., a corporation of California
Application September 26, 1934, Serial No. 745,593
3 Claims. (Cl. 142—1)

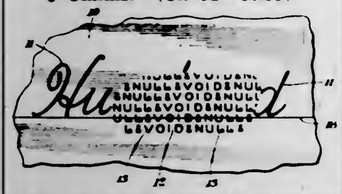
1. A lathe having a bed providing rails, pairs of ears at one end of the bed, a base web connecting the ears, a headstock having a pair of standards one arranged between the ears of each pair, bearings in the standards, a spindle rotatable in the bearings, a pulley on the spindle, a web connecting the standards, and means for fastening the headstock to the base web, both webs being narrower than the pulley.

2,005,102
DISTILLATION OF TAR
Stuart Parmelee Miller, Englewood, N. J., assignor to The Barrett Company, New York, N. Y., a corporation of New Jersey
Application May 21, 1931, Serial No. 539,019
8 Claims. (Cl. 196—149)



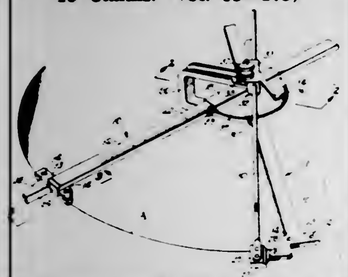
1. Clean coal tar oils comprising oil condensed directly from coal distillation gases and a distillate oil, the distillate oil being obtainable by the distillation of a total coal tar to pitch with a melting point of at least 260° F. by a process according to which y equals between $.3125x^2-36.25x+1286$ and $2.15x^2-246x+7290$ where $y=$ pitch melting point and $x=$oil yield, the upper limit of the boiling range of the oils condensed directly from the gases and the oils distilled from the tar being the same.

2,005,103
MOTOR VEHICLE
Alfred Moorhouse, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a corporation of Michigan
Application November 6, 1930, Serial No. 493,735
11 Claims. (Cl. 296—35)



1. In a device for resiliently engaging one body with reference to another, a cylinder on one body, a supporting member engaged with the other body telescopically associated with the cylinder, and a cylindrical vibration-absorbing unit removably engaged in the cylinder and having screw-threaded engagement with the supporting member, the adjustment of said member regulating the vertical position of the supported body relative to the other body.

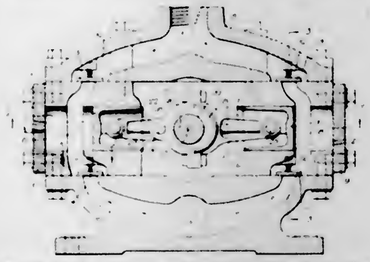
2,005,104
MACHINE FOR OPERATING UPON SHOES
Alfred R. Morrill, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a corporation of New Jersey
Application January 27, 1934, Serial No. 708,669
22 Claims. (Cl. 12—17)



1. A machine for operating upon shoes having, in combination, means for operating upon the bottom margin of a shoe, a shoe supporting jack, means for feeding the jack to transfer the point of operation about the shoe, a feeler mechanism arranged to engage a marginal contour surface fixed with relation to the shoe, devices controlled by said feeler mechanism for imparting rotating movements to the jack to maintain the shoe margin substantially normal to said operating means at the point of contact, a feeler mechanism engaging the surface of the shoe sole, and devices controlled by said latter feeler mechanism for imparting longitudinal tipping movements to the jack to maintain the surface of the shoe sole at the point of contact with said operating means substantially normal to said operating means in the direction of feed.

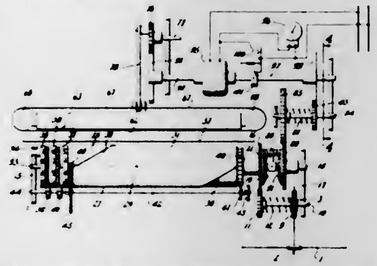
2,005,105
SAFETY PAPER
John Wallace Neff, New Rochelle, N. Y., assignor to Milton C. Johnson Company, New York, N. Y., a corporation of New York
Application June 23, 1930, Serial No. 463,365
Renewed April 18, 1933
6 Claims. (Cl. 91—67.95)

1. A safety paper carrying cobalt ferro-cyanide.



2,005,106
SHOP INSTRUMENT
Henry Ferdinand Peterson, Rockford, Ill.
Application May 11, 1934, Serial No. 725,048
13 Claims. (Cl. 33—178)

1. An instrument of the character described comprising, in combination, a pair of elongated arms, means for supporting said arms for pivotal adjustment about a common axis and also for longitudinal adjustment transversely of said axis, each arm having a transversely extending portion at its free end providing two contact points spaced apart a substantial distance transversely of the arm and adapted to be placed in contact with an arcuate surface, the points on each arm defining a chord of said surface which is bisected by a perpendicular line extending through said axis, and straight edges on said arms disposed outwardly from said contact points and acting in all positions of the arms to define radii through said axis and perpendicular to said chords.

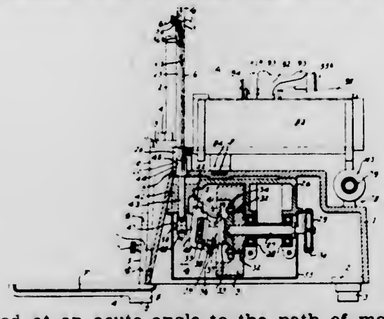


2,005,107
PUMP PISTON LUBRICATION CONSTRUCTION
Irving M. Phillips and Paul W. Kalinsey, Chicago, Ill., assignors to Continental Equipment Company, Chicago, Ill., a corporation of Illinois
Application July 28, 1932, Serial No. 625,312
6 Claims. (Cl. 103—171)

1. In a double-acting pump, the combination of a one-piece solid cylinder block having a flat top and a flat bottom and formed with a middle clearance chamber open at the top and bottom thereof, and with flow chambers open at top and bottom in the end portions of said cylinder block, whereby the middle and end chambers are all of the same height, and having axially aligned horizontal bores connecting said middle chamber with said flow chambers, midway between the flat top and bottom surfaces of the block, with the outer ends of said bores in vertical planes, plungers in said bores, mechanism in said clearance chamber for operating said plungers, accessible through the top of said clearance chamber, a fluid intake base secured flatwise to the bottom of said cylinder block, closing the bottom of said clearance space, a fluid outlet cap secured flatwise to the top of said cylinder block, closing the top of said clearance space, an inlet valve for the bottom of each flow chamber, an outlet valve for the top of each flow chamber, said valves being disposed horizontally in said vertical planes, and means for actuating said mechanism, the

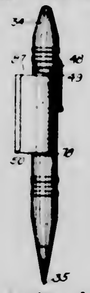
stroke of each plunger stopping short of the adjacent flow chamber, comprising similar bores and plungers in said cylinder block, parallel with and in the same horizontal plane as said first-mentioned bores and plungers, with said clearance chamber common to all plungers, but with similar separate flow chambers and valves for said last-mentioned bores and plungers, and mechanism in said clearance chamber to actuate said last-mentioned plungers, one pair of plungers operating in one direction while the other pair is operating in the opposite direction.

2,005,108
RECORDING METER
Riccard Pudelko, Zug, Switzerland, assignor to Landis & Gyr, A.-G., a corporation of Switzerland
Application August 19, 1931, Serial No. 558,066
In Switzerland September 2, 1930
2 Claims. (Cl. 234—1)



1. An energy flow measuring instrument including in combination a meter, means driven by the meter proportional to the energy flow, and devices, including a coacting platen, for making both a graphic and numerical record at the end of a predetermined time period.

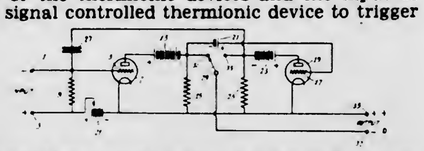
2,005,109
SLICING MACHINE
Carl S. Reed and Adolph Rubin, St. Louis, Mo., assignors to Hussmann-Ligonier Company, St. Louis, Mo., a corporation of Delaware
Application November 26, 1930, Serial No. 498,286
20 Claims. (Cl. 146—158)



1. A slicing machine comprising a cutting element, means for supporting said cutting element

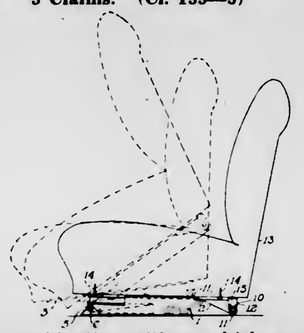
for straight line movement, said supporting means enclosing the cutting element transversely except for the cutting edge only thereof which extends outwardly beyond the supporting means, means for subjecting said cutting element to reciprocatory movement, said cutting element being provided with a cutting edge which is in-

clined at an acute angle to the path of movement of material being fed thereto to be sliced, and a gauge plate for regulating the thickness of slices cut by the slicing machine, said gauge plate being arranged in a vertical plane which is disposed at a slight angle with respect to the vertical plane of said cutting element.



2,005,110
WRITING IMPLEMENT
Robert W. Ritzert, Dayton, Ohio, assignor to Rolin Manufacturing Company, Dayton, Ohio, a corporation of Ohio
Application January 6, 1932, Serial No. 584,955
8 Claims. (Cl. 281—5)

3. A paper roll carrying device including two barrels one within the other and rotatable relatively to each other in opposite directions, each barrel having an opening to permit side loading of a pre-wound paper roll, the openings being so arranged that the roll is normally concealed, relative rotation of said barrels in certain directions allowing the free end of the paper to project out of the openings, relative rotation of the barrels in reverse direction or directions retracting the projected end of the paper to a position fully concealed.



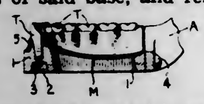
2,005,111
AMPLIFIER
Henry Shore, Elizabeth, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application April 9, 1931, Serial No. 528,796
10 Claims. (Cl. 178—70)

1. An electronic relay system comprising a plurality of independent thermionic devices, means to supply signals to one of the thermionic devices, and means connected with the output circuit of one of the thermionic devices and the input of the signal controlled thermionic device to trigger

the signal controlled thermionic element to produce from the relay system a constant amplitude and wave shape output irrespective of the wave shape and amplitude of the supplied energy.

2,005,112
VEHICLE SEAT
Le Roy Smelker, Dayton, Ohio, assignor to The Dayton Accessories Manufacturing Company, Dayton, Ohio, a corporation of Ohio
Application September 20, 1934, Serial No. 744,805
5 Claims. (Cl. 155—5)

1. The combination with a vehicle seat, of a rail adapted to rest on the floor of the vehicle and having a downwardly inclined rear end, a track member pivotally secured to the front end of the rail, a carriage member secured to the bottom of said seat and longitudinally slidable over the track member, and roller means carried by the rear end of the carriage member for rolling contact with the inclined rear end of the rail to raise the rear end of the seat while it is being shifted forwardly by the occupant.



2,005,113
PRODUCT FOR TREATING BITUMENS
Orvall Smiley, Indianapolis, Ind.
No Drawing. Application March 30, 1933, Serial No. 663,651
1 Claim. (Cl. 134—1)

A preparative unemulsified product to be added to bitumens to set up a change therein to render the bitumens suitable for roadways, said product consisting of substantially 15 parts higher aliphatic fatty acids, 15 parts soap, and 120 parts of beta tetrahydronaphthalene, and forming a stable product giving uniform results regardless of storage periods when applied to said bitumens, said tetrahydronaphthalene, in the presence of said acid and soap, operating to cause said change.

2,005,114
DENTAL MODEL
Benjamin L. Spitzer and Andrew Benko, New York, N. Y.
Application April 26, 1933, Serial No. 668,041
1 Claim. (Cl. 32—71)

A dental model comprising a base having a groove at its underside and having a gum-simulating portion, said portion of the base having a

separable mask of similar contour, said mask extending over the top edge of the base and being made of yieldable and resilient rubber, said base having sockets therein, said mask having openings through which teeth individually pass to enter the openings of said base, and releaseable con-

necting means partly located in said groove and connecting said teeth to said base, said mask being separate from said base and being readily removable therefrom, and means connecting said portion of the base to the superposed portion of said mask.

2,005,115

GOLF BALL WASHER AND DRIER

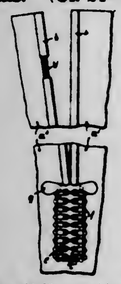
John C. Stutz, Kansas City, Mo.

Application May 1, 1933, Serial No. 668,764

3 Claims. (Cl. 15—21)

1. In a golf ball washer and cleaner, a bottom and two flanking cleaners of cylindrical form disposed in parallelism to form a ball-receiving channel, a rotary spiral conveyor above the bottom cleaner and depending into said channel and in close relation to the flanking cleaners to inhibit lateral passage of a ball between either of the last-named cleaners and the conveyor from the channel, one of the flanking cleaners having a peripheral pocket to receive a ball at and while engaged by the front end of the groove of the conveyor, and cooperate with the latter in carrying the ball to and ejecting it from the pocket into the channel without disengaging it from the groove of the conveyor.

2,005,116



FASTENER WITH SLIDING ATTACHMENT FOR GARMENTS, BAGS, AND THE LIKE

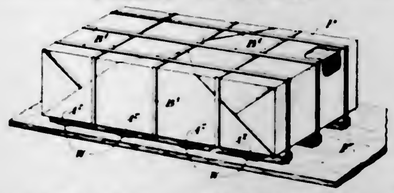
Johannes Franne, Liestal, near Basel, Switzerland

Application August 12, 1932, Serial No. 628,512

In Germany November 28, 1929

5 Claims. (Cl. 24—207)

1. Fastener with sliding attachment members comprising in combination a pair of flaps having ribs on their adjacent edges to be releasably connected to each other, said ribs being elastical in thickness along the said edges, fastening attachment members slidable on said ribs, the diameter of said members being somewhat smaller than that of the two ribs, to keep the said ribs in elastically close juxtaposition, flexible means for connecting the ends of said sliding members with each other in such a manner, as to keep them parallel to each other at least when closing the fastener, the first of the said sliding members to be moved along the said ribs being used as a handle for opening and closing the fastener.



2,005,117

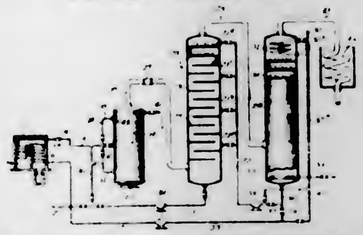
APPARATUS FOR SHIPPING METAL

William C. Tamplin, Pittsburgh, Pa., assignor to American Sheet and Tin Plate Company, a corporation of New Jersey

Application September 21, 1933, Serial No. 690,485

2 Claims. (Cl. 206—60)

1. A pack of metal sheets arranged for transport comprising a plurality of assembled prime sheets arranged one on top of the other, a non-metallic water-proof wrapping enclosing said assembled sheets, transverse means for securing said assembled and wrapped sheets together as a unit, spaced wooden supporting elements disposed longitudinally under said unit, spaced wooden supporting elements disposed between said unit and said longitudinally disposed supporting elements and arranged transversely with respect to the latter, separate metal spacing elements arranged at spaced intervals along the length of said transversely disposed supporting elements, each of said metal spacing elements being disposed wholly below said unit of assembled and wrapped sheets and contiguous thereto, and means extending along said longitudinally disposed supporting elements for securing the same to said unit of assembled and wrapped sheets.



2,005,118

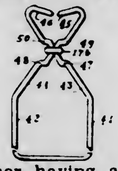
CONVERSION PROCESS

Vanderveer Voorhees, Hammond, Ind., assignor to Standard Oil Company, Whiting, Ind., a corporation of Indiana

Application February 14, 1930, Serial No. 428,398

5 Claims. (Cl. 196—48)

1. The method of converting relatively high boiling hydrocarbon oils into lower boiling products such as gasoline which comprises heating in a confined stream a substantially completely vaporizable hydrocarbon oil charging stock consisting substantially entirely of a petroleum distillate to substantially completely vaporize the oil and bring the vapors to a high cracking temperature of at least 900° F., passing the stream of heated oil vapors into an enlarged chamber wherein they undergo substantial cracking in the vapor phase by their contained heat, removing in a stream the cracked vapors from said chamber and passing the stream of vapors directly to and through a scrubbing tower, continuously introducing into said tower a small proportion of the said vaporizable charging distillate stock supplied to the cracking operation and intimately contacting the said vapors flowing through said tower only with said completely vaporizable distillate charging stock which is added in a volume just sufficient to scrub from the said cracked vapors substantially only entrained heavy and tarry products of cracking, passing only liquid products comprising said heavy tarry products from said tower into said enlarged chamber while excluding from said chamber heavy residual stocks from external sources, and intimately contacting them with the aforesaid stream of highly heated oil vapors entering the said enlarged chamber, retaining the said heavy products in said chamber at a cracking temperature until they are substantially completely converted to solid residuum, separately withdrawing the scrubbed vapors from said scrubbing tower and passing them directly to a fractionating operation wherein undesired higher boiling constituents thereof are separated in the form of reflux condensate, and separately removing and collecting the fractionated vapors.



2,005,119

TAG-FASTENER AND GUIDE THEREFOR

Samuel Weiss, Brooklyn, N. Y.

Application December 12, 1934, Serial No. 757,081

7 Claims. (Cl. 40—24)

1. A tag fastener having a pair of initially stressed prongs, suitably inclined branches on said prongs disposed to cross each other at a variable point through a desired range of variation of the latter, said branches terminating in pointed engaging members which are disposed to grip with their pointed ends a portion of a garment placed therebetween, and a control member of suitable shape and size automatically slidably encompassing the said branches at said point, whereby, in cooperation with parts on said branches disposed to intercept said control member, to limit the said range of variation, thereby also limiting to a desired extent the range of deflection of said prongs in a direction substantially parallel to the plane of said fastener.

2,005,120

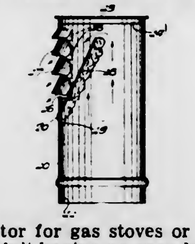
METHOD OF RECOVERING SALTS AND OTHER COMPOUNDS

Joshua C. Whetzel and Rufus E. Zimmerman, Pittsburgh, Pa., assignors to American Sheet and Tin Plate Company, a corporation of New Jersey

No Drawing. Application February 3, 1932, Serial No. 590,708

3 Claims. (Cl. 23—126)

1. The method of recovering iron salts from iron sulfate solutions which consists in providing said solutions with a small amount of free acid, heating said solutions above about 140° F. and then filtering the heated solutions while substantially maintaining their heat to recover ferrous sulfate monohydrate ($FeSO_4H_2O$).



2,005,121

DEFLECTOR FOR GAS STOVES, OR THE LIKE

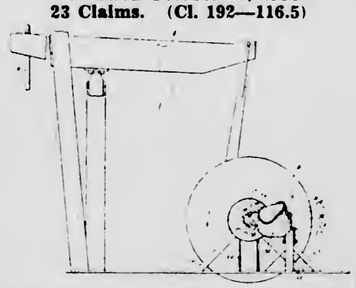
John Wilder, Niles, Ohio, assignor to Wilder Metal Company, Niles, Ohio, a corporation of Delaware

Application January 27, 1934, Serial No. 708,671

3 Claims. (Cl. 126—299)

1. A deflector for gas stoves or the like, comprising a conduit having an open lower end forming a free inlet adapted for attachment to the flue outlet of an oven and closed at its upper end and having an outlet opening in the wall thereof in proximity to its closed upper end, an imperforate deflecting plate within said conduit and disposed at an angle to the conduit wall and having its lower end in contact with and secured to the conduit wall between said outlet opening and open lower end and its other end spaced from said closed upper end and the conduit wall having said outlet opening and its side edges in contact with the inner wall of said conduit contiguous to said outlet opening, whereby a substantially inverted U-shaped unobstructed passage is formed solely within said conduit and extending from said open lower end to said outlet opening.

2,005,122

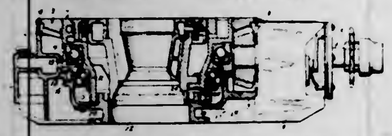


POWER TRANSMISSION UNIT

Forrest Joseph Young, Los Angeles, and Spencer William Long, Redondo Beach, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware

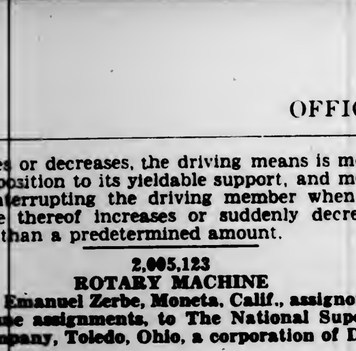
Application April 25, 1932, Serial No. 607,376

Renewed October 15, 1934



23 Claims. (Cl. 192—116.5)

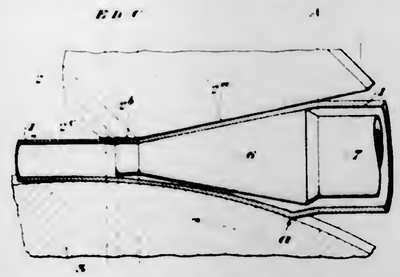
1. In a well pumping device, the combination of a pump driving member, means for actuating the pump driving member, means for yieldably supporting the driving means so that as the torque set up by the pump driving member in-



creases or decreases, the driving means is moved in opposition to its yieldable support, and means for interrupting the driving member when the torque thereof increases or suddenly decreases more than a predetermined amount.

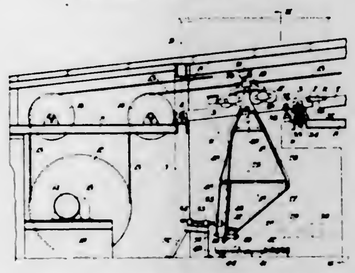
2,005,123
ROTARY MACHINE
Lewis Emanuel Zerbe, Moneta, Calif., assignor, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application December 19, 1933, Serial No. 703,074
11 Claims. (Cl. 308—230)

1. In a rotary machine, the combination of a base having a vertically extending opening therein, a rotary member mounted in the opening, a supporting bearing between said rotary member and base for rotatably supporting said rotary member, an adjustable upthrust ring threaded to said rotary member, said ring having longitudinal slots through the lower portion of the threaded length, circumferential slots in said ring communicating with the longitudinal slots, and means to circumferentially clamp the adjacent slotted portions of the ring together to bind the ring on the threaded portion of the rotary member.



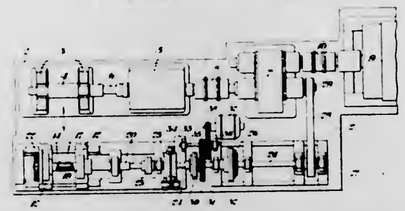
2,005,124
AUTOMATIC FEED CONTROL FOR FOLDING AND OTHER MACHINES
Gustaf E. Anderson, Brockton, Mass.
Application February 3, 1930, Serial No. 425,375
Renewed November 8, 1932
28 Claims. (Cl. 271—2.5)

1. In a machine of the class described, the combination with means for feeding the work in a step-by-step manner comprising a feed shaft, a feed-bar carried on one end of said shaft and means for rocking said shaft, of means for automatically varying the length of said feeding movement in accordance with the variation in speed of the machine.



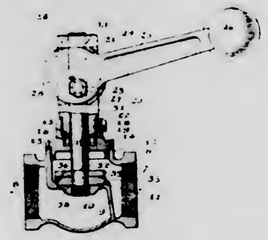
2,005,125
APPARATUS FOR SINKING TUBULAR WORK PIECES
Bryant Bannister, Mount Lebanon, Pa.
Application March 14, 1933, Serial No. 660,718
1 Claim. (Cl. 80—13)

Apparatus for sinking tubular work pieces comprising two metal working rolls and a mandrel defining a pass, said rolls and mandrel being constructed and arranged to provide a reducing pass having a convergent portion co-extensive with the major part of the length of said rolls, a substantially short reeling portion, and a divergent



portion, in combination with a power-actuated guide roll for guiding and assisting the work piece through the outlet end of the pass, said guide roll having its contact surface nearest the axis of the workpiece positioned adjacent said reeling portion.

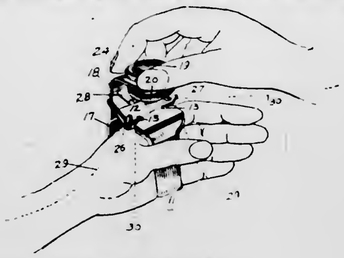
2,005,126
AERIAL TRAMWAY
Claire C. Beatty and Elmer J. Lloyd, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application May 21, 1934, Serial No. 726,782
1 Claim. (Cl. 214—41)



A conveyer comprising two conveyer tracks, a tramway cable adjacent said tracks, a carriage mounted on each of said tracks and secured to said cable, a carrier suspended from each of said carriages, said carriers having discharge doors and fastening means therefor, a bin disposed adjacent said tracks, a discharge chute for said bin, a conveyer in said discharge chute, means for driving said conveyer, means for driving said tramway cable in either direction, means for controlling the movement of said cable, spring-mounted track sections adjacent the discharge chute of said bin, means associated with said spring-mounted track sections for actuating the means for controlling the movement of said cable, means adjacent said track sections for insuring the operation of the fastening means for the discharge door of said carriers, means for discontinuing the operation of said conveyer if said door fastening means fails to operate, said last named means comprising a pivoted platform beneath said spring-mounted track sections, a spillage pan on said platform, and a switch operated by the depression of said platform for disconnecting said conveyer driving means.

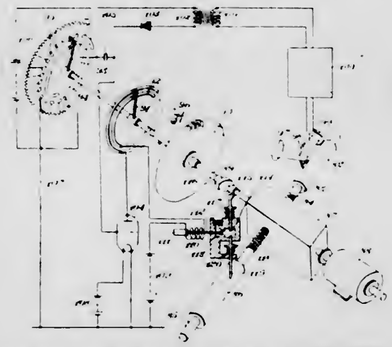
2,005,127
METAL PROCESSING MACHINE
Herbert G. R. Bennett, Duquesne, Pa.
Application December 29, 1933, Serial No. 704,573
3 Claims. (Cl. 164—66)

3. A metal processing machine, driving means for said machine, a magnetic clutch operatively associated with said driving means, a magnetic brake for said driving means, a second magnetic clutch operatively associated with said driving means, a flag switch disposed in the path of the work-piece to be processed for initiating the operation of said driving means, a limit switch for discontinuing the operation of said driving means and to initiate the operation of said second magnetic clutch, and means operatively associated with said last named magnetic clutch for restoring said metal processing machine to a determined position in its operating cycle.



2,005,128
VALVE
George S. Bowes, Cleveland, Ohio
Application September 4, 1931, Serial No. 561,231
6 Claims. (Cl. 251—40)

2. In a valve, a valve casing having an inlet and an outlet with a valve seat interposed between the same, a valve head cooperating with said seat, a valve stem connected to said head, shelves fixed in position relatively to said casing, a ring slidably engaging the shelves and normally held in fixed position, a cam rotating in the ring, a bolt pivotally and eccentrically connecting the cam to said stem, and a handle for operating said cam, said handle being weighted for holding the valve head in open or closed position.



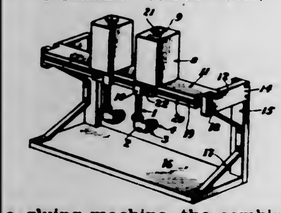
2,005,129
APPARATUS FOR SPLICING YARN
Raymond H. Chase, Providence, R. I., assignor to William Wallace Potter, Pawtucket, R. I.
Application June 12, 1931, Serial No. 544,015
4 Claims. (Cl. 117—6)

1. A twister device having means for severing the ends of adjacent threads to provide a lap of predetermined length, means to apply adhesive to said threads and means for intertwining the

fibers of said threads in a splice.

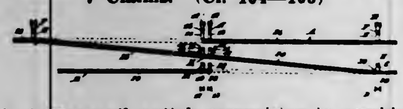
2,005,130
ELECTRICAL CIRCUIT AND APPARATUS
John Willey Dalton, Wimbledon, London, England
Application July 19, 1932, Serial No. 623,426
In Great Britain July 28, 1931
1 Claim. (Cl. 178—5)

The method of producing a representation of an original subject which comprises moving the original subject relative to scanning means, moving a surface upon which the representation of the original subject is to be formed at a corresponding rate relative to reproducing means, and during such movement effecting in each of a plurality of successively recurring regularly spaced intervals of time the following operations:—applying to the grid of a gaseous discharge tube for a period of time which is constant for each of the intervals a decreasing negative voltage the rate of decrease of which is the same for each of the intervals, projecting light on to a small area of the original subject in a scanning operation during a fraction only of the said period, applying to the grid of the tube during the said fraction of the period a further voltage which is stored on the grid and is proportionate with the tone value of the light transmitted through or reflected from the small area as a result of the scanning operation, thereby causing the voltage on the grid to reach a value permitting the flow of plate current only after the lapse of a fraction of the time interval which is proportionate with the tone value of the small area, causing the reproducing means to operate upon the surface upon which the representation is to be formed by current flowing from the plate of the tube from the instant at which the grid voltage reaches the said predetermined value to the end of the interval, and at the end of the



interval interrupting the flow of current from the plate of the tube, thereby interrupting the operation of the reproducing means.

2,005,131
FOLDING BOX
Robert E. De Luce, Chattanooga, Tenn., assignor to Star Box & Printing Co., Chattanooga, Tenn.
Application November 17, 1934, Serial No. 753,531
4 Claims. (Cl. 229—34)

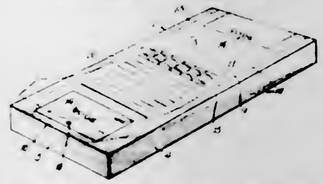


1. In a folding box of the type described, the combination of a body portion, opposite ends having scores disposed between the ends and the body, and extensions on each of the ends having scores disposed between said ends and end extensions, each of the end extensions having indentations, sides having scores disposed between the sides and body of the blank and tabs at opposite ends of the respective sides and having scores disposed between said tabs and said sides, said tabs being adapted to receive an adhesive and being of suitable shape for insertion between the end extensions and end portions of the box when the latter are folded over in position for assembling and being of suitable size and shape to effect a wiping contact of the portions carrying the adhesive with the indentations of the end extensions.

2,005,132
GLUING MACHINE
Robert E. De Luce, Chattanooga, Tenn., assignor to Star Box & Printing Co., Chattanooga, Tenn.
Application November 19, 1934, Serial No. 753,743
8 Claims. (Cl. 91—67.1)

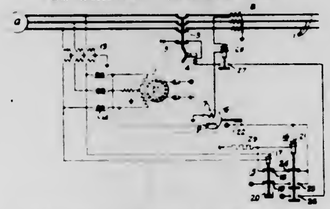
1. In a gluing machine, the combination of a frame, bars pivotally mounted on the frame, a plurality of cans adjustably mounted on the bars, spouts on the cans, horizontally disposed nipples on said spouts, apertured caps on the nipples, and screens contained within the caps.

2,005,133
MONORAIL SWITCH
De Clermont Dunlap, Newark, N. J.
Application November 4, 1933, Serial No. 696,612
7 Claims. (Cl. 104—103)



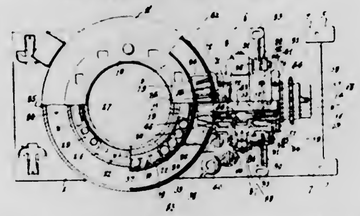
1. A monorail switch comprising in combination, a pair of monorail tracks, a hinged section in each of said tracks, said hinged section being mounted to swing into alignment with each other, and a track section arranged to extend between contiguous ends of said hinged sections when the latter are aligned.

2,005,134
SUPPORT FOR FLEXIBLE POSTERS
Jay Noble Emley, Forest Hills, N. Y., assignor to National Process Company, Inc., New York, N. Y.
Application January 22, 1934, Serial No. 707,706
9 Claims. (Cl. 40—125)



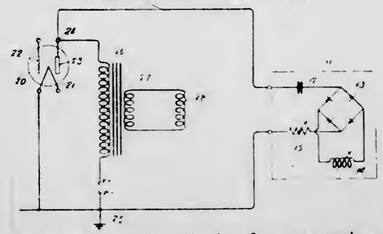
4. A supporting device for posters of the class described comprising a coupling plate, one side edge of which is curled to form a cylindrical socket and the other side edge having a curled cylindrical socket disposed angularly with respect to the first named socket, rods detachably coupled with the sockets of said plate, one of said rods having end portions projecting from both ends of the plate and adapted to engage the poster to support the same in extended position, the rod attached to the other socket extending from one end of the plate only and adapted to form a supporting leg for said poster, and said plate being adjustable longitudinally of the first named rod to raise and lower the second named rod with respect to a support to vary the inclination of the poster on said support.

2,005,135
CARTON FOR RUBBER HEELS AND THE LIKE
Albert A. Esterson, Baltimore, Md., assignor to Cat's Paw Rubber Company, Inc., Baltimore, Md., a corporation of Maryland
Application April 5, 1934, Serial No. 719,213
3 Claims. (Cl. 206—46)



1. A job-identifying repair package containing a shoe repair element or elements, said element or elements being housed and retained within and by the walls of the package, one of said walls having a portion thereof circumscribed or partially circumscribed by a means indicating and setting off said portion as a detachable job identifying check, the configuration and location of the indicating means being such that the removal of the check does not destroy the capability of the aforesaid package to retain its contents, said detachable check bearing corresponding indicia of an identifying character and being separable between the said indicia into two sections, whereby one of said sections may be retained by the dealer together with the repair elements confined within the remaining portion of the package, and the other of said sections may be retained by the customer for subsequent presentation and identification of the job.

2,005,136
RELAYING SYSTEM WITH DIRECTIONAL INDICATION STORAGE
Robert D. Evans, Swissvale, and William A. Lewis, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,605
32 Claims. (Cl. 175—294)



1. A protective relaying system for responding to faults on an electric power line, comprising a first fault-responsive relay element, a second fault-responsive relay element, said two elements responding to different electrical conditions, the second element being relatively slower in its response to fault conditions, an auxiliary relay, means for causing said auxiliary relay to be energized when the first element is actuated in response to fault conditions, means for preventing said energization if the auxiliary relay remains unenergized and the second element is actuated in response to fault conditions, and holding-circuit means for supplementarily energizing said auxiliary relay when the second element is actuated if the auxiliary relay is in actuated condition at that moment.

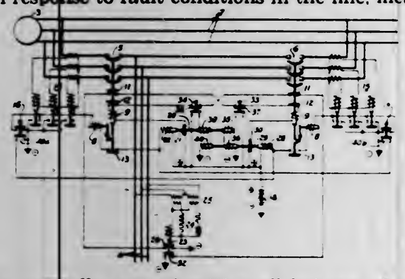
2,005,137
ROTARY MACHINE
David S. Faulkner, Los Angeles, Allen Erwin Rice, Hermosa Beach, and Lewis E. Zerbe, Moneta, Calif., assignors, by mesne assignments, to The National Superior Company, Toledo, Ohio, a corporation of Delaware
Application December 26, 1930, Serial No. 504,758
66 Claims. (Cl. 255—23)

26. In a rotary machine, the combination of a base having a vertical opening therein, a table mounted in the vertical opening from the top thereof, a supporting bearing carried by the base for rotatably supporting said table, a closure ring secured to said table, said closure ring having a curved annular mud flange interposed between the base and the table near the lower end of said table to protect said supporting bearing from foreign matter.

2,005,138
ELECTRIC METERING DEVICE
Floyd Fausett, Greenwood, Miss., assignor to Supreme Instruments Corporation, Greenwood, Miss.
Application February 5, 1932, Serial No. 591,201
2 Claims. (Cl. 250—20)

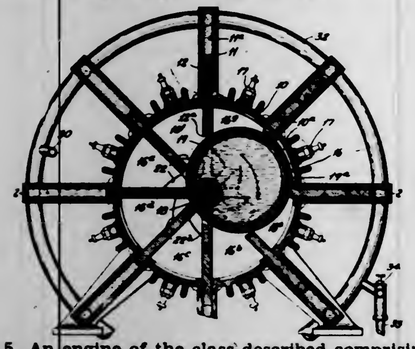
1. In a radio testing device for measuring the audio frequency energy in an output circuit of a radio broadcast receiving set, a meter of high sensitivity, a rectifier for the energy measured by said meter, detachable conductors for externally connecting said rectifier and meter across said output circuit of a receiving set, and a capacitance element disposed in said conductors to segregate the audible components of the output energy.

2,005,139
COMBINED EXPANSION AND CONTRACTION JOINT
Albert C. Fischer, Chicago, Ill., assignor to The Philip Carey Manufacturing Company, a corporation of Ohio
Application May 9, 1927, Serial No. 190,087
26 Claims. (Cl. 94—18)



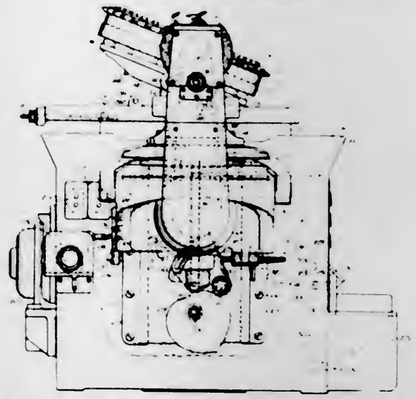
8. An expansion joint having its opposed sides formed of yieldable, non-metallic waterproofing material, said material having surface pockets formed therein and formed particularly adjacent to the top of the joint, said upper pockets carrying a mass of waterproofing material adapted to flow when the joint is subjected to pressure, whereby to seal the crevice above the joint.

2,005,140
MEANS FOR OBTAINING SERVICE CONTINUITY BY HIGH SPEED RECLOSING
Samuel B. Griscom, Swissvale, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application May 11, 1933, Serial No. 670,485
20 Claims. (Cl. 175—294)



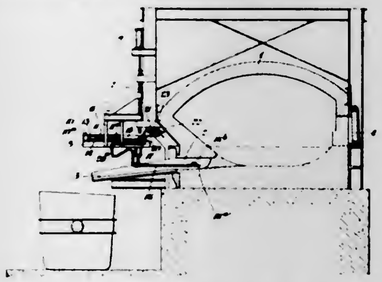
1. Relaying and switching means for the protection of a transmission line of a type subject to self-clearing arcing faults which clear themselves on the removal of an arc-sustaining voltage therefrom, said means comprising a plurality of energizing paths in parallel with each

other and in series with the line, one side of said parallel energizing paths being bussed together and the other side being connected to an end of the line, circuit-interrupting means in each energizing path, fault-responsive means for actuating the respective circuit-interrupting means in response to fault conditions in the line, means



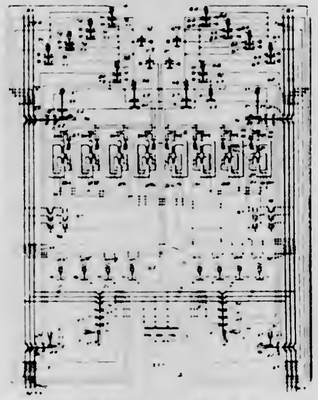
for normally open-circuiting all but one of said parallel energizing paths, and means responsive to the actuation of the circuit-interrupting means in one of said parallel energizing paths for close-circuiting another one of said parallel energizing paths, the connections of the parallel-connected energizing-paths being such that the line suffers no voltage-reversal in making the change from one energizing-path to another.

2,005,141
INTERNAL COMBUSTION ENGINE
Erwin Charles Gutswiller, North Plainfield, N. J., assignor of one-half to Ivan J. Amo, North Plainfield, N. J.
Application January 16, 1933, Serial No. 651,929
20 Claims. (Cl. 123—14)



5. An engine of the class described comprising a cylinder casing, an eccentric rotor in said casing, a plurality of abutments spaced circumferentially of the casing and dividing the same into a plurality of cylinders, common fluid pressure means holding all of the abutments in constant engagement with the periphery of the rotor and permitting outward radial movement of the abutments by the rotor, a driven shaft centrally of the casing and actuated by said rotor, means controlled by the rotor whereby explosive mixtures may be introduced into the respective cylinders and the burnt gases exhausted therefrom whereby said rotor will be driven by the explosive charge of the successive cylinders to provide a substantially constant drive of the rotor, said rotor comprising a ring, and side plates engaging the side walls of the casing and being freely rotatable in the ring to prevent direct axial rotation of the ring with said rotor.

2,005,142
CUTTER SHARPENER
Maxwell H. Hill, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a corporation of New York
Application December 8, 1932, Serial No. 646,270
6 Claims. (Cl. 51—225)



1. In a machine for sharpening cutters, a frame, a tool support reciprocable vertically on the frame, a carrier adjustable angularly on said tool support, a tool head adjustable rectilinearly on said carrier in a direction at right angles to the axis about which said carrier is adjustable, a grinding wheel journaled in said tool head, a carriage adjustable rectilinearly in a horizontal plane on the frame, a work support adjustable angularly on said carriage about a horizontal axis, a work arbor rotatably mounted on said work support and adapted to carry the cutter to be sharpened, means for reciprocating said tool support through a distance long enough to pass the grinding wheel across the face of a blade of the cutter and then clear the cutter, and means for rotatably indexing the work arbor when the grinding wheel is clear of the cutter.

2,005,143
TAPPING FURNACE
William C. Hogg, Pittsburgh, Pa.
Application October 5, 1933, Serial No. 692,342
6 Claims. (Cl. 266—42)

3. A furnace tapping machine including the combination of a pipe having a forwardly directed outlet, means for mounting said pipe adjacent a furnace's tapping-hole for longitudinal reciprocation theretowards, and means for supplying said pipe with compressed fluid and simultaneously moving it towards said tapping-hole and for stopping this supply and simultaneously moving said pipe away from said tapping-hole.

2,005,144
RELAYING SYSTEM
Edward H. Klemmer, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,609
15 Claims. (Cl. 175—294)

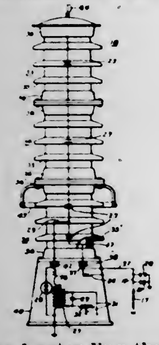
1. Protective relaying means for a transmission line, said line comprising at least two line-sections capable of being operated in parallel between two stations, a bus at each of said stations for connecting said line-sections together, at least one bus circuit-interrupter for at least one of said busses interposed in said bus between the two line-sections whereby said bus may be split into two bus-sections, and a line circuit-interrupter for each end of each of said line-sections; said protective relaying means comprising fault-responsive directional relaying equipment for controlling each of said line circuit-interrupters, and bus differential relaying equipment for controlling the circuit-interrupters connected to each of said bus-sections in the event of a bus fault; said bus differential relaying equipment comprising means for quickly actuating the affected bus circuit-interrupter to open the same, time-hesitation means for less quickly actuating the affected line circuit-interrupter to open the same in such manner that the bus circuit-interrupter will cease carrying current first, and means for preventing some of the fault-responsive directional relaying equipment for the line-section connected to the unfaulted bus-section at the same station from operating falsely during the interval between the current-interruptions in the bus circuit-interrupter and the line circuit-interrupter which are controlled by said bus differential relaying equipment.

2,005,145
PARTITION WALL ASSEMBLY
Guy F. Kotrbaty, Laurelton, N. Y., assignor to Fer-O-Con Corporation, New York, N. Y., a corporation of Delaware
Refiled for abandoned application Serial No. 473,249, August 5, 1930. This application December 9, 1933, Serial No. 701,709
1 Claim. (Cl. 72—115)

An improved wall construction assembly including abutted wall members severally comprising, in combination, parallel panel sections forming wall surfaces, end sections supporting and spacing the said panel sections, said end sections including locking means adapted to engage and coact with means in abutted like members whereby to lock abutted units together, the

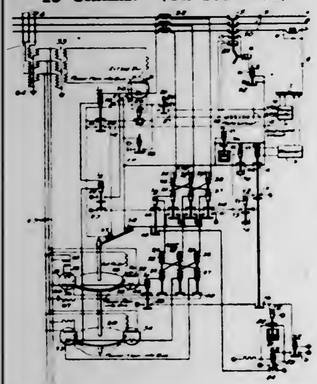
said locking means comprising a short guiding tongue projecting from an end section and adjacent a slot therein, the second abutted building member having a locking tongue passing through the said slot and engaged by the said guiding tongue.

2,005,146
SELF-SUPPORTING BUILDING MEMBER AND JOINT THEREFOR
Guy F. Kotrbaty, New York, N. Y., assignor to Fer-O-Con Corporation, New York, N. Y., a corporation of Delaware
Refiled for abandoned application, Serial No. 472,832, August 4, 1930. This application December 9, 1933, Serial No. 701,710
7 Claims. (Cl. 72—115)



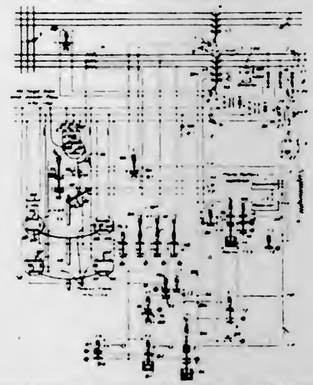
1. An improved building construction including a plurality of juxtaposed units, said units comprising spaced wall sections and end sections joining the wall sections, the end sections being severally provided with tongue-receiving slots, and tongued key members between abutting end sections and in interlocking relation therewith.

2,005,147
COUPLING CAPACITOR SYSTEM
Paul O. Langguth, Irwin, and William A. Lewis, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,608
17 Claims. (Cl. 175—294)



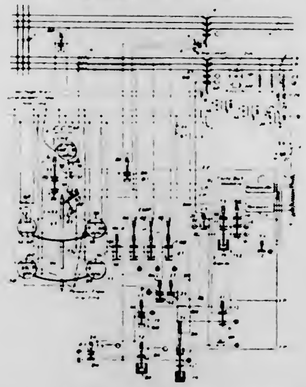
1. A capacitor coupling device comprising a plurality of serially connected capacitor-units, each of said units having an insulating housing with capacitor-means therewithin, and conducting terminals for said housing, means for making an electric-circuit connection from one end of the series to a transmission-line conductor, grounded means for the other end of the series, fastening means for securing the several parts together, the terminals of the capacitor-means within each of the several units being connected

to the respective conducting terminals of the several units, except the end-terminal of the unit at the grounded end, said end-terminal



being insulated and extending through the conducting terminal at the grounded end of said unit, and an inductor connected between said end-terminal and ground.

2,005,148
CARRIER CURRENT RELAY
Lester B. Le Vesconte, Irwin, and Edward H. Klemmer, Wilkinsburg, Pa., assignors to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application October 11, 1934, Serial No. 747,915
15 Claims. (Cl. 175—294)



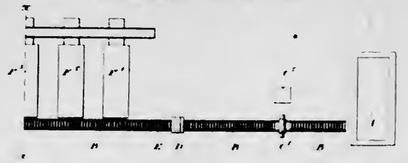
1. Protective equipment for a line-section of a transmission-line system, comprising line-sectionalizing circuit-interrupter means and relaying means at each end of the line-section being protected, and means for providing a communicating channel between the ends of the protected line-section, each of said relaying means including a trip-circuit means for the circuit-interrupter means, a normally inoperative transmitter means capable of transmitting an effective signal to said communicating channel, a normally inoperative receiver relay capable of receiving and responding to said signal, a uniform-time relay, means responsive to the existence of an external fault which is somewhere on the transmission system, but not in the protected line-section, for setting said signal-transmitting means in operation, and for setting said uniform-time relay in operation, and for completing a partial circuit in said trip-circuit means, means responsive to the energization of said receiver relay for interposing a break in the trip-circuit, and means responsive to the operation of said uniform-time relay for removing a break from the trip-circuit.

2,005,149
OUT-OF-STEP PROTECTION
William A. Lewis, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,606
20 Claims. (Cl. 175—294)

1. Protective equipment for a line-section of a polyphase synchronous transmission-line, comprising line-sectionalizing circuit-interrupter means and relaying means therefor at each end of the line-section being protected, each of said relaying means including a directionally responsive quick-acting relaying means for responding selectively to faults and a plurality of different fault-indicating quick-acting relaying means for responding to the presence of different types of faults on the transmission-line, only one of said fault-indicating means being responsive when there is a balanced polyphase fault without ground current, means for providing an intelligence-communicating channel between the two ends of the line-section being protected, auxiliary means associated with said intelligence-communicating channel for selectively cooperating with the directionally responsive means at the two ends of the protected line-section so as to provide a trip-circuit indication of the presence of an internal fault somewhere between the ends of the protected line-section, trip-circuit means, at each end, for quickly actuating the circuit-interrupter means at its end of the protected line-section, said trip-circuit means being responsive to said internal-fault communicating-channel indication and responsive also to an indication of any one of said fault-indicating means, and out-of-step protective means for temporarily preventing an effective trip-circuit indication of the fault-indicating means which responds to said balanced polyphase faults, said out-of-step protective means being responsive to the continuance, for a time, of a response of said fault-indicating means which responds to said balanced polyphase faults, and being also responsive to the non-occurrence, during such time, of a communicating channel signal-indication condition which would establish the presence of an internal fault somewhere between the ends of the protected line-section.

2,005,150
CONTINUOUS CARRIER RELAYING
William A. Lewis, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,607
45 Claims. (Cl. 175—294)

1. Protective relaying equipment for effecting a control of line-sectionalizing circuit-interrupter means for a transmission line-section, comprising, at each end of the line-section being protected, relaying means including means for obtaining both a directional response to a fault-current power-flow into the protected line-section and also a response to a voltage-change which indicates the presence of a fault on the transmission-line under conditions when there is no corresponding current-flow of fault-magnitude, a communicating channel between the two ends of the line-section being protected, a transmitter means disposed at each end of the line-section for normally continuously transmitting a signalling current through said communicating channel to the other end of the line-section, transmitter-controlling means, responsive both to said directional response of the relaying means and the response to a voltage-indication of fault without corresponding fault-current, for causing said transmitter to cease transmitting effective signalling currents, a receiver disposed at each end of the line-section and associated with said communication channel, and receiver-means at each end, responsive to a failure of the receiver to receive a sufficient signalling current from the other end, and responsive also to the direction of power-current-flow into the receiver-end of the line-section being protected, for quickly energizing a control circuit for the circuit-interrupter means at that end.

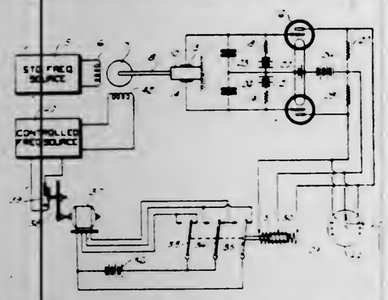


2,005,151
CONTROL OF SWITCHES IN TOTALIZER SYSTEMS
Frederick Limb, Beeston, England, assignor to Ericsson Telephones Limited, London, England
Application December 23, 1930, Serial No. 504,329
In Great Britain January 30, 1930
2 Claims. (Cl. 235—92)

1. A totalizer system comprising a plurality of conductors leading from a transmitting station to receiving apparatus, impulse transmitting contacts whereby a plurality of circuits are closed over certain of the said conductors in combination, each of the said contacts closing one and only one of the said circuits, registering means, controlling means for causing an impulse to be transmitted to the said registering means, and current-operated means having one winding in circuit with the said conductors and another

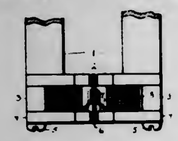
winding energized in a local circuit whereby the said controlling means are caused to operate when a prearranged number of the said circuits are closed and prevented from so doing if any other number of the said circuits are closed.

2,005,152
APPARATUS FOR MANUFACTURING PLATES AND THE LIKE
James E. Lose, Munhall, Pa.
Application September 21, 1933, Serial No. 690,468
4 Claims. (Cl. 29—17)



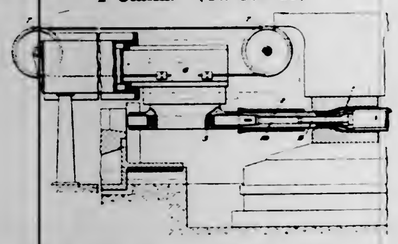
1. A layout for manufacturing plates and the like comprising a 2-high reversing slabbing mill, a slab shear, a tilting table associated with said slab shear, a 3-high plate mill, a tilting table on either side of said 3-high plate mill, a 2-high universal reversing roughing mill, a series of 4-high continuous mill finishing stands, and transfer means between each of said devices.

2,005,153
SYNCHRONIZING SYSTEM
Alvin M. Marks, Brooklyn, N. Y., assignor to Communication Patents, Inc., New York, N. Y., a corporation of Delaware
Application December 9, 1931, Serial No. 579,943
8 Claims. (Cl. 250—36)



1. In a synchronizing system, a source of current having a definite frequency, means for impressing said current on an inductance device to produce a field, another alternating source of current having its output impressed upon said inductance device to affect said field, said sources having normally the same frequency, means within said field of said inductance device to obtain a turning moment proportional to any shift in the frequency of the currents from said sources, a piezo electric device mechanically connected to said last mentioned means for translating said

turning moment into energy proportional to said turning moment, and means for impressing said

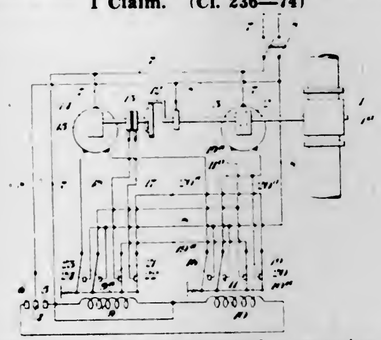


energy on a frequency adjusting circuit of one of said sources.

2,005,154
PHONOGRAPH PICK-UP
Stanley McClatchie, Newark, N. J.
Application June 25, 1931, Serial No. 546,705
In Germany June 28, 1930
10 Claims. (Cl. 179—100.41)

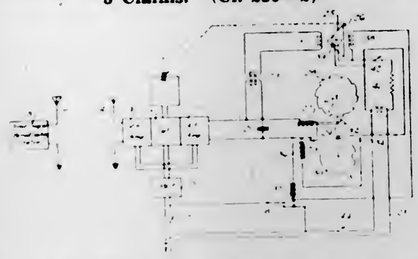
10. A pickup comprising a magnet, pole-pieces, a pickup coil and an armature operatively associated therewith, said armature having a flat portion and a bulging portion forming a needle-holding pocket and being formed of sheet metal.

2,005,155
TUBE EXPANDING MILL
Bolton C. Moise, Pittsburgh, Pa.
Application February 23, 1932, Serial No. 594,621
1 Claim. (Cl. 80—13)



A tube rolling mill including the combination of a set of working rolls constructed and arranged to continuously engage the work during each rolling operation, a mandrel, means for continuously holding said mandrel at a predetermined position between said rolls, a ram for engaging the rear end of said work, means for mounting said ram for continuous movement for a distance at least equaling the length of said work and means for applying continuous force directed towards said mandrel to said ram during the rolling operation of said mill, said mandrel and ram having coacting portions that are constructed and arranged to positively interengage when said ram approaches said mandrel.

2,005,156
DETERMINING COPPER IN COPPER COATED WIRE AND THE LIKE
Walter Frederick Muehlberg, Cleveland, Ohio
No Drawing. Application March 14, 1933, Serial No. 660,777
5 Claims. (Cl. 23—230)



1. The method of determining the amount of copper on thinly coated steel wire which includes immersing the wire in a neutral silver nitrate solution, agitating the solution for approximately thirty seconds, and calculating the amount of the coating from the copper removed by the solution.

2,005,157
CONTROL OPERATING
John T. Nichols, Pittsburgh, Pa.
Application November 14, 1932, Serial No. 642,671
1 Claim. (Cl. 236—74)

The combination of a control, a reversing electric motor driving said control, means for connecting said motor when the extremes of a range of conditions affected by said control are exceeded, and means including cooperative elements respectively moving at the same and reduced speeds as said controller for reversely connecting said motor when disconnected by said first means, said elements being constructed and arranged to disconnect said motor when they are respectively moved to determined mutual positions.

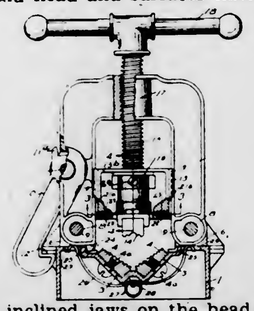
2,005,158
COMBINATION RADIORECEIVER AND TIMEPIECE
Alexander McLean Nicolson, New York, N. Y., assignor to Communication Patents, Inc., New York, N. Y., a corporation of Delaware
Application October 18, 1930, Serial No. 489,571
8 Claims. (Cl. 250—2)

1. In a radio receiver, a power supply therefor, tuning mechanism for said receiver, means for automatically tuning said receiver to a particular station, means for controlling the time

of said tuning, a time keeping mechanism, a loud speaker, and means for utilizing energy received from the output of said receiver for adjusting said time keeping mechanism, a portion of said energy also operating said loud speaker.

2,005,159
PLYWOOD KNOCKDOWN BOX
George H. Osgood, Tacoma, Wash.
Application May 1, 1934, Serial No. 723,337
1 Claim. (Cl. 217—12)

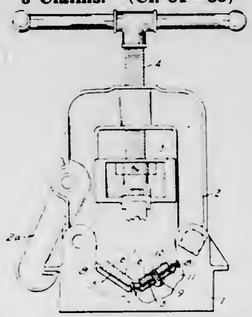
A plywood box comprising six sides, the corresponding edges of each side being complementarily tenoned and mortised together to prevent relative sliding movement; the bottom and four sides being permanently secured together along their contiguous edges in spaced relation to each other by staples spanning the spaces between said parts; each said four sides being provided with two slits extending downward from its top edge and positioned adjacent its upper corners; four spring steel clips, each clip being bent at right-angles at its center and provided with resilient hooked ends, each said clip being adapted to extend around the corner of the box, when assembled and to have its hooked ends slid down the said slits and adapted to grip the inner and outer sides thereof; and means for removably fastening the cover to said four sides.



2,005,160
PROCESS OF PRODUCING HIGH-PERCENTAGE TRANSPARENT SOAPS
Wilhelm Pape, Benrath-on-the-Rhine, Germany, assignor, by mesne assignments, to Procter & Gamble Company, Ivorydale, Ohio
No Drawing. Application August 29, 1932, Serial No. 630,974. In Germany November 13, 1931
4 Claims. (Cl. 87—16)

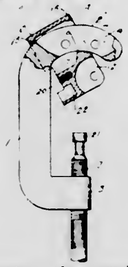
1. A process of producing transparent kneaded toilet soaps containing a high percentage of fatty acids consisting of saponifying a mixture of fats and saponifiable natural resin with concentrated soda lye not substantially in excess in the substantial absence of an electrolyte, and while the soap is at a temperature of liquefaction suddenly cooling it to a temperature sufficiently low to prevent crystallization, drying the soap under conditions which prevent crystallization, subsequently kneading and plodding while cooling the soap, and then forming the soap into bars.

4. As an article of manufacture the product produced by the process of claim 1, consisting of a substantially transparent, kneaded toilet soap bar containing substantially seventy-one per cent to seventy-five per cent of fatty acids and having the original shape that it had when stamped as a bar.



2,005,161
PIPE VISE
Thorvald Petersen, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application February 19, 1934, Serial No. 711,947
12 Claims. (Cl. 81—21)

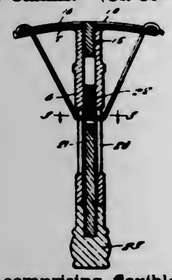
1. In a pipe vise, the combination of a base: a frame extending from the base having guide surfaces; a head slidingly mounted between the guide surfaces, said head and surfaces having a wide



clearance; inclined jaws on the head and base; and means exerting pressure on the head, said means permitting the side movement of the head.

2,005,162
PIPE VISE GRIPPING MEMBER
Thorvald Petersen, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application February 19, 1934, Serial No. 711,948
3 Claims. (Cl. 81—38)

1. A gripping member of a pipe vise comprising relatively inclined jaw seats and jaws on said seats, each jaw having opposite approximately parallel gripping faces with teeth having slopes of substantially equal inclination and means attaching said jaws on said seats with either face up.



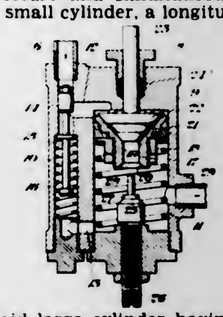
2,005,163
PIPE CUTTER
Thorvald Petersen, Erie, Pa., assignor to Reed Manufacturing Company, Erie, Pa., a corporation of Pennsylvania
Application February 19, 1934, Serial No. 711,950
4 Claims. (Cl. 81—192)

1. In a pipe cutter, the combination of a body having a guide portion with cutter hook and

nut ends integral therewith and extending therefrom and at an angle thereto; a cutter block on the guide portion having a guide opening with integral surrounding guide walls, said opening being of a size permitting the assembly of the block over one of the pre-formed ends of the body; and a screw in the nut end operating the block.

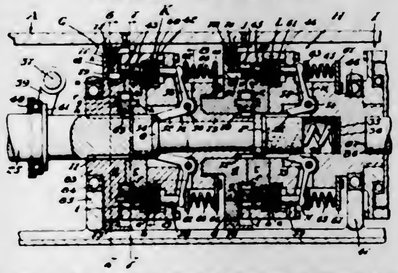
2,005,164
RAZOR
Herbert G. Pressentin, Madison, Wis.
Application January 19, 1934, Serial No. 707,355
4 Claims. (Cl. 30—12)

3. A razor comprising flexible guard and cap members, a handle, interengaging means on the cap and handle for securing the cap, guard and a blade clamped therebetween in position on one end of the handle, said handle being hollow, a stem working in the handle, means engaged with the stem for adjusting the same axially of the handle, and a member engaged with the stem and the opposite end portions of the guard and cap for flexing the latter in the direction of their longitudinal median and to hold the guard, cap and blade in longitudinally curved condition.



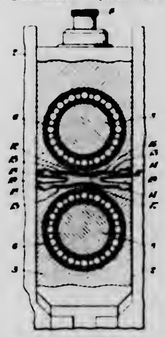
2,005,165
RAILWAY CAR BODY
Charles De Los Rice, West Hartford, Conn.
Application January 18, 1934, Serial No. 707,199
6 Claims. (Cl. 105—413)

1. In a railway car, a car body having a pair of side sills extending throughout the length of the car, a floor at each end of the car above the trucks and supported by said sills at an upper level, a sheathing at each side of the car and extending downwardly below said sills between said end floors, transverse beams between the end floors and extending beneath said sills from one sheathing to the other sheathing, means for connecting said transverse beams to said sills, means for connecting the ends of said transverse beams to said sheathings, and a floor supported by said transverse beams located below the level of the end floors.



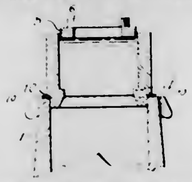
2,005,166
LUBRICATION SYSTEM
Samuel S. Roberts, Pittsburgh, Pa.
Application July 6, 1932, Serial No. 621,091
5 Claims. (Cl. 184—7)

1. A metering valve including parallel small and large cylinders respectively constructed and arranged so that the large one has an inlet from the smaller cylinder and an outlet to the device to be lubricated and the small one has an inlet for lubricant under pressure and a bore communicating with the outlet end of the large one, means including a piston in said small cylinder constructed to cut off communication between its inlet and the bore to the outlet end of said large one when moved theretowards by lubricant entering the inlet and to establish communication between opposite ends of said large cylinder and said bore through the inlet to the large cylinder, when oppositely moved upon release of pressure and simultaneously close the inlet to the small cylinder, a longitudinally bored



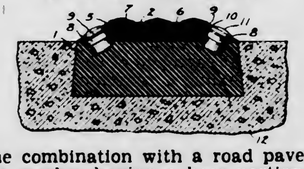
piston in said large cylinder having valve seats at both ends, a sliding valve fitting the seat of the bore in said second named piston towards said inlet and having a stem projecting through the end wall of said large cylinder, an adjustably fixed valve fitting the other seat of the bore in said piston when said piston is moved towards the outlet end of said large cylinder and including a portion constructed and arranged to effect closure of the piston bore slightly before seating of the piston against said fixed valve and a stem sufficiently long to then crack said first named valve from its seat upon further movement of the piston and springs for urging said pistons toward the inlets of the respective cylinders.

2,005,167
CHANGE SPEED TRANSMISSION
Clyde A. Roeder, Omaha, Nebr.
Application September 4, 1934, Serial No. 742,600
6 Claims. (Cl. 74—259)



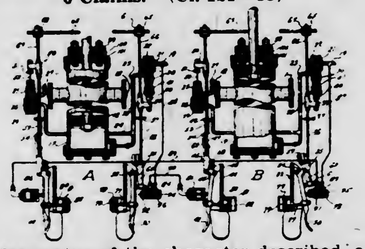
1. In a change speed mechanism, a drive shaft, a driven shaft, a reciprocal shaft interposed between said drive and driven shafts in axial alignment therewith, a gear mount revoluble on said reciprocal shaft, a ring gear having internal and external teeth arranged with its internal teeth geared to said reciprocal shaft, a cylinder revolubly supported on said reciprocal shaft, gear teeth on said cylinder meshing with the external teeth on the ring gear, a friction clutch normally interconnecting said gear mount and cylinder, means controlled by longitudinal movement of said reciprocal shaft for placing said clutch in and out of operative relation to said gear mount and cylinder, means for locking said gear mount against rotation on release of said clutch, transmission means for driving said driven shaft from said cylinder, and torque controlled means for reciprocating said reciprocal shaft.

2,005,168
ROLLING MILL
George H. Rose, Cleveland Heights, Ohio
Application February 6, 1934, Serial No. 709,992
3 Claims. (Cl. 80—56)



1. A spring mounting for heavy elements normally free and tending to move toward each other comprising, in combination, a pair of opposed blocks for supporting said elements, the adjoining edge of each of said pair of opposed blocks having a concavity adjacent each of its ends, and a spring separator adapted to be placed between the adjoining edges of said blocks and having upper and lower cantilevered convexed portions at each of its ends conforming substantially to the concavities therein, said spring separator being disposed in such manner as to cause the upper and lower cantilevered convexed portions at each of its ends to occupy the cancavities of said pair of opposed blocks while the remainder of the spring separator and the remainder of the adjoining edges of said blocks are maintained in spaced relationship with respect to each other.

2,005,169
CASTING METAL INGOTS
Andrew Reed Rowe, Midland, Pa.
Application August 27, 1932, Serial No. 630,721
1 Claim. (Cl. 22—209)

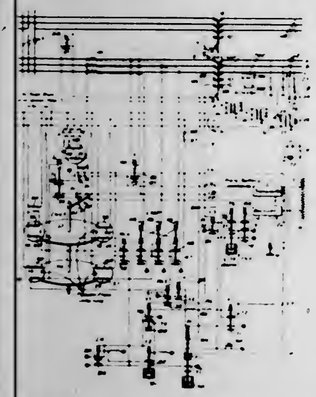


The method of molding ingots comprising placing a hot top in a mold and charging the mold with metal, inserting an imperforate cover and resting it near the bottom of the hot top after the first charge of metal into the mold to obtain the maximum radiation from the cover, subsequently removing the cover and completing the charge of metal to near the top of the hot top and again placing the cover in the hot top on the melted metal so that it will cover the molten metal in the hot top at approximately the height of the metal in the hot top.

2,005,170
TRAFFIC MARKER
George Segelhorst, Stowe, Ohio
Application November 9, 1933, Serial No. 697,294
2 Claims. (Cl. 88—79)

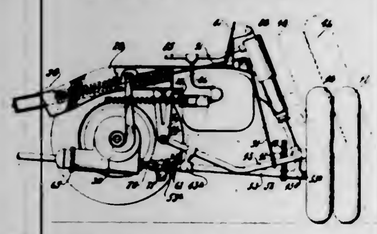
1. The combination with a road pavement of a traffic marker having a base portion of vulcanized material substantially of the color of the pavement and embedded into the pavement so that the portion of the base in the plane of the adjoining surfaces of the pavement is of the color of the pavement, and a top portion integrally vulcanized to said base portion and having a color contrasting with said base portion, said top portion having its lateral faces exposed above said pavement and beveled to render the marker visible and prevent dislodgment of said marker by traffic impact.

2,005,171
TANDEM POWER PRESS
John P. Singiser, Chicago, Ill., assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Application August 13, 1930, Serial No. 474,890
6 Claims. (Cl. 121—38)



1. Apparatus of the character described, comprising two pressing machines connected in tandem, each of said machines including relatively movable pressing members, a power operator therefor, a releasing device for said power operator, and two-hand control means for the power operator including two manuals for actuation respectively by the two hands of the operator, the tandem connection between said machines including an operative connection from one of the manuals of one machine to the releasing device of the other, whereby joint actuation of both manuals of one machine produces operation of that machine and sole actuation of the said one manual of one machine actuates the releasing device of the other machine.

2,005,172
CONTINUOUS CARRIER RELAYING
Roy M. Smith, North Arlington, N. J., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application December 22, 1933, Serial No. 703,610
20 Claims. (Cl. 175—294)



1. An electrical transmission system including a plurality of line-sections, a relaying station, a bus at the relaying station having a plurality of said line-sections connected thereto, each of said

bus-connected line-sections having circuit-interrupter means interposed between itself and the bus, and tripping means for actuating each of said circuit-interrupter means, characterized by protective means for one of said line-sections, said protected line-section having line-sectionalizing circuit-interrupter means at each end thereof, and said protective means comprising relaying means at each end of the protected line-section and including a communicating channel between the two ends of the line-section, said relaying means including quick-acting relaying

means associated with the circuit-interrupter means at both ends of the protected line-section and also associated with the communicating channel therebetween for tripping said circuit-interrupter means in the event of a fault accompanied by power-direction into the protected line-section at both ends thereof, and means responsive to the energization of the tripping means on another of the circuit-interrupter means associated with said bus for interposing an impediment against the subsequent immediate quick tripping of a circuit-interrupter means of the protected line-section.

2,005,173
VEHICLE LIFTING AND TRAVERSING DEVICE
Brooks Walker, Piedmont, Calif.
Application April 5, 1932, Serial No. 603,317
9 Claims. (Cl. 180—1)

1. The combination with a motor vehicle of a structure mounted on said motor vehicle adapted to support two spare tires at the rear end of said vehicle, means for imparting movement to said structure to cause said tires to engage the ground at each side of the vehicle longitudinal center and lift two wheels of said vehicle out of engagement with the ground.

2,005,174
ELECTRIC TUBING CONNECTER
Gershom G. Williams, La Jolla, Calif.
Application September 23, 1933, Serial No. 690,690
4 Claims. (Cl. 247—27)

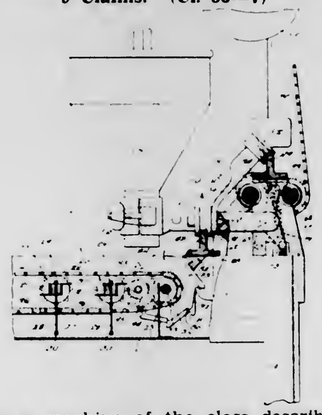
1. An electric tubing connecter consisting of, a socket portion adapted to receive the end of electric tubing, a screw and wedge receiving means associated with said socket portion and disposed with its axis in substantially tangential relation with the axis of said socket portion, a relatively long thin tapering wedge means disposed at the inner portion of said receiving means and a screw engageable with said receiving means to force the wedge means tangentially into wedging curved relation between the socket and tubing.

2,005,175
CENTRIFUGALLY-CAST CIRCULAR INGOT
James L. Adams, Jr., Youngstown, Ohio
Application December 28, 1932, Serial No. 649,181
3 Claims. (Cl. 22—218)

1. A cast ring-ingot with substantially helically directed end-faces, on its axially disposed ends, said end-faces forming offset elements with respect to main body of ring-ingot, but included between inner and outer radii of latter.

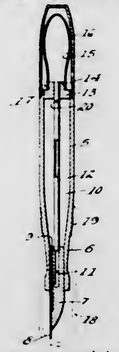
2,005,176
CAMPER'S TOOL
John Le B. Arbuckle, Columbus, Ohio
Application December 16, 1932, Serial No. 647,653
1 Claim. (Cl. 145—62)

In a combination tool, a handle provided with a longitudinally extending socket opening to one end thereof, the inner part of said socket being of restricted slot-like formation and the outer portion of said socket towards the end of the handle being of enlarged or greater cross sectional area, the said socket providing shoulders substantially midway of its length at the points of juncture of the restricted slot-like inner portion with the enlarged outer portion thereof, a knife provided with a blade and handle removably positioned in said socket with the blade of the knife received in the restricted slot-like portion of the socket and the handle of the knife in the enlarged outer portion thereof, the end of the knife handle adjoining said blade being engaged with said shoulders to control the inserted positions of the knife within said socket, a metallic ferrule reenforcing the end of the tool handle adjacent to the open end of said socket, said ferrule being provided with a flange arranged in the socket contiguous to its open end, said flange being formed with a shoulder, and a spring-



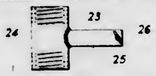
pressed member carried by the knife handle and arranged to engage with the walls of said last-named shoulder when the knife is positioned within said socket to positively retain said knife within said socket, said knife being confined against accidental movement when positioned within said socket.

2,005,177
SHOE PRESS PAD
William C. Card, Jr., Winthrop, Mass., assignor to Compo Shoe Machinery Corporation, New York, N. Y., a corporation of Delaware
Application August 8, 1933, Serial No. 684,165
7 Claims. (Cl. 12—38)



1. An inflatable shoe press pad for handling right or left shoes only, and having a thickened shank portion, said thickened portion being of greater longitudinal extent at the inside edge of the pad than at the outside.

2,005,178
DOUGHNUT MACHINE AND THE LIKE
Charles E. Carpenter, Chicago, Ill.
Application October 9, 1934, Serial No. 747,653
9 Claims. (Cl. 53—7)



1. In a machine of the class described, the combination of a frying pan, means for forming and depositing doughnuts in one end of said frying pan, and means for turning and advancing said doughnuts lengthwise of the pan, said means comprising a series of transversely extending longitudinally slotted shafts, a radial paddle member located in the slot of each of said shafts, and rotating with the shaft, an enlargement on each longitudinal edge of said paddle, said enlargements being of greater width than the shaft slots, to thereby retain the paddles against slippage out of the slots, and means for simultaneously rotating all of the shafts periodically through semi-revolutions to thereby carry the respective blades upwards and over away from the point of doughnut introduction and towards the point of doughnut delivery, substantially as described.

2,005,179
FOUNTAIN PEN
Frank B. Chamberlin, Columbus, Ohio
Application May 6, 1933, Serial No. 669,730
1 Claim. (Cl. 120—46)

A fountain pen comprising a barrel provided with an internal ink reservoir, a ported feed bar formed in connection with the lower end of said barrel, the ports in said feed bar establishing communication for fluid flow between said ink reservoir and the atmosphere, a closure formed at the upper end of said ink reservoir, a bulb carried by said closure, and a tube extending longitudinally of said barrel and establishing fluid flow between the interior of said bulb and the ports of said feed bar, said tube adjacent to said closure being provided with a restricted, valveless opening possessing a diameter materially less than that of said tube, the axis of said opening being disposed substantially at right angles to the longitudinal axis of the tube.

2,005,180
TANK CLEANING DEVICE
James A. Cronin, Berkeley, Calif., assignor to Standard Oil Company of California, San Francisco, Calif., a corporation of Delaware
Application February 20, 1933, Serial No. 657,543
9 Claims. (Cl. 299—73)

1. A tank cleaning device comprising a support adapted to extend from the bottom of a tank to the top thereof, a nozzle carrier longitudinally movable on said support, a nozzle pivoted on said carrier, orienting means for said carrier extending along and to the upper end of the support and adapted to move said carrier about said support as an axis, and a hose connected to said nozzle and adapted to supply a cleaning fluid thereto, said hose adapted to be manipulated from the outside of said tank to move said nozzle in a vertical plane.

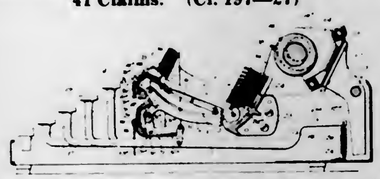
2,005,181
HOBBYHORSE
Frank G. Dennison, Newton, Mass.
Application April 7, 1932, Serial No. 603,819
5 Claims. (Cl. 272—53)

1. In a hobby-horse capable of forward movement, the combination with a body portion and fore and hind legs carried thereby and connected together for movement simultaneously in opposite directions as the rider thrusts his body forward or rearward, said fore legs being provided with extensions connected together to form a hand lever for the rider, of a resilient connection between the hand lever and the body portion for facilitating the movement of the hind legs as the rider thrusts his body forward.

2,005,182
PRODUCTION OF PATTERN EFFECTS ON TEXTILE AND OTHER MATERIALS
George Holland Ellis and Henry Charles Olpin, Spondon, near Derby, England, assignors to Celanese Corporation of America, a corporation of Delaware
No Drawing. Application January 14, 1933, Serial No. 651,848. In Great Britain February 9, 1932
11 Claims. (Cl. 8—5)

1. Process for the production of pattern effects on materials, which comprises discharging a ground color thereon by means of substances selected from the group consisting of stannous and titanous chloride salts, while restricting acidity by means of an organic base.

2,005,183
CATALYTIC OXIDATION OF KETONES
Walter Flemming and Walter Speer, Ludwigshafen-on-the-Rhine, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application February 23, 1933, Serial No. 658,148. In Germany March 1, 1932
10 Claims. (Cl. 260—112)



1. The process for the catalytic oxidation of ketones, which comprises subjecting a ketone corresponding to the general formula R—CO—R_1, in which R denotes an alkyl, cycloalkyl, aralkyl or aryl radicle and R_1 and alkyl, cycloalkyl or aralkyl radicle or in which R and R_1 are connected with each other as members of a non-aromatic ring system, to oxidation, in the liquid phase, by means of a gas containing oxygen, in the presence of an oxidation catalyst.

10. The process for the catalytic oxidation of ketones, which comprises subjecting acetone to oxidation, in the liquid phase, by means of a gas containing oxygen, in the presence of an oxidation catalyst comprising at least one metal selected from the group consisting of manganese and cobalt, and of acetic acid, at a temperature between about 75° and about 105° C., the partial pressure of oxygen being at the most about 5 atmospheres.

2,005,184
FRUIT COATING METHOD
Thomas W. W. Forrest, Fresno, Calif., assignor to Sun-Maid Raisin Growers of California, a corporation
No Drawing. Application June 23, 1933, Serial No. 677,265
3 Claims. (Cl. 99—8)

1. In a method of treating partially dehydrated fruit, contacting the surfaces of the fruit with an emulsion containing oil, water, sugar, fruit pectin, and an emulsifying agent in addition to the fruit pectin.

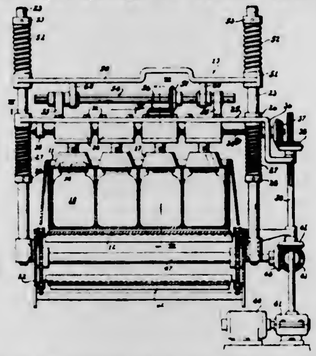
2,005,185
TYPEWRITING MACHINE
Max Garbell, Chicago, Ill., assignor to Victor Adding Machine Company, Chicago, Ill., a corporation of Illinois
Application August 24, 1931, Serial No. 558,864
41 Claims. (Cl. 197—27)

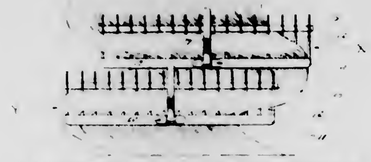
1. A typewriter action mechanism comprising a type bar, an actuating member having a fixed pivot, a direct operative connection between said actuating member and type bar, and a pair of toggle links for limiting the movement of said type bar, one of said links being pivotally connected to said type bar and the other of said links being pivotally connected at one of its ends to said one of said links and at its other end to said actuating member at a point removed from the fixed pivot of the latter and from the direct connection between the latter and the type bar, said actuating member serving independently of said toggle links to actuate said type bar.

2,005,186
APPARATUS FOR TIGHTENING CAPS ON JARS
Hugh T. Griswold, Toledo, Ohio, assignor to Owens-Illinois Glass Company, a corporation of Ohio
Application December 30, 1933, Serial No. 704,770
7 Claims. (Cl. 226—88)

1. In apparatus for tightening caps on jars or other containers, the combination of a horizontally disposed conveyor, means for supporting the containers thereon with the containers arranged in rows extending transversely of the conveyor, a battery of chucks spaced above the conveyor and arranged in a row extending transversely of the conveyor, means for intermittently driving the conveyor and thereby bringing said rows of containers in succession to an operative position beneath the battery of chucks and temporarily holding the containers at rest in said operative position, means for continuously rotating the chucks about vertical axes, a supporting plate on which the chucks are mounted, a cam shaft mounted on and spaced above said plate, cams on said shaft, a second plate positioned above the

cams, means for rotating the cam shaft and cams and causing the latter to engage said second plate and thereby force the cam shaft downward, causing it to lower the chucks into engagement with the caps, springs for holding said second





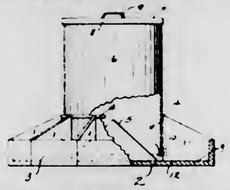


plate with a yielding pressure against the cams and thereby holding the chucks with a yielding pressure against the caps, and springs for lifting the chucks when released from the control of the cams.

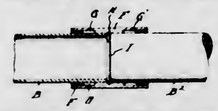
2,005,187
HAIRDRESSING DEVICE
John Halloh, Sunnyside, N. Y.
Application December 1, 1933, Serial No. 700,455
6 Claims. (Cl. 132—38)

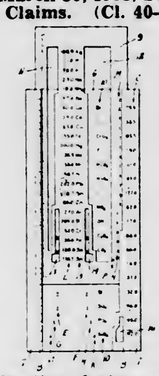


1. A hairdressing appliance, comprising a comb element, a locking bar, and resilient means connecting the bar to the comb element, said resilient means being adapted to permit the bar to pass over the teeth of the comb from one side to the other and cause the bar to bear on a hair formation through which the teeth of the comb have been passed.

2,005,188
FEEDER
Clarence E. Hedrick, Newton, Kans.
Application July 9, 1934, Serial No. 734,323
3 Claims. (Cl. 119—53)

1. In a feeder a base element polygonal in form, and having an outer wall upwardly extending, and a bottom therefor, a conical baffle secured to the bottom concentric to the wall, a plurality of partitions radially extending and joined to the wall at the outer ends thereof, an annular band secured to the inner end of each partition near the upper edge thereof, a portion of the said partitions having a plurality of apertures spaced apart vertically, and a pin insertable in a selected aperture of each apertured partition, and a cylindrical container open at one end and positioned on the said pins said pins spacing the container from the floor.

2,005,189
SOLDER COUPLING
Albert H. Herr, Port Huron, Mich.
Application July 10, 1933, Serial No. 679,765
6 Claims. (Cl. 285—115)



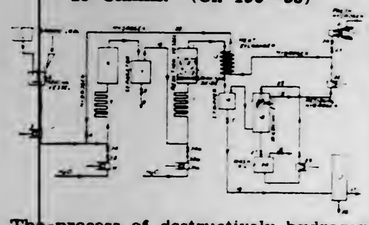
1. A coupling comprising two telescopically engaged members, one cut away to form an open ended annular recess between the same and the other member, a ring of fusible metal insertable in said recess and occupying the inner portion thereof, and a ring of less fusible metal insertable into the outer portion of said recess and forming a retainer for said inner ring.

2,005,190
PROCESS FOR THE DIGESTION OF VEGETABLE GROWTHS TO PRODUCE CELLULOSE
Herman B. Kipper, Accord, Mass.
No Drawing. Application April 13, 1933, Serial No. 665,957
9 Claims. (Cl. 92—9)

1. In a process for the digestion of vegetable growths to secure cellulose fibre, the step of subjecting the said growths to the action of nitric acid mixed with organic liquids.

2,005,191
MOLECULAR WEIGHT INDICATOR
Carlo D. Koski, Brainerd, Minn.
Application March 30, 1933, Serial No. 663,461
4 Claims. (Cl. 40—65)

1. In an indicating device, a body, a member connected with said body for movement relatively thereto, two series of symbols located respectively on said body and said movable member, symbols in one of said series representing certain data and symbols in the other series representing certain other data, said members each having thereon a series of numerals representing



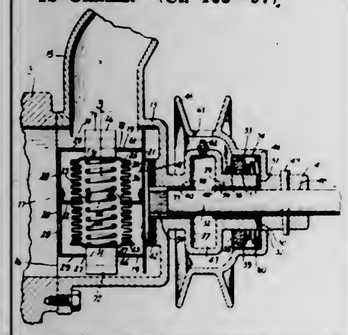
numerical data related to the symbols thereon, and aligned with the corresponding symbols, a second series of numerals on each of said members positioned in each instance adjacent an edge of the other member, said last mentioned edges of said members having protruding portions extending generally in the direction of the arrangement of said second series of numerals and serving to cover certain of said numerals in various relatively adjusted positions of said two members, substantially as and for the purposes described.

2,005,192

CONVERSION OF SOLID FUEL AND PRODUCT DERIVED THEREFROM OR OTHER MATERIALS INTO VALUABLE LIQUIDS

Carl Krauch, Ludwigshafen-on-the-Rhine, and Mathias Pier, Heidelberg, Germany, assignors to Standard-I. G. Company, Linden, N. J., a corporation of Delaware

Application July 29, 1932, Serial No. 625,648
In Germany February 14, 1925
15 Claims. (Cl. 196—53)



1. The process of destructively hydrogenizing carbonaceous substances, such as solid and liquid fuels, distillation and extraction products thereof, which comprises treating them with hydrogen, in the presence of a catalyst containing uranium, and heat at a temperature between about 300° and 700° C. sufficient to promote the reaction and at a pressure of at least 20 atmospheres.

2,005,193

TEMPERATURE RESPONSIVE LIQUID PUMP

Edward L. Mayo, Cleveland, Ohio, assignor to The Bishop & Babcock Mfg. Company, Cleveland, Ohio, a corporation of Ohio

Application March 21, 1934, Serial No. 716,657
12 Claims. (Cl. 103—97)

1. In a pump for circulating liquid through the cooling system of an internal combustion engine, a pump rotor comprising a head and centrifugal pump vane means movable radially on the head to different pumping positions to vary the pumping effect of the rotor from substantially zero to a predetermined maximum, and means thermally responsive to changes of pumped liquid temperature for adjustably moving the vane means.

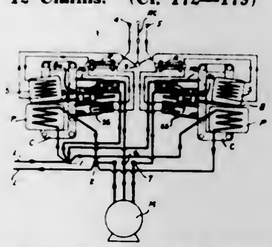
12. In a pump for circulating liquid through a conduit system, a pump chamber, a centrifugal pump rotor rotatably supported in the chamber having centrifugal pumping elements movable radially to vary the pumping effect and means for variably moving the pumping elements thermally responsive to temperature changes of liquid in the chamber.

2,005,194

HEADLIGHT LAMP

Franklin Mayo, Chicago, Ill., assignor to Walter R. Armstrong, Chicago, Ill.

Application December 1, 1932, Serial No. 645,251
1 Claim. (Cl. 176—26)



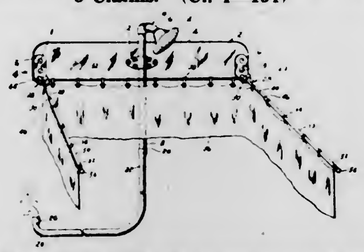
A headlight lamp for mounting in a standard horizontally disposed socket of a parabolic reflector-type automobile headlight, comprising a lamp base constructed and arranged to be received and aligned by said socket, a lamp bulb supported at one end in the base, primary and secondary filaments mounted within the bulb in spaced relation to one side of the axis of the base, and a conical reflector at the outer end of the bulb and fixedly supported by the bulb with its axis disposed at an angle to the axis of the base and concentric with the primary filament of the bulb, whereby all of the light emanating from the filament will be reflected as a cone to the parabolic reflector from which the greater part will be projected to the foreground, a lesser amount to the sides, and the least amount upwardly.

2,005,195

DELAYED ACTION SWITCH MECHANISM

Ira E. McCabe, Chicago, Ill.

Application July 31, 1933, Serial No. 683,037
12 Claims. (Cl. 172—179)



1. A motor control including a source of electricity, a motor, means for establishing a circuit from the source through the motor, a normally open switch in the motor circuit, electrically operated means for closing said switch, a remote control switch, means actuated by closing the control switch to establish a circuit through said operating means to close the motor switch, and means to delay the closing of the motor switch after the closing of the control switch including a variable electrical resistor in the control circuit increasing in conductivity as its temperature increases, and means to maintain the motor switch closed and the resistor ineffective as long as the control switch remains closed.

2,005,196

SHOWER BATH APPARATUS

George E. Mears, Los Angeles, Calif.

Application January 22, 1934, Serial No. 707,676
8 Claims. (Cl. 4—154)

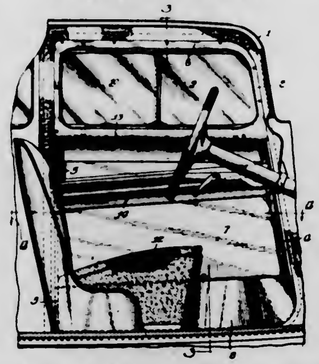
1. A shower bath apparatus comprising, a panel mountable on a bath room wall, a shower head positioned on said panel, a pair of brackets on the panel, a cross rod having its ends secured to said brackets, and a pair of extension rods mounted to swing on said brackets for horizontal extension and capable of being folded parallel with said cross rod when not in use.

2,005,197

PRIMING MIXTURE

Joseph D. McNutt, New Haven, Conn., assignor to Winchester Repeating Arms Company, New Haven, Conn., a corporation of Maryland

No Drawing. Application March 31, 1934, Serial No. 718,517
9 Claims. (Cl. 52—4)



1. A priming mixture comprising an alkali or an alkaline earth salt of dinitrophenylazide.

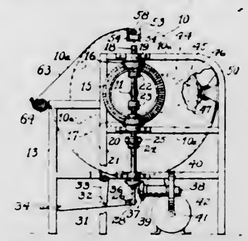
2,005,198

AUTOMOBILE DOOR

Willard L. Morrison, Chicago, Ill.

Application June 2, 1933, Serial No. 673,937
3 Claims. (Cl. 296—44)

1. An automobile construction comprising a door, a seat, a box on the inside of said door at the bottom thereof, an extension part for the seat which projects across the top of the box when the door is closed so as to act as a cover therefor and as an extension for the seat.



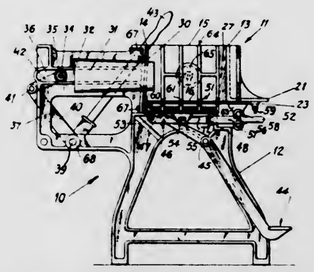
2,005,199

MACHINE FOR CLEANING WINDOW SHADES

Peter F. Nardulli and Michael J. Nardulli, Chicago, Ill.

Application December 13, 1933, Serial No. 702,138
12 Claims. (Cl. 15—40)

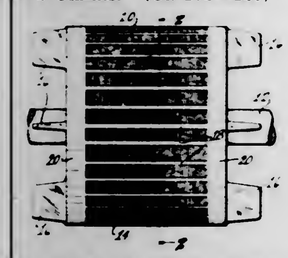
1. In a machine of the class described, the combination of a rotary drum, a tank for containing cleaning liquid around the lower portion of said drum, brushing means adjacent said drum, a driving shaft, gearing between said shaft and said drum for selectively rotating said drum in either of two directions for rotation in a single direction of said shaft, clutch mechanism for selectively



connecting said gearing for drum rotation in either desired direction, and devices for mounting a shade roller longitudinally on said drum, whereby a shade attached to said roller may be wrapped around said drum by rotation of the latter and cleaned on both sides by said brushing means for a single mounting of said roller on said drum.

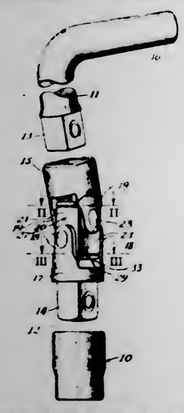
2,005,200

MOLD FOR BRICK-FACED BLOCKS



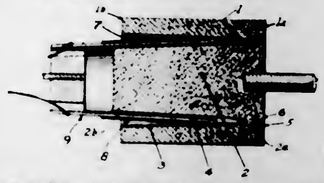
Thomas F. O'Gorman, Nutley, N. J.

Application March 17, 1933, Serial No. 661,213
4 Claims. (Cl. 25—41)



1. In a mold for plastic material, a mold box with end walls pivotally supported at their lower edge from a base-plate, a front wall secured to said base-plate, a supporting frame beneath said mold box, a sloping rear wall integral with said supporting frame, means for supporting said front wall from said base-plate in a plurality of adjusted positions relative to said rear wall, said base-plate and attached front and end walls being pivotally supported and adapted to swing jointly through an angle of ninety degrees upon said frame, a core-actuating lever fulcrumed in the frame and located on one side of the mold with its handle elevated above the upper level of the mold for moving a plurality of cores into and out of said mold box, a foot lever pivotally mounted on said frame and extending upwardly in contact with the rear portion of the lower face of said base plate for lifting and tilting said base-plate and attached front and end walls a portion of said swing to an inclined position on said frame to permit said mold box to be easily hand-swung the remainder of said ninety degree swing, a removable pallet, the front wall of said mold box being provided with end openings forming hand holds for removing said pallet and molded block from said mold.

2,005,201
INDUCTION MACHINE
Eyvind W. Petersen, Beloit, Wis., and William A. Singer, Chicago, Ill., assignors to Fairbanks, Morse & Co., Chicago, Ill., a corporation of Illinois
Application November 9, 1932, Serial No. 641,818
2 Claims. (Cl. 172—120)

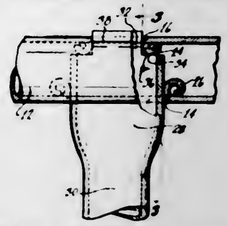


1. A rotor for an electric machine comprising, as a unitary metallically united structure, a magnetic core, and a winding and end ring portion consisting of a pressure cast alloy containing from 3% to 5% aluminum, magnesium substantially .01%, the remainder consisting of zinc of a commercial purity and characterized by the absence of more than a trace of copper, whereby the impact strength of the rotor structure is substantially increased, and the physical properties of the winding material uniformly maintained during ageing of the rotor assembly.

2,005,202
UNIVERSAL JOINT
Emil F. Pilger, Kenosha, Wis., assignor to Snap-On Tools, Inc., Kenosha, Wis., a corporation of Delaware
Application May 27, 1932, Serial No. 613,808
6 Claims. (Cl. 64—102)

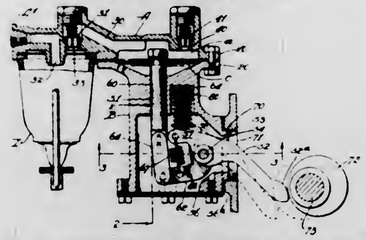
1. In a device of the character described, the combination with spaced members having bifurcated extremities, of a block interposed between said bifurcated member extremities, pivot pins extending in normal directions through said block and each of said bifurcated extremities to connect said members for movement in right angular directions, said block having a circumferential groove provided therein, and a spring lodged in said groove for frictional contact with the member extremity to maintain any adjusted relation therebetween.

2,005,203
VARIABLE INDUCTANCE DEVICE
Wladimir J. Polydoroff, Chicago, Ill., assignor to Johnson Laboratories, Inc., Chicago, Ill., a corporation of Illinois
Application May 4, 1932, Serial No. 609,159
10 Claims. (Cl. 171—242)



1. A variable inductance device, including a tapered magnetic core gradually increasing in density toward its larger end, and a correspondingly-tapered inductance coil inductively related to said core.

2,005,204
LAWN MOWER
Ralph R. Poynter, Lebanon, Ind.
Application February 23, 1933, Serial No. 657,993
14 Claims. (Cl. 56—255)



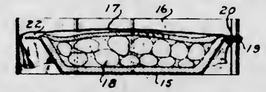
1. In a device of the class described, a pair of ground wheels mounted on an axle and having a driving connection therewith, a toothed blade hung from said axle and rotatable on a substantially vertical axis, and speed-increasing means connecting said axle to drive said blade, said blade running free of association with any other cutting element.

2,005,205
MEANS FOR CONNECTING TUBULAR MEMBERS
Milton H. Rix, Three Rivers, Mich., assignor to Fairbanks, Morse & Company, Chicago, Ill., a corporation of Illinois
Application April 29, 1933, Serial No. 668,542
4 Claims. (Cl. 287—54)

1. In a joint or connection for tubular members, a passage formed by aligned apertures through wall portions of one member, a compressed end portion on the other member, adapted to extend through said apertures, terminals on the outer end of said compressed portion, having faces seated on opposite sides of one of said apertures, for clamping the members in assembly, and means on the compressed end of the second member arranged to engage an inner wall portion of said first member.

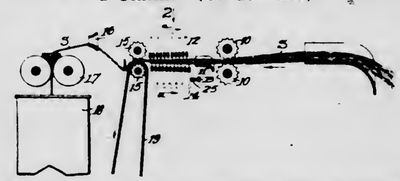
2,005,206
FUEL PUMP
Edward A. Rockwell, Chicago, Ill., assignor to General Motors Corporation, Detroit, Mich., a corporation of Delaware
Application May 29, 1929, Serial No. 366,842
6 Claims. (Cl. 103—215)

4. In combination, an impulser, a cam-actuated lever for actuating the same, a compression spring for causing the lever to follow the cam, a lever connected to the impulser having a lost-motion connection with the first-mentioned lever, a tension spring reacting between the levers for providing a limited pressure feeding stroke, and a downwardly directed pocket in which the follower spring is carried.



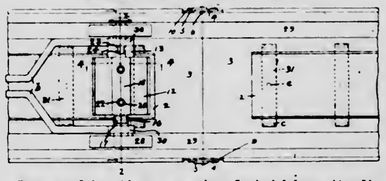
2,005,207
ELECTRICAL SWITCH
Joseph Rosen, Brooklyn, N. Y., assignor to Peer Electric Co. Inc., Long Island City, N. Y., a corporation of New York
Application November 23, 1932, Serial No. 643,978
3 Claims. (Cl. 200—51)

1. In an electric switch, a housing, a pair of spaced contacts therein, a pin extending substantially perpendicularly from a part of said housing, said pin being provided with spaced circumferential grooves, a contact bridge member of substantially U-shape having aligned openings in the legs thereof for insertion over said pin, a handle having an enlarged hub pivotally mounted on said pin between said legs, said hub being provided with a recess, a spring compressor seating in said recess, and having a portion passing through an opening in the connecting portion of said bridge member, and a spring surrounding a portion of said spring compressor to force parts of the walls of said leg openings into said grooves.



2,005,208
WRAPPING
Jonas Schuchat, Chicago, Ill.
Application August 20, 1934, Serial No. 740,613
7 Claims. (Cl. 206—44)

1. A commodity wrapper comprising a plate member for supporting the commodity and having a peripheral vertically yieldable flange; a flexible cover sheet disposed over said commodity and having its marginal portions depending over the flange of said plate; a preformed flexible endless band member having its ends permanently secured together surrounding said plate and the marginal portions of said cover sheet; said band member having a yielding spring engagement with said plate flange, and a plurality of spaced elongated apertures in said band member receiving adjacent portions of said plate flange and

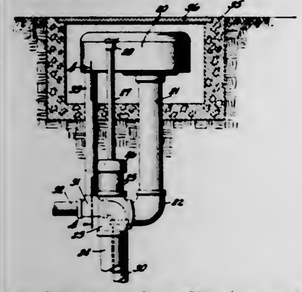


cover sheet, whereby vertical movement of said permanently endless band member relative to said plate draws said cover sheet substantially taut over the commodity, engages portions of said flange within said apertures and thereafter maintains the wrapper in assembled position by the spring engagement of said flange portions with said spaced apertures to clamp adjacent marginal portions of said cover sheet therebetween.

2,005,209
CLEANING DEVICE FOR GILL-BOX FALLERS
Harry Whitaker, South Barre, Mass.
Application June 26, 1934, Serial No. 732,491
1 Claim. (Cl. 19—129)

A gill-box having, in combination, a plurality of fallers having faller pins and successively movable from an initial working position along a substantially rectangular closed path having an upper working portion and a lower return portion, and a brush to clean said fallers, said brush being held fixed in position adjacent the path of upward return movement of said fallers and being successively and directly engaged by said fallers closely adjacent said pins as said fallers are moving upward to initial working position at the feeding end of the machine.

2,005,210
SAFETY BLADE SHARPENER
Reginald Henry White, Toronto, Ontario, Canada
Application January 26, 1934, Serial No. 708,383
3 Claims. (Cl. 51—159)



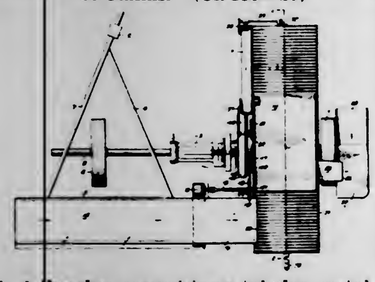
1. In combination, a pair of rigid longitudinally aligned coupled supports providing flat trackage at each side thereof, bow-shaped resilient members secured to the supports and extending transversely thereof, a pair of longitudinally aligned abrading elements having their upper surfaces in a common plane mounted on the resilient member, respectively above a support and of less length and breadth than the supports, the oppo-

site side edges of the abrading elements being disposed inwardly of the adjacent trackage, and a blade carriage movable over the trackage adapted to move a blade in contact with the abrading elements, the resilient members supporting the abrading elements permitting the latter to yield to pressure in a direction transversely of the path of travel of the carriage.

2,005,211
CONDUIT CAP

Ralph G. Whitlock, Los Angeles, and Lewis Sharp, Huntington Park, Calif., assignors to Federal Foundation, Inc., Las Vegas, Nev., a corporation of Nevada

Application April 9, 1934, Serial No. 719,698
9 Claims. (Cl. 221—67)

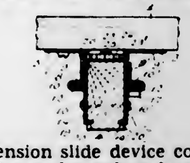


1. The combination of: a fill pipe; a head on said pipe; a pipe closure member movably mounted on said head and having a position closing said pipe and a position freeing said pipe to permit access thereto; means provided on said head for discharging a token into a position where it may be taken by the operator for each cycle of actuation of said member to permit access to said fill pipe; and means for coacting with a token before its removal to prevent further actuation of said closure member until said token has been taken up by said operator.

2,005,212
THRESHING

Elmer E. Wickersham, Stockton, Calif., assignor by mesne assignments, to Caterpillar Tractor Co., San Leandro, Calif., a corporation of California

Application January 14, 1928, Serial No. 246,697
20 Claims. (Cl. 130—27)

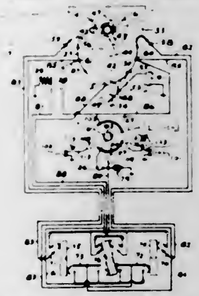


4. A thresher comprising a tubular, metal shell, a head closing one end of said shell, a bulkhead bracing said shell and spaced from said head, an axle passing through said shell adjacent said bulkhead, supporting wheels on said axle, and separating mechanism within said shell, said mechanism including a cylinder operating through an opening in said bulkhead.

2,005,213
EXTENSION SLIDE DEVICE

Max Wurm, Brooklyn, N. Y.

Application September 1, 1934, Serial No. 742,376
3 Claims. (Cl. 311—69)



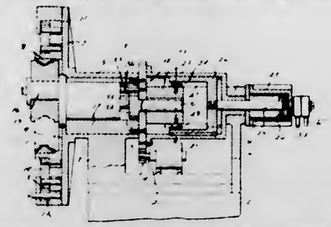
1. An extension slide device comprising a unit of three juxtaposed members having relative longitudinal sliding movement, the central one of which serves as a fixed guide-member for each of the engaging sliding side-members and the latter being provided with outwardly extending guide-ribs, guide-fixtures provided with inwardly disposed guide-ways engaged by said guide-ribs, said fixtures being mounted on said central member below and exteriorly of said side-members and serving to guide the side members in parallel longitudinal movement and in the same horizontal plane.

2,005,214
SIGNAL APPARATUS

Fred A. Anderson, Oakland, Calif.

Application April 24, 1933, Serial No. 667,670
5 Claims. (Cl. 177—329)

2. In signalling apparatus of the character described, a rotatable shaft, a signal arm fixed to the shaft for swinging to and between a pair of set positions thereof, a switch-actuating member rigid with said shaft, an electrically operable and reversible drive means for said shaft, power circuits for said drive means whereby to energize the same to actuate the shaft, and mutually independent switches each providing a pivoted switch arm in each said circuit for automatic actuation, by said actuating member in accordance with the setting of said signal arm whereby only that said circuit which will energize said drive means for swinging the arm from one said set position thereof to the other set position is closed at the appropriate said switch.



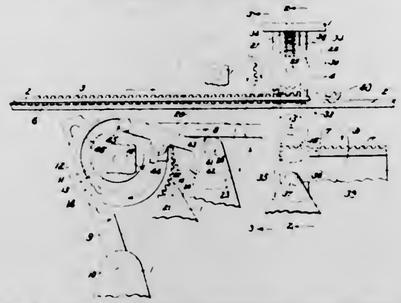
2,005,215
METHOD OF FORMING AN ANNULUS AND APPARATUS THEREFOR

Joseph E. Batie, Detroit, Mich., assignor, by mesne assignments, to The Kelsey-Hayes Wheel Company, Detroit, Mich., a corporation of Delaware

Application December 14, 1931, Serial No. 581,034
3 Claims. (Cl. 80—5)

1. An apparatus for forming an annulus, comprising a master die for engaging the annulus, a

rotatable carrier, a crank eccentrically mounted on said carrier, a roll carried by said crank for

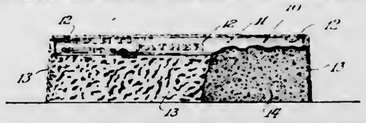


engaging the annulus, and means comprising a member movable longitudinally of said carrier for rotating said crank relative to said carrier.

2,005,216
CYLINDER PRESS MOTION

Arthur G. Bowles, Oakland, Calif.

Application February 14, 1934, Serial No. 711,147
13 Claims. (Cl. 101—282)

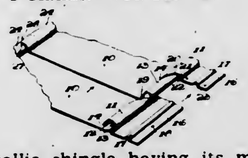


1. A cylinder press movement comprising a reciprocable bed, guides supporting the bed, means for reciprocating the bed, a rack secured along the edge of the bed, an impression cylinder geared to said rack in the printing stroke, means disengaging said cylinder from the rack during the return stroke, said bed being of a length to revolve said cylinder more than one revolution thereagainst during one printing stroke for printing in register on one place on the cylinder from forms in tandem, means continuing the revolution of said cylinder about one turn during the return stroke of said bed, and means reengaging the cylinder gear to said rack in register for repetition of the printing stroke as above.

2,005,217
MARKER

Elmer G. Brumund, Chicago, Ill., assignor to Brumund Bros. & Hufker Foundry, Incorporated, Chicago, Ill., a corporation of Illinois

Application December 26, 1931, Serial No. 583,269
1 Claim. (Cl. 40—124.5)



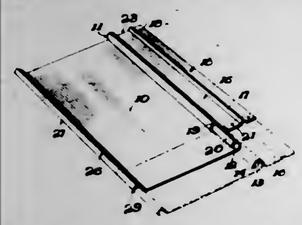
A tombstone including a hollow-shell integrally formed of cast metal and including an indicia bearing upper surface and four downwardly extending divergent side walls, irregular surfaces upon the exterior faces of each of these side walls simulating rough cut stone, irregularities on the interior surfaces of these side walls corresponding to the irregularities on the outer surfaces in a manner effective to maintain a uniform wall thickness; a filler positioned below and within the hollow shell and having four side surfaces convergently extending upward from the plane of the base, and irregularities in these surfaces corresponding with the irregularities on the interior surfaces of the hollow shell in a manner effective to prevent the removal of the hollow metal shell from the filler, exclusive of any adhesion therebetween.

2,005,218
METALLIC SHEET ROOFING

Oliver G. Burriss, Anderson, S. C., assignor of forty one-hundredths to E. P. Vandiver and forty one-hundredths to John C. Taylor, both of Anderson, S. C.

Application April 19, 1934, Serial No. 721,384
Renewed May 1, 1935
3 Claims. (Cl. 108—17)

1. A metallic shingle having its material at one longitudinal edge bent inwardly over the same for affording a longitudinal hollow bead, said bead having inner and outer layers and an inner longitudinal edge spaced from the upper surface of the shingle for affording a longitudinal passage, an attaching extension carried by the outer layer and disposed generally in the plane of the shingle, the forward end of the attaching extension being foreshortened with its forward end spaced from the forward end of the shingle and being substantially parallel therewith, said bead at its rear end having its inner and outer layers cut for affording a diagonal edge extending from the inner longitudinal edge of the bead to the free end of the same, said bead having its outer layer near its forward end cut away for providing a diagonal edge which extends from the longitudinal edge of the bead to a point spaced a substantial distance above the attaching extension for providing a substantially vertical shoulder extending from this point to the forward foreshortened end of the attaching extension, the inner layer of the bead projecting forwardly beyond this diagonal edge of the outer layer to provide a bead extension terminating at the forward end of the shingle and tapering rearwardly, said shingle being provided at its opposite longitudinal edge with a hollow rib projecting above the shingle and having its free longitudinal edge spaced from the shingle for affording a longitudinal passage, the forward end of this rib being cut to afford a diagonal edge.



2,005,219
METALLIC SHEET ROOFING

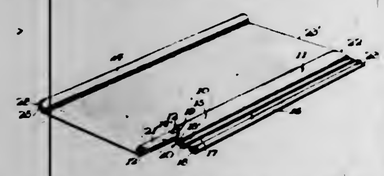
Oliver G. Burriss, Anderson, S. C., assignor of forty one-hundredths to E. P. Vandiver and forty one-hundredths to John C. Taylor, both of Anderson, S. C.

Application November 28, 1934, Serial No. 755,219
4 Claims. (Cl. 108—22)

2. A metallic shingle having its material at one longitudinal edge bent over the same for affording a longitudinal hollow bead having inner and

outer layers and an inner longitudinal edge spaced from the upper surface of the shingle for affording a longitudinal passage, an attaching extension permanently secured to the outer layer and having its forward end foreshortened and spaced from the forward end of the shingle, said bead having its outer layer near its forward end cut away for providing a transverse edge spaced rearwardly from the forward end of the shingle,

the rear end of the bead having a transverse edge, the attaching extension projecting longitudinally beyond one end of the outer layer of the bead, the inner layer of the bead projecting forwardly beyond the transverse edge of the upper layer to provide a bead extension, said shingle being provided at its opposite longitudinal edge with a hollow rib having a longitudinal passage.



2,005,220

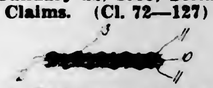
METALLIC SHEET ROOFING

Oliver G. Burriss, Anderson, S. C., assignor of forty one-hundredths to E. P. Vandiver and forty one-hundredths to John C. Taylor, both of Anderson, S. C.

Application February 14, 1935, Serial No. 6,576

4 Claims. (Cl. 108—22)

1. A metallic shingle having its material at one longitudinal edge bent over the same for affording a longitudinal hollow bead, said bead having inner and outer layers and an inner longitudinal edge spaced from the upper surface of the shingle for affording a longitudinal passage, an attaching extension permanently secured to the outer layer and having its forward end foreshortened and spaced from the forward end of the shingle, said bead having its outer layer near its forward end cut away for affording a diagonal edge, said diagonal edge extending from said inner longitudinal edge at a point spaced rearwardly from the forward end of the attaching extension to said forward end of the attaching extension, the inner layer projecting forwardly beyond the diagonal edge of the upper layer for providing a bead extension, said bead at its rear end being cut through both the inner and outer layers thereof for affording a rear diagonal edge which extends from the rear end of the shingle to said longitudinal edge at a point spaced forwardly from the rear end of the shingle, said shingle being provided at its opposite longitudinal edge with a hollow rib having a longitudinal passage.



2,005,221

MULTI-PLY FLASHING STRUCTURE

Samuel H. Cohen, Boston, and Jacob Wasserman, Cambridge, Mass.

Application January 22, 1935, Serial No. 2,914

6 Claims. (Cl. 72—127)

1. A multi-ply flashing structure adapted to be embedded in a mortar seam and comprising three plies, the inner one being substantially impermeable, non-corrodible sheet metal and the outer ones being waterproofed fibrous sheet material bonded facially to the surfaces of said inner ply and presenting in their fibrous texture a multiplicity of exposed recesses into which the mortar of a seam may enter in substantial amount and harden to lock said structure in such seam.

2,005,222

HEADER SLIDE

William W. Criley, Cleveland, Ohio

Application May 3, 1932, Serial No. 608,910

4 Claims. (Cl. 78—17)

1. In a forging machine, side guides therein, a header slide movable within said side guides and having a transversely disposed operating crankshaft connected thereto by a pitman and a wrist pin, the center of said wrist pin being below the center of the crankshaft, a tool on the front of said slide in advance of and below the level of said wrist pin, an extension arm rearwardly disposed on said slide and carrying at its rear end a bearing, guiding means for said bearing entirely within the machine frame, all forces acting within lines of motion established by said side guides projected.

2,005,223

MANUFACTURE OF CELLULOSE ESTERS

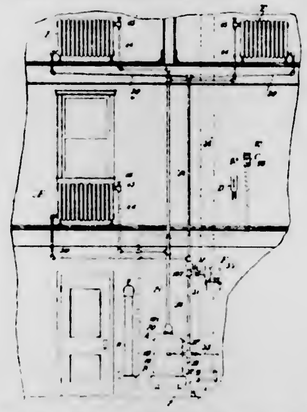
Henry Dreyfus, London, England

No Drawing. Application March 18, 1933, Serial No. 661,568. In Great Britain April 5, 1932

22 Claims. (Cl. 260—101)

1. The manufacture of organic esters of cellulose, comprising esterifying cellulosic material in the presence of a hydrohalide acid and a hydrohalide of a nitrogen containing base.

2,005,224



HEATING APPARATUS

Clayton A. Dunham and Aubra R. Dunham, Glencoe, Ill., assignors to Experimental Laboratories Incorporated, Chicago, Ill., a corporation of Illinois

Application July 7, 1930, Serial No. 466,002

8 Claims. (Cl. 237—2)

1. A heating apparatus comprising a generator for a mixed fluid heating medium consisting of products of combustion and steam, said generator comprising a burner and a valve for controlling the supply of fuel to the burner, a radiating system comprising a plurality of separate radiators, an exhausting mechanism connected with all of the radiators for withdrawing gaseous products therefrom and creating a subatmospheric pressure therein and in the generator, conduits for the heating medium leading from the generator to the radiators, and thermostatic means for controlling the valve so as to

decrease the fuel supply to the burner when the temperature of the gases exhausted from the radiating system exceeds a predetermined maximum.

2,005,225

DISK HARROW WITH RIGHT AND LEFT TURNING MECHANISM

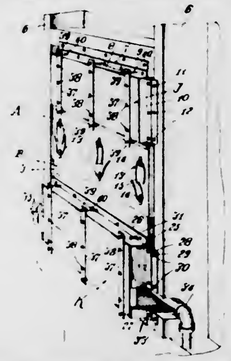
Samuel S. Furrer, Oxnard, Calif., assignor to Brenneis Manufacturing Company Inc., Oxnard, Calif., a corporation of California

Application August 7, 1934, Serial No. 738,773

16 Claims. (Cl. 55—83)

1. A harrow of the character described, including: a leading section and a following section pivotally connected so as to be swung from closed to angled relation; pulling means connected to said leading section for attaching the harrow to a pulling device; angling means connecting said pulling means to said following section and operating in response to a pulling force in said pulling means to positively swing said following section toward angled position; collapsible means for limiting the angling movement of said following section to angled relation relative to said leading section, said collapsible means comprising a chain which folds when said sections move toward closed relation and extends when said sections move toward angled relation; and means connecting said following section to said pulling device and moving said following section toward closed relation to said leading section when said pulling device turns rightward relative to said harrow.

2,005,226



CONCEALED RADIATOR

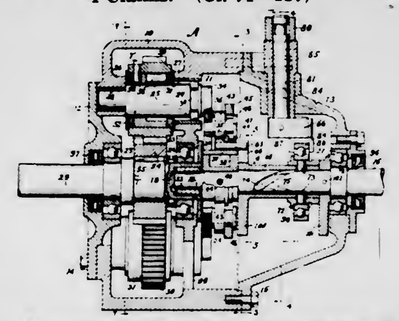
Lawrence P. Dwyer, Winnetka, Ill., assignor to C. A. Dunham Company, Marshalltown, Iowa, a corporation of Iowa

Application June 12, 1931, Serial No. 543,871

4 Claims. (Cl. 237—79)

1. A metallic casing for enclosing a concealed radiator, said casing being adapted to be positioned within a building wall and provided in its front face wth a lower inlet opening and an upper outlet opening, the casing comprising a plurality

of telescoping sections, and wires secured to the front wall of the casing and adapted to be engaged with the lathing of the building structure and embedded within the plaster wall.



2,005,227

VARIABLE SPEED TRANSMISSION

James P. Johnson, Shaker Heights, Ohio

Application November 25, 1932, Serial No. 644,170

4 Claims. (Cl. 74—117)

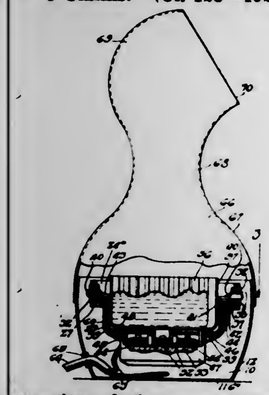
1. A power transmission comprising a drive shaft, a driven shaft, a plurality of crank shafts spaced about the axis of one of said shafts, an eccentric carried by said drive shaft, crank arms on said crank shafts, crank pins on said crank arms, rollers rotatably mounted antifrictionally on said crank pins and adapted for rolling engagement with said eccentric, a ring engageable with said crank pins for maintaining said rollers in engagement with said eccentric, and one-way driving clutches between said crank shafts and said driven shaft.

2,005,228

TORSION SET ROTARY JAR

James Allen Kammerdiner, Los Angeles, Calif.

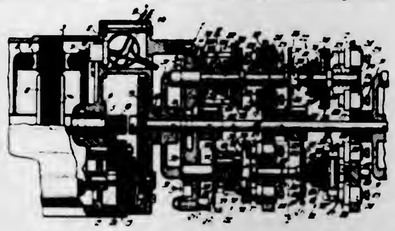
Application October 29, 1932, Serial No. 640,139



7 Claims. (Cl. 255—27)

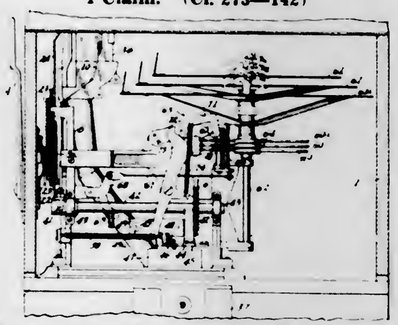
1. A rotary jar consisting of two sections related for limited longitudinal movement, jarring means to arrest longitudinal movement of said sections at one end of the longitudinal travel thereof to effect a jarring action, trip means to interlock said sections at the other end of their longitudinal travel and enable angular movement, said trip means including an inclined engaging surface on one of said sections and a roller journaled on the other section disposed to be abutted

therewith in one angular position and thereby restrain longitudinal movement of said sections, said inclined engaging surface being of sufficient pitch for a predetermined longitudinal stress to cause said roller to ride over said surface to another angular position free of said surface for longitudinal movement of said sections to jarring position, said trip means being maintainable in interlocking relation by a torsional stress against the action of a longitudinal stress exerted upon said sections.



2,005,229
VAPORIZER
Clarence J. Loos and Louis J. Miller, Chicago, Ill.
Application January 29, 1932, Serial No. 589,580
5 Claims. (Cl. 128—192)

1. A vaporizer device comprising a housing, a pan movably disposed therein, and a heating element movable with said pan and a hood removably connected to said housing and extending below the plane of the top of said pan.

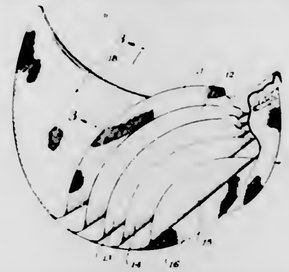


2,005,230
ELECTRIC CIRCUIT CONTROLLER FOR ELECTRIC SIGN FLASHERS, SIGNALING DEVICES, AND SIMILAR MECHANISMS
William L. Laib, Oak Park, Ill., assignor to Reynolds Electric Company, Chicago, Ill., a corporation of Illinois
Application September 24, 1928, Serial No. 308,060
8 Claims. (Cl. 200—27)

1. A switch mechanism, comprising a series of contact members arranged in groups and individualized to electrical circuits, companion contact elements for cooperating with said contact members to control the respective electrical circuits, connecting means mechanically connecting the contact elements of each group for si-

multaneous action, means including a Geneva movement mechanism for successively actuating the groups of the series, and devices associated with said last mentioned means for effecting sliding engagement between the contact members and contact elements.

2,005,231
AMUSEMENT APPARATUS
Jerry F. Macourek, Columbus, Ohio, assignor to Gustavus W. Snyder, Columbus, Ohio
Application July 21, 1934, Serial No. 736,382
1 Claim. (Cl. 273—142)



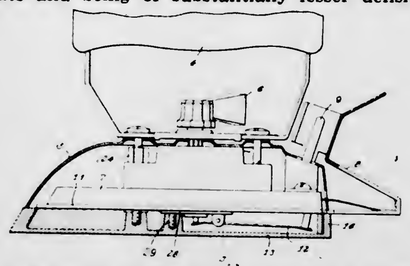
In a combined coin controlled vending and amusement furnishing apparatus, a cabinet having a sight opening formed therein, a plurality of spinners mounted for rotation about a substantially vertically disposed axis arranged within said cabinet, each of said spinners possessing a different diameter than the diameters of the remaining spinners, circularly arranged relatively spaced game figures carried by the outer peripheral portions of said spinners and disposed in angularly offset relationship with respect to each other, means for imparting simultaneous rotation to said spinners, and automatic means for selectively arresting the rotation of said spinners in varying sequences.

2,005,232
DRESS SHIELD
Harry V. Marsh, Chicago, Ill.
Application July 27, 1934, Serial No. 737,171
4 Claims. (Cl. 2—53)

1. As a new article of manufacture, an underarm dress shield comprising two members each having a free edge and an edge secured to the other of said members; said members being normally collapsed into parallelism with each other but being spreadable apart along their free edges

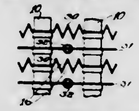
when in use; each of said members including a porous fabric outer casing having arranged therein a layer of absorbent cellulose treated with a deodorant substance and a sheet of material impervious or resistant to perspiration; the said sheet in each of said members being arranged between the said absorbent cellulose layer thereof and the other of said members so that when the dress shield is in use perspiration may readily

pass through the porous fabric outer casings into the absorbent cellulose layers so as to be absorbed by the latter and prevented from coming into contact with the garments of the wearer, while at the same time said members will conform to the curvature of the armpit and cling to the body of the wearer as soon as they become moist from perspiration when in use, whereby the said dress shield when in use will support itself in position without external support.



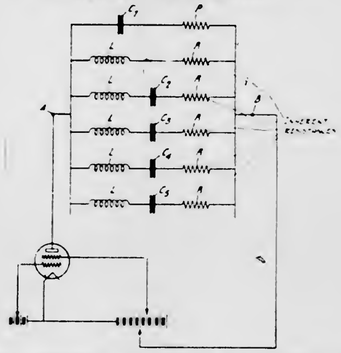
2,005,233
CIGARETTE HOLDER
Clarence L. Martin, Hazardville, Conn.
Application April 3, 1934, Serial No. 718,811
6 Claims. (Cl. 131—51)

2. A cigarette holder comprising—in combination, a bit member formed with an opening therethrough and a recess portion in line with the opening, an open-ended capsule in the recess for receiving a flavoring substance, a slotted sleeve on the bit member to permit the capsule to be inserted, removed, or confined therein, the bit member having a recess with an inclined wall for receiving and retaining an end of a cigarette therein, and means actuated by the slotted sleeve for ejecting the stub portion of a consumed cigarette.



2,005,234
SADIRON SOLE PLATE
Michael W. McArdle, Chicago, Ill., assignor to Chicago Flexible Shaft Company, Chicago, Ill., a corporation of Illinois
Application September 9, 1933, Serial No. 688,707
6 Claims. (Cl. 68—26)

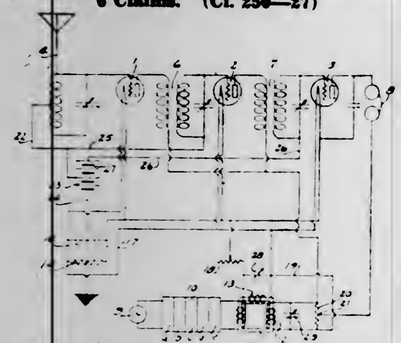
1. A composite sole plate for light weight sadirons comprising a shell of hard metal adapted to withstand rough usage having upstanding marginal edges defining the working surface of the iron and forming a top cavity and a cast metal filler having the properties of a body cast into said cavity filling the cavity to substantially the plane of the upper edge thereof, the metal of the filler forming the main body of the sole plate and being of substantially lesser density



and of greater coefficient of expansion than the metal of the shell.

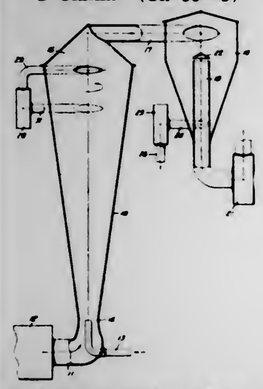
2,005,235
RADIATOR STRUCTURE
Arthur B. Modine, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application July 22, 1931, Serial No. 552,362
1 Claim. (Cl. 257—130)

A radiator core comprising a plurality of tubes and transverse fins mounted upon said tubes, certain of said fins having transverse corrugations formed therein between the tubes, in combination with fins having flat non-corrugated surfaces on opposite sides thereof arranged intermediate said corrugated fins, said flat fins having apertures therein, and means at said apertures adapted to engage and direct a part of the air passing through the radiator through said apertures and toward an adjacent fin.



2,005,236
STABILIZING THE FREQUENCY OF A VALVE GENERATOR
Eric Balliol Moullin, Oxford, England, assignor to Radio Corporation of America, a corporation of Delaware
Application October 4, 1933, Serial No. 692,067
In Great Britain April 12, 1932
3 Claims. (Cl. 250—36)

1. An oscillation generation circuit comprising an electron discharge device having an electrical

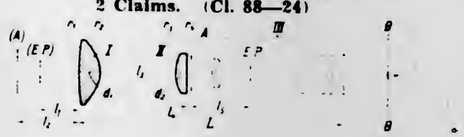


network in the path traversed by the oscillatory energy, said network comprising an inductive branch, a capacitive branch in parallel with said inductive branch and a plurality of series resonant branches resonant to harmonics directly in shunt with said inductive and capacitive branches, said network being anti-resonant to the fundamental frequency but series resonant to said harmonics.

2,005,237
OPERATION OF THERMIONIC TUBES
Fred A. Parsons, Milwaukee, Wis.
Application February 2, 1929, Serial No. 336,945
6 Claims. (Cl. 250—27)

1. The method of operating a thermionic tube in a cascade amplifier having successive circuits tuned to pass the same frequency, which method consists in intermittently applying to the elements of the tube potentials tending to cause tube operation at efficiency so high as to tend to result in oscillation, and varying such potential intermittently upon one element of the tube at such intervals as to prevent oscillation.

2,005,238
METHOD OF MANUFACTURING DRIED FOOD PRODUCTS
David D. Peebles, Eureka, Calif.
Application January 6, 1932, Serial No. 584,914
1 Claim. (Cl. 99—5)



In a method for producing a dried food product from materials like tubers, the steps of shredding the fresh tubers to form shreds having a paper-like thinness, introducing the fresh shreds into the lower portion of a treatment chamber, effecting suspension of the shreds within the treatment chamber in an upwardly-moving expanding column of drying gas, the gas being of gradually diminishing velocity, removing the desiccated shreds from the upper portion of the chamber together with the drying gas, and then separating the shreds from the gas.

2,005,239
GUY ANCHOR
Chester R. Pieper, La Crosse, Wis.
Application November 17, 1930, Serial No. 496,271
3 Claims. (Cl. 189—92)

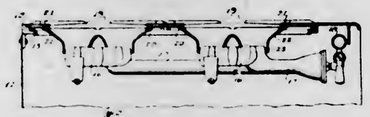
3. In an earth anchor of the type having blades adapted to slide edgewise into position by a substantially arcuate movement guided by the earth into which they enter, a blade having side edge portions inclined outwardly and downwardly and a central portion cupped to be concave upwardly.

2,005,240
OPTICAL SYSTEM FOR INSTRUMENTS REPRODUCING SOUNDS WITH THE AID OF LIGHT
Robert Richter, Jena, Germany, assignor to the firm of Carl Zeiss, Jena, Germany
Application August 2, 1934, Serial No. 738,080
In Germany August 7, 1933
2 Claims. (Cl. 88—24)

$r_1 = 59.1$ $d_1 = 5.5$ $l_1 = 9.9$
$r_2 = 8.5$ $l_3 = 29.1$ $l_2 = 15.9$
$r_3 = 10.7$ $d_2 = 2.8$ $l_4 = 1.0$
$r_4 = \infty$ $l_5 = 15.3$
$L = 87.6$

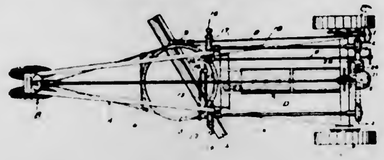
	I	II
n_d =	1.6396	1.5163
ν =	49.3	64.0

1. An optical system for instruments reproducing sounds with the aid of light, comprising a condenser, a slit and an objective, the planes conjugate to the slit and the entrance pupil of the objective relatively to the condenser being at the further side of the condenser and lying at a distance of at least 5 millimetres from the extreme lens apex of this condenser, the slit image projected by the condenser having a length of at most 10 millimetres, and the image of the entrance pupil of the objective, which is projected by the condenser, having a diameter of at most 2 millimetres.



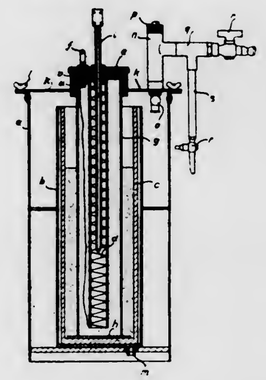
2,005,241
GAME PRACTICE MEANS
Carl I. Robinson, Chicago, Ill.
Application October 15, 1932, Serial No. 638,020
5 Claims. (Cl. 273—29)

1. Tennis practice means comprising a vertical ball returning surface corresponding in position to the plane of a tennis net and against which a ball may be projected, said surface having vertical boundary markings thereon for indicating the side limits of an imaginary full size conventional tennis court beyond said surface, a foreground upon which said ball rebounds from said vertical surface, and boundary markings on said fore-



ground foreshortened with respect to relative markings of a full size court to compensate for the reduced flight of a rebounding ball for indicating the position where said ball would have alighted with respect to prescribed limits in actual play.

2,005,242
GAS STOVE
John C. Rogers, Cicero, Ill., assignor to Crown Stove Works, Cicero, Ill., a corporation of Illinois
Application August 14, 1933, Serial No. 684,997
1 Claim. (Cl. 126—39)



In a multiple burner gas stove, the combination with a top frame formed with an internal countersunk marginal ledge, and burners located below said frame, of a plurality of removable burner top plates seated on said ledge in edge-to-edge contact and equipped with aligned grate bars, each of said burner top plates and its grate bars having openings therethrough directly over a corresponding number of burners and of greater diameter than said burners, integral imperforate upwardly flaring flame guards continuous with and depending from the margins of said openings respectively and formed with cylindrical lower open end portions encircling said burners with unobstructed clearance for the flow of secondary air, and removable burner grates seated in the upper ends of said flame guards.

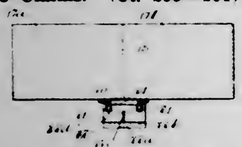
2,005,243
POWER OPERATED CONTROL MECHANISM
Adolph Ronning, Minneapolis, Minn.
Original application August 11, 1928, Serial No. 298,926. Divided and this application October 14, 1932, Serial No. 637,745
17 Claims. (Cl. 37—156)

1. A mechanism for adjusting vertical and angular positions of an implement carried by a travelling machine frame, comprising a pair of movable support members connecting the implement with the frame, a continuously rotatable power driven shaft, a single manually operative control element, and operative connections between said element, shaft and support members capable of translating selected movements of the control element under power from the shaft to either or both of said support members.

2,005,244
VAPORIZER
Wilhelm Schmidt, Berlin, Germany
Application January 31, 1934, Serial No. 709,124
4 Claims. (Cl. 128—192)

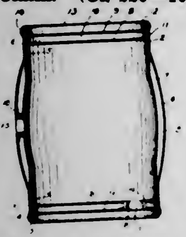
1. A vaporizer comprising in combination a brass container tin plated on its inner side, a second brass container tin plated on its inner and outer sides inserted in said first mentioned brass container, a cylinder made of refractory glass open at the top to communicate with said first mentioned container inserted in said second container and adapted to receive a mixture of chemicals, a copper cylinder in said glass cylinder and projecting above the upper end of said first mentioned container, a lid securely fixed on the upper end of said first mentioned container and having a central aperture surrounding the upper end of said copper cylinder and a lateral aperture, a tube fitting tightly in said central aperture forming a tight closure between said lid and said copper cylinder, said tube having an external screw thread at its upper end, a cap fixed on the upper end of said copper cylinder and having an internal screw thread adapted to engage the screw thread on said tube to form a tight closure between said copper cylinder and said lid, a heating element fixed in said cap and extending into said copper cylinder to heat and vaporize the chemicals in said glass cylinder, discharging means fitted in the lateral aperture in said lid and adapted to conduct the vapors from said first mentioned container, and a branch tube leading from said means adapted to draw off the condensed water from the vapors passing through said means.

2,005,245
PACKAGED CONFECTION
Russell Stover, Kansas City, Mo.
Application May 28, 1934, Serial No. 727,909
3 Claims. (Cl. 206—56)



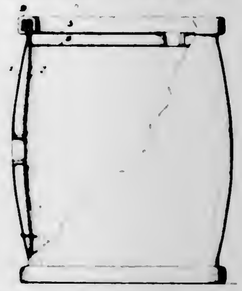
1. A package comprising a receptacle, a minor quantity of confectionery topping in the bottom of said receptacle and a major quantity of frozen

comestible superposed upon said topping, said topping having such a low freezing point that



it will remain flowable during normal temperatures of storage and dispensing of the package.

2,005,246
SHOWER BATH STRUCTURE
John A. Stuntebeck, St. Gregor, Saskatchewan, Canada, assignor to Alois J. Stuntebeck, St. Gregor, Saskatchewan, Canada
Application June 23, 1932, Serial No. 618,912
3 Claims. (Cl. 299—101)

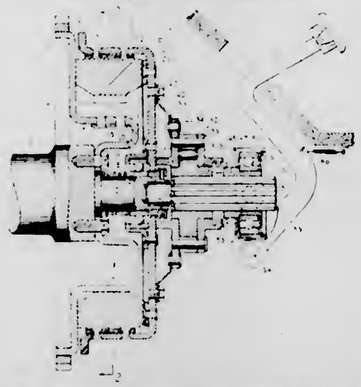


1. In a portable shower bath device, two sources of liquid supply, a valved discharge for each of said sources, each of said discharges being adapted to discharge a free stream of liquid, and a mixing chamber having an upper end open to the air and located below said discharges to receive the free streams of liquid emerging from both of said discharges, the lower portion of said chamber having apertures therein through which received liquids may be distributed.

2,005,247
INSULATED METALLIC CONTAINER
Edward D. Thompson, Warren, Ohio, assignor to The Stevens Metal Products Company, Niles, Ohio, a corporation of Ohio
Application May 24, 1933, Serial No. 672,708
1 Claim. (Cl. 220—10)

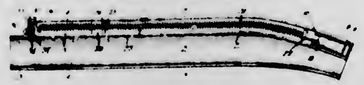
A bilged metal drum of the insulated type comprising an outer shell bilged intermediate its ends and terminating at its ends in extended cylindrical walls parallel to its axis, a chime ring fitted externally to each of said walls and adjacent the outer edges thereof to provide intervening cylindrical wall portions between said rings and said bilged portion, an inner shell having cylindrical walls constituting the greater portion of its length and a substantially central bilged portion, the end walls of said outer and inner shells being closely fitted together and terminating in substantially the same transverse plane, end closures for said inner shell, said end closures each comprising a pair of spaced covers each having vertically extending cylindrical flanges adapted to fit snugly within the respective cylindrical ends of said inner shell, and each terminating in the said transverse plane of the end walls of said outer and inner shells, and a common bond for the respective end walls of said shells and said flanges whereby said bonded shells and covers form heavily reinforced end structures for said drum.

2,005,248
METALLIC RECEPTACLE
Edward D. Thompson, Warren, Ohio, assignor to The Stevens Metal Products Company, Niles, Ohio, a corporation of Ohio
Application September 5, 1933, Serial No. 688,107
2 Claims. (Cl. 220—10)



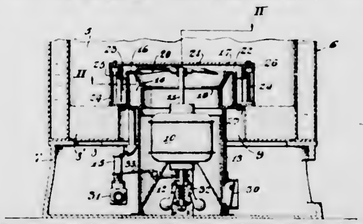
2. A metallic receptacle comprising a body, an end closure for said body, said body comprising an inner shell and an outer shell spaced apart from the greater portion of their length and welded together circumferentially near their terminal ends, the end of said inner shell extending beyond said outer shell end, said end closure having a flange extending beyond said inner shell flange when the closure is in position to close the receptacle open end, said inner shell end and said cover flange being rolled outwardly over the peripheral edge of said outer shell end to form a double seam at the end of the receptacle.

2,005,249
EXHAUST GAS PURIFIER
Chester Tietig, Los Angeles, Calif.
Application February 4, 1930, Serial No. 425,911
4 Claims. (Cl. 60—30)



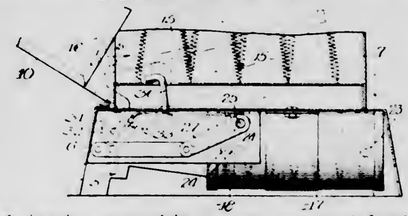
1. An exhaust gas purifier comprising a Venturi tube having an internal constricted throat, said Venturi tube being adapted to be interposed within and constitute a part of the exhaust-gas line of an internal combustion engine, and an open-ended air tube passing through the wall of the Venturi tube and having one of its ends disposed in proximity to the outer surface of the Venturi tube and its other end communicating with the Venturi tube rearwardly of its throat at the outlet side thereof.

2,005,250
DRIVING MECHANISM AND CLUTCH
Ernest E. Wemp, Detroit, Mich.
Application February 4, 1931, Serial No. 513,327
14 Claims. (Cl. 192—48)



1. The combination of the crank-shaft or the like of an engine, a driving clutch member on the shaft rotating therewith, a driven clutch member journaled on the shaft, centrifugally controlled means carried by the first clutch member adapted to engage the driven clutch member upon adequate R. P. M. of the shaft, a driven shaft, means connecting the driven clutch member and driven shaft, an overrunning clutch in said means, and control means for locking out the overrunning clutch and for effecting driving engagement between the first mentioned clutch members whereby driving effort may be transmitted from the driven shaft to the engine shaft.

2,005,251
LIGHT FOR GASOLINE DISPENSING NOZZLES
Straud K. Wood, Ben L. Eales, and Leo V. De Witt, Hutchinson, Kans.
Application October 16, 1933, Serial No. 693,770
1 Claim. (Cl. 240—6.4)

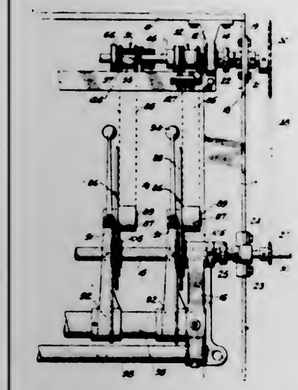


In a gasoline discharge appliance, a tube for the flow of gasoline, a second tube extending longitudinally of and in fixed relation and exterior to the first tube, a lens closing and sealed in the front end of the second tube, a battery and an incandescent lamp within the second tube, a housing for the lamp, a permanent and a normally broken conductor between the battery and lamp and extending longitudinally through the second tube, a plug abutting the rear end of the said housing and holding portions of said conductors spaced apart, a spring within the second tube and applying forward pressure on the plug to hold the housing adjacent the lens, and a fluid conductor switch within the lamp to complete the broken conductor by gravitative action, when the appliance is held in a downwardly and forwardly inclined position.

2,005,252
GAS BURNING APPARATUS
Nelson T. Branche, Toledo, Ohio, assignor to Surface Combustion Corporation, Toledo, Ohio, a corporation of New York
Application February 29, 1932, Serial No. 595,712
10 Claims. (Cl. 158—109)

9. In a gas burner, the combination of a fan for producing a blast of air, means for directing said blast radially outwardly from the axis of the fan, means in the path of said blast for discharging gas into said blast to form a combustible mixture, and means surrounding said means in spaced relation to form a baffle against which said mixture impinges.

2,005,253
TOASTER
August J. Braun, Chicago, Ill.
Application January 20, 1934, Serial No. 707,443
1 Claim. (Cl. 161—16)



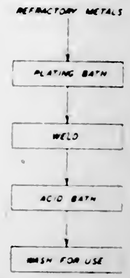
A toaster comprising a compartment having a pivoted closure, heating elements arranged in spaced relation within said compartment, bread holding elements spaced to enter between said heating elements secured to said pivoted closure, means for opening said pivoted closure comprising a rotatable shaft, a handle for rotating said shaft, a crank arm fixedly carried by said shaft, a link pivoted to said crank arm, a guide for said link, a cylinder, a piston therein, a spring for urging said piston in one direction, a valve for admitting air to said cylinder to control the action of said spring, said cylinder having an aperture to release the control of said spring adjacent one end of the movement of said piston, a piston rod bent at right angles and having the right angled end thereof secured to the guided end of said link, and means operable by the bent end of said piston rod for moving said closure into open position.

2,005,254
FILM TAKE-UP MECHANISM
Bruce Burns, Los Angeles, Calif., assignor, by mesne assignments, to Hughes Industries Co., Ltd., Los Angeles, Calif., a corporation of Delaware
Application April 25, 1931, Serial No. 532,806
9 Claims. (Cl. 271—2.3)

1. Take-up mechanism of the character described, including: a shaft; a body fixed to said shaft; a sleeve rotatably mounted on said shaft

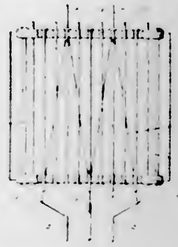
adjacent said body; spring means surrounding said shaft for frictionally engaging said sleeve with said body fixed to said shaft; a film engag-

ing member rotatably mounted on said sleeve; and a clutch member axially slidable on said sleeve for drivably connecting said sleeve and said film engaging member.



2,005,255
LETTER OUTLINING TEMPLET
Herbert De Oslund, Minneapolis, Minn.
Application February 9, 1933, Serial No. 655,873
3 Claims. (Cl. 33—174)

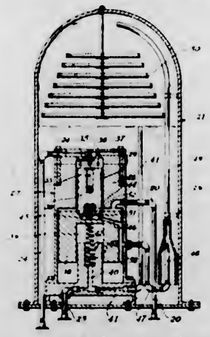
1. A letter or character outlining templet comprising outer and intermediate substantially straight and parallel arms, said outer arms being connected at one end by a main elbow, and one of said outer arms and the intermediate arm being connected at one end by a smaller elbow, the other end of said intermediate arm being spaced from said main elbow to afford a narrow marker passage, the free end of the other outer arm being curved and terminated close to but spaced from said smaller elbow to afford a marker passage, all edges of said three arms being parallel.



2,005,256
METHOD OF SPOT WELDING REFRACTORY METALS
William W. Eitel and Jack McCullough, San Bruno, Calif., assignors to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application January 2, 1934, Serial No. 704,895
6 Claims. (Cl. 219—10)

6. The method of joining tungsten, tantalum or similar wires which comprises separating said wires by a layer of nickel having a volume sufficiently small to leave no unalloyed remainder at

the point of fusion, and spot welding said wires through said layer.



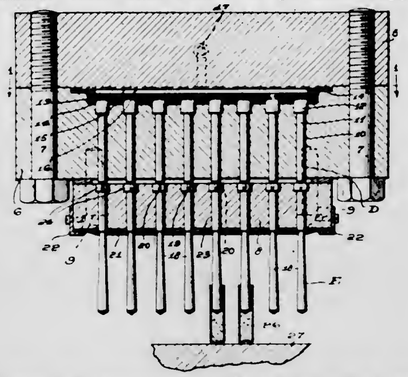
2,005,257
VACUUM TUBE GRID
William W. Eitel and Jack McCullough, San Bruno, Calif., assignors to Heintz & Kaufman, Ltd., San Francisco, Calif., a corporation of Nevada
Application April 26, 1933, Serial No. 668,072
2 Claims. (Cl. 250—27.5)

2. In combination a vacuum tube comprising an envelope, a cathode lying in a plane, a plurality of vertical wires surrounding said cathode and arranged to form a grid of substantially rectangular cross section, upper and lower conductive supports for said wires said supports having a series of apertures therein, the vertical wires located at the narrow edges of said grid being solidly fastened to both of said supports and the wires located in the broad surfaces of said grid parallel to the plane of said cathode being solidly fastened at one end to one of said supports only, the other end being free to expand through an aperture in the other support.

2,005,258
REFRIGERATION
Andrew Flukes, Chicago, Ill., assignor of one-third to Elmer L. Ballew, and one-third to Marty Bloom, Chicago, Ill.
Application February 8, 1934, Serial No. 710,201
10 Claims. (Cl. 62—5)

4. In refrigerating apparatus, the combination of: a generator; an absorber; an evaporator; means for circulating the relatively strong refrigerant liquor from the absorber to the generator; said circulating means including a valve coacting therewith to combine upon said circulating means the effective pressure of the relatively weak refrigerant liquor entering the absorber from the generator with the pressure of the refrigerant gas entering the absorber from the evaporator, so as to render both of said pressures, when combined, effective to operate said

circulating means and thereby circulate the relatively strong refrigerant liquor from the absorber back into the generator.



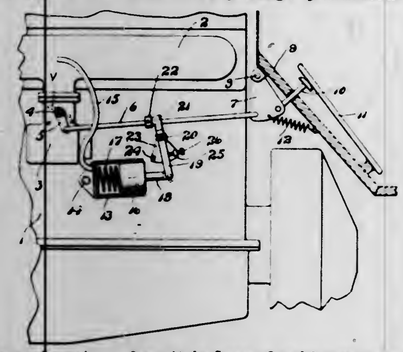
2,005,259
OIL SAVER
William R. Guiberson, Dallas, Tex., assignor to The Guiberson Corporation, Dallas, Tex., a corporation of Delaware
Application August 28, 1933, Serial No. 687,133
2 Claims. (Cl. 286—16)

1. An oil saver comprising, a housing having a vertical passage therethrough for receiving a reciprocating element and also having a transverse packing chamber, the chamber of the housing being lined with soft metal to provide smooth working surfaces, elastic packing blocks slidable on the smooth working surfaces of the chamber arranged for engagement with a reciprocating element passing through the housing, followers attached to the blocks, a pair of rods slidable on the outer sides of the housing, each rod having one end attached to one of the followers and slidably connected with the other follower, a crosshead connecting the other ends of the rods, and an adjusting screw threaded through the crosshead and rotatably attached to the follower with which the rods are slidably connected.

2,005,260
PRESS MECHANISM
Daniel D. Huyett, Wilmington, Del., assignor to Atlas Powder Company, Wilmington, Del., a corporation of Delaware
Application December 30, 1932, Serial No. 649,622
14 Claims. (Cl. 86—20)

7. A machine for applying a uniform pressure simultaneously to the contents of a group of containers comprising in combination, a reciprocatory structure having a pressure chamber formed therein, one side of which pressure chamber consists of a diaphragm, a plurality of press points or punches associated with and carried bodily by said reciprocatory member, means for supporting a group of containers in alignment with the press points, said press points being adapted to enter and press the contents of the containers, a source of positive pressure supply, means for admitting pressure fluid to the said chamber from said source of pressure supply

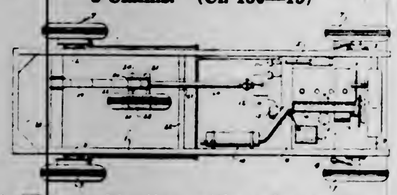
during the reciprocation of said structure, and means for transmitting the pressure of the diaphragm as determined by the pressure fluid, simultaneously to all of the press points.



2,005,261
RIVETING MACHINE
George H. Leland, Dayton, Ohio, assignor of one-half to The Leland Electric Company, Dayton, Ohio, a corporation of Ohio
Application May 24, 1933, Serial No. 672,564
15 Claims. (Cl. 78—48)

1. In a riveting machine, a support for a structure having a series of rods projecting beyond one end thereof, a riveting roller having recesses extending along its path of rotation to receive in order the projecting ends of said rods and upset the same, a support for said roller, means for imparting movement to one of said supports to cause the recesses of said roller to successively engage the ends of the rods, and means for exerting pressure on said rods during the movement of said movable support.

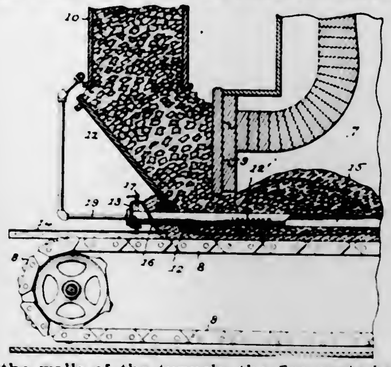
2,005,262
THROTTLE CONTROL MECHANISM
Frank E. Liverance, Jr., Grandville, Mich.
Application January 24, 1935, Serial No. 3,351
10 Claims. (Cl. 123—103)



1. In an internal combustion engine provided with a carburetor having a throttle means for controlling the volume of fuel mixture passing

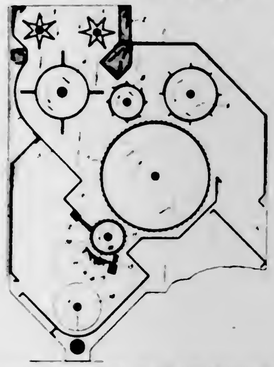
through the carburetor to the engine, of yielding means acting on said throttle when the engine is at rest, to open the same to a predetermined position to permit a greater passage of fuel mixture than the minimum passage permitted by

the carburetor when it is free of said means, and means actuated by air pressure provided through suction of the engine when it is running for releasing said throttle opening means, as and for the purposes specified.



2,005,263
MOTOR VEHICLE DRIVE
Charles M. McLanahan, Detroit, Mich.
Application March 20, 1933, Serial No. 661,675
5 Claims. (Cl. 180—15)

1. The combination with a frame supported upon wheels, of an engine carried by said frame, a propeller shaft, means for connecting said propeller shaft to said engine, drive members mounted on the free end of said propeller shaft, a wheel carried by said drive members, guide means mounted in said frame and receiving said propeller shaft for preventing side sway of said propeller shaft, said means being located remote from said drive members and remote from said wheel and means for holding said wheel in contact with a road surface, said last named means being arranged to engage said drive members remote from said wheel.

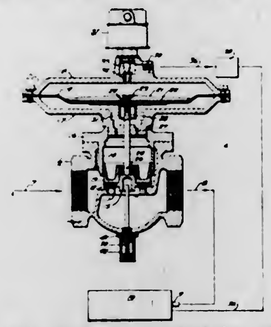


2,005,264
BOILER AND LIKE FURNACES
Edward M. McNamara, Chicago, Ill.
Application March 23, 1932, Serial No. 600,650
4 Claims. (Cl. 110—40)

1. The combination in a furnace provided with a combustion chamber, a rearwardly fuel feeding fire grate at the bottom of said chamber, means for feeding crushed fuel to the forward end of said grate, a plurality of air inlet tubes open at both ends and extending through the front wall of said chamber a distance above the fire grate and a distance inwardly from said wall in a position to be wholly enveloped in the entering fuel, the tubes so arranged constituting cores in forming longitudinal air tunnels in the mass of fuel in its progressive movement to the rear of the combustion chamber and with said tubes adapted to supply air for local combustion

of the walls of the tunnels, the fire grate being of an endless chain formation.

2,005,265
COTTON CLEANING AND RECLAIMING MACHINE
John E. Mitchell, Dallas, Tex.
Application May 19, 1933, Serial No. 671,797
1 Claim. (Cl. 19—37)



In a cotton cleaning and reclaiming machine having a main cotton extracting saw cylinder and providing a discharge opening past the cylinder for the escape of hulls, and small lock cotton not engaged by the saws, a reclaiming saw cylinder positioned below said opening, a yielding member cooperating with said reclaiming saw cylinder and a curved rigid member substantially concentric with the periphery of said reclaiming saw cylinder and one side of which forms with said yielding member a hull-discharge gap for said reclaiming saw cylinder, means for circumferentially adjusting said curved member relative to said yielding member to vary the size of said discharge gap, and means for doffing cotton from said reclaiming saw cylinder.

2,005,266
SLOW-OPENING VALVE
William A. Ray, San Francisco, Calif., assignor to General Controls Co., a corporation of California
Application November 13, 1933, Serial No. 697,797
4 Claims. (Cl. 137—139)

1. A device of the character described comprising a valve body including a valve seat and a

cylinder in said body, a piston fitting loosely in said cylinder and carrying a valve member cooperating with said seat, a diaphragm chamber mounted on said body and including a flexible member, a member connecting said flexible mem-

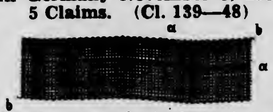
ber and said piston, a conduit for passing fluid leaking past said piston to one side of said flexible member in said chamber, and a passage to the other side of said flexible member in said diaphragm chamber.

2,005,267
PIPE FLANGE CONNECTION
Christian Rehder, Kiel-Gaarden, Germany
Application February 16, 1933, Serial No. 657,010
In Germany September 29, 1932
2 Claims. (Cl. 285—137)

1. A pipe flange connection, comprising in combination a pipe and a flange having a neck with a central bore and an annular groove cut in said neck around and separate from said bore and at an incline to the axis thereof so that the inner wall of said groove together with its extension form a cone standing on the neck of said flange, said annular groove adapted to accommodate the end of said pipe, and a bead-like projection on the wall of said bore intermediate its length adapted to be rolled to the internal diameter of said tube after the end of said tube has been pressed into said annular groove.

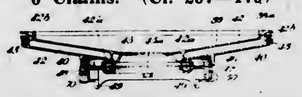
2,005,268
TREATMENT OF FLOUR
Rudolf Rüter, Cologne-Deutz, Germany
No Drawing. Application January 23, 1934, Serial No. 708,000. In Great Britain October 19, 1933
13 Claims. (Cl. 99—10)

1. The process for improving the baking quality of flour which consists in the addition to flour of substances from the homologous series CH_3, C_2H_5, C_3H_7, C_4H_9 combined with chlorinated nitrogen.



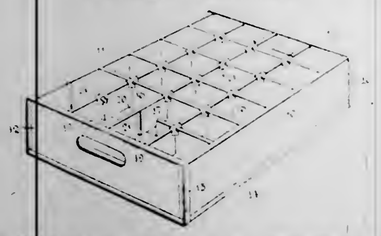
2,005,269
CLUTCH OPERATING MECHANISM
Heinrich Schildknecht, Gaggenau, Germany, assignor to Daimler-Benz Aktiengesellschaft, Stuttgart-Unterturkheim, Germany, a German company
Application April 5, 1933, Serial No. 664,624
In Germany April 9, 1932
4 Claims. (Cl. 192—99)

1. A clutch operating mechanism for power driven vehicles comprising in combination a clutch casing, a clutch pedal pivoted on the side of said casing, a clutch lever pivotally mounted on the outside of the clutch casing at the side of said clutch pedal with its pivotal-axis vertical, said clutch lever having an arm formed to engage clutch operating means inside the casing



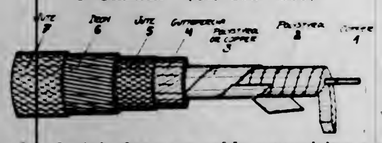
and the clutch casing having an opening therein through which said arm extends from the outside into the interior of the clutch casing, and a connecting rod operatively connected to the clutch pedal and clutch lever for turning said lever about the said vertical axis on the clutch pedal being actuated.

2,005,270
PROCESS AND APPARATUS FOR THE MANUFACTURE OF WIRE GAUZE
Karl Schmid, Reutlingen, Germany, assignor to firm Vereinigte Metalltuch-Fabriken Peter Villforth, Reutlingen, Germany
Application November 3, 1932, Serial No. 641,082
In Germany November 5, 1931
5 Claims. (Cl. 139—48)



1. A loom for manufacturing wire gauze with warp wires that extend slightly zigzag in the direction of the run of the gauze, comprising a reciprocating sley, a reed displaceable across the sley in either direction, means for slidably guiding the reed in the sley in the direction of the weft, the reed being adapted to hold all the warp wires in the act of beating up the filling in a parallel position deviating at a slight angle from the reciprocating direction of the sley, a mechanism operatively connected to the moveable reed and arranged to effect its lateral movement and means operated by the returning movement of the batten for actuating said mechanism.

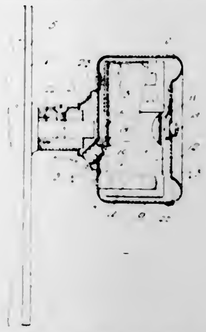
2,005,271
COOLING SLAB FOR VISCOUS LIQUIDS
Edward Metcalfe-Shaw, Chiswick, London, England
Original application July 24, 1933, Serial No. 682,033. Divided and this application June 7, 1934, Serial No. 729,517. In Great Britain July 27, 1932
6 Claims. (Cl. 257—179)



1. A cooling table for receiving boiled sugar or other viscous liquid from a machine for continuously heating such liquid, comprising a rotary water jacketed plate of shallow truncated conical form having a central discharge aperture to which the sugar or other viscous liquid is adapted to flow by gravity.

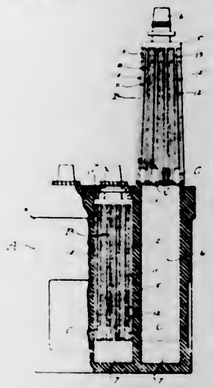
2,005,272
CRATE FASTENER
Oscar Sliger, St. Louis, Mo., assignor to The Mengel Company, Louisville, Ky., a corporation of New Jersey
Application December 20, 1934, Serial No. 758,506
6 Claims. (Cl. 217—22)

1. An anchoring element for cross partitions of crate-like structures, comprising an inverted channel-shaped body-portion; cheeks arranged in pairs at the sides of and adjacent each end of said portion; and a wing extending outwardly from the inner portion of each cheek at right angles thereto and as a continuation thereof.



2,005,273
SUBMARINE SIGNALING CABLE
Ernst Studt, Nordenham, Germany, assignor to Norddeutsche Seekabelwerke A.-G., Nordenham, Germany
Application September 25, 1933, Serial No. 690,957
In Germany October 24, 1932
5 Claims. (Cl. 173—266)

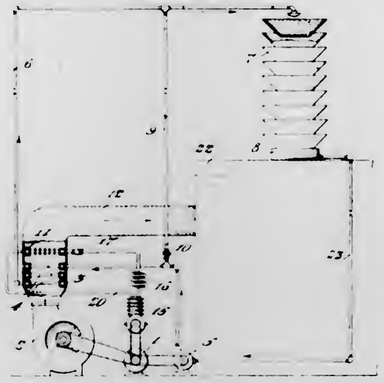
1. An electric deep sea cable comprising a cable core consisting of an electric conductor, an insulating profiled band of polystyrol wound on the said conductor, the turns of which band winding abut against one another and a closed winding of thin bands on the said profiled band winding, a watertight sheathing around the said cable core, and an armouring around the said watertight sheathing.



2,005,274
KEYHOLE ILLUMINATING DEVICE
George J. Taylor, Cleveland, Ohio
Application June 8, 1932, Serial No. 616,105
2 Claims. (Cl. 240—2.13)

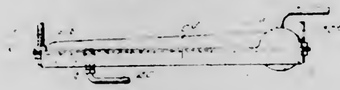
1. An illuminating device for the keyhole of a door lock, comprising a hollow metallic door knob having a reduced attaching stem provided with a flared outer end portion, an electric lamp socket carried by and extending inwardly and downwardly from the inner side of the knob and completely housed within said flared outer end portion of the stem, said flared end portion of the stem having an opening in alinement with the lamp socket at the bottom thereof, an electric lamp threaded in said socket, an electric battery disposed in the door knob and having a rear contact engaged by the central terminal of said electric lamp, said socket being in electrical connection with the door knob, a push button at the outer side of and in electrical connection with the door knob, said push button being arranged to be pressed into engagement with the casing terminal of the battery for closing the circuit of said lamp, an insulating covering on said battery,

and spaced clips attached to the inner wall of the door knob and arranged one above the other for receiving and supporting the battery within the knob in an upright position.



2,005,275
INSULATOR FOR STORAGE BATTERY PLATES
Thomas A. W. Thomas, Los Angeles, Calif.
Application June 16, 1933, Serial No. 676,159
2 Claims. (Cl. 136—81)

1. In a storage battery, a battery element embodying groups of interleaved plates and a separator between adjacent plates, and a hollow insulator cap of yieldable material disposed over each lower corner portion of the plates of one group with the walls thereof in surface contact with opposite faces of the plates and the confronting surfaces of like corner portions of the separators and normally spreading the lower portion of the element fan-shape.



2,005,276
SYSTEM FOR CONDITIONING AIR
George P. Tidmarsh and Patrick M. Tidmarsh, Tucson, Ariz.
Application July 18, 1933, Serial No. 681,006
5 Claims. (Cl. 62—129)

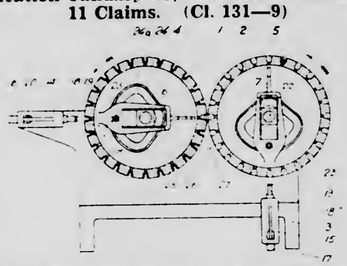
1. In a system for conditioning air for buildings, a circulatory water system including means for contacting the water with the atmosphere, a heat exchange device and means for circulating the water in the system, means for impelling a stream of air through the heat exchange device into the building, and means in the air stream for reducing the temperature of part of said

stream passing from the heat exchange device to the building to below the dew point to precipitate part of the moisture content whereby the stream of air entering the building is partially dehumidified without reducing the temperature of the air flow as a whole to below its dew point.

2,005,277
EVAPORATOR
Jens Touborg and Homer E. Rosebrook, Greenville, Mich., assignors to Gibson Electric Refrigerator Corporation, Greenville, Mich., a corporation of Michigan
Application October 15, 1934, Serial No. 748,386
9 Claims. (Cl. 62—126)

1. An evaporator in the form of a single substantially flat substantially horizontal shelf with means for supporting the same in a refrigerator, said means permitting raising or lowering of one edge of said shelf.

2,005,278
DISPLAY CONTAINER
Homer L. Trimble, Cleveland Heights, Ohio
Application January 28, 1933, Serial No. 654,018
13 Claims. (Cl. 206—44)

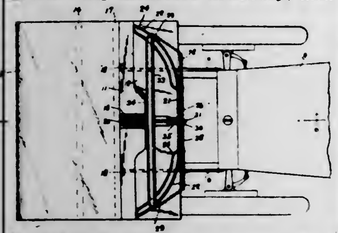


11. A display box having opposite marginal walls parted to permit its bottom to be folded upwardly so as to provide reversely inclined containers for merchandise, and lock elements interposed between the parted wall sections and movable responsive to the folding of the box into position to lock the box in folded display position.

2,005,279
ELECTRICAL CONDENSER
Willem Christiaan van Geel and Hendrik Emmens, Eindhoven, Netherlands, assignors to N. V. Philips' Gloeilampenfabrieken, Eindhoven, Netherlands
Application June 29, 1931, Serial No. 547,750
In the Netherlands July 24, 1930
7 Claims. (Cl. 175—315)

3. A condenser comprising at least one rectifier cell, said cell comprising an electrode at least partly consisting of a sheet of one of the metals of the first undergroup of the fourth main group of the periodic system of the elements, and a dielectric consisting of a film of a stable chemical compound obtained by conversion of the electrode material on the surface of said electrode, and an electrolyte, having a smaller emissive power than said electrode, consisting of manganese dioxide (MnO_2) and containing as a hygroscopic substance phosphorus pentoxide (P_2O_5).

2,005,280
DEVICE FOR CONTINUOUS COMPRESSING AND DRYING OF CIGAR BUNCHES
Ernst Sigurd Detlof von Segebaden, Stockholm, Sweden, assignor to Aktiebolaget Formator, Stockholm, Sweden, a joint-stock company of Sweden
Application January 28, 1932, Serial No. 589,496
11 Claims. (Cl. 131—9)

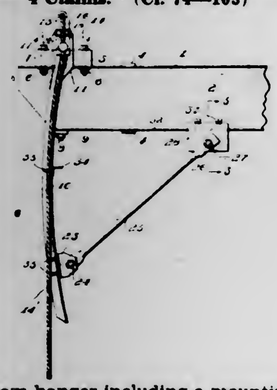


1. In a machine for forming bunches in manufacturing cigars in combination a primary movable endless carrier having pockets open at both ends, a second movable carrier having pockets, means for automatically transmitting the bunches from pockets of the primary carrier to pockets of the second carrier and means for imparting to the head of the bunches in the pockets of the second carrier a shape corresponding to that of the uncut finished cigar.

2,005,281
AUTOMOBILE SAFETY APPLIANCE
Gordon Warfield, Baltimore, Md.
Application January 16, 1935, Serial No. 2,885
3 Claims. (Cl. 293—24)

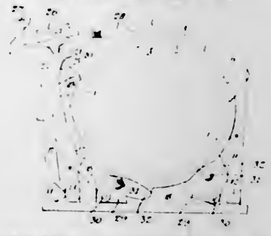
1. A safety device for automobiles comprising a base structure adapted to be attached to the front portion of an automobile, a downwardly swingable front flap on the said base structure, an upstanding rear wall on the base structure, side wings supported by said wall, spring means

for urging the wing members inwardly, and trip



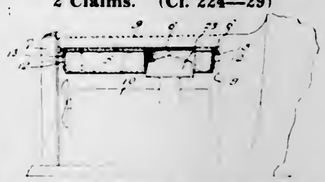
means adapted to hold the wing members apart until the trip member is struck.

2,005,282
EXHAUST BOX
Wenzel F. Weiss, San Jose, Calif., assignor to Sprague-Sells Corporation, Hoopeston, Ill., a corporation of Delaware
Original application October 12, 1925, Serial No. 61,943. Divided and this application October 31, 1927, Serial No. 229,971
6 Claims. (Cl. 198—209)



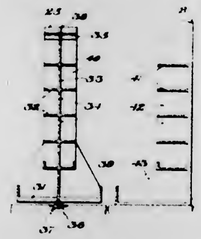
1. In an exhaust box for treating foodstuffs in open end cans, a plurality of horizontally aligned disks for supporting and moving said open end cans through said box, power means for rotating said disks, vertical shafts carrying said disks, sleeve bearings for supporting said shafts, plugs in the lower ends of said sleeve bearings for sealing the same against escape of lubricant, means for supplying lubricant to said shafts, an adjusting member on the lower ends of said shafts for aligning said shafts vertically, access to said adjusting member being possible only through removal of said plug.

2,005,283
BEAM HANGER
Henry A. Winland, Lancaster, Ohio, assignor to George H. Alten, doing business as Alten's Foundry and Machine Works, Lancaster, Ohio
Application May 7, 1934, Serial No. 724,443
4 Claims. (Cl. 74—103)



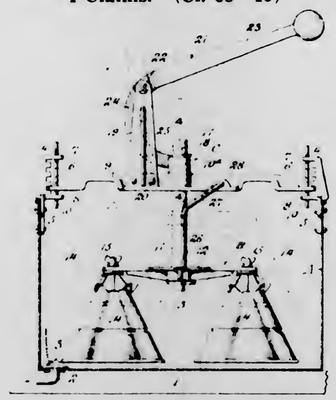
1. A beam hanger including a mounting adapted to be secured on a walking beam, a trunnion in said mounting, arcuate guide arms hung near the opposite ends of said trunnion, means secured near the lower ends of said arms and adapted to also be secured to said walking beam to position the hanger, a crown extending above said trunnion, a cable supported on said crown and extending down said arms, the lower ends of said cable adapted to be secured to a clamp, and means secured to the cable above the trunnion to prevent the entire cable from slipping from said crown should one of the bights of the cable be parted.

2,005,284
BRAKE OPERATING MECHANISM
Edward Brian Wilson, Westminster, London, England, assignor to Wilson Box (Foreign Rights) Limited, London, England
Application May 31, 1933, Serial No. 673,783
In Great Britain June 6, 1932
1 Claim. (Cl. 188—77)



Brake operating mechanism for the reverse speed of an epicyclic change speed gear, comprising a pair of brake bands surrounding the brake drum and superimposed one upon the other, the ends of the inner band being disposed on the opposite side of the drum to those of the outer band, a link pivoted at one end to one end of the inner band and at its other end secured to the gear box, a pull rod secured to one end of the outer band, a finger secured at one end to the gear box and at its other end pivotally supporting the said pull rod, a toggle lever pivotally connected to the said finger and engaging the free end of the outer band, a strut pivotally connected to the said toggle lever and a rocking bus bar supporting the said strut.

2,005,285
TOOL AND ACCESSORY CONTAINER
Paul O. Woody, Clearfield, Utah
Application June 6, 1933, Serial No. 674,589
2 Claims. (Cl. 224—29)

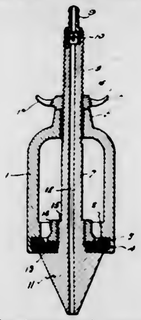


1. A tool and accessory container including a tray-like sheet metal receptacle tapered smaller from one end to the other so as to fit in the space between the rearwardly diverging brace rods connecting the radiator and dash-board of an automobile, said receptacle having the upper edges of its side walls rolled outwardly, said outwardly rolled edges of said receptacle being in the form of hook-shaped flanges and constituting means for removably mounting the receptacle on said brace rods within said space, and manually operable means to firmly secure said hook-shaped flanges in quickly-releasable engagement with the brace rods.

2,005,286
SELF-SERVICE STORE WITH REVOLUBLE SHELVES
James H. Carroll, Atlanta, Ga.
Application May 16, 1932, Serial No. 611,721
Renewed April 22, 1935
1 Claim. (Cl. 211—144)

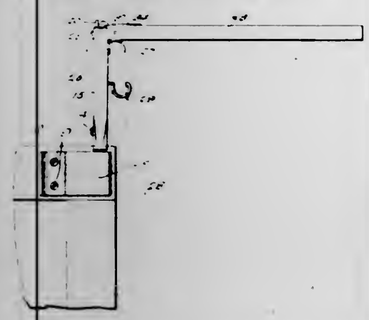
In a self-service store, the combination of a revoluble shelf unit having a series of longitudinal extending shelves, a bottom shelf of greater area than the other shelves, a top member, a vertical central partition extending from the bottom shelf to the top member and through the intermediate shelves, means for pivotally mounting the bottom shelf and top member, and a gear and spring controlled ratchet mounted on one of the pivot members to permit of revolving the unit in one direction and preventing its being revolved in the opposite direction.

2,005,287
WASHING MACHINE
Charles T. Childers, Galesburg, Ill.
Application March 29, 1934, Serial No. 718,026
4 Claims. (Cl. 68—19)



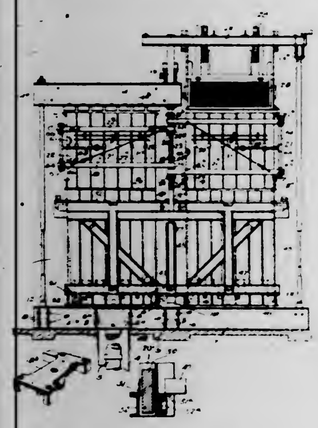
1. In a washer, the combination of a suction cup washer element, means mounting said element for vertical reciprocating movement; an operating member; and cam and follower connections between said member and said means, the control of the operating face of the cam being such as to effect a greater mechanical driving advantage nearing the upper end of a suction creating stroke than at the beginning thereof.

2,005,288
PERMANENT HAIR WAVING DEVICE
William Hamilton Cooper, Buffalo, N. Y.
Application December 10, 1932, Serial No. 646,663
14 Claims. (Cl. 132—33)



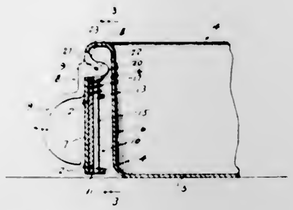
2. In a hair winder, a cylindrical body adapted to be rotated about a mandrel, a skirt extending longitudinally of said body and having means for aiding in holding a lock of hair under tension and guiding a lock of hair towards the mandrel longitudinally thereof and forming the hair into a helical coil about a mandrel, and an abutment at the junction of the body and skirt for urging a coil of hair longitudinally of the mandrel and disposing its convolutions in contacting engagement with each other.

2,005,289
VETERINARY INSTRUMENT
Edgar Ellsworth, McLoud, Okla.
Application November 23, 1934, Serial No. 754,547
1 Claim. (Cl. 128—245)



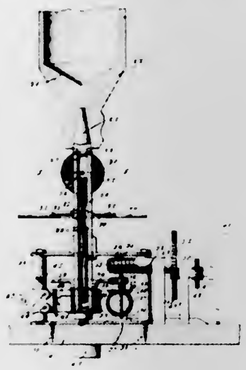
A veterinary instrument comprising a substantially U-shaped frame having a ring integral with the open end thereof, the bight portion of the frame having a longitudinally extending groove therein, said ring having a channel in its inner periphery, a compressible annulus mounted in said channel and having a portion thereof projecting beyond the inner side of said ring and defining a seat, a stem extending through said groove and extending through said ring, a frusto-conical shaped head on said stem, a compressible bevelled edge washer on said stem abutting the rear portion of said head, a nut on said stem for securing the washer in position, said washer being cooperable with the compressible annulus for clamping a portion of the rectum therebetween, said stem and said head being provided with a fluid passage therein and a clamping nut threadedly mounted on said stem and engageable with the bight portion of the frame for moving the stem within the frame.

2,005,290
GARMENT HANGER
Adolph J. Fussenegger, Louisville, Ky.
Application December 3, 1934, Serial No. 755,789
5 Claims. (Cl. 211—86)



1. A garment hanger comprising a bracket for rigid mounting on a support, a vertical dowel projecting upwardly from the bracket, a standard pivotally mounted on said dowel in axial extension thereof, a hanger arm pivoted to the upper part of the standard, and latch means on the upper end of the standard and releasably engaging a portion of the hanger arm for maintaining the hanger arm in a horizontal position, said latch means being releasable to permit said hanger arm to swing to a depressed vertical position.

2,005,291
BALING PRESS
Thaddeus S. Grimes, Columbus, Ga., assignor to The Lummus Cotton Gin Company, Columbus, Ga., a corporation of Georgia
Application September 10, 1930, Serial No. 480,996
15 Claims. (Cl. 100—28)



1. In a baling press having a ram, and a head through which said ram works, a pair of spaced supporting sills for said press and having opposed lateral seat portions supporting said head, tie means binding said sills together and against the sides of said head to hold the latter upon said seat portions, and reinforcing means for said sills and held in place by said tie means.

2,005,292
ICE CUBE TRAY
Albert S. Halsip, Fredericksburg, Va.
Application July 27, 1933, Serial No. 682,498
7 Claims. (Cl. 62—108.5)

1. An ice cube tray, a bracket having guide members on the front wall of said tray, a thrust pin mounted for vertical sliding movement in said guide members, spring return means for said pin surrounding the pin, said return means serving to retain the lower end of the pin retracted to a substantially flush position with respect to the bottom tray, and manually actuated means carried by said tray and cooperable with the upper end of the pin for actuating said pin, said means being in the form of a pivoted lever and having a cam element engageable with said pin.

2,005,293
ROTARY DISPLAY APPARATUS
Arthur L. Harris and Charles L. Harris, New Albany, Ind., assignors to Louise M. Harris, New Albany, Ind.
Application June 7, 1933, Serial No. 674,736
2 Claims. (Cl. 248—45)

2. Apparatus for the purpose indicated comprising a rotary post, a frame in which said post is journaled, a base on which said frame is mounted, a driving motor mounted on the base and operatively connected with the post to rotate the latter, collector rings mounted upon but insulated from the post and provided with brushes in superficial contact with them, and a receptacle formed with a diametrical bore through which the post passes, a screw passing axially through the receptacle and through the post, the post being formed with an axial bore,

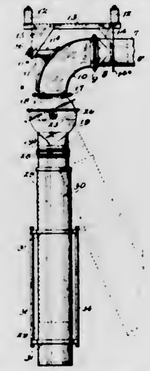
and conductors disposed in said bore and extending from the contacts in said receptacle to the collector rings respectively.

2,005,294
ANÆSTHESIA APRON
Jacob B. Lazare, Brooklyn, N. Y.
Application March 15, 1933, Serial No. 660,915
3 Claims. (Cl. 155—189)

1. An anæsthesia apron for use on a patient in a dentist's chair and comprising a body portion hemmed at the sides, elongate fastening means passing thru the hems and providing a loop extending below the lower end of the body portion and adapted to be positioned under the footrest of the chair, said fastening means including free end portions extending beyond the upper end of the body portion and adapted to be secured together at the rear of the back of the chair to tension the body portion on a patient in the chair.

2,005,295
PROCESS OF POLYMERIZING ORGANIC COMPOUNDS CONTAINING A DOUBLE LINKAGE, AND PRODUCTS OBTAINABLE THEREBY
Kurt Meisenburg, Leverkusen, near Cologne-on-the-Rhine, Germany, assignor to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a corporation of Germany
No Drawing. Application March 13, 1929, Serial No. 346,809. In Germany March 16, 1928
4 Claims. (Cl. 260—2)

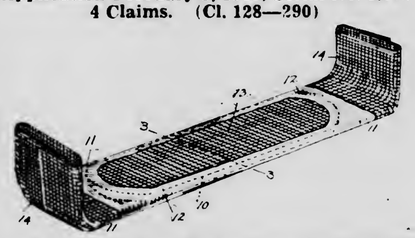
1. The process which comprises emulsifying a compound corresponding to the general formula



$$CH_2{:}C(-X)-Y$$

wherein X stands for hydrogen or alkyl, Y means an aromatic nucleus or an acyl radical, in water in the presence of an emulsifying agent, and causing polymerization to take place at a temperature between about 30–60° C.

2,005,296
METHOD OF PURIFYING NATURAL HEAVY SPAR
Johannes Müller and Manfred Müller, Homberg-on-the-Lower-Rhine, Germany, assignor to the firm Sachtleben Aktiengesellschaft für Bergbau und Chemische Industrie, Cologne-on-the-Rhine, Germany, a German company
No Drawing. Application February 17, 1934, Serial No. 711,818. In Germany March 6, 1933
19 Claims. (Cl. 23—122)

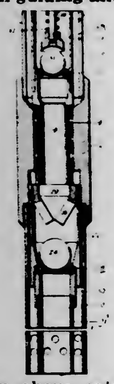


1. The method of purifying natural heavy spar, comprising calcining spar under reducing conditions at 1300 to 1350° C., whereby small amounts of barium sulphide are produced, and quenching the charge in a mineral acid.

2,005,297
ADJUSTABLE INLET STRUCTURE FOR CONDUITS
Ethan Frank Murray, Columbus, Ga., assignor to Lummus Cotton Gin Company, Columbus, Ga., a corporation of Georgia
Application June 8, 1933, Serial No. 674,920
3 Claims. (Cl. 302—34)

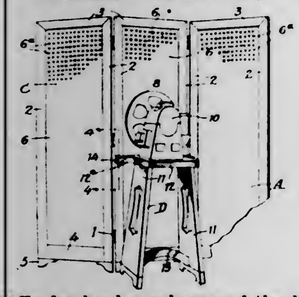
1. In a pneumatic conveyor telescope, an overhead support, a hanger depending therefrom, a conveyor pipe having one end disposed in said hanger, an elbow in swivelled connection at one end with said hanger supported end of the conveyor pipe, an inlet conduit depending from the other end of said elbow and supported thereby, a bracket on the outer curve of said elbow, a cooperating bracket depending from said overhead support in proximity to the elbow bracket, and a pivot pin received in both of said brackets in axial alignment with said conveyor pipe.

2,005,298
SANITARY NAPKIN
Robert J. O'Brien and Abraham A. Rubin, Paterson, N. J.
Application February 8, 1935, Serial No. 5,672
4 Claims. (Cl. 128—290)



1. A catamenial napkin having a liquid absorbing pad that is supplied with an anti-coagulant for the flow to be absorbed by the pad and having a water-proof wrapper with means of access of liquid to be absorbed by the pad.

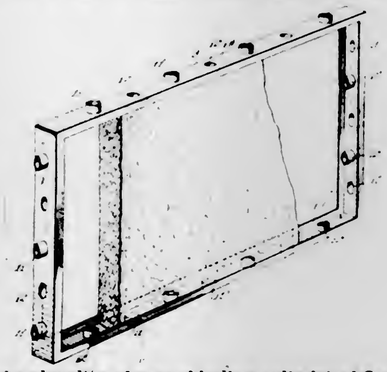
2,005,299
VALVE ASSEMBLY FOR WELL PUMPS
John Penrod, Okmulgee, Okla.
Application April 29, 1930, Serial No. 448,346
2 Claims. (Cl. 251—121)



1. In a pump valve for use in wells, a spherical valve element, and an annular valve body having a central axially extending passage for fluid and a surrounding seating surface flared upward and outward and provided between the upper and

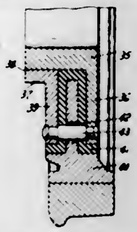
lower edges thereof and in full communication with said fluid passage with an annular sand and fluid receiving groove dividing the said seating surface into a lower final sealing area and an upper combination guiding and sealing area, said upper combination guiding and sealing area being

positioned axially above said groove and said lower sealing area and co-axially therewith to co-operate with the fluid in said groove in cushioning the impact of the spherical valve with the lower final sealing area and in centering the spherical valve element for axial presentation to the lower sealing area.



2,005,300
BAFFLE FOR LOUD SPEAKERS
Arthur M. Pfalzer, Hollywood, Calif.
Application December 15, 1933, Serial No. 702,597
8 Claims. (Cl. 181—31)

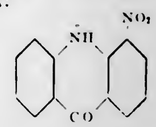
1. A baffle for loud speakers and the like comprising a foldable frame of sufficient area when opened to reproduce the fundamental frequencies of sound waves of the lower register, the rear face of the frame having a high sound absorption coefficient; said frame having an opening therethrough; and an electrodynamic loud speaker registering within the opening.



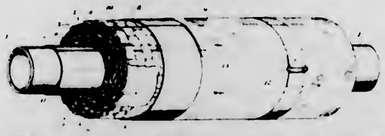
2,005,301
METAL FRAMES FOR CONSTRUCTING BUILDING BOARDS
Albert Rafter, Glen Ridge, N. J., assignor to Rafter Machine Company, Belleville, N. J., a partnership composed of Albert Rafter and John C. Rafter, Jr.
Application December 12, 1933, Serial No. 701,959
3 Claims. (Cl. 72—40)

1. A frame for constructing building boards of cementitious material, comprising a metal channel having a bottom wall and side walls at right angles thereto, said bottom wall having a plurality of spaced hollow cylindrical flanges struck outwardly along the longitudinal center line thereof

and a plurality of spaced hollow cylindrical flanges struck inwardly, said inwardly directed flanges forming small cylinders having a diameter greater than the diameter of the cylinders formed by the outwardly directed flanges.



2,005,302
CAR WHEEL
Curt Saurer, Akron, Ohio, assignor to The Firestone Tire & Rubber Company, Akron, Ohio, a corporation of Ohio
Application April 14, 1931, Serial No. 529,972
9 Claims. (Cl. 295—11)



4. A metal wheel comprising a hub member and a felloe member provided with widely overlapping flanges, an annular rubber member interposed between said flanges and cured thereto and a rim member shrunk on said felloe member.

2,005,303
DYEING OF CELLULOSE DERIVATIVES
Louis Spiegler and Henry R. Lee, South Milwaukee, Wis., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application January 25, 1933, Serial No. 653,482
8 Claims. (Cl. 8—5)

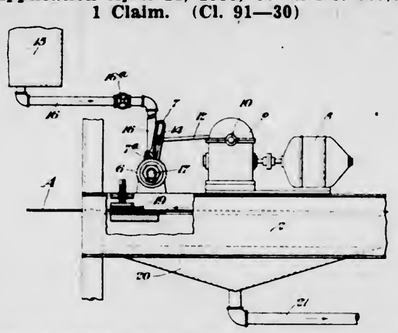
1. The process which comprises dyeing cellulose ester fibers with an acridone compound of the general formula:

2,005,304
ARTICLE OF MANUFACTURE
Edward A. Toohey, Somerville, N. J., assignor to Johns-Manville Corporation, New York, N. Y., a corporation of New York
Application July 30, 1932, Serial No. 626,493
2 Claims. (Cl. 154—45)

1. Thermal insulation comprising a plurality of composited, soft sheets of wool felt having discontinuous irregularities of surface, of some of the said sheets, forming voids between adjacent sheets, the adjacent sheets being collapsed upon each other, whereby there is minimized the circulation of air between the voids defined by two adjacent sheets.

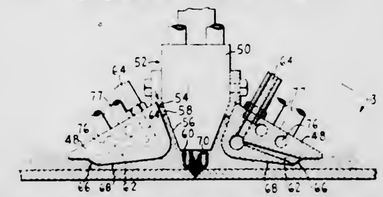
2,005,305
DUST COLLECTOR
Frederick H. Wagner, Baltimore, Md., assignor to The Bartlett Hayward Company, a corporation of Maryland
Application June 7, 1933, Serial No. 674,732
8 Claims. (Cl 183—84)

1. A dust collector for separating dust particles from gas, comprising a hollow casing; an inlet and an outlet in said casing; a continuous spiral passageway closed at the top and of uniform cross sectional area connecting said inlet and outlet; an inclined spiral apron forming the bottom of said passageway, said apron being of less width than said passageway; a dust-collecting chamber beneath and in communication with said passageway; and means for isolating said outlet from said dust-collecting chamber below said apron.



2,005,306
METHOD OF MAKING TUBES
Clarence H. Wallis, Ellwood City, Pa., assignor to National Tube Company, a corporation of New Jersey
Application June 21, 1934, Serial No. 731,793
4 Claims. (Cl. 29—156)

1. A method of making seamless tubes with clean inside surfaces, including using a lubricant on their last cold drawing passes over a mandrel, which will not deposit a residue when heated to annealing tempeatures, solidly pointing the opposite ends of said tubes after said last cold drawing passes without cleaning their inside surfaces,



subsequently annealing said tubes and then finishing said tubes including cutting off their solidly pointed ends.

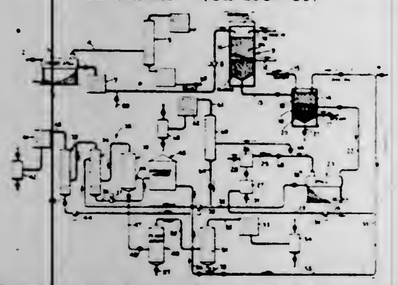
2,005,307
APPARATUS FOR COATING METAL STRIPS
Thomas D. Williams, Garfield Heights, Ohio, assignor to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application April 11, 1933, Serial No. 665,618
1 Claim. (Cl. 91—30)

Apparatus for coating metal strip comprising a stationary cylindrical shell having a plurality of dispensing apertures, a coating material supply conduit for said stationary cylindrical shell, a rotary shell journaled in said first named shell and having a plurality of apertures adapted for periodic alinement with said dispensing apertures and at least one feed orifice adapted for periodic alinement with said coating material supply conduit, a ratchet secured to said rotary shell, a rocking lever journaled on said last named shell and having a pawl for engaging said ratchet, a connecting-rod adjustably secured to said rocking lever, means for reciprocating said connecting-rod, means for evenly distributing the coating material from said dispensing apertures on said metal strip and removing the surplus therefrom, a coating material storage container for said supply conduit, and means for returning the surplus coating material to said storage container.

2,005,308
WELDING BURNER
James L. Anderson, Tenafly, N. J., assignor to Air Reduction Company, Incorporated, New York, N. Y., a corporation of New York
Application April 1, 1931, Serial No. 527,031
17 Claims. (Cl. 158—27.4)

1. Apparatus for welding metal, which includes: a torch having a face perforated to deliver a

seamwise extending system of flame, means for controlling the flow and combustion of the envelope gases of the flame system, including parts associated with said torch to provide passages for the admission of air to join said envelope gases, additional passages for supplying forced streams of oxidizing gas, said additional passages being located and directed so as to cause an induced flow of the envelope gases and oxidizing gas along the surface of the metal and away from the region of fusion, and means for circulating a cooling medium in said parts.



2,005,309

MANUFACTURE OF MOTOR FUEL FROM SLUDGE OIL

George Armistead, Jr., Lockport, Ill., and Walter Ullrich, Port Arthur, Tex., assignors to The Texas Company, New York, N. Y., a corporation of Delaware

Application July 8, 1931, Serial No. 549,568

11 Claims. (Cl. 196—50)

7. The method of producing cracked motor fuel from acid sludge produced by the treatment of a hydrocarbon lubricating oil fraction with a strong mineral acid, which comprises mixing said sludge with a diluent oil to reduce the viscosity thereof so that it may be settled into layers, mixing water with the diluted sludge and cooking the mixture by direct contact with steam to facilitate separation of liquid hydrocarbons and aqueous material from the sludge, permitting the cooked mixture to settle and separate into an upper layer of liquid hydrocarbons, and a lower layer of heavy sludge or coky material having an aqueous portion, removing liquid hydrocarbons from said layer first mentioned, subjecting the removed liquid hydrocarbons to preliminary heating to distill therefrom retained acidic material and a portion of said diluent oil, subjecting remaining oil to cracking conditions of temperature and pressure to cause cracking thereof, and fractionating the resulting cracked vapors to produce motor fuel.

2,005,310

APPARATUS FOR ROLLING PIPE

William Bark, John Henry Schmidt, and James V. Maxurie, Gary, Ind., assignors to National Tube Company, a corporation of New Jersey

Application June 2, 1932, Serial No. 615,018

1 Claim. (Cl. 80—11)

A tube rolling mill including the combination of a stand of longitudinal tube rolling rolls, oppositely extending alined tube troughs for said stand, tube pushers arranged at the ends of said troughs remote from said stand so as to push tubes into the latter, a mandrel bar over one of said troughs and having a mandrel-carrying pin on its end adjacent said stand, a reciprocable block for mounting the end of said bar remote from said stand, a crank axially alined with and spaced from said block, an arm interconnecting said crank and block, a motor for revolving said arm, a double-ended mandrel releasably carried on said pin, the latter being sufficiently long to extend beyond said mandrel, a quickly removable support for the portion of said pin extending beyond said mandrel, a water bosh on the side of said stand opposite said bar, said block being reciprocable between positions where it positions said bar with said mandrel between the rolls of said stand and where it positions said bar with said mandrel over said bosh, a mandrel carriage and a quick-acting reciprocating motor mounting said carriage for vertical reciprocation from a position where it engages said mandrel when said block is reciprocated to its second named position to one where it immerses said mandrel in water in said bosh.

2,005,311

STOPPER ROD FOR LADLES

Harvey Ross Belding, Vandergrift, Pa., assignor to American Sheet and Tin Plate Company, a corporation of New Jersey

Application July 6, 1934, Serial No. 734,035

4 Claims. (Cl. 22—85)

1. A stopper rod for ladles adapted to hold high-melting-point molten metals comprising a tube, a refractory sleeve for externally insulating said tube, a stopper-head on the lower end of said tube, and a coolant-supply tube disposed within said first named tube.

2,005,312

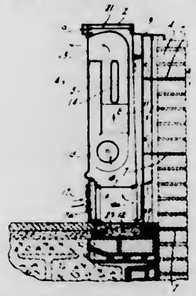
MOTOR VEHICLE

Harold D. Church, Cleveland, Ohio, assignor to The White Motor Company, Cleveland, Ohio, a corporation of Ohio

Application August 22, 1932, Serial No. 629,774

20 Claims. (Cl. 180—54)

1. The combination in an automotive vehicle of front and rear axles, wheels upon said axles, a body structure supported from said axles including a flooring, an internal combustion engine mounted in a position beneath and closely adjacent to said flooring, said engine being constructed with horizontal cylinders and in such a manner as to have but a small depth, and a transmission mechanism for operatively connecting said engine to certain of said wheels including a change speed mechanism supported beneath said flooring in close proximity thereto, said change speed mechanism being constructed with a shifting mechanism arranged laterally at one side thereof and with its main shafts aggrouped in a substantially horizontal plane in order to reduce its depth.



2,005,313

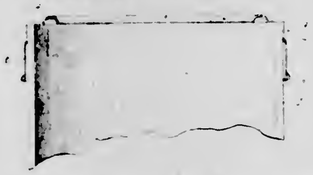
SILL HEATER CABINET CONSTRUCTION

Clyde W. Colby, East Cleveland, Ohio

Application July 22, 1931, Serial No. 552,444

4 Claims. (Cl. 72—0.5)

1. An exterior building-wall panel for the purpose described and comprising a thin outside masonry spandrel and inside wall cabinet means arranged to provide an enclosure spaced from said spandrel by an inverted well, with an opening connecting the bottom parts of said well and said enclosure, said cabinet having an elevated discharge opening, heating means in said enclosure, and hygrometric means arranged adjacent said connecting opening to be effective upon air flowing therethrough.



2,005,314

CONTAINER AND ITS COVER

Robert Ensko, Freeport, N. Y., assignor to Seeman Brothers, Inc., New York, N. Y., a corporation of New York

Application September 28, 1934, Serial No. 745,898

4 Claims. (Cl. 229—5.5)

1. A container comprising a cylindrical body portion of compressible material such as cardboard, and a removable metal cover therefor, said cover having a circular disk top portion, and a skirt depending from the periphery of said disk, a portion of said skirt adjacent said top having an inside diameter slightly less than the normal outside diameter of said cylindrical body portion, so as to frictionally engage said body portion and slightly compress the same, and the lower portion of said skirt having an inside diameter slightly larger than the inside diameter of the upper portion of the skirt.

2,005,315

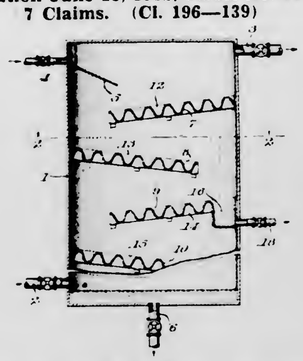
METHOD FOR ROLLING SHEET METAL

William L. Goodhue, Cleveland, Ohio, assignor to American Sheet and Tin Plate Company, a corporation of New Jersey

Application December 22, 1933, Serial No. 703,617

15 Claims. (Cl. 29—18)

1. The method of rolling wide sheet metal for deep drawing purposes comprising rolling and matching pre-heated sheet bars in a roll pass having gradually reduced dimensions from its center toward each end to form crowned breakdowns, reheating said crowned breakdowns to rolling temperature, and rolling said re-heated breakdowns in a roll pass having gradually increasing dimensions from its center toward each end to finished gage and size.



2,005,316

APPARATUS FOR FRACTIONATING HYDROCARBON OIL VAPOR

Frank W. Hall, Port Arthur, Tex., assignor to The Texas Company, New York, N. Y., a corporation of Delaware

Application June 15, 1932, Serial No. 617,318

7 Claims. (Cl. 196—139)

1. Apparatus for dephlegmating hydrocarbon oil vapor comprising a closed vessel having a lower vapor inlet and an upper vapor outlet, a liquid outlet adjacent the lower portion of the vessel, and downwardly sloping vertically spaced transversely corrugated baffles affixed to alternate side walls of the vessel, the lower free edges of the baffles terminating short of the opposed walls of the vessel for forming successive gaps between the lower free edges of said baffles and the walls of said vessel to provide a staggered vapor flow passage.

2,005,317

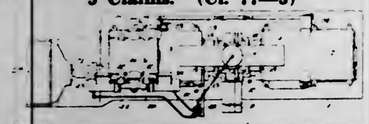
PRODUCT OF 2-ACETYLAMINO-3-CHLORANTHRAQUINONE

Fritz Helwert and Albert Palm, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware

No Drawing. Application August 31, 1934, Serial No. 742,354. In Germany September 20, 1933

6 Claims. (Cl. 260—60)

1. A process for producing 2-acetylamino-3-chloranthraquinone which comprises subjecting the mixtures of isomeric chloraminoanthraquin-

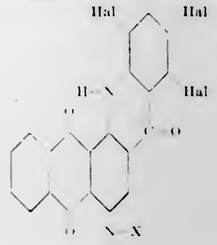


ones obtainable by the treatment of 2-(3'-amino-4'-chlorbenzoyl)-benzoic acid with acid condensing agents, to acetylation and isolating the 2-acetylamino-3-chloranthraquinone.

2,005,318
CLOSURE CAP FOR TUMBLERS, BOTTLES, JARS, AND OTHER RECEPTACLES
Harry Ingram, Brooklyn, N. Y.
Application December 16, 1930, Serial No. 502,770
7 Claims. (Cl. 215—37)

1. A closure for receptacles comprising a cap having a depending skirt formed with axially disposed corrugations and an elastic gasket positioned between the skirt and wall of the receptacle and of a cross sectional thickness not to fill the skirt corrugations, the skirt extending downwardly and inwardly to effect sealing contact between the gasket and receptacle.

2,005,319
OPPOSED RECIPROCATORY TOOL MACHINE
Harry M. Johnston, McKeesport, Pa., assignor to National Tube Company, a corporation of New Jersey
Application October 17, 1932, Serial No. 638,246
5 Claims. (Cl. 77—3)

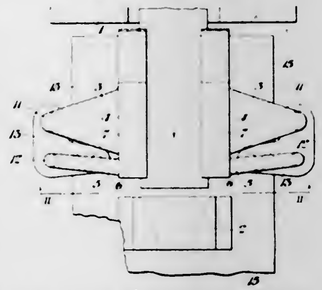


1. In a machine including opposed reciprocatory tools, a downwardly movable upper jaw and a fixed lower jaw arranged between said tools, a depressible horizontal slide extending away from said jaws and having a slotted end fitting around said fixed lower jaw, a carriage carried by said slide and having parallel arms constructed to slide by both sides of said fixed lower jaw and in which there are laterally alined coupling-receiving depressions, means for urging said slide upwardly, means for interconnecting said downwardly movable upper jaw and said slide, and means for forcing said upper jaw downwardly so that said slide is moved downwardly against the urge of the first named means.

2,005,320
PROCESS OF PREPARING CHLORINATED RUBBERS
Erich Konrad and Fritz Schwerdtel, Leverkusen-I. G. Werk, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany
No Drawing. Application October 22, 1932, Serial No. 639,150. In Germany October 27, 1931
18 Claims. (Cl. 260—1)

1. The process of preparing chlorinated rubbers from rubber latices which comprises subjecting the rubber latices to an oxidizing reaction and then chlorinating the product.

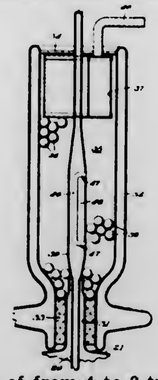
2,005,321
DYESTUFFS OF THE ANTHRAQUINONEACRIDONE SERIES
Max Albert Kunz, Mannheim, and Erich Berthold and Karl Koeberle, Ludwigshafen-on-the-Rhine, Germany, assignors to General Aniline Works, Inc., New York, N. Y., a corporation of Delaware
No Drawing. Application March 31, 1932, Serial No. 602,402. In Germany April 2, 1931
7 Claims. (Cl. 260—37)



1. Vat dyestuffs of the anthraquinoneacridone series corresponding to the formula

II

in which X stands for a hydrogen atom or —OC—R, R being a radicle of the benzene series, which dyestuffs dissolve in concentrated sulphuric acid to give usually orange solutions and dye cotton violet to blue to green blue and green grey shades.



2,005,322
BUTT-WELDING PIPE
Walter T. Mahla, Lorain, and James Lester Mauthe, Elyria, Ohio, assignors to National Tube Company, a corporation of New Jersey
Application February 10, 1934, Serial No. 710,756
5 Claims. (Cl. 205—9)

1. An apparatus for applying oxidizing gases to the edges of heated skelp, including oppositely spaced nozzles and chambers into which said nozzles open and which are slotted to receive the edges of skelp and hold the same opposite said nozzles.

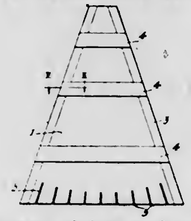
2,005,323
DISTILLING AND FRACTIONATING APPARATUS
Wallace A. McMillan, Beacon, N. Y., assignor to The Texas Company, New York, N. Y., a corporation of Delaware
Application January 13, 1934, Serial No. 706,479
18 Claims. (Cl. 202—160)

3. In apparatus for precise analytical distillation and fractionation, having a distilling bulb adjacent the lower end thereof, a condenser section adjacent the upper end thereof, and an elongated jacketed fractionating tube having an internal diameter of less than 10 mm. connecting the distilling bulb with said condenser section and adapted for substantially adiabatic fractionation; a packing for said fractionating tube comprising a spiral wire having a substantial

uniform pitch of from 4 to 8 turns per inch fitting snugly against the interior wall of said tube, and a wire insert of substantially uniform cross section extending through the spiral and substantially filling the central core of said spiral, the cross sectional area of said spiral being greater than the cross sectional area of said insert.

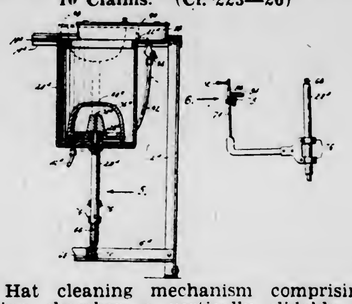
2,005,324
LAST
Henry L. Moorhouse, Brockton, Mass., assignor to Brockton Last Company, Brockton, Mass., a corporation of Massachusetts
Application January 20, 1933, Serial No. 652,629
1 Claim. (Cl. 12—133)

A wooden last for use in the manufacture of boots and shoes, having a heel portion substantially symmetrical with regard to the longitudinal axis of the last, in combination with a forepart having the extreme forward conical contour of the topmost ridge portion disaligned both from the heel and the longitudinal axis of the last, said disaligned ridge portion extending into the toe portion forwardly of the ball of the last, said forwardly extending disaligned ridge portion being in a relative position to produce a substantially vertical face from the cone to the arch of the last at the left of a right last, and at the right of a left last.



2,005,325
ROLLING MILLWORK MEASURING
Rolland E. Peterson, Aetna, Ind., assignor to American Sheet and Tin Plate Company, a corporation of New Jersey
Application September 21, 1933, Serial No. 690,467
4 Claims. (Cl. 80—47)

1. The combination of a roll stand, an elevating catcher table with reversibly operating conveyer means, constantly rotating pinch-rolls mounted at one end of said catcher table adjacent said roll stand, said pinch-rolls rotating in unison with and in the same direction as said

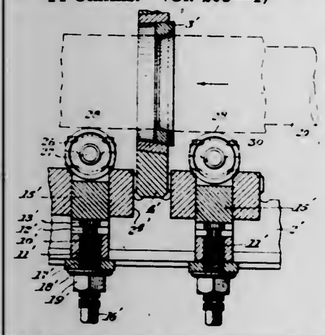


conveyer means and means for remotely recording the rotation of pinch-rolls in one direction only.

2,005,326
MACHINE FOR MAKING PLANT PROTECTORS
Walter R. Schindler, Los Angeles, Calif.
Application December 9, 1933, Serial No. 701,642
4 Claims. (Cl. 93—1)

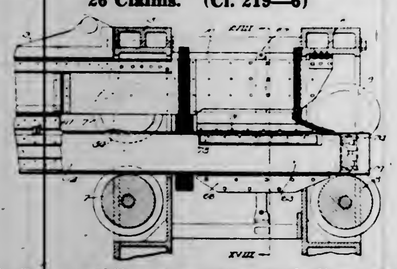
1. In a paper gluing and cutting machine, means for continuously feeding a pair of paper bands, means for applying glue to one of said bands along diagonal strip areas thereon, means for thereafter pressing said bands together, whereby they adhere along said diagonal strip areas and means for thereafter cutting the said bands along the center lines of said strip areas, said cutting means comprising a rotating helical knife and an anvil roller positioned adjacent thereto and on the opposite side of said paper bands, whereby the bands are continually cut into double thickness blanks with the two thicknesses glued together adjacent their cut edges.

2,005,327
HAT CLEANING DEVICE
Harry Schlesinger, Des Moines, Iowa, assignor to Cleaners Appliance Company, Des Moines, Iowa, a corporation of Iowa
Application June 10, 1933, Serial No. 675,186
10 Claims. (Cl. 223—26)



3. Hat cleaning mechanism comprising a cleaning chamber, a vertically slidable shaft projecting upwardly thereinto, a hat block on said shaft and means for raising said shaft to a position with said hat block above said chamber, said chamber having a hub extending upward from the bottom thereof for said shaft to extend thru, said hub being so connected with

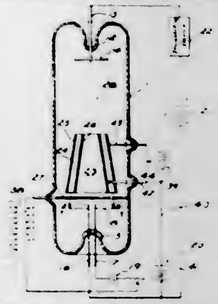
said bottom as to prevent leakage of liquid between the bottom and hub, a liquid outlet for said chamber, said hub extending to a level thereabove to prevent leakage of liquid from said chamber around said shaft, said hat block having a socket to fit over said hub.



4. In a device of the class described, a pair of spaced supports, a sleeve slidable through one of said supports, a rod on the other one and projecting into the sleeve, a hat block carried by and a handle secured to the sleeve and an eccentric lock for said handle, said lock being spring actuated to lock the handle against downward movement.

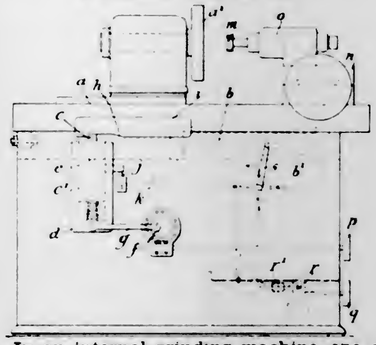
2,005,328
PUSH BENCH GUIDE
Sydney Smith, London, England, assignor to Wellman Seaver Rolling Mill Co. Ltd., London, England, a British Company
Application February 19, 1932, Serial No. 594,037
14 Claims. (Cl. 205—4)

1. Apparatus for the manufacture of tubes by the push bench process, comprising a mandrel, a plurality of dies for cooperation with the mandrel to thin and elongate a blank, and non-yieldably mounted means separate from the dies having a portion engaging the blank throughout substantially less than its entire periphery for guiding the mandrel and blank in proper cooperative relationship with respect to the dies.



2,005,329
METHOD AND APPARATUS FOR WELDING
James L. Adams, Jr., Youngstown, Ohio
Application October 8, 1930, Serial No. 487,194
26 Claims. (Cl. 219—6)

1. In a welding apparatus including means for effecting a feeding movement of substantially tubular preformed material in a direction approximately parallel to the axis of the material, heating means producing a flash heating zone for heating the edge portions of the substantially tubular material, and means effective on the edge portions of the material for imparting a succession of angular movements thereto in a direction substantially normal to the direction of feeding movement.



20. In a method of welding together the edges of a plate bent to form a tube blank having an axial seam cleft, the steps including inducing from within the blank an electric heating current circumferentially thereof and passing across the seam cleft, deflecting successive portions of the edges in opposite directions and engaging the blank at a plurality of points on the exterior periphery of the blank for opposing the repulsive effect of said current tending to open up the formed blank.

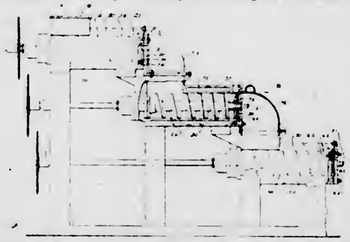
2,005,330
ELECTRON EMISSION DEVICE
Thomas W. Sukumlyn, Los Angeles, Calif.
Application August 19, 1930, Serial No. 476,323
11 Claims. (Cl. 250—27.5)

3. An electron emission device, comprising a cathode having an extended area, means for converging the stream of electrons as they progress from the cathode, and a control electrode arranged with its active length conforming to the base of the means forming the path for the converging stream, and an envelope for the cathode the converging means and the control electrode.

2,005,331
INTERNAL GRINDING MACHINE
Harry Hales Asbridge, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath, England, a British company
Application July 3, 1934, Serial No. 733,678
In Great Britain July 19, 1933
4 Claims. (Cl. 51—95)

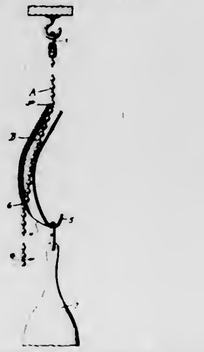
1. In an internal grinding machine, the combination of a grinding wheel, a slidable work-

table, hydraulic means to traverse the worktable to its stop or grinding position, a stop limiting the movement of the table slidably mounted in a pivotally mounted carrier for pivotal movement in a plane parallel to the direction of movement of the work-table, mechanical means to impart relatively rapid and short pivotal movements to said stop carrier, a cam track associated with said slidable work-table to depress said stop in its carrier as said table approaches its stop or grinding position, resilient means associated with said stop to resist such depression thereof, an abutment associated with said work-table adapted to be pressed continuously against the said stop by the hydraulic traversing means when said table is in its stop or grinding position, and means actuated on depression of said stop to limit the flow of hydraulic fluid to said hydraulic traversing means.



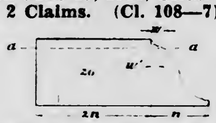
2,005,332
INTERNAL GRINDING MACHINE
Harry Hales Asbridge, Ashton-on-Mersey, England, assignor to The Churchill Machine Tool Company Limited, Broadheath, England, a British company
Application December 14, 1934, Serial No. 757,572
In Great Britain July 19, 1933
2 Claims. (Cl. 51—95)

1. In an internal grinding machine, in combination, a bed, a worktable traversible upon the bed, a handle controlling the traverse of the table and having forward, reverse and neutral positions, a cross slide upon said bed, a grinding head upon said cross slide, a cam controlling the feed movements of said slide, a shaft turning said cam, means acting on said cam for progressively increasing the limit of feed movement imparted by said cam in order to compensate for grinding wheel wear, a dog upon the table, an arm operatively connected to said handle and adapted to be engaged by said dog to bring the worktable to rest, a second dog upon the table, driving means for the said shaft, means whereby said second dog couples up said driving means to said shaft, a tappet wheel upon said shaft, tappets upon said wheel, one tappet actuating the means aforesaid for progressively increasing the limit of the feed movement of the cross slide, a second tappet actuating the handle to put it in its reverse position, and a third tappet disengaging the drive to said shaft when the tappet wheel has made one turn.



2,005,333
PROCESS FOR REFINING A SOAP BASE
John W. Bodman, Winchester, Mass., assignor to Lever Brothers Company, Cambridge, Mass., a corporation of Maine
Application June 24, 1930, Serial No. 463,474
4 Claims. (Cl. 87—16)

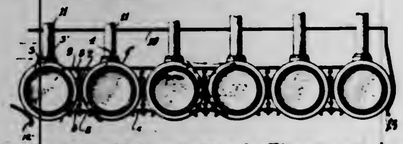
2. The process of homogenizing and refining a soap base for the production of a homogeneous plastic mass from which bars or cakes may be subsequently formed, which consists in regulating the temperature of the base to maintain a predetermined condition of plasticity and, while so maintained, repeatedly forcing the base under



a high pressure through successive sets of minute orifices of decreasing size, with none of the orifices having a size comparably greater than the openings of a 20-mesh screen.

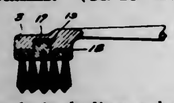
2,005,334
ADJUSTABLE SUSPENSION DEVICE
Ervin J. Casper, San Francisco, Calif.
Application March 7, 1933, Serial No. 659,930
3 Claims. (Cl. 248—328)

3. A suspension device comprising in combination a pendant chain and a rigid hanger adjustably mounted upon the chain, said hanger being substantially arcuate in longitudinal section and comprising a portion at its upper end for slidable engagement with the chain, link-engaging means adjacent the lower portion to releasably engage the links of the chain when moved downwardly, and a load-supporting member at the lower end in offset relation with the link-engaging means, whereby when a load is imposed on said load-supporting member the hanger will be tilted in a direction to flex the chain and force the link-engaging means into firm engagement with a link of the chain for the purpose of supporting the load in various elevations.



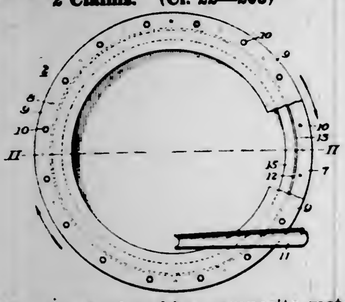
2,005,335
SHINGLE
Raymon W. Clough, Cranston, R. I.
Application June 19, 1933, Serial No. 676,469
2 Claims. (Cl. 108—7)

1. A shingle having two parallel side edges one of which, constituting the bottom edge, is



longer than the other, one squared end, and its other end formed by a short in-turned shoulder adjoining each side edge the inner ends of which are connected by a cyma reversa curve extending from the said shoulder at the shorter side edge to said shoulder at the longer side edge.

2,005,336
ENGINE COOLING DEVICE
Walter F. Davis, Nassau County, N. Y., assignor to Fairchild Aviation Corporation, New York, N. Y., a corporation of Delaware
Application December 18, 1931, Serial No. 581,851
4 Claims. (Cl. 123—171)



4. In air-cooled engines, a baffling means bearing on the engine cylinders and extending across the inter-cylinder spaces to direct air to the leeward sides of said cylinders, and a member bearing on the opposite sides of said cylinders, and fastened to said baffling means for clamping the complete assembly in position.

2,005,337
TOOTHBRUSH
Emil Doll, West New York, N. J.
Application February 23, 1934, Serial No. 712,665
4 Claims. (Cl. 15—176)

1. A toothbrush including a handle having a disk integral with one end thereof, said disk being provided with a tapered socket having the wall thereof projecting beyond one face of the disk and externally threaded, and a head for the brush including a disk like bristle carrying body having an integral tapered pin fitting said socket and a threaded recess circumjacent the pin at the base thereof threadedly receiving the threaded wall extension of said socket.

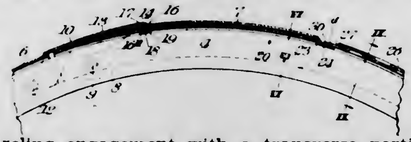
2,005,338
MAKING COMPOSITE INGOTS
Frank R. Frost, Pittsburgh, Pa., assignor to Superior Steel Corporation, Pittsburgh, Pa., a corporation of Virginia
Application December 14, 1931, Serial No. 580,747
2 Claims. (Cl. 22—203)

1. The process of making composite metal ingots, which comprises placing a liner of one metal in an ingot mold, leaving spaces between the edges of the liner and the mold walls, revolving the mold, and introducing another metal in a molten state into the mold so as to cast the molten metal by centrifugal force against the liner and cause the molten metal to enter the spaces around the edges of the liner, so as to form a composite ingot having the liner securely held to the body of metal cast against it.

2,005,339
FLASH LIGHT HANGER
Henry Hyman, Brooklyn, N. Y.
Application March 6, 1933, Serial No. 659,871
2 Claims. (Cl. 240—10.66)

1. In a device of the character described, a U-shaped member having its ends extending at an angle to its legs and a flat ended hollow member having a pair of holes near said flat end through which said legs slide, and a guide with straight sides between said legs to guide said U-shaped member longitudinally.

2,005,340
SEAL
George M. Jaffin and Jacob T. Basseches, New York, N. Y.
Application June 17, 1933, Serial No. 676,286
12 Claims. (Cl. 101—28)



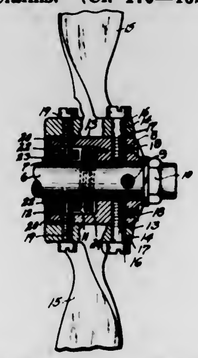
1. An impression seal of the character described including a bed having a resilient impressionable unengraved surface, a supporting standard disposed from said base mounting a pressure applying assembly, comprising a reciprocal plunger, over said resilient base, an impression die for said plunger and means for connecting said die to said plunger independently of the outline of the base comprising readily disengageable connecting means, the resilient base serving as the mate for the impression die.

9. For use with an impression seal of the character described including a resilient base, an impression die therefor consisting solely of concentrically disposed cut impression markings whereby the seal may be axially positioned independently of the base and mate therewith in all axial positions of said die.

2,005,341
SEALING RING
Albert E. Jesser, Vandergrift, Pa., assignor to Pittsburgh Steel Drum Company, Pittsburgh, Pa., a corporation of Pennsylvania
Application August 24, 1934, Serial No. 741,255
11 Claims. (Cl. 220—61)

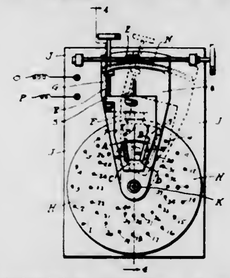
1. In a device of the character described, a split ring of channel form, a channel form lever

connected to and adapted for telescoping engagement with one end of the ring, a link pivoted to the other ring end and having pivotal connection with said lever by means of a looped terminal portion of the link disposed in en-



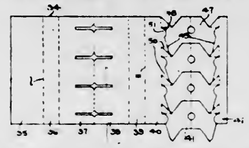
circling engagement with a transverse portion of the lever, whereby said lever and link lie along and substantially conform to the outer contour of the ring when in closed position thereon, and means on the ring for removably securing the lever thereto in closed position.

2,005,342
REFINING OF HYDROCARBONS
Leo D. Jones, Philadelphia, and Edward M. James, Moylan, Pa., assignors to The Sharples Specialty Company, Philadelphia, Pa., a corporation of Delaware
No Drawing. Application March 5, 1931, Serial No. 520,466
6 Claims. (Cl. 196—40)



1. In the refining of hydrocarbons, the steps comprising subjecting to intense agitation a mixture of a hydrocarbon and strong sulphuric acid and thereby dispersing the acid in fine particles in the hydrocarbon, discontinuing said agitation, then coalescing the fine particles by ageing the resulting mixture for a period of time between four and twenty minutes, and then immediately rapidly separating the coalesced particles from the hydrocarbon.

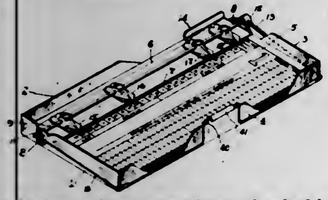
2,005,343
VARIABLE PROPELLER
Forrest M. Kent, Spokane, Wash.
Application May 9, 1934, Serial No. 724,719
2 Claims. (Cl. 170—162)



1. A variable propeller comprising a shaft, a hub block fixed on the shaft, said hub block having a hollow chamber, two opposite flat sides, and an arcuate slot extending through each flat side into the chamber, a pair of propeller blades having flat inner T-ends respectively seated on the two opposite sides of the block, pivotal connections that are diametrically opposite to each other and concentric with the arcuate slots connecting the T-ends of the propeller blades to the block in such position that the centers of the propeller blades are offset with respect to each other, screw pins respectively connected to the T-ends and extending slidably through the arcuate slots into the chamber of the block, a collar mounted on the shaft within said chamber, a pair of opposite eyelet bearings pivotally connected to the collar, said screw pins extending through said eyelet bearings, and a coiled spring mounted on the shaft within the chamber and having one of its ends connected to the hub block and its other end connected to the collar.

2,005,344
TELEVISION APPARATUS AND METHOD
Le Roy J. Leishman, Los Angeles, Calif.
Application January 27, 1931, Serial No. 511,557
14 Claims. (Cl. 178—6)

1. In a television receiver, a scanning disc having a plurality of light-directing sections disposed in a spiral having a plurality of turns; a member pivotally mounted and substantially co-axial with, parallel to and adjacent said disc, the said member having a viewing opening therethrough, two of the sides whereof are substantially radial with the center of the scanning disc, said member being adjustably rotatable about its said pivotal mounting, a second member mounted on said first member adapted to be adjustably moved radially of said disc and having a viewing opening therethrough adapted to partially register with the viewing opening in said first member.



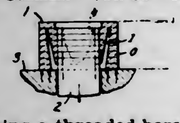
2,005,345
BOX OR CARTON
Henry Levine, Philadelphia, Pa.
Application June 2, 1933, Serial No. 673,964
In Denmark March 7, 1933
10 Claims. (Cl. 229—29)

1. In a carton of the character described, a single sheet of material which is longitudinally scored to provide a plurality of longitudinally extending sections adapted to constitute the side and bottom walls of a carton when the blank is folded along said scored lines, one of said sections being slitted to provide a plurality of partition members which are adapted to be swung into vertically disposed substantially parallel relation for interlocking engagement with a longitudinally extending partition formed in said bottom wall of the carton, the upper edge of said longitudinally extending partition being provided with longitudinally spaced slots for

respectively receiving the bottom portions of said transverse partitions, said transverse partitions being respectively provided with aligned apertures the common axis of which is substantially coincident with the upper edge of said longitudinally extending partition, and a locking strip extending longitudinally of the carton and interposed between the upper edge of said longitudinally extending partition and the bottom edges of said apertures whereby to maintain the transverse partitions interlocked with the longitudinally extending partition.

2,005,346
TICKET AND TICKET HOLDER
Murdock Macdonald, East Cleveland, Ohio
Application August 16, 1932, Serial No. 629,011
5 Claims. (Cl. 206—40.6)

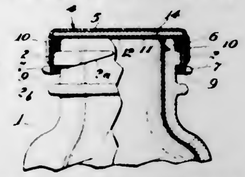
1. A ticket holder consisting of a holder proper adapted to receive a plurality of duplicate tickets, a severing bar mounted adjacent one side of said holder on top of said tickets and extending longitudinally of the holder, said bar being displaceable laterally of the holder, notching means movably carried on said bar, and means mounted on the lower surface of said bar for discharging the stub of a severed ticket upon lateral displacement of said bar across said holder.



2,005,347
DYEING COMPOSITION
Eugene A. Markush, Jersey City, N. J., assignor to Pharma Chemical Corporation, New York, N. Y., a corporation of New York
No Drawing. Application October 9, 1933, Serial No. 692,823
8 Claims. (Cl. 8—6)

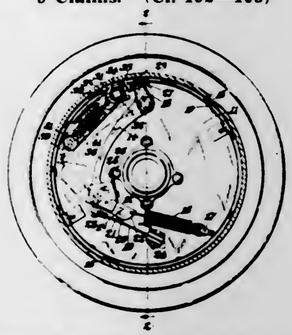
1. As a new composition of matter, a compound producible by combining a diazotized amine of the aromatic series containing no solubilizing group with a heterocyclic amine containing at least one solubilizing group, said diazoamino compound probably having the formula

R—NH—N=N—A



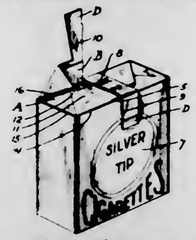
in which R represents the residue of a heterocyclic amine containing at least one solubilizing group and A represents an aromatic radical, said diazoamino compound being mixed with a coupling compound.

2,005,348
NUT, SCREW, AND LIKE ARTICLE
Anthony G. M. Michell, Canton, Mass.
Application May 23, 1932, Serial No. 612,918
10 Claims. (Cl. 85—32)



1. A nut having a threaded bore, and having a recess surrounding the bore inclined to the axis of the bore combined with a threaded bolt having a recess therein substantially coextensive with the threads of the nut, the walls of said recess in the bolt being inclined in the same direction as the inclination of the recess in the nut.

2,005,349
SEALED PACKAGE AND PARTS THEREOF
Marion H. Raney, Flushing, N. Y., assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a corporation of New York
Application January 4, 1933, Serial No. 650,081
19 Claims. (Cl. 215—56)



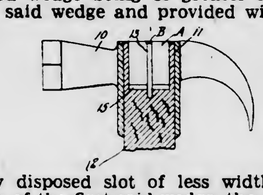
1. As an article of manufacture, a closure cap comprising a cover portion, a depending skirt, a relatively porous liner provided with a coating of paraffine, and a non-porous liner substantially bonded to said first liner having an aperture therein.

2,005,350
CENTRIFUGAL CLUTCH
Henry John Rickwood, Croydon, England, assignor to Trojan Limited, Croydon, England, a British company
Application September 17, 1932, Serial No. 633,655
In Great Britain September 25, 1931
9 Claims. (Cl. 192—105)

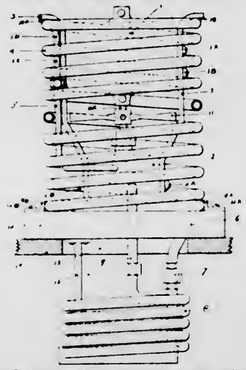
1. A centrifugal clutch comprising in combination rotatable driving and driven elements, cooperating clutch parts associated respectively with the driving and driven elements, a centrifugal member rotatable with the driving element and movable under centrifugal force away from and towards the axis of rotation, means operable automatically by movement of the centrifugal member as aforesaid to effect relative sliding movement between the clutch parts in a direction parallel with the axis of rotation, a main spring control for the centrifugal member arranged to act uni-directionally to resist outward movement of said member, and an auxiliary resilient control arranged to act first in one direction to resist outward movement of the centrifugal member and then in the opposite direction, said auxiliary control comprising a snap-over cam and a spring-loaded cam follower, one of which parts is movable by the centrifugal member and the other relatively fixed.

2,005,351
PACKAGE WRAPPER
Irving S. Rosenblatt, San Francisco, Calif.
Application August 30, 1932, Serial No. 631,036
2 Claims. (Cl. 229—51)

1. A wrapper of the character described comprising a substantially rectangular-shaped sheet of wrapping material, and a tab projecting from one end of the sheet, said tab being centrally scored at its end to start a tear centrally through the tab and one end of the wrapper, said wrapper also having a score line formed in each side edge at a point adjacent the tab end of the wrapper to permit tearing of the wrapper along one end of a package wrapped by the wrapper.



2,005,352
CLOTH SHRINKING MACHINE
Burt J. Shaw, Rochester, N. Y., assignor to Fashion Park Manufacturing Corporation, Rochester, N. Y., a corporation of New York
Application June 20, 1934, Serial No. 731,418
9 Claims. (Cl. 26—46)



1. In a cloth shrinking machine a steam box, a water bath, means for feeding the cloth to be shrunk through said steam box and thence through said water bath comprising a pair of driven rollers mounted thereon at each end and connected so that the first rotates slightly more rapidly than the second and a riding roller in said bath between said driven rollers, means for feeding said cloth from said bath over a surplus water remover and distributor into a drier comprising an endless perforated conveyor passing over a vacuum slot, both of said feeding means operating without stretching said cloth and automatic means for regulating the suction of said surplus water remover and distributor.

2,005,353
HANDLE FASTENING DEVICE
Frank M. Spezzano, Bristol, Pa.
Application August 22, 1933, Serial No. 686,194
1 Claim. (Cl. 306—33)

A handle fastening device comprising an elongated wedge having a longitudinal slot extending the major portion of its length and terminating in an expander, a second wedge adapted to be inserted into the slot of the first mentioned wedge and intersecting the same, said second mentioned wedge being of greater length than the first said wedge and provided with a longitudinally disposed slot of less width than the thickness of the first said wedge, the walls of the slot being parallel except at the extremities where they are reversely tapered and adapted to be expanded by driving contact with the expander of the first mentioned wedge to oppositely directed curvatures within the body of the handle.

2,005,354
REFRIGERATING METHOD AND APPARATUS
Andrew L. Still, Los Angeles, Calif.
Application May 7, 1934, Serial No. 724,405
8 Claims. (Cl. 62—115)

1. The refrigerating apparatus which includes a condenser coil which surrounds a compressor, a fan and a motor which drives the said compressor and fan, the compressor and the air fan and the motor secured to the condenser coil so that the said coil supports the said members, an expansion valve, a pipe communicating with the expansion valve and the condenser, a freeze member communicating with the expansion valve and a pipe communicating with the freeze member and the compressor.

2,005,355
FLOWER CUTTER
Thomas Patrick Tierney, Jr., Montgomery, N. Y.
Application March 16, 1934, Serial No. 715,877
1 Claim. (Cl. 146—81)

A flower cutter comprising a base provided with an obliquely disposed comparatively wide groove therein having a transverse slot in its bottom obliquely disposed to said groove, a cutter normally held above the groove in said base, said cutter operating through said slot, a bar or lever in form of a housing slotted at its bottom, and pivoted at one end to said base to which said cutter is attached, said lever having a slot, a guide post anchored in the base passing through

the slot in said lever to guide the same during its operation, a spring wound about the pivot pin of said bar or lever intermediate its ends and engaging with its outer ends said lever and said base to normally hold the same in upwardly in-

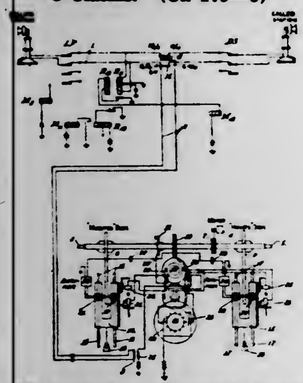
clined position above said base permitting the depression of said cutter to obliquely cut the stems of flowers placed into the groove of the base upon the depression of said lever by its handle.

2,005,356

HEAT INSULATING MATERIAL AND METHOD OF WATERPROOFING SAME

Edward A. Tochey and Archibald Hughes, Somerville, N. J., assignors to Johns-Manville Corporation, New York, N. Y., a corporation of New York

No Drawing. Application August 4, 1927, Serial No. 210,716
7 Claims. (Cl. 106—18)



1. Method of preparing fibrous heat-insulating material, characterized by depositing in powdered form, upon the fibres while in loosely aggregated arrangement, a heat-liquefiable inherently water-repellant material, and thereafter extending said deposit by heating the deposited powdered material conserving said loose aggregation during and after the formation of said deposit.

2,005,357

TELEPHONE TIME-ANNOUNCING SYSTEM

Thomas W. Varley, New York, N. Y.

Application October 10, 1934, Serial No. 747,656
3 Claims. (Cl. 179—6)

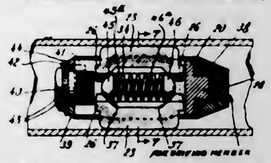
1. In an automatic telephone exchange system, telephone lines, means including a selector switch for establishing a connection between a calling and a called line under the control of a calling party, automatic means for connecting a calling line with said selector switch, a time-announcing unit, and means for associating said unit with the calling line upon the operation of said automatic means and until said selector is operated under the control of the calling party.

2,005,358

ROLL AND METHOD OF MAKING THE SAME

George H. Aupperl, Leechburg, Pa., assignor to Hyde Park Foundry and Machine Company, Hyde Park, Pa., a corporation of Pennsylvania

Application December 14, 1931, Serial No. 580,795
3 Claims. (Cl. 148—3)



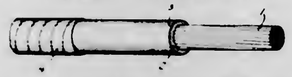
1. In the method of forming iron roll castings, the steps comprising forming the casting in a chill mold to chill the outer portion only thereof, and thereafter, substantially when the outer portion becomes self-supporting, closely jacketing the casting with heat retaining sheathing having surface contact with said casting, whereby the outer portion of the casting is subjected to a reheating operation from the heat of the inner portion without destruction of the chill in the outer portion.

2,005,359

TUBE CLEANER

Oreste J. Bagnoli, Woodcliff, N. J., and Thomas C. Wilson, Brooklyn, and James Henry Young, New York, N. Y., assignors to Thomas C. Wilson, Incorporated, New York, N. Y., a corporation of New York

Application November 29, 1933, Serial No. 700,174
8 Claims. (Cl. 15—104.09)



1. A rotary tube cleaner comprising a hollow elongated body having at least three substantially radial openings therein extending lengthwise of said body and communicating with a central chamber within the body, said body being rotatable about its longitudinal axis, at least three cleaning elements loosely mounted respectively in said openings, and extending substantially radially from said central chamber, each of said elements having a cam surface on the inner edge thereof in said central chamber, a member in said chamber engaging the cam surfaces of all of said cleaning elements, a single resilient means disposed longitudinally in said chamber in engagement with said member and resiliently expansible lengthwise of said body, said resilient means acting through said member and said cam surfaces to force all of said cleaning elements outwardly from said chamber, and means on said body engageable with parts of said cleaning elements to prevent complete removal of said elements from said openings.

2,005,360

HIGH TENSION RUBBER INSULATED CABLE

Charles R. Boggs, Waban, Mass., assignor to Simplex Wire & Cable Company, Boston, Mass., a corporation of Massachusetts

Application April 14, 1932, Serial No. 605,164
1 Claim. (Cl. 173—266)

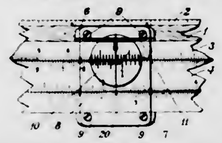
The process of manufacturing electrical cable insulated with vulcanized rubber and having increased life when operated at high voltages, which includes the steps of cementing unvulcanized rubber insulation to the conductor, applying a layer of finely divided conducting material on the surface of said unvulcanized rubber, applying a sheath over and in intimate contact with said layer, vulcanizing the rubber insulation thus encased in said sheath, whereby said layer of finely divided conducting material becomes a conductive film which is a permanently integral part of the surface of said vulcanized rubber insulation, stripping said sheath from said cable, and wrapping said cable with a metallic tape so as to be in intimate electrical contact with said conducting film.

2,005,361

CAP

Grace de Wolf Rollins, New Rochelle, and Ernestine Hines Dobbs, Larchmont, N. Y.

Application January 16, 1935, Serial No. 2,000
2 Claims. (Cl. 2—198)



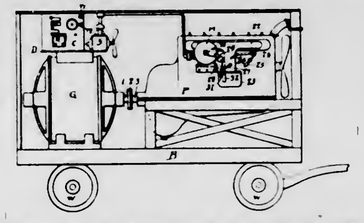
1. As an article of manufacture, a cap comprising a piece of material for fitting over the head of a wearer to keep the wearer's hair in place, said piece of material being in the form of an isosceles triangle having two like corners and another corner with adjacent edges at right angles to each other which is designed to drape downwardly at the back of the wearer's head and be held in place against the wearer's hair by the tying together of the other two corners of the triangular piece of material, and a visor attached to said piece of material at the edge thereof which extends between the two like corners, said visor having a curved edge which is attached to the straight edge of the piece of material whereby the piece of material is puckered between the ends of the visor to produce bulging of the material and cause training of the same over and about the forehead of the wearer when the cap is secured in place when the cap is in use.

2,005,362

MAGNIFYING ATTACHMENT FOR SLIDE RULES

Henry P. Clausen, White Plains, N. Y.

Application January 5, 1933, Serial No. 650,284
2 Claims. (Cl. 88—39)



1. The combination of a slide rule having an upper and lower scale, a graduated member slidable longitudinally between said scales, a flat transparent member having an index line connecting the graduations on the scales and on the graduated member, said transparent member being slidable longitudinally over the scales and over the graduated member, and a plano spherically convex lens slidably held to the transparent member by suction whereby it may be freely moved thereon from the upper to the lower scale.

2,005,363

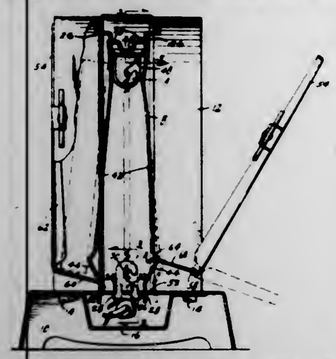
VOLTAGE REGULATOR

Fielding C. Coates, Los Angeles, Calif., assignor to Mole-Richardson, Inc., Los Angeles, Calif., a corporation of California

Application November 7, 1933, Serial No. 696,950
2 Claims. (Cl. 290—40)

1. In a regulating system for a generator driven by a prime mover, the speed of which varies inversely with the load on the generator, means for controlling the speed of said prime mover, manually operable means for said speed control means to determine the maximum desired speed of said prime mover, a counter-E. M. F. motor connected in series with the generator field across the output terminals of said generator to reduce the excitation of said generator, and means operably responsive to the counter-E. M. F. of said counter-E. M. F. motor for actuating said speed control means to reduce the speed of said prime mover when the voltage output of said generator exceeds the said predetermined value.

2,005,364



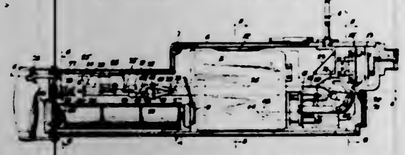
TOASTER CONSTRUCTION

Percy O. Derringer, Belleville, Ill., assignor to Knapp-Monarch Company, Belleville, Ill., a corporation of Missouri

Application March 2, 1933, Serial No. 659,364
11 Claims. (Cl. 219—19)

1. In a toaster construction, a frame having an opening therein, a heating element supporting member extending through said opening, said heating element supporting member having a head on one side of said frame and having means on the other side thereof to coact with a heating element, a heating element coacting there-

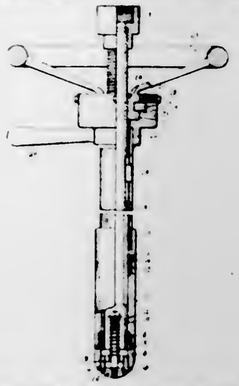
with and supported thereby, a tapered shoulder on said member and a resilient lug on said frame



at the edge of said opening to snap past said shoulder and thereby retain said member in said opening.

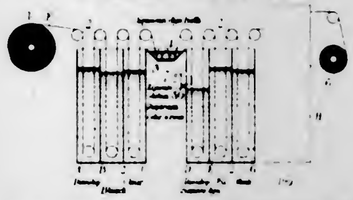
2,005,365
MUSHROOM SPAWN
Rosario Di Giacinto, Toughkenamon, Pa.
No Drawing. Application January 29, 1935, Serial No. 3,995
6 Claims. (Cl. 47—1)

1. Mushroom spawn in the form of pressed pellets or their equivalents.



2,005,366
MACHINE GUN CAMERA
John P. Gaty, Woodside, N. Y., assignor to Fairchild Aerial Camera Corporation, a corporation of New York
Application May 26, 1933, Serial No. 672,946
9 Claims. (Cl. 88—16)

1. In a camera comprising a casing, a single photographic objective in said casing and means aligned therewith for admitting light from an external source into said casing, means supporting said objective for movement into a predetermined focal relationship with said light admitting means for the purpose of photographic exposure of objects located externally to said casing, an object located interiorly of said casing and means for illuminating the same, a light reflecting system including a reflecting member and means supporting the same for movement into such relationship with respect to the axis of said objective as to provide a secondary light path between said object and said objective, said objective supporting means also supporting the objective for movement into a predetermined focal relationship with said reflecting member for the purpose of photographing said internally located object.



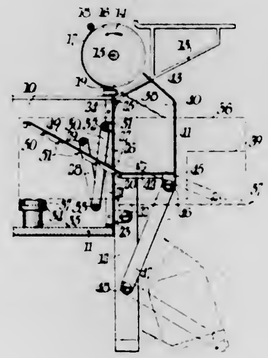
2,005,367
GROUTING PLUG
Erle P. Halliburton, Los Angeles, Calif.
Application June 27, 1932, Serial No. 619,395
8 Claims. (Cl. 61—63)

1. A device for grouting cementing materials through grouting holes in linings, which device comprises a tube for introducing cementing materials to said grouting holes, a sleeve packer surrounding said tube for packing the tube to the hole near the end of said hole, one end of said packer being fixed to the lower end of said tube, a sleeve telescoped over said tube and fixed to

the other end of said sleeve packer for actuating said packer movable relative to said tube, a screw jack for actuating said sleeve and tube, and a check valve near the end of said tube adapted to be closed by the back pressure of the grouting material.

2,005,368
PHOTOGRAPHIC REVERSAL PROCESS
Kenneth C. D. Hickman, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application June 15, 1932, Serial No. 617,368
4 Claims. (Cl. 95—5)

1. In a process for making photographic images in a single photographic emulsion layer by a reversal process involving successively the making of an original image in said layer, the removal of that image and the formation of a second image by a second exposure in the same layer, the step of dyeing the layer immediately prior to the second exposure with a filter dye absorptive of blue light whereby the exposure throughout the layer is controlled.

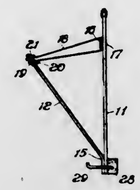


2,005,369
METHOD OF COILING RODS OR BARS
William W. Hill, Duquesne, Pa., assignor to Carnegie Steel Company, a corporation of New Jersey
Application October 11, 1932, Serial No. 637,319
2 Claims. (Cl. 80—63)

1. The method of manufacturing commercial rods and bars which consists in finishing the rods

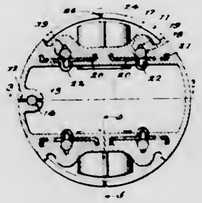
or bars in a roll stand, cooling said rods or bars on a cooling bed, cropping the advance ends of said rods or bars, conveying them over a shear table, reeling the cooled rods or bars into coils and cropping the trailing ends of said rods or bars.

2,005,370
DOCUMENT RECEPTACLE FOR A PHOTOGRAPHIC REPRODUCING MACHINE
Carter J. Hughey, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application February 3, 1934, Serial No. 709,670
14 Claims. (Cl. 271—86)



1. In a machine for handling documents, the combination with a casing for said machine and including a plate member which is provided with an opening, a feeding means within said casing for moving documents and provided with a document exit, and a document receptacle movably connected to said casing and movable to a document receiving position with respect to said exit of the feeding means, of a supporting member attached to said receptacle and movable within the opening of said plate member, and engaging means between said supporting and said plate members and adapted upon engagement to position said supporting member with the receptacle in the aforementioned document receiving position and with said plate member enclosing one side of said receptacle.

2,005,371
PROCESS FOR THE MANUFACTURE OF TRIPROPIONIN
David C. Hull, Kingsport, Tenn., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application August 18, 1934, Serial No. 740,485
4 Claims. (Cl. 260—106)

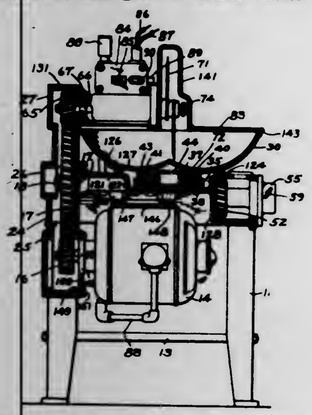


1. In a process of making tripropionin by esterifying glycerol with propionic acid in the presence of a catalyst and removing the water formed by azeotropic distillation with a water-withdrawing agent, the step which comprises heating the glycerol and propionic acid together prior to contact with the catalyst.

2,005,372
SHELF
Carl A. Johns, Chicago, Ill.
Application November 28, 1934, Serial No. 755,134
4 Claims. (Cl. 211—93)

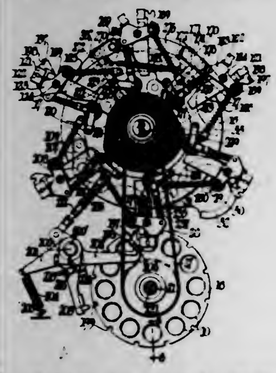
1. A collapsible kitchen shelf comprising a vertical back member, means for attaching said back member to a vertical surface, a front member attached to said back member at the respective lower edges of the two members, said front member being adapted to lie alongside said back member when said shelf is in condition for shipping and to fold forward to form a trough-shaped shelf, a pair of hooks pivotally attached to said back member and adapted to swing inward and be confined between said two members when said shelf is in condition for shipping and to swing outward for attachment to said front member when said shelf is in condition for use, and means for removably attaching said hooks to said front member, each hook including a pair of substantially parallel legs, the free ends of which are adapted to engage means on said front member to hold said front member in rigid position.

2,005,373
EXPANSIBLE PISTON
Clarence S. Johnston, Amarillo, Tex.
Application November 10, 1933, Serial No. 697,485
4 Claims. (Cl. 309—12)



1. In combination with a piston having a split skirt, an integral web formed upon the inner walls of the skirt, said web having an expansion channel, and a hinge member formed within the web and spanning said channel for reinforcing the same against splitting.

2,005,374
FOOD HANDLING APPARATUS
Herbert L. Johnston, Troy, and John C. Slager, Dayton, Ohio, assignors to The Hobart Manufacturing Company, Troy, Ohio, a corporation of Ohio
Application May 11, 1929, Serial No. 362,216
10 Claims. (Cl. 146—67)



1. In apparatus of the character described, a driving shaft, a rotatable container, a gear rotatable with said container, and a gear on said

driving shaft in driving relation with said gear on the container, said gear rotatable with the con-

tainer serving as a bearing for rotatably supporting the container.

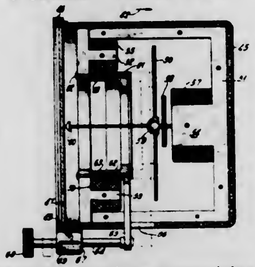
2,005,375
AUTOMATIC ALL-METAL SPOOL MAKING MACHINE
John G. Jones and Haywood G. Dewey, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application August 1, 1933, Serial No. 683,156
61 Claims. (Cl. 29—38)

10. In a machine for joining flanges and a core to form a spool, the combination with a carrier mounted for rotatable and axial movement and having a plurality of clutch elements each for engaging and supporting a flange, and a power drive for intermittently rotating said carrier, of a plunger axially movable and for carrying a flange into engagement with a clutch element on said carrier, an actuating means for reciprocating said plunger to forward and retracted positions, a second actuating means for reciprocating said carrier in an axial direction to forward and retracted positions, both of said actuating means being in timed relation to said power drive, and a guard means in alignment with said plunger and for cooperating with one of said clutch means and with said plunger in forward position thereof to supervise the location of a flange within said clutch element.

2,005,376
WALL STRUCTURE
Gustav H. Kaemmerling, Erie, Pa., assignor to Erie City Iron Works, Erie, Pa., a corporation of Pennsylvania
Application October 17, 1932, Serial No. 638,065
17 Claims. (Cl. 122—6)

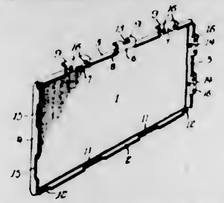
1. In a wall structure, the combination of a series of tubes; and wall blocks each having a plurality of tube-embracing grooves, the walls of each groove engaging opposite sides of the tube embraced and forming seats for the tubes, said blocks being associated edge to edge to form a wall.

2,005,377
POWER PLANT
Alexander T. Kasley, Prospect Park, Pa., assignor to Delaware Chemical Engineering Company, Wilmington, Del., a corporation of Delaware
Application July 22, 1932, Serial No. 624,114
Renewed May 10, 1935
5 Claims. (Cl. 122—21)



1. In a cyclic process for generating power, the steps of commingling a stream of low pressure steam and a stream of primary fluid comprising a concentrated solution capable of absorbing the steam with the evolution of heat, utilizing the latent heat of the steam and the heat of absorption by passing a separated body of secondary fluid in heat exchange relation with the commingling streams of primary fluid and low pressure steam, generating high pressure steam from the greater portion thereof, preheating said stream of primary fluid by passing it in heat exchange relation with the stream of spent primary fluid, and preheating said stream of secondary fluid by passing it in heat exchange relation with the residues from the generation of said high pressure steam.

2,005,378
MANUFACTURE OF CELLULOSE MATERIAL
Franz Kiel, Mannheim-Waldhof, Germany, assignor of one-half to Zellstofffabrik Waldhof, Mannheim-Waldhof, Germany, a corporation of Germany
No Drawing. Application November 9, 1932, Serial No. 641,947. In Germany December 16, 1931
2 Claims. (Cl. 92—21)



1. In a process for the manufacture of cellulose material of all kinds from unbleached cellulose, the step of preventing discoloration, particularly reddening of the material which comprises the impregnation of the fibrous material with a solution of stannous chloride.

2,005,379
AIRCRAFT DEVIATION INDICATOR
Charles Marcus, New York, N. Y., assignor, by mesne assignments, to Eclipse Aviation Corporation, East Orange, N. J., a corporation of New Jersey
Application May 9, 1932, Serial No. 610,303
5 Claims. (Cl. 33—204)

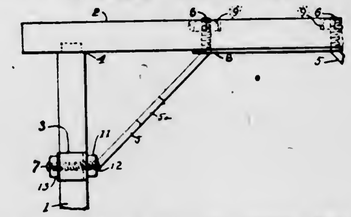
5. A gyroscopic structure comprising a pair of current coils connected in series and wound in opposed relation to provide magnetic poles of opposite polarity, a voltage coil arranged so that the current therein is 90° out of phase with the currents in the current coils and providing a magnetic pole facing the poles of the current coils, and a universally mounted disc constituting the rotor of the gyroscope and interposed between the pole of the voltage coil and the poles of the current coils whereby eddy currents are induced in said disc so that the latter is rotated by the magnetic reaction between the fields produced by the currents in the disc and in the three coils.

2,005,380
TILE
Harry Marsh, Youngstown, and Robert M. Chesney, Warren, Ohio, assignors to Porcelain Tile Corporation, Warren, Ohio, a corporation of Delaware
Application September 26, 1932, Serial No. 634,844
6 Claims. (Cl. 72—18)

1. A tiled construction comprising a wall and sheet metal tiles cemented thereto, each of said tiles having U-shape channels on two of its margins, and each tile having on two of its margins portions to enter the channels of adjacent tiles to space all of the tiles in proper relation to one another and interlock them and prevent separation of the tiles from one another in the plane of the tiles.

2,005,381
RECOVERY OF INGREDIENTS OF PLASTIC MATERIALS
Homer R. McDougal, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application May 21, 1932, Serial No. 612,852
7 Claims. (Cl. 260—103)

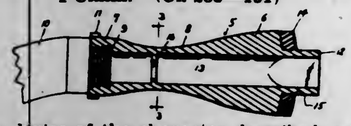
2. The process of recovering the valuable components of moisture-resistant plastic materials containing in addition to a cellulose ester base, a cellulose ester plasticizer selected from the group consisting of triphenyl phosphate, orthobutyl para-toluene sulfonate, butyl sulfone, ethyl acetanilide, monochlornaphthalene, ethyl benzoate, tricresyl phosphate, and diethyl phthalate, ester gum, and paraffin wax, which comprises leaching out the plasticizer, gum and wax with a hydrocarbon liquid which is a cellulose ester nonsolvent, but a common solvent for the plasticizer, gum and wax, distilling off the solvent from the resulting solution, adding a gum-wax precipitant to the residue, removing the precipitated gum and wax, and separating the plasticizer in pure form from the precipitant.



2,005,382
RUBBER FOR ELECTRICAL INSULATION AND WATER RESISTANT MATERIALS AND METHOD OF PRODUCING THE SAME
John McGavack, Leonia, and Ralph F. Tefft, Nutley, N. J., assignors, by mesne assignments, to United States Rubber Company, New York, N. Y., a corporation of New Jersey
No Drawing. Application June 26, 1931, Serial No. 547,174
8 Claims. (Cl. 106—13)

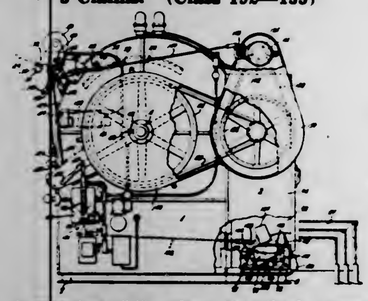
1. As a composition of matter, creamed latex containing wax dispersed therein and an ammonium soap of the wax, said latex being substantially devoid of non-volatile water-soluble substances.

2,005,383
HYDROLYSIS OF CELLULOSE ESTERS
Thomas F. Murray, Jr., and Cyril J. Staud, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application February 20, 1932, Serial No. 594,387
18 Claims. (Cl. 260—102)



1. The hydrolysis of an organic ester of cellulose in solid form which comprises treating it with a hydrolyzing bath essentially consisting of an alcohol and an inorganic salt selected from the group consisting of zinc iodide and ferric chloride.

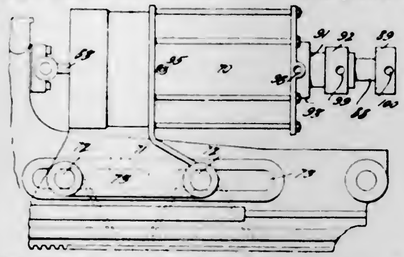
2,005,384
LADDER
Manuel A. Nunes, Santa Clara County, Calif.
Application June 23, 1934, Serial No. 732,067
1 Claim. (Cl. 228—59)



The combination with the stiles of a ladder and the connecting tread or cross member, of brace means disposed across the opposing angles formed by the stiles and tread, a tie plate disposed on the tread and longitudinally thereof, one end of each brace means passing through the tie plate and tread and the other end passing through an adjacent stile, and fastening means on each end of each brace means disposed to engage the tread and stiles respectively.

2,005,385
OUTBOARD MOTOR WASHER
William Y. O'Hara, Waipahu, Territory of Hawaii
Application September 19, 1933, Serial No. 690,168
1 Claim. (Cl. 285—161)

In a device of the character described, a body having a bore extending therethrough, said body having an enlarged end, and a relatively small end, said body tapering from its ends to an intermediate portion, said body at its smallest end being threaded for screw threaded engagement with the nipple of a hose, and at its largest end being provided with a spout adapted to be inserted in the outlet port of an engine or the like, for flushing the latter.

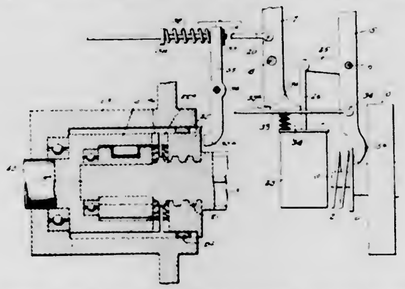


2,005,386
DRYING TUMBLER
Charles M. Otis, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a corporation of Ohio
Original application July 17, 1931, Serial No. 551,403. Divided and this application March 17, 1933, Serial No. 661,362
5 Claims. (Class 192—135)

1. Apparatus of the class described, comprising a casing having a door opening therein, a rotatable goods containing cylinder in said casing, a plurality of aligned doors in said cylinder, and a common locking member carried by said cylinder and movable into locked position by opening of any one of said cylinder doors, whereby to prevent rotation of said cylinder when any one of the doors thereof is in open position.

2,005,387
TAPERING MECHANISM
George M. Pelton, deceased, late of Milwaukee, Wis., by Herbert W. Knox, administrator, Milwaukee, Wis., assignor to The Filer & Stowell Company, Milwaukee, Wis., a corporation
Original application August 11, 1930, Serial No. 474,583. Divided and this application July 20, 1931, Serial No. 552,003
8 Claims. (Cl. 121—45)

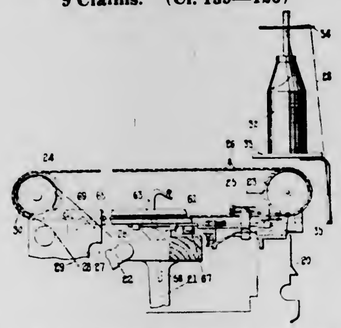
1. In a tapering mechanism a cylinder, a power piston in one end of said cylinder, three pistons arranged at the opposite end of the cylinder, the first of said pistons being normally in contact with the end of the cylinder, the second of said pistons overlying and normally in contact with the first piston, the third of said pistons overlying and normally in contact with the second piston, means carried by the first piston to engage the cylinder in the operation of that piston and limit the movement of the piston, means carried by the second piston to engage the limiting means carried by the first piston in the movement of the second piston to thereby limit the movement of the second piston, means carried by the second piston to



limit the movement of the third piston, and means for selectively admitting fluid under pressure between the first piston and the end of the cylinder, between the first and second pistons and between the second and third pistons, the movement of any one of said pistons being communicated to the power piston.

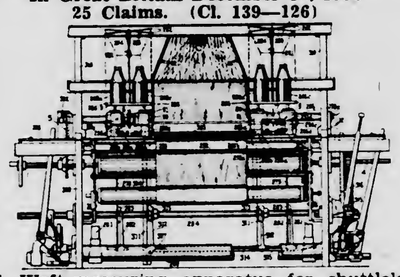
2,005,388
WIRELESS APPARATUS
Albert Vinten Pettman and William Reed-Lethbridge, Auckland, New Zealand
Application August 22, 1933, Serial No. 686,284
In New Zealand September 2, 1932
3 Claims. (Cl. 250—20)

1. In wireless apparatus, a receiving set, an aerial, a high inductance, a variable resistance associated therewith, each connected to the aerial at the signal incoming end, their other ends connected to the receiving set, tuned inductances connected to the incoming ends of the inductance and resistance and their other ends connected to the earth terminal of the receiving set.



2,005,389
MOTOR VEHICLE TRANSMISSION CONTROL
Charles F. Pilcher, St. Louis, Mo.
Application August 2, 1932, Serial No. 627,268
3 Claims. (Cl. 192—48)

3. In a vehicular transmission, a mechanism for transmitting power from an internal combustion engine to the driving wheels of the vehicle and comprising an overrunning clutch, a shiftable cooperating clutch member for engagement with the overrunning clutch for either driving the engine from the driving wheels for braking purposes or for driving the vehicle backward according to the direction of rotation of the shiftable clutch member, a stationary housing surrounding the shiftable clutch member, a friction ring disposed circumferentially of the shiftable clutch member and cooperable with said clutch



member and wall of the housing to impede rotative movement of said clutch member, said ring being shiftable with said clutch member, a brake control rod, and an operating connection between said rod and clutch member for forcibly shifting the clutch member into engagement with the overrunning clutch incidental to a movement of the brake control rod in a brake applying direction.

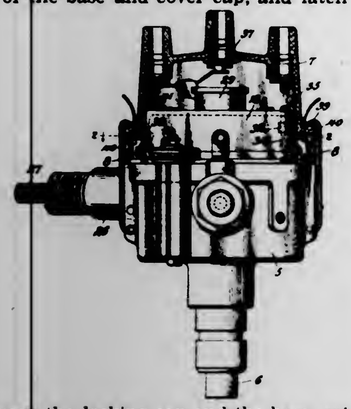
2,005,390
SHUTTLELESS LOOM AND THREAD MEASURING AND CUTTING MECHANISM THEREFOR
William Pool, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application December 16, 1933, Serial No. 702,764
In Great Britain December 31, 1932
9 Claims. (Cl. 139—126)

1. Weft measuring apparatus for a shuttleless loom comprising weft drawing means adapted to draw from a supply towards the fell of a fabric loops of weft sufficient for two picks of weft in said fabric, a single movable trapper adapted to grip the weft, means for actuating said trapper to carry the weft across the path of said drawing means, weft cutting means, and means for actuating said cutting means to cut one limb of each loop when the other limb has been inserted as a pick into the fabric, said weft cutting means being disposed past said trapping means along the path of said drawing means so as to sever such loops with unequal limb lengths, the amount of weft available in the first limb for the first pick being substantially greater than the amount of weft in the second limb.

2,005,391
SHUTTLELESS LOOM AND WEFT-SELECTING MECHANISM THEREFOR
William Pool, Spondon, near Derby, England, assignor to Celanese Corporation of America, a corporation of Delaware
Application December 16, 1933, Serial No. 702,765
In Great Britain December 31, 1932
25 Claims. (Cl. 139—126)

1. Weft-measuring apparatus for shuttleless looms in which weft is drawn in loop lengths prior to insertion into the warps, said apparatus comprising a plurality of movable trapping means, drawing means movable with respect to the said trapping means, means to move each of the trapping means separately to enable each such means to draw a length of weft trapped therein from a supply, and selector means adapted to bring about engagement between the trapping means and the supply of the drawing means with the length of any particular weft drawn from its supply by one of the trapping means.

2,005,392
COMBINATION SNOWPLOW
William Frank Remus, Pembroke, Ontario, Canada
Application April 18, 1933, Serial No. 666,741
8 Claims. (Cl. 37—44)



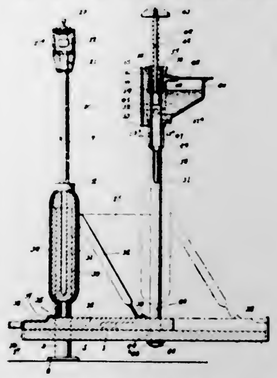
1. A combination snow plow including a frame or chassis; a front shoe supported on said frame or chassis; means for tilting either the forward or rear portion of said shoe separately or raising and lowering said forward and rear portions of the shoe together; angles on opposite faces on the inside of said shoe adapted to bear against said frame or chassis for guiding said shoe when raising and lowering the same; front scraper blades carried by said shoe; a pair of rear side scrapers; blades for said scrapers; means for hingedly mounting said rear side scrapers and blades at the sides of said chassis and adjusting said rear side scrapers and blades vertically; and means controlled from the rear of said chassis for adjusting said rear side scrapers and blades toward and away from one another.

2,005,393
LOCKING MEANS FOR DISTRIBUTORS
Edward Rick and Joseph Bonnie, Fresno, Calif.
Application September 19, 1934, Serial No. 744,742
15 Claims. (Cl. 200—19)

1. A distributor lock comprising a base, a cover cap thereon, a locking cap enclosed by said cover

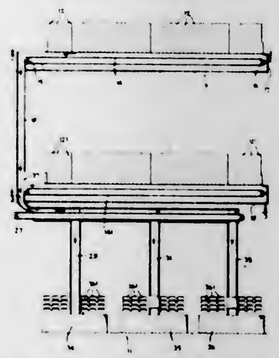
cap and mounted for bodily movement independent of the base and cover cap, and latch means

between the locking cap and the base, said latch means being operable by the bodily movement of said locking cap.



2,005,394
AUTOMATIC PHOTOGRAPHIC SHUTTER
William A. Riddell, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application September 14, 1934, Serial No. 743,999
13 Claims. (Cl. 95—63)

1. In a photographic shutter including shutter leaves, leaf operating mechanism, and a movable trigger for controlling the leaf operating mechanism, the combination with an automatic shutter operating mechanism, of a latching plate movably mounted with respect to the trigger and automatic shutter operating mechanism and adapted to hold one or the other against sufficient movement to operate the shutter leaves.



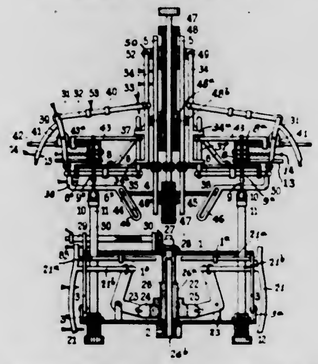
2,005,395
FOOD PREPARING DEVICE
Charles W. Rothfeld, Philadelphia, Pa.
Application January 3, 1933, Serial No. 650,029
8 Claims. (Cl. 99—2)

1. In a device of the character described, a support, a cross head positioned above said support, upstanding vertically movable spring controlled means carrying said cross head and fixedly secured to said support, a set of downwardly directed spaced electrically heated piercing and cooking elements carried by the cross head, a food holder member secured in an upright position with respect to said support and having a set of depressions in one face thereof corresponding in number and position to said piercing and cooking elements, a second food holder member hingedly mounted with respect to said support adjacent said first food holder member and on the side thereof having said depressions, said second member having a set of depressions complementary to those in said first member whereby when in its upright position it will form with said first member a set of spaced food holders, and said members being spaced apart adja-

cent the upper portion of each food holder when said second member is in upright position to admit the respective piercing and cooking elements for the purpose of piercing and cooking from the interior thereof the food contained in the holders.

2,005,396
CARRIER SYSTEM
Joseph M. Scanlan, Great Neck, N. Y., assignor to G & G Atlas Systems, Inc., New York, N. Y., a corporation of New York
Application December 19, 1931, Serial No. 582,024
10 Claims. (Cl. 243—19)

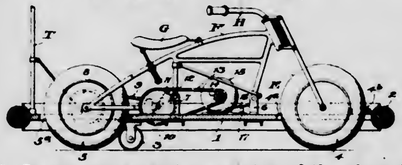
1. In a central station installation for pneumatic carrier systems embodying a plurality of sub-stations and a plurality of tubes arranged to transmit carriers from any sub-station in the system to any other through the central station, a single channeled conveyor adapted to receive carriers from said tubes, multi-channelled means adapted to selectively receive said carriers directly and without lifting from said conveyor for selectively conveying said carriers to a plurality of dispatch points, and tube inlets adjacent said dispatch points grouped in relation to the selection made at said multi-channeled means to receive carriers for transmission to selected destinations.



2,005,397
MANUFACTURE OF STRENGTHENED ABSORPTIVE PAPER
Milton O. Schur, Berlin, N. H., assignor to Brown Company, Berlin, N. H., a corporation of Maine
No Drawing. Continuation of application Serial No. 554,598, August 1, 1931. This application January 21, 1933, Serial No. 652,939
4 Claims. (Cl. 91—68)

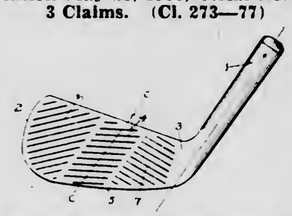
1. As an article of manufacture intended especially for such use as toweling, a dry paper web containing distributed therethrough about ¾% of regenerated cellulose, said web also containing distributed therethrough a smaller amount of solid wetting-out agent of sufficiently high wetting-out effectiveness to render said web capable of imbibing water practically instantaneously.

2,005,398
ESTERIFICATION OF CELLULOSE WITH A MODIFIED PERCHLORIC ACID CATALYST
Cyril J. Staud, Rochester, N. Y., and James D. Coleman, Columbus, Ohio, assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application March 4, 1932, Serial No. 596,902
10 Claims. (Cl. 260—101)



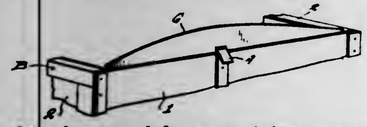
1. The acylation of cellulosic material having free and esterifiable hydroxyl groups in the presence of a catalyst essentially consisting of a mixture of perchloric and phosphoric acids.

2,005,399
APPARATUS FOR THE TAILORING TRADE FOR REPRODUCING THE SHAPE OF THE BODY OF THE CUSTOMER
Ernst Sterling, Magdeburg, Germany
Application November 14, 1929, Serial No. 407,260
In Germany August 5, 1929
4 Claims. (Cl. 223—18)



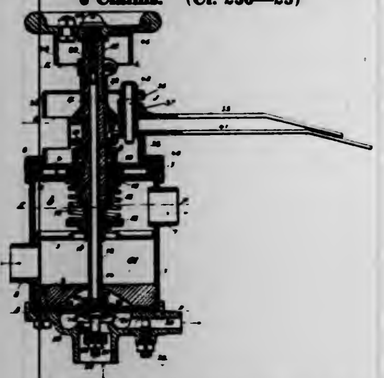
1. A tailor's dummy, comprising in combination a casing composed of a plurality of mutually displaceable elements of different shapes, holders connecting said elements, a framework in said casing and composed of an upper frame at the chest portion of the dummy and a lower frame at the belly portion of the dummy, each of said frames comprising a plate, a plurality of members radially shiftable relative to said plate, a common central element, levers connecting each of said members to said central element, means projecting from said members and connected to said holders, and a vertical spindle engaging said central element and adapted to be rotated to vertically displace said central element to radially shift said members through the intermediary of said levers to vary the girth of said casing at the chest and belly portions of the dummy respectively, and means for mutually displacing said frames in vertical direction to adjust the length of said casing.

2,005,400
AMUSEMENT APPARATUS
Harold Stoehrer, Manatee, Fla., and Fred L. Markey, Exeter, N. H., assignors to Dodgem Corporation, Lawrence, Mass., a corporation of Massachusetts
Application January 25, 1934, Serial No. 708,320
4 Claims. (Cl. 180—2)



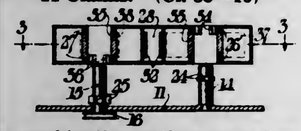
1. In an amusement apparatus of the class described, including an electrically charged floor and a ceiling, a vehicle comprising a platform having front and rear openings, metallic travellers carried by the under side of the platform, a bicycle frame mounted on the upper side of the platform and including a dirigible front wheel projecting through one of the openings of the platform and a rear traction wheel projecting through the other opening in the platform and both wheels adapted to engage the surface on which the vehicle travels, an electric motor mounted on the platform, means for connecting the motor with the rear traction wheel of the bicycle, and means including a trolley and foot operated switch means located on the platform at each side of the cycle frame adapted to selectively place the motor in circuit with the charged ceiling and floor.

2,005,401
GOLF CLUB
Leon A. Storz, Worcester, Mass.
Application May 20, 1933, Serial No. 672,069
3 Claims. (Cl. 273—77)



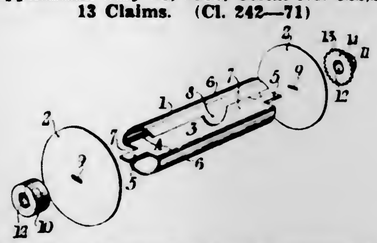
1. A golf club head or blade having, in a central zone of its face, scorings substantially parallel to the sole of said head, the outer zone of said face having scorings at such an inclination to the first-named scorings that when the club head arrives at the bottom of the swing in a faced-backward position (Fig. 2), said outer zone scorings, which then become effective on the ball, tend to assume a position substantially horizontal or parallel with the ground, thereby imparting substantially as much back-spin as though the ball had been struck by the central zone of the club face.

2,005,402
EDGE GUARD
James W. Trew, Gettysburg, Pa., assignor to Rice, Trew & Rice Co. Inc., Biglerville, Pa., a corporation of Pennsylvania
Application October 30, 1934, Serial No. 750,701
10 Claims. (Cl. 217—3)



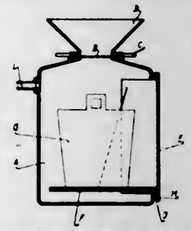
1. An edge guard for a container comprising a band to be positioned along an upper edge of the container and extending above such edge, and means within the field defined by the margins of the band and extending laterally therefrom and in a direction toward the lower margin of the band to engage the upper edge of the container to hold the band in applied position.

2,005,403
COMBINED GAS AND LIQUID SHUT-OFF DEVICE FOR GAS HEATED LIQUID HEATERS
Eugen Wender, Sinsheim (Elsenz), Germany
Application September 28, 1931, Serial No. 565,587
In Germany October 2, 1930
6 Claims. (Cl. 236—25)



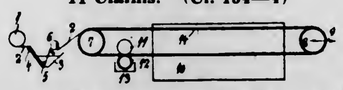
1. A combined gas and liquid control device for gas heated liquid heaters with mechanically controlled means for common operation and release of a liquid and a gas valve and with a casing divided into a gas chamber and a liquid chamber, comprising a liquid valve provided with throttling means and influenced by the liquid pressure, a spring which loads the gas valve and loosely connects the gas valve with the liquid valve by said pressure.

2,005,404
MOTION PICTURE FILM MAGAZINE
Otto Wittel, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application June 14, 1932, Serial No. 617,141
11 Claims. (Cl. 88—16)



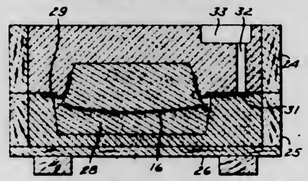
1. The combination with a magazine adapted to contain motion picture film, of a pair of film cores rotatably mounted in said magazine and each provided with an axial hole, and a plurality of teeth within each hole and adjacent one end of each core, said cores being inverted with respect to each other and available to both sides of said magazine.

2,005,405
PHOTOGRAPHIC FILM CARTRIDGE AND SPOOL FOR USE THEREIN
Otto Wittel, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application July 13, 1932, Serial No. 622,298
13 Claims. (Cl. 242—71)



8. A photographic film spool comprising a core and flanges attached thereto, said core comprising a single piece of metal and being S-shaped in cross section.

2,005,406
SUCTION FILTER
Heinrich Zimmer, Varnsdorf, Czechoslovakia
Application February 16, 1934, Serial No. 711,592
In Germany December 2, 1932
1 Claim. (Cl. 210—149)

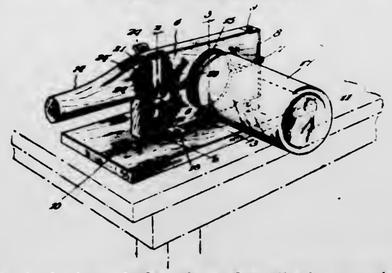


A filter comprising a tank having a top and a bottom and side walls, the top being tapered upwardly and having an opening formed therein, a sieve covering the opening in the top and having marginal portions resting upon the top about the opening, a funnel disposed over the top and having its lower end resting upon the marginal portions of the sieve, an outstanding flange being provided about the lower end of the funnel, fasteners pivotally carried by the top in spaced relation to each other circumferentially of the opening and having outstanding handles whereby the fasteners may be turned into and out of position for engaging the flange and clamping the funnel and sieve in place, a suction pipe leading from said tank near the upper end thereof, an opening being formed in the side walls of the tank, a door hinged at one side to the outer face of the side walls of the tank for movement into and out of position to close the opening in the side walls, a platform projecting from the inner face of said door adjacent the lower end thereof and disposed within the tank when the door is closed, vertical webs extending between side portions of the door and platform to brace the platform against downward strain, a removable receptacle resting upon said platform and disposed under the sieve when the door is closed, grooves formed in the inner face of the door adjacent margins thereof, packing mounted in the grooves and projecting from the inner face of the door for engaging the outer face of walls of the tank about the side opening when the door is closed, and means to releasably secure the door closed and apply pressure to the packing to form a tight joint about margins of the door.

2,005,407
METHOD OF MANUFACTURING IMPREGNATED TEXTILE BELTING
Alfred Abrahamsen and Johannes Eugen Hansen, Lillesand, Norway
Application June 8, 1933, Serial No. 674,949
In Norway May 21, 1932
11 Claims. (Cl. 154—4)

8. A method of manufacturing laminated driving and conveyor belting comprising impregnating a fabric strip with an aqueous dispersion of rubber, passing the impregnated fabric strip while wet in belt fashion about two spaced rolls, winding the strip about said rolls to form a laminated endless belt, increasing the space between the rolls while the laminated endless belt is still moist to stretch the same, and drying the belt while in a stretched condition.

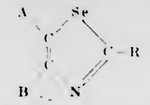
2,005,408
FAN INLET GUARD AND A METHOD OF MANUFACTURING THE SAME
Matthew C. Allin, Weston, Ontario, Canada, assignor to Riley Engineering & Supply Co. Ltd., Toronto, Ontario, Canada, a corporation of Canada
Application February 21, 1933, Serial No. 657,824
8 Claims. (Cl. 22—203)



4. The method of manufacturing a fan inlet guard comprising the steps of providing a substantially circular wire-mesh screen, bending the screen into a dished shape, and casting an annular metal frame into engagement with the peripheral portion of the screen.

2,005,409
PROCESS OF PRODUCING ALLOYS
William Bell Arness, Baltimore, Md., assignor, by mesne assignments, to Rustless Iron Corporation of America, Baltimore, Md., a corporation of Maryland
No Drawing. Application August 15, 1931, Serial No. 557,371
6 Claims. (Cl. 75—45)

1. In the production of rustless irons and steels, the method of eliminating silicon from a bath of iron or steel having a high percentage of chromium and an objectionable amount of silicon which comprises, forming thereon a basic iron oxide slag substantially free from oxides of chromium, and maintaining the temperature of the bath between 2800° F. and 3000° F., whereby the silicon contained in said bath is selectively oxidized thereby achieving iron and steel high in chromium and substantially free of silicon and substantially free from chromium oxide inclusions.



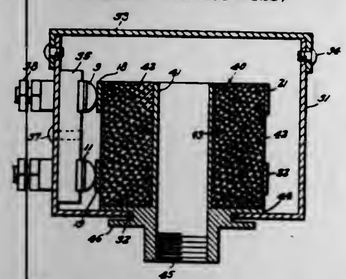
2,005,410
FRUIT JAR OPENER AND TIGHTENER
Emil A. Balz, Athens, Wis.
Application April 9, 1934, Serial No. 719,802
5 Claims. (Cl. 81—3.3)

1. A device of the class described comprising pivotally connected relatively stationary and movable jaws provided with coacting seating recesses adapted to receive the screw cap of a container, the movable jaw being extended longitudinally beyond the stationary jaw to form an operating handle, spaced guide strips secured to the stationary jaw and adapted to receive the movable jaw, and means extending through the stationary jaw and guide strips for clamping said guide strips in contact with the movable jaw.

2,005,411
SELENAZOLES AND PROCESS FOR PREPARING THEM
Leslie G. S. Brooker and Frank L. White, Rochester, N. Y., assignors to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
No Drawing. Application June 29, 1932, Serial No. 619,959
16 Claims. (Cl. 260—44)

1. A base of the structure—

in which A and B represent hydrogen, an alkyl group, or an aryl group of the benzene series, and R represents an alkyl group.



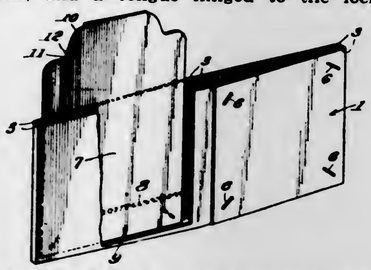
2,005,412
PLATINUM CONTACT MASS CONTAINING PROMOTER AND METHOD OF MAKING SAME
Gerald C. Connolly and Jeremiah A. Pierce, Baltimore, Md., assignors, by mesne assignments, to Chester F. Hockley, as receiver for The Silica Gel Corporation, Baltimore, Md., a corporation of Maryland
No Drawing. Application February 7, 1931, Serial No. 514,317
10 Claims. (Cl. 23—175)

7. The contact process for the manufacture of sulphuric acid which includes passing a gas mix-

ture containing sulphur dioxide and oxygen over a contact mass, said contact mass comprising a porous adsorbent carrier impregnated with platinum and having a promoter for the platinum associated therewith, said promoter being chosen from the group of substances consisting of a compound of the metals iron, nickel, aluminum, copper, bismuth, molybdenum, beryllium, vanadium, tin, chromium, and manganese, and being present in an appreciable amount up to and not exceeding 5% by weight of said contact mass.

10. A contact mass comprising a porous adsorbent carrier including a reinforcing substance and impregnated with platinum and a promoter substance for the platinum.

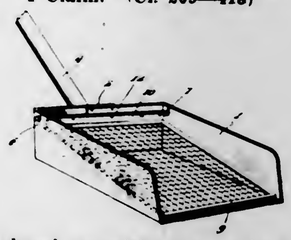
2,005,413
SWITCH STRUCTURE
Earl J. Dyess, Longview, Tex.
Application May 8, 1934, Serial No. 724,564
1 Claim. (Cl. 173—328)



In combination with an electrical conduit, a casing having contact brushes therein, a di-electric head for the conduit, said casing being provided with an opening through which said head can be inserted, said bead being provided with contacts for engagement with the said brushes, said head being provided with a tubular conduit section extending therethrough, a base plate on the conduit section against one end of the head, a conduit receiving socket at the end of the conduit section adjacent said base plate, and a flange on the said socket in spaced relation to the base plate, said flange being adapted to limit upward movement of the said head into the casing.

2,005,414
CELLULOSE DERIVATIVE COMPOSITION
Harry B. Dykstra, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application March 11, 1932, Serial No. 598,311
8 Claims. (Cl. 106—37)

1. A composition comprising a cellulose derivative and an ester of a polycarboxylic acid of at least 5 carbon atoms wherein the hydrogen atom of at least one carboxyl group is replaced by a radical from the group consisting of crotyl, oleyl, cinnamyl, allyl, butadienyl, linalyl, geranyl, erucyl, and undecylenyl.

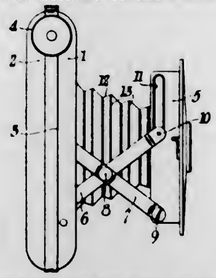


2,005,415
FOLDING BERRY BOX
Henry M. Ebner, Cameron, Wis.
Application September 18, 1933, Serial No. 690,007
1 Claim. (Cl. 229—23)

A box comprising foldable side walls and one of said walls including inner and outer permanently connected panels, said inner panel having a slot and a cut away portion communicative with said slot to form spaced shoulders lying above the lower wall of the slot, a bottom hinged to one of the walls, a locking flange on the bottom, and a tongue hinged to the locking

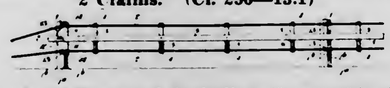
flange and adapted to be positioned between the panels by way of the slot and cutaway portion and the latter permitting the tongue to enter freely into the slot to bring the locking flange to underlie the shoulders for preventing accidental movement of the tongue out of said slot.

2,005,416
COAL SHOVEL
John H. Fisher, Elyria, Ohio
Application July 13, 1933, Serial No. 680,302
1 Claim. (Cl. 209—418)



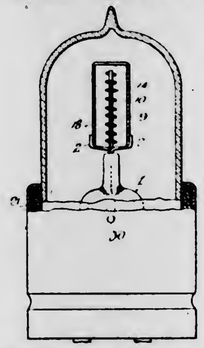
A coal shovel comprising a scoop having pivot openings in its sides at the upper rear corners thereof and a slot rising from one of said openings through the upper edge of the side of the scoop, a handle secured on the back end of the scoop at the bottom thereof and extending upwardly and rearwardly therefrom, a screen, a reenforcing frame secured around the edges of the screen and having its rear end extended relatively upward for the full width of the frame, and a straight pivct rod secured rigidly to the free edge of the extended rear end of the frame with its ends projecting beyond the sides of the frame, one end of said rod having flattened sides whereby it may pass through the slot in the edge of the scoop and rotatably seat in the opening below the slct and the opposite end of the rod being circular in cross section whereby it may rotatably seat in the opening in the adjacent side of the scoop upon endwise movement of the rod and screen after the flat-sided end of the rod is seated.

2,005,417
AIR VENT FOR CAMERA BELLOWS
Carl C. Fuerst, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a corporation of New York
Application April 20, 1934, Serial No. 721,470
4 Claims. (Cl. 95—39)



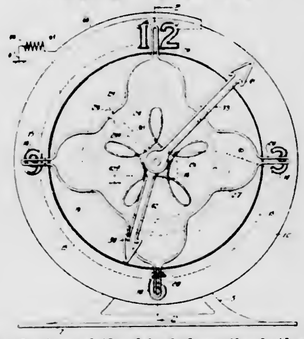
1. In a photographic camera having a bellows and a shutter, the combination with a shutter

casing including a rearwardly extending lens tube having an annular slot there around and slots leading radially away from the tube, of a means for attaching the bellows to the shutter including



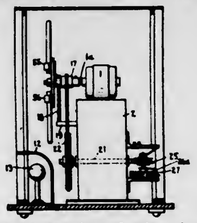
a plate adapted to engage said bellows and having an annular flange projecting into the annular shutter recess, and means for holding said plate and bellows tightly against an unslotted portion of said camera shutter.

2,005,418
TRAFFIC GUARD
George A. Gleason and Albert P. Hayden, Worcester, Mass., assignors to The American Steel and Wire Company of New Jersey, a corporation of New Jersey
Application September 21, 1933, Serial No. 690,458
2 Claims. (Cl. 256—13.1)



1. A traffic guard including the combination of a post, a spring-steel strip bent in the form of a goose-neck and having one end mounted on said post, and a guard rail mounted by the other end of said spring-steel strip and extending horizontally away from said post, said strip and guard rail being interconnected by adjustable means whereby the tension applied to the latter by the former may be varied.

2,005,419
VACUUM DEVICE
Robert F. Gowen, Ossining, N. Y., and James L. Bradford, Elizabeth, N. J., assignors, by mesne assignments, to Radio Corporation of America, a corporation of Delaware
Application April 3, 1918, Serial No. 226,537
7 Claims. (Cl. 250—27.5)

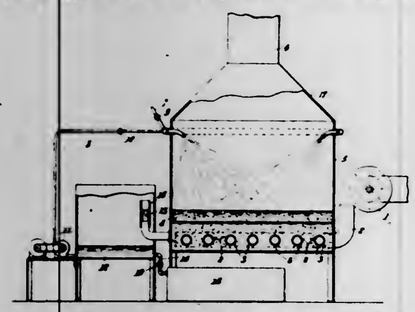


1. A vacuum device comprising a filament and grid electrode, a plate electrode comprising a single piece of metal with a central opening cut therethrough and bent downwardly on opposite sides of said central opening.

2,005,420
DISPLAY SIGN
William B. F. Hall, Fort Wayne, Ind.
Application March 14, 1934, Serial No. 715,392
17 Claims. (Cl. 40—130)

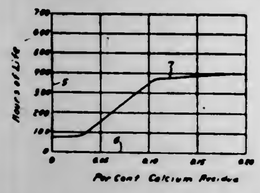
1. In a device of the kind described, the combination of a stationary support, a dial on said stationary support and having characters thereon, illuminable hands operatively associated with said dial, a second support rotatively mounted on said stationary support coaxial with said dial and hands, illuminable means on said second support and arranged as a design, means for moving said hands relative to the dial and to each other, means for rotating said second support at a speed different from that of the hands, and means for causing illumination of said hands and said illuminable means at desired intervals.

2,005,421
LIGHT DISPLAY APPARATUS
John M. High, New York, N. Y.
Application September 30, 1932, Serial No. 635,623
4 Claims. (Cl. 240—10.1)



1. In an optical display device, in combination, a rotary shaft, a lamp mounted thereon for rotation, a motor for driving said shaft, and means driven by said motor for causing the rate of speed of rotation to vary in a predetermined manner, said means comprising a wire wound rheostat having its resistance non-uniformly disposed throughout its length, a wiper for engaging said rheostat, and a driving connection between said motor and said wiper.

2,005,422
METHOD OF CONCENTRATING WASTE LIQUORS
Clarence C. Hunicke, Palisade, and Charles L. Wagner, Boonton, N. J.
Application October 31, 1933, Serial No. 696,092
2 Claims. (Cl. 252—7)

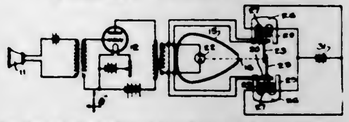


1. The method for the concentration of sulphite waste liquors from the pulp industry which con-

sists in emitting hot flue gases into said waste liquors and bubbling same through a predetermined maintained column of waste liquors, breaking up the bubbles to a predetermined size and

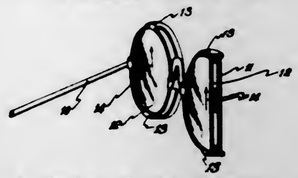
exhausting the moisture laden gases while contemporaneously spraying the surfaces of the waste liquor column to maintain its predetermined height and abate any foam.

2,005,423
ALLOY
Matthew A. Hunter, Troy, N. Y., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
Application January 18, 1933, Serial No. 652,259
3 Claims. (Cl. 75—1)



1. An electric resistance element consisting essentially of nickel substantially 80 percent, chromium substantially 20 percent and from .03 to .2 percent calcium.

2,005,424
BROADHEAD HUNTING POINT
Frank Kindle and Roy Emmit Speck, Pendleton, Ind.
Application September 20, 1930, Serial No. 483,349
6 Claims. (Cl. 273—106.5)



1. An arrow head, comprising a triangular body portion and a shank integrally joined to the base thereof and adapted to be secured to the end of an arrow shaft, the sides of said body portion being sharpened to provide cutting edges, said body portion being symmetrically tapered laterally from its median line, and its greatest thickness ahead of the trailing ends of such sharpened edges being less than one-eighth (⅛) the width between the two trailing points of said head and materially less than the thickness of said shank, said shank being gradually tapered at its forward end to provide an uninterrupted surface at said joint.

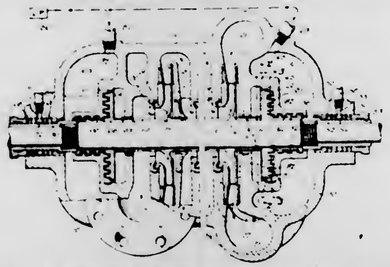
2,005,425
REGENERATIVE SOUND RECORDING DEVICE
Bernard Kwartin, Brooklyn, N. Y.
Application February 3, 1931, Serial No. 513,100
6 Claims. (Cl. 179—100.3)

1. In an apparatus for photographically recording sound vibrations, in combination, means responsive to the sound vibrations for converting the latter into corresponding electrical current variations, a light source arranged to be variably energized by said current variations for producing light variations corresponding to said sound variations, a pair of cooperating shutters arranged in advance of said light source and movable toward and away from each other, the inner ends of said shutters being relatively so arranged and complementally formed that upon movement of said shutters relatively to each other there is formed therebetween an opening variable in depth and in width, and means for effecting the movement of said shutters relatively to each other accordingly as the intensity of the said light source is varied.

2,005,426
POLARIZING VIZOR OR SUNSHADE
Edwin H. Land, Wellesley Farms, Mass.
Application November 3, 1933, Serial No. 696,459
10 Claims. (Cl. 88—41)

1. In a device of the character described, ophthalmic mounting means, and a plurality of pairs of cooperating light-polarizing bodies, at least one body of each of said pairs being firmly held by said mounting means in a position adapted to substantially eliminate specular glare, and at least one other body of each of said pairs being adjustably held by said mounting means in position to coperate with said first-mentioned body in the elimination of diffuse glare.

2,005,427
TILING AND THE LIKE
George H. Lenke, Elmhurst, Ill., assignor of one-half to Julius J. Ohlis, Oak Park, Ill.
Application September 28, 1933, Serial No. 691,293
8 Claims. (Cl. 72—19)



8. As an article of manufacture, an attaching member for mortised tile members and the like, said attaching member having a base portion for attachment to a support, an outstanding tenon on said base portion, a head at the outer end of said tenon, and yieldable oblique wings on said base portion at opposite sides of said tenon for yieldingly seating the mortised tile members and the like and yieldingly pressing said members into engagement with the head of the tenon.

2,005,428
SHOE SIZE MEASURING DEVICE
Lester L. Levy, Brooklyn, N. Y.
Application October 30, 1933, Serial No. 695,857
4 Claims. (Cl. 33—3)

1. A shoe size measuring device comprising a scale bar, a heel bar rigidly and immovably affixed to one end of the scale bar at the middle thereof and providing a pair of extensive heel abutment members, a member slidably mounted on said scale bar solely for longitudinal movement thereon and providing a toe abutment portion for each of said heel portions, a pair of shoe size scales of different ranges provided on a face of said scale bar, said scales being arranged in parallel relation, said heel bar and slidable member being parallel and of the same length whereby the spaces between said pair of heel and toe portions are adapted to simultaneously receive the feet of the individual whose shoe size is to be measured.

2,005,429
CENTRIFUGAL PUMP AND THE LIKE
Joseph Lichtenstein, Brooklyn, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a corporation of New York
Application March 21, 1932, Serial No. 600,085
16 Claims. (Cl. 103—112)

1. In a device adapted to operate with liquids at high pressure, a rotor and a housing, a stuffing box carried by said housing and cooperating with said rotor, a passage having radial baffles therein and adapted to have radial flow of liquid therein toward the periphery thereof, fixed and rotatable members forming a radial labyrinth seal communicating at its outer end with said passage and adapted to have radial flow of said liquid through said labyrinth toward the axis of said rotor and causing rotational flow of said liquid about said axis whereby centrifugal force is developed to oppose said flow, and a chamber for receiving the liquid after passage through said radial labyrinth seal and in communication with said stuffing box.

2,005,430
ALLOY
James M. Lohr, Morristown, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application October 12, 1934, Serial No. 748,083
3 Claims. (Cl. 75—1)

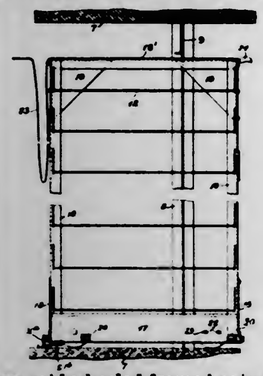
1. A nickel-chromium alloy containing 15 percent to 25 percent chromium, 1 to 20 percent molybdenum, 0.1 to 1.0 percent zirconium and 0.01 to 0.20 percent calcium balance nickel.

2,005,431
ALLOY
James M. Lohr, Morristown, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application October 12, 1934, Serial No. 748,084
2 Claims. (Cl. 75—1)

1. A nickle-chromium alloy containing 15 to 25 per cent chromium, .01 to .20 percent calcium, .01 to .50 percent zirconium and .01 to 1 percent aluminum, balance nickel.

2,005,432
ALLOY
James M. Lohr, Morristown, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application January 4, 1935, Serial No. 359
5 Claims. (Cl. 75—1)

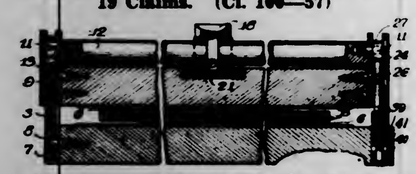
5. A nickel-chromium-iron alloy containing from 10 to 18 percent chromium, 17 to 30 percent iron, 1 to 20 percent molybdenum .1 to 1.0 percent zirconium, .01 to .2 percent calcium, balance nickel.



2,005,433
ALLOY
James M. Lohr, Morristown, N. J., assignor to Driver-Harris Company, Harrison, N. J., a corporation of New Jersey
No Drawing. Application January 4, 1935, Serial No. 360
3 Claims. (Cl. 75—1)

1. A nickel-chromium-iron alloy containing 10 to 15 percent chromium, 25 to 30 percent iron, .01 to .20 percent calcium, .01 to .50 percent zirconium and .01 to 1.0 percent aluminum, balance nickel.

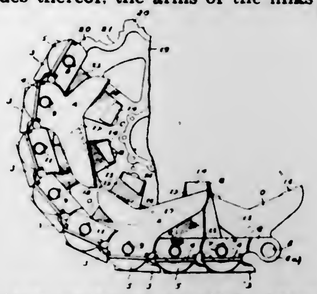
2,005,434
CONVERTIBLE BOOKSTACK
Angus S. Macdonald, New York, N. Y., assignor to Snead & Company, Jersey City, N. J., a corporation of New Jersey
Application January 6, 1932, Serial No. 585,008
8 Claims. (Cl. 189—34)



1. In a convertible metallic bookstack, the combination of pairs of uprights each pair having shelf supporting means, and each pair having de-

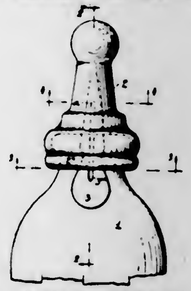
tachable means whereby they may be associated with permanent library structure to provide ranges of normally fixed stacks and also means adapting them to be attached to a wheeled frame to enable conversion from a fixed stack into a

rolling case, said wheeled frame having end members to which said uprights are attached through the medium of said last mentioned means, and said uprights when so attached constituting the uprights of the rolling case, and shelves carried by the uprights.



2,005,435
APPARATUS FOR PRESSING CLOTHING
Sam H. MacFarland, Evanston, Ill.
Application July 7, 1934, Serial No. 734,139
19 Claims. (Cl. 100—57)

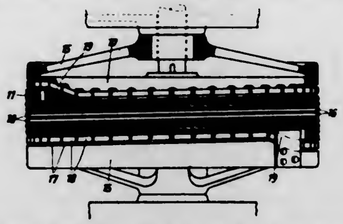
1. In apparatus for pressing clothing, in combination, a rigid bottom plate, a rigid top plate, said plates being hinged together along one edge, an upstanding ear on one edge of the bottom plate, an upstanding ear on the opposite edge of the bottom plate and opposite the first mentioned ear, a pair of keepers on the top plate through which said ears have sliding movement, and means extending across the upper surface of the top plate for simultaneously causing each of said ears to slide vertically through its respective keeper to move said plates toward each other to press an article of clothing therebetween.



2,005,436
TRACK ASSEMBLY
Wesley K. McMillan, San Francisco, Calif., assignor, by mesne assignments, to George H. Hancrien, trustee for McMillan-Miller Engineering Co., San Francisco, Calif., a copartnership, bankrupt
Application February 23, 1932, Serial No. 594,638
Renewed November 19, 1934
5 Claims. (Cl. 305—10)

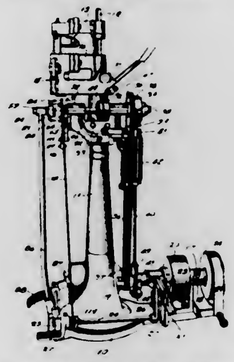
5. An endless track assembly composed of a plurality of links of two different types arranged alternately, each of said links having an aperture in its main portion to receive a pin engaging the link ahead and rearwardly projecting apertured members to permit connection to the next succeeding link, each of said links having a base and upwardly projecting arms, the arms of the links of the first type being substantially vertical and having stops disposed on the outer and inner sides thereof, the arms of the links of the

second type projecting angularly beyond the points of connection of said links and bearing against the under sides of said stops, the stops on the outer sides of said arms being disposed at opposite angles to the stops on the inner side of said arms.



2,005,437
BOTTLE NIPPLE
Harry D. Naum, Brooklyn, N. Y.
Application December 16, 1932, Serial No. 647,507
Renewed November 16, 1934
3 Claims. (Cl. 128—252)

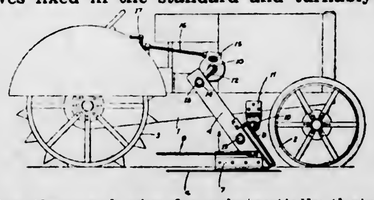
1. A bottle nipple formed with a top portion and an enlarged bottle-engaging base portion, having formed integrally with the base portion a lifting tab which tab is formed with an air passageway leading upwardly within the nipple and communicating with the interior thereof, the tab extending a substantial distance outwardly from the said base portion of the nipple and in such direction as to conform with the curvature of the neck of the bottle and be deflected thereby so as to lie flat against the same, the said projecting portion of the tab being adapted for grasping by the fingers to be moved away from the bottle and thence toward the top portion of the nipple for lifting the nipple from the bottle, and being adapted, when the nipple is laid on a plane surface, to hold the nipple with its base elevated for the reception of air.



2,005,438
ROPE GEARING
Otto Ohnesorge, Bochum, Germany
Application August 26, 1931, Serial No. 559,556
In Germany September 6, 1930
10 Claims. (Cl. 74—224)

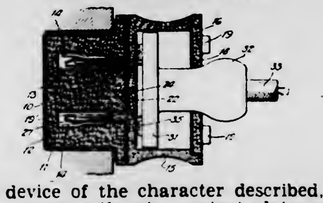
1. An apparatus of the character described, comprising in combination a pulley, an endless chain coiled in a series of helically positioned juxtaposed convolutions about said pulley and engaging the same, a portion of the endless chain extending from the convolution at one end of the series to the convolution at the other end of

the series while being spaced from the pulley, a plurality of tension elements each supported on at least one convolution of the chain, and a mechanism simultaneously cooperating with all convolutions of the chain for moving the tension elements axially relatively to the pulley.



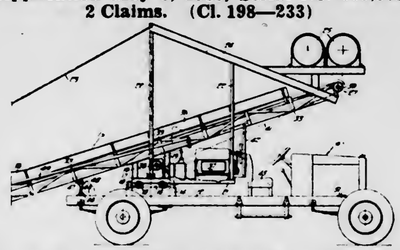
2,005,439
BASKET MAKING MACHINE AND METHOD
Albert H. Schmidtke, St. Joseph, Mich., assignor to St. Joseph Iron Works, St. Joseph, Mich., a corporation of Michigan
Application May 20, 1932, Serial No. 612,395
21 Claims. (Cl. 1—13.6)

1. In an apparatus of the class described the combination of a rotatable form which is reciprocable in a direction transverse to its axis of rotation, means with which the form rotatively co-operates to reciprocate the form simultaneously to or from its midway position during each quarter rotation of the form, and fastener applying mechanism adapted to co-operate with the form to apply fasteners to the work at intervals between quarter rotations of said form.



2,005,440
BEAN CUTTER
Edmund M. Sciarini, Modesto, Calif.
Application April 9, 1934, Serial No. 719,719
3 Claims. (Cl. 97—47)

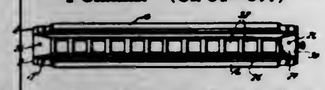
1. A bean cutter including, with a supporting vehicle having a frame, a standard disposed to one side of the frame, a cutter mounted on the lower end of the standard, vertically spaced transverse crankshafts journaled on the frame and disposed in a plane parallel to the standard, control means for imparting rotation to one shaft, relatively long crank pins on the shafts, and sleeves fixed in the standard and turnably en-



gaging the crank pins for substantially their full length.

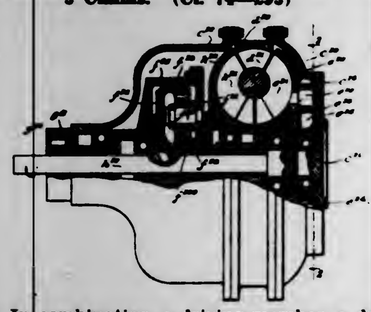
2,005,441
ELECTRICAL CONNECTER
William J. Shearer, Elmhurst, N. Y.
Application June 22, 1932, Serial No. 618,630
1 Claim. (Cl. 173—330)

In a device of the character described, a receptacle, recesses therein, contact plates mounted in said recesses, a plug carried by said receptacle, contact pins carried by said plug and extending into said recesses but out of engagement with said contact plates, said contact pins each comprising two resilient members, and means for flexing one of said resilient members into engagement with its respective contact plate, said last mentioned means including a cam surface formed on one of the resilient members constituting the contact pins and means carried by the plug and movable into engagement with said cam surface to flex the member carrying said cam surface into electrical contact with its respective contact plate in the receptacle.



2,005,442
CONVEYER
Ellis H. Spiegl, Salinas, Calif.
Application May 8, 1933, Serial No. 669,873
2 Claims. (Cl. 198—233)

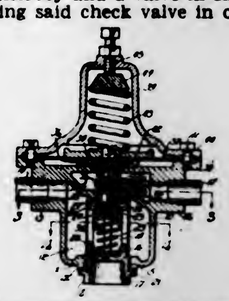
1. A crop gathering apparatus comprising a vehicle adapted to advance over a field, a continuous supporting framework having a first portion inclined to the horizontal and transversely spanning said vehicle to project beyond both sides thereof and a second portion substantially horizontal and extending from the lower terminus of said first portion for a sufficient distance to accommodate a plurality of side-by-side loaders, a conveyer belt the upper and lower runs of which are substantially coextensive with said



framework, said upper run having a horizontal stretch on said horizontal portion and an inclined stretch on said inclined portion, and means forming an enclosing wall around said upper run except at the discharge end thereof.

2,005,443
HARMONICA
Walter R. Steele, Lemon Grove, Calif.
Application March 14, 1934, Serial No. 715,407
4 Claims. (Cl. 84—377)

1. In a device of the kind described, a frame comprising a pair of sticks meeting at their forward edges and diverging toward their rear edges, the uppermost stick having cells cut in its forward margin and opening through its upper side, the lower stick having a pair of notches cut in its forward edge below each cell in the upper stick, an upper reed plate secured on the upper stick over the cells therein, a center reed plate secured on the lower stick above the notches, and a lower reed plate secured on the underside of the lower stick below the notches, the said center and lower reed plates having their reeds communicating with the notches in the lower stick, and valve means for admitting air to any of the reed plates.

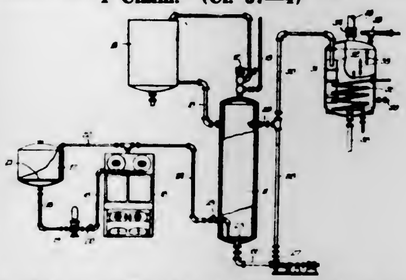


2,005,444
TRANSMISSION
Carl W. Weiss, Brooklyn, N. Y.
Application March 13, 1934, Serial No. 715,257
3 Claims. (Cl. 74—293)

1. In combination, a driving member, a driven member, a variable speed transmission device having an impeller member, a rotor member, a reaction rotor member, the impeller member being in operative relation with the driving member, the rotor member being in operative relation with the driven member, and a booster gearing having one member in operative relation with the reaction rotor member and another member in operative relation with the driven member.

2,005,445
REGULATOR
Alfred H. Wiedhofft, Chicago, Ill.
Application March 16, 1931, Serial No. 522,807
Renewed November 15, 1934
4 Claims. (Cl. 50—23)

1. In combination with a casing, its chamber and a check valve controlling the entry of fluid into said chamber, a cage removably secured to said casing, a screen surrounding said cage and supported thereby and a valve in said cage normally holding said check valve in open position

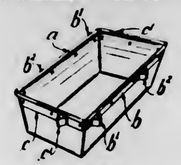


to establish communication between said cage and said chamber and permitting closure of said check valve upon removal of said cage.

2,005,446
GREASE SEAL
John R. Winter, Detroit, Mich., assignor of one-half to H. A. Montgomery
Application October 20, 1932, Serial No. 638,802
11 Claims. (Cl. 288—1)

11. In a seal, a packing ring of deformable material adapted to encircle and seal against a shaft passing through the same, and a casing for the ring adapted to be press-fitted into a housing about the shaft, said casing consisting of a centrally apertured sheet metal cup having a cylindrical rim which terminates in a portion of substantially uniform thickness bent abruptly in toward the axis of the cup substantially as far as the bottom of the latter to provide an end flange of considerable radial extent, the metal of the cup at the junction of said rim and flange portions being materially thinner than the cylindrical rim portion to facilitate bending of the flange portion without appreciable distortion of the cylindrical portion.

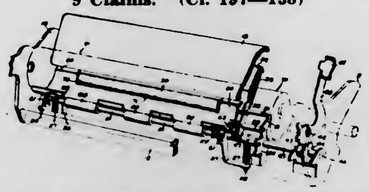
2,005,447
APPARATUS FOR SPLITTING FATS
Oscar H. Wurster, Chicago, Ill.
Application October 23, 1931, Serial No. 570,681
1 Claim. (Cl. 87—4)



A blow-out device for use in combination with an autoclave saponification apparatus, comprising a closed tank having an inlet pipe extending into the upper portion thereof, a cylindrical casing surrounding the end of said pipe and extending adjacent the bottom of the tank, a check valve-controlled vent in the top of said tank, means for exhausting air from said tank, cooling means for said tank, and an outlet line for withdrawing materials separated in said tank.

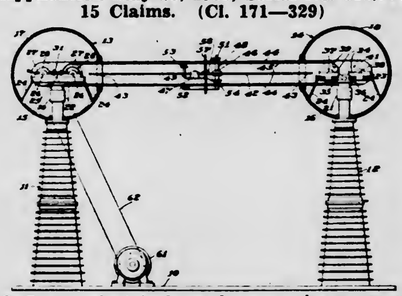
2,005,448
BLEACHING AND STRIPPING MATERIAL AND PROCESS FOR MAKING SAME
Maurice Aisen, Norwalk, Conn.
No Drawing. Original application January 6, 1926, Serial No. 79,674. Divided and this application March 18, 1932, Serial No. 599,846
7 Claims. (Cl. 8—2)

4. A bleach material comprising a thin sheet carrying a coating of a mixture of a bleaching agent, a softener, a carrier, an adhesive substance and a chemical capable of reducing the surface tension of the mixture.



5. The process of making a decolorizing material comprising in mixing a bleaching agent with a carrier, a softener, an adhesive substance and a chemical capable of reducing the surface tension of the mixture and applying the mixture to a thin sheet.

2,005,449
BAKING PAN
William Walter Arrowsmith, All Saints, Chorlton-on-Medlock, England
Application January 17, 1935, Serial No. 2,261
In Great Britain June 2, 1934
7 Claims. (Cl. 53—6)

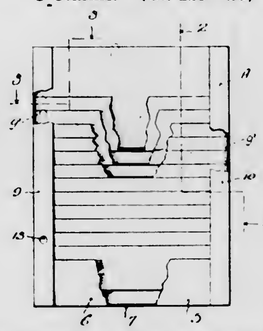


1. Bread and like baking tins provided with spacing members on their sides and ends, and those spacing members on one side or end offset in relation to those on the opposite side or end, as herein set forth.

2,005,450
PAPER FEEDING MECHANISM
Raymond G. Bower, Detroit, Mich., assignor to Burroughs Adding Machine Company, Detroit, Mich., a corporation of Michigan
Application December 9, 1933, Serial No. 701,616
9 Claims. (Cl. 197—138)

1. In a machine of the class described, a platen, front and rear feed rolls movable into and out of engagement with said platen, means supporting said rolls, a paper pan guidingly interlocked with said roll supporting means and mounted so as not to be affected by the movement of said rolls into and out of engagement with said platen, means for urging said pan into engagement with said platen, and means for limiting the movement of the rear portion of said pan toward said platen whereby a slight space remains between said platen and the rear of said pan while the front edge of said pan engages said platen whereby papers may be easily fed under said platen from the rear but will be lightly gripped at the front of said platen.

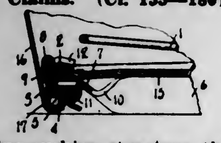
2,005,451
HIGH VOLTAGE ELECTRICAL MACHINE
Ralph C. Browne, Salem, Mass.
Application May 23, 1932, Serial No. 612,907
15 Claims. (Cl. 171—329)



3. In an electrical machine, a charge carrier comprising an endless belt of flexible material, a second charge carrier in close proximity thereto, and means attached to one of the carriers adapted to wedge the carriers apart against electrostatic attraction.

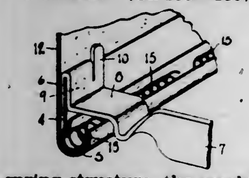
2,005,452
INDICATING DEVICE
William F. Bull, Brooklyn, N. Y.
Application November 1, 1930, Serial No. 492,772
3 Claims. (Cl. 199—30)

1. In an indicating device, in combination, indicia, a bar in proximity to said indicia, tension held indicators or markers movable on said bar lengthwise of said indicia, said indicators or markers movable on the bar to and from operating position with said indicia.



2,005,453
CARD INDEX
Robert A. Chadwick, Jr., Milwaukee, Wis.
Application January 18, 1934, Serial No. 707,068
3 Claims. (Cl. 129—20)

1. A card index comprising a series of paper or fabric sheets each folded back upon itself on a longitudinal line defining side walls with the



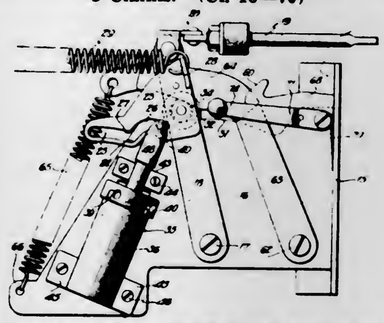
folded sheets placed partially one within the other, a dividing sheet disposed in the uppermost folded sheet between the side walls thereof, and means connecting the ends of all of the sheets together, whereby series of stepped pockets are formed on the opposite sides thereof.

2,005,454
SPRING STRUCTURE
William A. Clark, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application August 18, 1934, Serial No. 740,386
16 Claims. (Cl. 155—180)

6. In a spring cushion structure, the combination of a border frame having an inturned curved flange at its lower edge providing an upholstery supporting ledge substantially spaced from the upper edge of the border frame, cross bars disposed on edge and having saddles at their ends secured to the border frame and provided with horizontal portions disposed above and in spaced relation to said upholstery supporting ledge, said horizontal portions having integral upholstery clamping tongues, cross pieces disposed transversely above said cross bars and secured to the said border frame and having integral upholstery securing tongues, upholstery having its edge wrapped around the bottom of said border frame and over said supporting ledge, and upholstery clamping strips projecting between said supporting ledge and the said cross bars and cross pieces in clamping engagement with the upholstery arranged therearound, said upholstery clamping tongues being in retaining engagement with said upholstery clamping strips, the upholstery clamping strips having channel portions embracing the inturned portion of said border frame and projecting below the border frame to constitute a binding and guard for the upholstery.

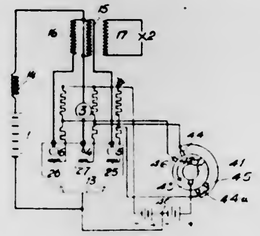
2,005,455
SPRING STRUCTURE
William A. Clark, Detroit, Mich., assignor to L. A. Young Spring & Wire Corporation, Detroit, Mich.
Application September 17, 1934, Serial No. 744,296
5 Claims. (Cl. 155—180)

1. In a spring structure, the combination with a border frame having a bottom portion of curved channel section, the mouth or entrance of the channel portion being of less width than the maximum diameter of the channel, upholstery wrapped around the bottom of said border frame and over the edge of the inner arm of the channel, and helically coiled spring clamping members sprung into the channel with the upholstery partially embracing them, the normal diameter of the clamping members with the upholstery thereon exceeding the width of the entrance to the channel.



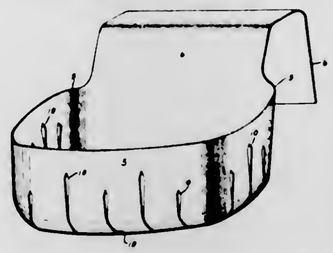
2,005,456
VARIABLE RESISTANCE DEVICE
Frederick L. Creager, Merchantville, N. J., assignor to Radio Corporation of America, a corporation of Delaware
Application June 11, 1932, Serial No. 616,629
9 Claims. (Cl. 201—60)

1. A variable resistance device comprising a strip support form, a high resistance conductor wound on said form, and means providing spaced low resistance areas along the surface of said form on an edge thereof between said surface and said conductor, said areas being provided by accretive metallic bodies intimately adhering to said surface, for contact with spaced groups of turns of said conductor.



7. The herein described method of manufacturing electrical resistors of the variable contact type in which a high resistance element is supported on an insulating strip, which consists in masking portions of said strip leaving spaced unmasked portions, sand-blasting said last named portions, unmasking said strip, spraying low resistance coatings of metal upon said strip over said previously masked and unmasked portions, removing said coatings from said portions previously masked, thereby leaving coated areas of metal on said unmasked portions, and superimposing said resistance element on said strip in contact with said areas.

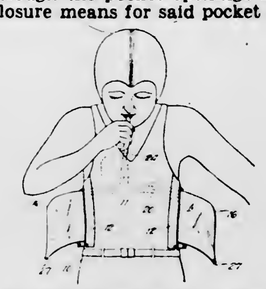
2,005,457
DOORCHECK
Simon Dubitsky, Glendale, Long Island, Samuel Adler, Bronx, Eugene Grieshaber and Charles Dearcopp, Glendale, Long Island, and Ralph Wood, South Ozone Park, N. Y.
Application September 14, 1934, Serial No. 743,950
5 Claims. (Cl. 16—70)



2. In a door check device, a door actuated lever, spring means acting upon said lever to urge the same in a door closing direction, a roller carried by said lever, check means acting upon said lever to retard the rapid movement of the same during a portion of its door closing movement and being rendered inoperative as the lever nears the limit of its closing movement, cam elements engaging said roller and coacting to form a wedge therefor when said check means is rendered inoperative, and spring means acting upon one of said cam elements to forcibly wedge said roller and cause said door actuated lever to rapidly move to a fully returned position.

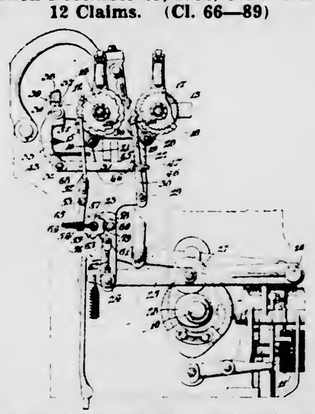
2,005,458
ION VALVE FOR PRODUCING ALTERNATING CURRENTS
Karl Erik Eriksson and Uno Lamm, Ludvika, Sweden, assignors to Allmänna Svenska Elektriska Aktiebolaget, Västerås, Sweden, a corporation of Sweden
Application July 7, 1933, Serial No. 679,343
In Sweden July 8, 1932
7 Claims. (Cl. 175—363)

1. In ion valves for producing alternating currents, a cathode, a plurality of working anodes adapted to conduct alternatingly the current to said cathode, control grids for said anodes, means for impressing on said grids control voltages for blocking said anodes during certain intervals, and a transition anode combined with means for impressing a transitory voltage thereon sufficient to cause said transition anode to absorb the load current from one main anode and deliver same to the next anode.



2,005,459
STRAINER FOR SINKS
Ida L. Finn, Racine, Wis.
Application December 19, 1934, Serial No. 758,188
4 Claims. (Cl. 4—290)

1. As an article of manufacture, a strainer comprising a bowl of substantially oblong shape having an imperforate bottom and a rear wall terminating in a curved hanger, the front and end walls of the bowl embodying vertically arranged drainage openings.



2,005,460
SAFETY BATHING SUIT
Jacob Fried, New York, N. Y.
Application October 5, 1933, Serial No. 692,271
4 Claims. (Cl. 9—20)

1. In a bathing suit having open pockets at opposite sides thereof, the pocket openings being disposed exteriorly of the bathing suit, relatively flat, inflatable air bags fixedly secured along one edge to the bathing suit within said pockets and foldable when deflated into said pockets and extendable through the pocket openings for inflation, and closure means for said pocket openings

for closing the same when said air bags are folded therein.

2,005,461
MECHANISM FOR NARROWING FLAT KNIT FULL FASHIONED HOSIERY
Gustav Gastrich, Wyomissing, Pa., assignor to Textile Machine Works, Wyomissing, Pa., a corporation of Pennsylvania
Application December 28, 1932, Serial No. 649,161
12 Claims. (Cl. 66—89)

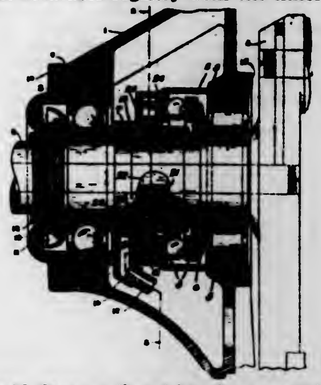
1. The combination of a pair of narrowing spindles, a pair of operating elements respectively associated with said spindles, a common actuator for said operating elements adapted normally to rotate said spindles to corresponding extents during each cycle of operation of said common actuator, means for withholding one of said operating elements during alternate operating cycles of said common actuator, means for withholding the second of said operating elements during a portion of each operating cycle of said common actuator, and means for interconnecting the withholding means of both operating elements for simultaneous operation to permit said normal operation of said operating elements by said common actuator.

2,005,462
BUILDING CORNER CONSTRUCTION AND UNITS THEREFOR
John H. Gibson, Cleveland, Ohio, assignor to The Weaver-Wall Company, Cleveland, Ohio, a corporation of Ohio
Application November 24, 1930, Serial No. 497,652
18 Claims. (Cl. 20—5)

5. A corner piece comprising a strip of material of substantially uniform thickness through-

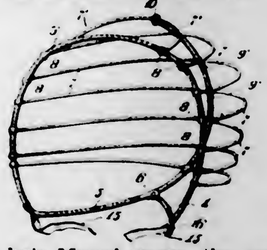
out bent into angular form and having a portion of said strip extending around the bend offset

from the body of the piece substantially the thickness of the material.



2,005,463
HEAD AND BACK SUPPORT FOR A LEGLESS SEAT
Helma J. Harryman, Glendale, Calif.
Application August 4, 1934, Serial No. 738,489
1 Claim. (Cl. 155—154)

Head and back supports for a legless seat, including a pair of side rails having forward and rear ends, a pair of standards having their lower ends pivotally connected to said rails, a cloth seat having side edge portions secured to the outside of said rails, a cloth back having side edge portions secured to the outer side of said standards, flexible straps having their lower ends secured to said rails adjacent the centers thereof and their upper ends secured to the top ends of said standards that yield and stretch when said seat is occupied and heavy pressure is applied to said back, a cloth head support, eyelets to which the ends of said head support are secured, chains connected to said eyelets, and snap hooks on the ends of said rails for engaging the links of said chains to adjust said head support, said parts arranged so that said standards can be folded parallel with said rails and rolled with said cloth seat and back around said head support into a cylindrical bundle.

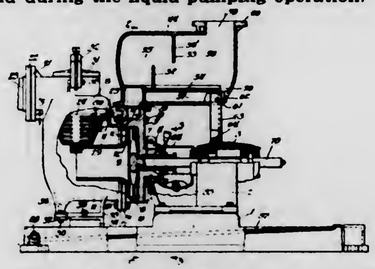


2,005,464
HIGH PRESSURE JOURNAL LUBRICATOR
John F. Hörmann, Havana, Ill.
Application August 5, 1933, Serial No. 683,834
3 Claims. (Cl. 308—187)

1. A high pressure journal lubricator comprising in combination with a journal having a central passage and a communicating transverse passage for oil, a channeled collar and a channeled spacer sleeve encompassing the journal, the inner sleeve member provided with a plurality of spaced holes establishing oil communication between said inner channel of said outer collar and said inner channel of the sleeve and provided with an oil hole communcating with said inner channel thereof and attachments connected therewith for receiving lubricating oil under high pressure into said channels of the collar and sleeve; said transverse hole in said journal in constant rotatable registry with the inner chan-

nel of said sleeve, a thrust bearing support flange on said inner sleeve and an annular hood for covering and protecting said sleeve and collar.

2,005,465
MARCEL WAVER
Anna J. Janda, Chicago, Ill., assignor to John J. Ryan, Chicago, Ill.
Application November 16, 1928, Serial No. 319,770
11 Claims. (Cl. 132—38)



1. In a hair Marcel waver, the combination with a front face member inverted U-shaped in contour, of a horizontal U-shaped neck member connected to and merging into said front face member, spaced-apart horizontal U-shaped intermediate members to serve as division lines between the undulations of hair raised from the head between said intermediate members, and a binding member connected to the horizontal neck member and intermediate members but not to the front face member.

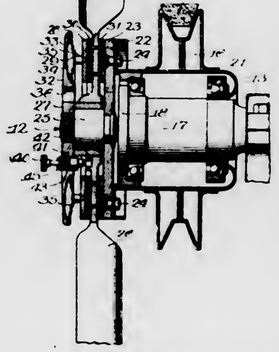
2,005,466
SELF PRIMING PUMP
Harry E. La Bour, Elkhart, Ind.
Application September 8, 1931, Serial No. 561,516
15 Claims. (Cl. 103—113)

1. In a self-priming centrifugal pump the combination of a pump casing containing a runner chamber, a runner disposed in said casing, a horizontal shaft for said runner, a tubular suction inlet opening concentrically into said chamber, a discharge throat leading substantially tangentially out of said chamber, a cylindrical separator and discharge chamber disposed with its longitudinal axis extending horizontally above the axis of said runner, transverse longitudinally spaced baffle means in said separator dividing it into a plurality of communicating sub-chambers, said discharge throat lying substantially in a vertical plane and leading substantially tangen-

tially into the first one of said sub-chambers, and a return passage leading from another one of said sub-chambers into said runner chamber, said return passage serving as a liquid discharge throat during the operation of liquid pumping, and a discharge outlet from the top of said separator communicating with said last named sub-chamber for discharging gas during the priming operation of the pump and for discharging liquid during the liquid pumping operation.

11. The method of evacuating a centrifugal pump of air to prime the same, which comprises sealing the pump with liquid, rotating the pump runner, circulating a body of priming liquid through the pump in contact with the runner to entrain air and form a mixture, discharging the mixture at a relatively high velocity, guiding the mixture at said relatively high velocity in a curved path to develop centrifugal force, separating a part of the entrained air by said centrifugal force, reducing the velocity of the mixture, discharging the liquid at reduced velocity into an open topped container permitting the formation of a free surface of the liquid to promote gravity separation of air therefrom and returning liquid from the bottom of said container into a portion of the pump casing where the runner develops hydraulic pressure when the pump is operating to pump liquid and again entraining air in the pump.

15. In a centrifugal pump, the combination of a main frame having a cylindrical bore, one end of which is closed by an integral end plate, the other end terminating in a flat annular clamping face, an inlet plate seated in the open end of said bore and having at its margin a flat annular face in the same plane as said clamping face, said plate having a central tubular inlet, said cylindrical bore between said end plate and said inlet plate comprising a runner chamber having a tangential discharge passageway, a runner in said chamber for moving liquid entering through said inlet and discharging the same through said tangential discharge passageway, an inlet trap comprising a hollow body loosely enclosing said tubular inlet and having an annular flat clamping face overlying both the flat annular clamping face of the frame and the flat annular face on the inlet plate, a flat gasket between the clamping face of the trap on one side and the coplanar clamping faces of the frame and of the inlet plate respectively on the other side, and clamping means between the frame and the inlet trap for clamping said parts together to seal the inlet trap to the frame and the inlet plate to the frame, independently of the thickness of the gasket.

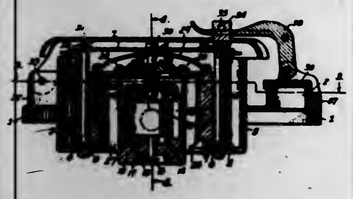


2,005,467
FLOWER HOLDER
Emma M. Menge, Newton, Mass.
Application February 26, 1935, Serial No. 8,285
4 Claims. (Cl. 47—41)

3. A flower holder provided with a base portion having stem-receiving openings therein and having its perimeter formed as a series of leaf-like projections each of which is relatively broad with acute angled edges, whereby the said holder may

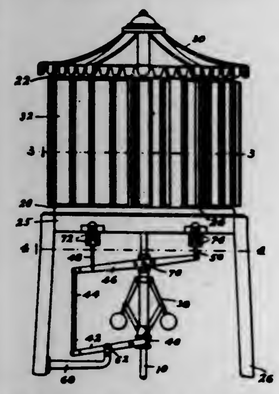
be supported by the lower faces of said projections upon different diameters of flower container, the said holder as an entirety being of a concave or saucer-like shape.

2,005,468
ENGINE COOLING DEVICE
Arthur B. Modine, Racine, Wis., assignor to Modine Manufacturing Company, Racine, Wis., a corporation of Wisconsin
Application March 3, 1933, Serial No. 659,539
13 Claims. (Cl. 236—35)



12. In a device of the kind described, the combination with an engine, air advancing means, temperature responsive means connected with the engine for constant rotation during operation of the engine, said temperature responsive means providing means controlling operation of said air advancing means by said engine.

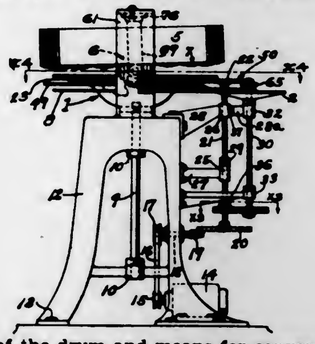
2,005,469
TANK CLOSURE
John Nelson, Minneapolis, Minn., and Victor C. Norquist, Kansas City, Mo., assignors to Butler Manufacturing Company, Kansas City, Mo., a corporation of Missouri
Application January 28, 1933, Serial No. 654,006
5 Claims. (Cl. 220—44)



1. A closure for a tank comprising a plate having an opening, a first valve seated in said opening, said first valve being provided with two ducts connecting the tank inside with the atmosphere,

a second valve seated in said first valve and controlling one of said ducts, and a third valve seated

in said first valve and controlling the other of said ducts.

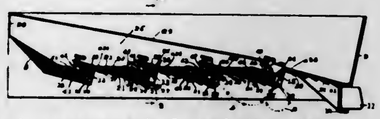


2,005,470
WINDMILL
Olof R. Olson, Kansas City, Mo., and Herbert L. Mika, Kansas City, Kans.; said Mika assignor to said Olson
Application November 6, 1933, Serial No. 696,810
2 Claims. (Cl. 170—17)

1. In a windmill having a housing, a windwheel disposed within the housing and comprising a vertically arranged rotary shaft journaled in said housing, a pair of horizontally disposed disks spaced apart and fixedly mounted upon said shaft, a vertically-disposed cylindrical column fixed to said disks and surrounding the shaft, and a plurality of vertically disposed equally spaced vanes arranged approximately at a tangent to said column and fixed to the disks, said vanes being spaced from the column to leave intervening openings for the passage of the wind.

2,005,471
FRUIT AND VEGETABLE JUICE FILLING MACHINE
Stefano Pittaluga, San Leandro, Calif.
Application December 11, 1931, Serial No. 580,301
6 Claims. (Cl. 226—98)

1. A fruit and vegetable juice filling machine for cans comprising a drum rotatable on a vertical axis; a feed tank rotatable on a universal joint directly above said drum; said universal joint having an upper section provided with a shaft extension adjustably mounted off the center of the machine and at an angle causing the feedtank to converge at a certain point as it rotates; means for automatically feeding cans to said drum; a plurality of valves to hold the cans and contents in place as the same are filled through said plurality of valves equally spaced in said feed tank operable by said cans during ro-

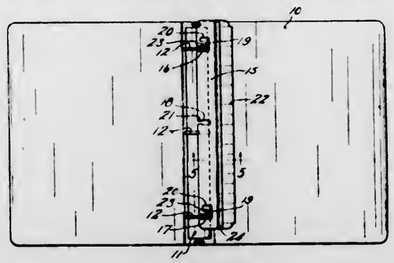


tation of the drum and means for conveying the cans from the drum.

2,005,472
BALE TIE
Alvin V. Rowe, Galesburg, Ill.
Application March 21, 1934, Serial No. 716,738
12 Claims. (Cl. 24—27)

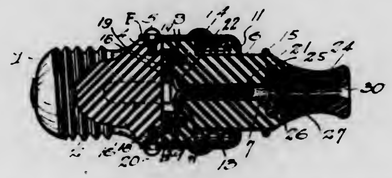
1. A bale tie having a loop, and a straight wire portion connected therewith, said loop being fashioned with an expanded tie wire receiving seat comprising a loop section having lateral portions thereon secured together as a unit to form a reinforced loop section which operates to grip the wire under stress in a frictional manner and prevent slippage with consequent chafing of the wire.

2,005,473
AIR-JET PROPELLED CONVEYANCE
Arthur G. Sanden, Bellingham, Wash.
Application March 13, 1933, Serial No. 660,498
6 Claims. (Cl. 115—15)



1. A conveyance body including side keels and side stem posts providing a concave bottom longitudinally and a concave bow, a plurality of inclined planes on the said bottom slanting downwardly rearwardly, and intervening steps connecting the said incline planes each having a main and a bypass air nozzle therethrough.

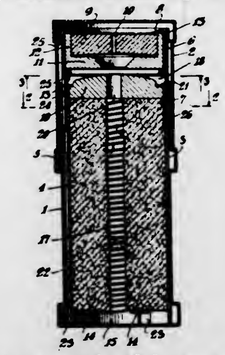
2,005,474
COMBINED FLY-STRIP AND RULER FOR RING BINDERS
Frank Stanley Schade, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a corporation of Massachusetts
Application September 27, 1933, Serial No. 691,138
3 Claims. (Cl. 129—1)



1. A fly-strip for loose leaf ring binders adapted for use as a ruler when removed from the binder rings, said strip having graduations at its forward edge, slots at its rear edge for attach-

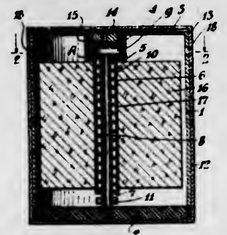
ment to the rings of the binder, and an intermediate longitudinal stiffening rib serving also as

a bearing when the strip is pressed down upon a paper sheet for use as a ruler.



2,005,475
ELECTRICAL CONNECTER
Edward F. Schmidt, Spokane, Wash.
Application June 1, 1932, Serial No. 614,803
1 Claim. (Cl. 173—343)

The combination with an electrical connecter having an enlarged head forming an annular shoulder, said head having a recessed face and means therein for making electrical contact with a plug, and a spaced stop ring on the exterior of the reduced body of the connecter, of a cylindrical cup shaped locking sleeve mounted on the head projecting over the body of the connecter having an annular inturned flange and longitudinally slidable on the body of the connecter, said flange adapted to co-act with said stop ring, and a spring enclosed by the sleeve coiled about the body of the connecter and interposed between and abutting against said shoulder and said flange, whereby the free end of the sleeve projects a distance over the plug equal to the distance between the inturned flange and the stop ring in order to bring the connecter flush with the edge of the sleeve when said connecter is disengaged from said plug for ready access to said electrical contact means.

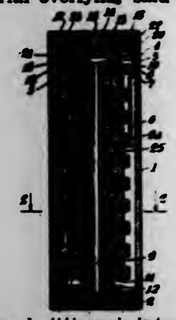


2,005,476
LIGHTER
George Philip Schmitt, New York, N. Y., assignor to Cardinal Products, Inc., a corporation of New York
Application September 12, 1933, Serial No. 689,114
10 Claims. (Cl. 67—7)

8. A cigarette lighter comprising an open ended casing, an absorbent material adapted to be charged with vaporizable fluid disposed within said casing, a cap fitted over one end of said casing, a disk of catalytic material supported by said cap in the path of vapor from said fluid, a surface of said disk being disposed for contact with a cigarette or the like, said casing being provided with means for the admission of air to the underside of said casing, and an air and vapor mixing chamber extending through said

casing, whereby a supply of fumes will be presented to the underside of said disk.

2,005,477
LIGHTER
George Philip Schmitt, New York, N. Y., assignor to The Glolite Corporation, a corporation of Delaware
Application January 12, 1934, Serial No. 706,368
25 Claims. (Cl. 67—7)



2. A lighter comprising a casing having a fuel chamber open to the atmosphere, a catalyst located adjacent said chamber and having a side presentable toward a cigarette, there being a conduit between said chamber and the other side of said catalyst, a cap for said casing, and means operable by said cap for closing said conduit when the lighter is not in use.

2,005,478
LIGHTER
George Philip Schmitt, New York, N. Y., assignor to Platinum Products Corporation, a corporation of New Jersey
Application March 2, 1934, Serial No. 713,643
Renewed November 17, 1934
11 Claims. (Cl. 67—7)

1. A lighter comprising a casing, an absorbent element of substantially cylindrical form therein adapted to be charged with vaporizable fuel, said element having a passageway therethrough in communication with the casing interior and being composed of a plurality of members so formed and arranged as to present an increased surface area, means for admitting atmospheric air into said casing, and a catalyst supported in the path of air and fuel flowing through said passageway.

11. A lighter comprising a casing, an absorbent element therein adapted to be charged with vaporizable fuel, a substantially flat catalytic element having an outer surface area of substantial

extent for contact with a cigarette or the like including catalytic material having passages therethrough and a perforated cover of thin sheet metallic material overlying said catalytic mate-

rial, means for admitting air into said casing, and means for supporting said catalytic element on said casing in the path of air and fuel flowing from said casing.

2,005,479

LOCK LID FOR JOURNAL BOXES

Alfred C. Schmehl, Beaver Falls, and John P. Anderson, Koppel, Pa.

Application January 17, 1929, Serial No. 333,077
5 Claims. (Cl. 308—51)

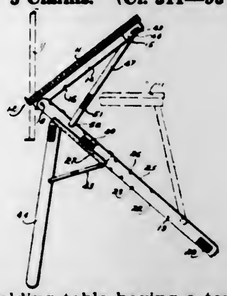
2. The combination in a journal box having an opening in its front wall, of a lid for closing the opening, a member movably mounted on the inner face of the lid for engagement with a wall of the box, a rotatable member mounted on the lid in spaced relation to the mounting of the first named member, and adapted when rotated to move and hold the first member in engagement with the box.

2,005,480

CREASE HOLDING MEANS FOR GARMENTS

David Segelin and Solomon Segelin, Rochester, N. Y.

Application November 26, 1934, Serial No. 754,694
2 Claims. (Cl. 2—231)



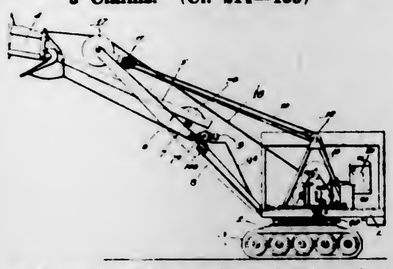
1. A garment provided with a crease maintained indefinitely by a strip of flexible material having a substantial edge portion of each side thereof overlapping the garment fabric along the inside of said crease and secured thereto by suitable stitching so as to lie flatly thereagainst whereby the intermediate portion of said strip is spaced from and serves to limit expansion of said crease and the edge portions of said strip serve as permanent hinge connections between said intermediate portion and the garment fabric.

2,005,481

FOLDING TABLE

Harry L. Skoogh, Jamestown, N. Y., assignor of one-half to Bertil Anderson, Jamestown, N. Y.

Application July 17, 1933, Serial No. 680,699
5 Claims. (Cl. 311—93)



1. In a folding table having a top or work receiving portion, a full length leg pivotally joined to said top, a supporting member, a slidable shoe mounted on said leg, slotted means on said shoe registerable with any of several recesses formed in said leg, means on said member having restricted slidable connection with said slotted means, said member means being movable to engage one of said recesses when said shoe is adjusted longitudinally of said leg.

2,005,482

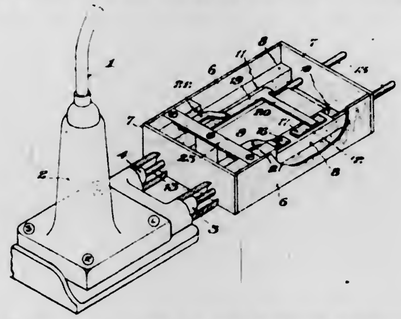
HYDRAULIC POWER SHOVEL

William W. Sloane, Chicago, Ill., assignor, by mesne assignments, to Lima Locomotive Works, Incorporated, Lima, Ohio, a corporation of Virginia

Application September 25, 1931, Serial No. 565,015
3 Claims. (Cl. 214—135)

1. In a machine of the character described, a prime mover, a hydraulic pump driven by said prime mover, a high pressure line, a low pressure line, hydraulic power devices connected between said high and low pressure lines, a by-pass line connected between said high and low pressure lines and having a pressure-responsive valve therein, a pressure tank connected to said high pressure line, and a pipe leading from said tank to said pressure-responsive valve and supplying pressure to open the latter when the pressure in said tank exceeds a predetermined value, and other hydraulic power devices connected between said pressure tank and said low pressure lines.

2,005,483



GEAR SHIFT LEVER SWITCH

Rudolph R. Sucky, Edward F. McGonigal, and Edgar Bargar, Blaine, Ohio

Application August 3, 1934, Serial No. 738,248
2 Claims. (Cl. 200—59)

1. A gear shift lever switch for use with automobile signal systems, including a casing having

spaced upwardly facing parallel grooves in the bottom wall thereof, a plurality of spaced contacts in each of said grooves, a slidable switch element in one of said grooves having a pair of spaced contacts adapted for engagement with the contacts of said groove, a second slidable switch element in the other of said grooves having a single contact adapted to engage the contacts of said groove, a conducting element connected to the last named single contact and having a part thereof engaging one of the contacts

carried by the other of said slidable switch elements, a pair of spaced contacts carried by the casing above the switch elements one of which is adapted to engage the conducting element of the first mentioned slidable switch element while the other is engaged with one of the pair of contacts carried by the first named switch element, and means connecting the gear shift lever with said slidable switch elements whereby to selectively engage each of the latter with their associated spaced contact elements when the shift lever is moved to varying positions.

2,005,484

GLAZIER'S POINTS

Harry Thorin, Monson, Mass.

Application November 6, 1934, Serial No. 751,697
2 Claims. (Cl. 10—34)

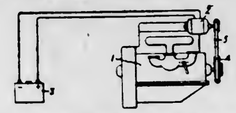
1. As an article of manufacture, a continuous strip of flat glazier points integrally connected together by a neck portion, the strip being rolled into a spiral coil with the points overlapping each other, into a convenient size for handling, and whereby the endmost glazier point may be unwound and driven into the sash of a window and then detached from the strip by bending the main body part of the strip at right angles to the plane of the same.

2,005,485

PENCIL

Albert C. Wells, Chicago, Ill.

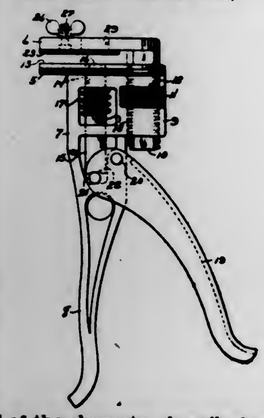
Application August 30, 1930, Serial No. 478,827
Renewed November 14, 1934
3 Claims. (Cl. 120—17)



1. A pencil comprising, in combination, an elongated tubular body having a conically shaped lower end section, a sleeve slidably supported coaxially of said body with its lower end protruding externally of the conical end thereof, said sleeve having a longitudinal bore adapted to support a length of lead in position for writing and a radially extending slot communicating with said bore, spring means normally urging said sleeve downwardly, a plunger slidable longitudinally in said bore, spring means acting between said plunger and a stationary part of said body to urge said plunger downwardly to feed a lead to writing position, an elongated tongue projecting into the radially extending slot therein, and being movable axially thereof, and a wedge member fixed to said tongue and operable to force said tongue into binding engagement with a lead when said sleeve is moved downwardly and to release said lead for feeding movement when said sleeve is moved upwardly.

2,005,486

ELECTRIC GENERATOR SYSTEM



Guy W. Wilson, Erie, Pa., assignor to General Electric Company, a corporation of New York

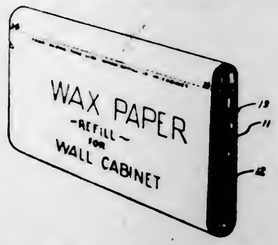
Application August 5, 1932, Serial No. 627,592
2 Claims. (Cl. 290—50)

1. The combination, with a direct engine driven automobile having a battery charging system consisting of a storage battery and a battery charging generator, of means for adapting said system to frequent stop operation of the automobile wherein the engine thereof idles a maximum percentage of the time of said operation comprising an overdriving connection between the engine and the generator which operates the generator at sufficient speed for battery charging purposes when the engine is idling, and means for preventing the generator from charging the battery when the engine is operating substantially above its idling speed.

2,005,487
GLASS BREAKER TOOL
Frank Zemanek, Mason City, Iowa, assignor of one-fourth to Frank Kubiak and one-fourth to Tony Zemanek, both of Mason City, Iowa
Application November 29, 1934, Serial No. 753,920
5 Claims. (Cl. 49—52)

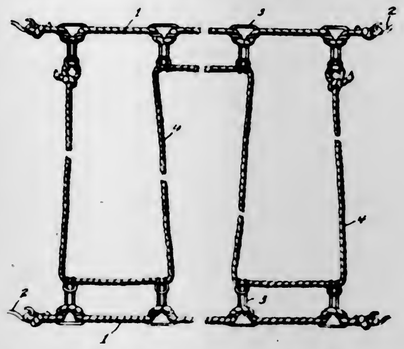
1. A tool of the character described comprising opposed gripping jaws, one jaw being formed with widely spaced apart bearing ribs, a punch movably carried by the other jaw for action between the ribs when the said jaws are closed with relation to a piece of work and means for actuating the punch.

2,005,488
PROCESS FOR THE PRODUCTION OF SILICOFLUORIDES
Emil Gotthilf Leopold Abel, Brand-Erbisdorf, Germany, assignor to Brander Farbwerke, Chemische Fabrik Gesellschaft mit beschränkter Haftung, Brand-Erbisdorf, Germany, a corporation of Germany
No Drawing. Application August 15, 1932, Serial No. 628,896. In Germany August 26, 1931
2 Claims. (Cl. 23—88)



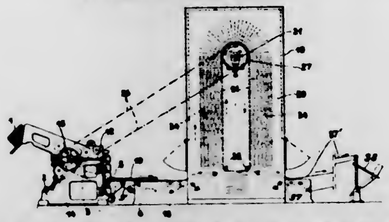
1. A process for the production of silicofluorides out of fluo-silicic acid, particularly for the use of timber preserving, characterized by the fact of carrying out the reaction of fluosilicic acid upon zinc metal in the presence of reduced copper as catalyzer.

2,005,489
ANIMAL TRAP
William Barrett, Hinton, Iowa
Application June 11, 1934, Serial No. 729,980
8 Claims. (Cl. 43—80)



1. An animal trap comprising a frame including a pair of upstanding inverted U shaped members, a cross bar between the upper ends of the members, a spring urged jaw adapted to swing upwardly within the frame, a setting member pivotally attached at one side of the frame adapted to overlap and retain the jaw when opened and trigger means co-acting with said setting member for releasing the jaw.

2,005,490
DISPENSING PACKAGES AND CONTAINER THEREFOR
Burke M. Baxter, Middletown, Ohio, assignor to The Crystal Waxing Company, Middletown, Ohio, a corporation of Ohio
Application April 11, 1932, Serial No. 604,463
6 Claims. (Cl. 206—57)



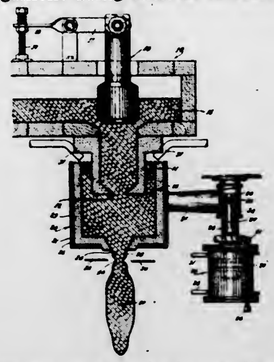
1. A wrapped package containing a singly folded stack of sheets of flexible material for use with a dispenser having a lateral opening through which individual sheets from the folded stack may be withdrawn comprising a single folded stack of sheets with a flat panel within the fold of the stack, said panel for retaining said sheets in the form of their original fold during dispensing of the sheets thereof, and the wrapper having a weakened tear line in such position as to register with the lateral opening in the dispenser.

2,005,491
MULTIPLE LINE HOLDER
George Beaverson, Minneapolis, Minn.
Application October 4, 1934, Serial No. 746,811
1 Claim. (Cl. 68—3)

A multiple line holder consisting of two anchorage ropes to which are attached a number of permanent or removable hooks, said ropes extending parallel to and distant from each other in the same plane, the ends of which are fastened to permanent hooks securely placed in the framework or walls of the building where the device is to be used and between which anchorage ropes a line is strung in such a manner as to form a series of parallel lines, this being accomplished by running the line from the end hook on one of said ropes to the corresponding hook on the opposite rope, then passing to the next closest hook and then back to the corresponding hook on the other rope, and so on until the desired number of lines have been strung substantially as described and illustrated in the attached drawing.

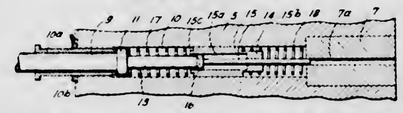
2,005,492
APPARATUS FOR CONVEYING ENVELOPE BLANKS
Peter Becker, Dusseldorf/Wersten, Germany, assignor to United States Envelope Company, Springfield, Mass., a corporation of Maine
Application July 24, 1931, Serial No. 552,969
In Germany July 24, 1930
3 Claims. (Cl. 198—31)

1. A conveyor and separator for envelopes and the like, comprising a horizontal conveyor for transporting varnished wet envelopes, a plurality of other horizontal conveyors situated side by side with respect to each other, one of the second-mentioned horizontal conveyors forming a continuation of the first-mentioned conveyor, a driving shaft, a gripper situated over the second-mentioned horizontal conveyors, means actuated by said driving shaft for moving said gripper, said gripper transporting some of said envelopes from one of the second-mentioned horizontal conveyors to another one of the second-mentioned horizontal conveyors, and vertical conveyors forming a continuation of the second-mentioned horizontal conveyors.



2,005,493
GREETING CARD
Evaline Blackwell, Los Angeles, Calif.
Application September 10, 1934, Serial No. 743,353
4 Claims. (Cl. 229—68)

1. A mailing card composed of a handkerchief having an ornamental border of different texture from the main border, the body of the handkerchief being stiffened by sizing such as starch and the like of soluble quality adapted to be washed out by laundering, the said sizing treatment converting the handkerchief to simulate a paper consistency of light card board stock, a greeting expression impressed on one side of the sheet and other expressions and address on the other side; the sheet thus formed folded upon itself to simulate a mailing envelope, the corners of the sheet as folded overlapping each other and sealed down by ornamental seals such as Christmas seals and the like.

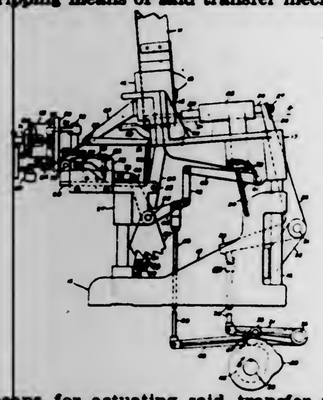


2,005,494
GLASS FEEDER
Ray A. Chilcote, Los Angeles, Calif., assignor of one-half to McLaughlin Glass Co., Los Angeles, Calif., a corporation of California
Application January 17, 1933, Serial No. 652,171
9 Claims. (Cl. 49—55)

1. An apparatus for feeding glass comprising a forehearth having a downwardly extending nipple providing an outlet, a cup shaped member into which the nipple extends, and means for causing relative reciprocating movement to take place between the cup shaped member and the nipple, the arrangement being such as to cause glass to

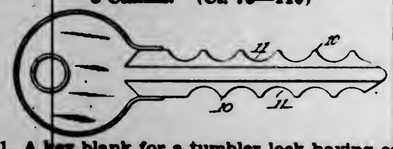
be extruded during a stroke in one direction and a tendency for extruded glass to be caused to intrude into the cup shaped member during a stroke in the opposite direction.

2,005,495
BOLT MAKING MACHINE
William L. Clouse, Tiffin, Ohio, assignor to The National Machinery Company, Tiffin, Ohio, a corporation of Ohio
Application April 18, 1934, Serial No. 721,083
12 Claims. (Cl. 10—11)



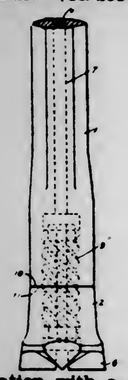
12. A bolt machine comprising a bed frame having a die mounted therein, a reciprocating header slide mounted in said bed frame, a tool carried by said header slide arranged to cooperate with said die, said die provided with an opening, a knock-out pin axially aligned with said die opening and supported therein in its retracted position, means to support said knock-out pin at the end thereof remote from the die and means to support said knock-out pin intermediate its ends, said last named means movable with respect to the pin and with respect to the die.

2,005,496
APPARATUS FOR FEEDING FRAGILE RODS, TUBES, AND SIMILAR ARTICLES
John F. Donovan and George Illingworth, East Cleveland, Ohio, assignors to General Electric Company, a corporation of New York
Application December 20, 1933, Serial No. 703,278
5 Claims. (Cl. 49—14)



1. A device for feeding fragile rods, tubes and similar articles comprising a hopper having oppositely disposed openings in the walls thereof and adapted to contain a quantity of said articles substantially uniformly disposed in axial alignment with said openings, a ram disposed outside of said hopper in axial alignment with said openings, transfer mechanism comprising gripping means disposed on the opposite side of said hopper in axial alignment with said openings, means for reciprocating said ram to cause it to enter one of said openings and engage an end of one of said articles and push it out of

said hopper through the opposite opening into said gripping means of said transfer mechanism,



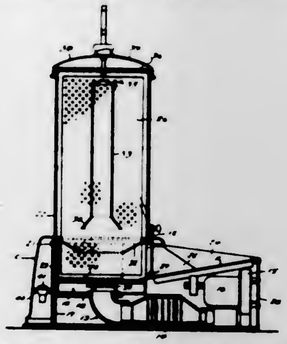
and means for actuating said transfer mechanism to deliver said article to a desired point.

2,005,497
KEY BLANK
Morris Falk, Fitchburg, Mass.
Application January 2, 1934, Serial No. 704,837
3 Claims. (Cl. 76—110)

1. A key blank for a tumbler lock having combination levers on opposite sides, the full width of said blank being greater than the space between the opposite levers, and alternating projections and notches along both edges of the blank, all the projections being located at the points where cuts have to be made, the notches on one side registering with the projections on the other.

2,005,498
DETACHABLE BIT FOR ROCK DRILLS
Raymond S. Hart, Fanwood, N. J.
Application April 28, 1933, Serial No. 668,358
2 Claims. (Cl. 255—64)

1. The combination with a socket and a bit each having a screw threaded bore, the screw threads of said bores being of like hand and uniform diameter throughout, and a screw plug with obtuse angle-faced helices thereon fitting said bores and having a screw thread extending uninterruptedly from end to end of the plug, said thread having a steep enough pitch so that a longitudinal force will produce relative rotation of the threaded coupling parts.

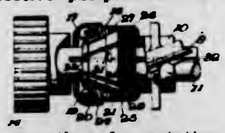


2,005,499
RESINOUS COMPOUNDS
Rowland Hill, Cheadle Hulme, England, assignor to Imperial Chemical Industries Limited, Westminster, England
No Drawing. Application July 19, 1930, Serial No. 469,275. In Great Britain August 3, 1929
10 Claims. (Cl. 134—26)

1. Process of making resins which comprises heating together a polyhydric alcohol, an aliphatic aldehyde, a fatty oil and a resinifying polycarboxylic acid as sole reactants.

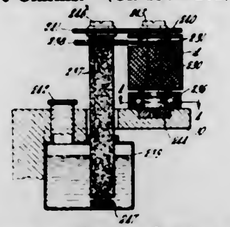
2,005,500
SEPARATION AND RECOVERY OF OLEFINES FROM GASES CONTAINING THE SAME
Walter Philip Joshua, Cheam, and Herbert Muggleton Stanley, Tadworth, England
No Drawing. Application January 7, 1935, Serial No. 798. In Great Britain January 26, 1934
12 Claims. (Cl. 260—170)

1 The process of removing olefines from gas mixtures containing same consisting in absorbing the olefine in a solution of a cuprous salt in an aqueous hydroxy-alkylamine.



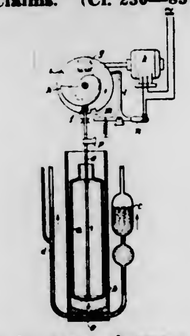
2,005,501
DISPENSING DEVICE
William W. Kelly, Cleveland, Ohio
Application January 6, 1933, Serial No. 650,426
7 Claims. (Cl. 34—21)

1. In a device of the class described, a receptacle having inlet means for air at the bottom thereof, outlet means for air at the top thereof and a dispensing outlet at one side for removal of nuts therefrom, means for forcing heated air into and through said receptacle, a funnel shaped, horizontal baffle partition spaced above the bottom of said receptacle and a foraminous cage spaced above said baffle partition.



2,005,502
BEARING
Harry R. Lontz, Richmond, Ind., assignor to The F. & N. Lawn Mower Company, Richmond, Ind., a corporation of Delaware
Application March 14, 1934, Serial No. 715,538
4 Claims. (Cl. 308—197)

1. In a self adjusting bearing for a rotatable member of the type including a fixed bearing member, a rotatable bearing member, a spring adapted to move said rotatable bearing member relatively to said fixed bearing member and a resilient sleeve interposed between said spring and said rotatable bearing member for controlling the application of power of said spring, means engaging said rotatable member, sleeve and rotatable bearing member at one point only in their respective peripheries for connecting



said members together for rotation as a unit, said means being so constructed and arranged that said rotatable bearing member and sleeve are also capable of movement axially with respect to said rotatable member and to one another during operation under the action of said spring.

2,005,503
SUPPLYING INK TO INK TRANSFER MEMBERS
George E. Pelton, Popkins Farm, Fairfax County, Va.
Original application February 23, 1934, Serial No. 712,674. Divided and this application October 3, 1934, Serial No. 746,720
20 Claims. (Cl. 197—171)

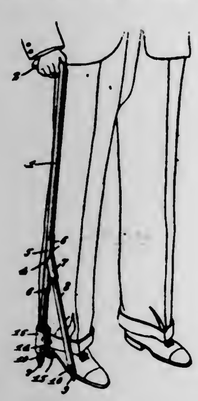
1. In a typing mechanism having a ribbon, the combination of a roller with which said ribbon contacts and which is rotated by contact with said ribbon, a disk arranged co-axially with said roller and rotated by said roller and contacting with said ribbon to deposit ink thereon, and means for supplying ink to said disk.

2,005,504
PUMP FOR AUTOMATIC, PERIODICALLY WORKING GAS ANALYZERS
Richard Praützsch, Hamburg, Germany
Application October 23, 1934, Serial No. 749,640
In Germany February 10, 1934
4 Claims. (Cl. 230—85)

1. In a pump for gas analyzers, a cylinder containing a sealing medium, a gas pump connected to the lower end thereof and adapted to receive sealing medium from said cylinder, a plunger mounted to move up and down in said cylinder to change the level of sealing medium in said gas pump, driving means adapted to force said plunger downward, said driving means being adapted to release said plunger to return to its upper position by its own buoyancy as the sealing medium returns from said gas pump to said cylinder.

2,005,505
PROCESS OF PRODUCING 1-PHENYL-2,3-DIMETHYL-5-PYRAZOLONE
Baptist Reuter, Krailling-Planegg, Germany
No Drawing. Application November 28, 1932, Serial No. 644,747. In Germany April 12, 1928
13 Claims. (Cl. 260—45)

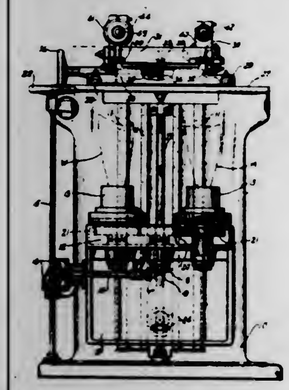
1. A process for producing 1-phenyl-2,3-dimethyl-5-pyrazolone which comprises the steps of reacting 1-phenyl-3-methyl-5-pyrazolone with an alkylating agent in the absence of a solvent at an elevated temperature, thereby producing a melt, and treating said melt with an excess amount of a compound of the group consisting of an alkali-metal hydroxide and an alkali-metal carbonate at a temperature of substantially 100° C. for a relatively long period of time.



2,005,506
PROCESS OF PRODUCING 4-DIMETHYLAMINO-1-PHENYL-2,3-DIMETHYL-5-PYRAZOLONE
Baptist Reuter, Krailling-Planegg, Germany
No Drawing. Application November 28, 1932, Serial No. 644,748. In Germany March 10, 1927
20 Claims. (Cl. 260—45)

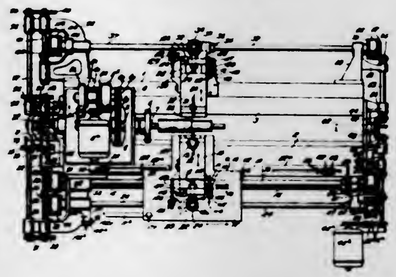
1. A process for producing 4-dimethylamino-1-phenyl-2,3-dimethyl-5-pyrazolone which comprises the steps of heating the melt, resulting from the methylation of 1-phenyl-3-methyl-5-pyrazolone, with a compound of the group consisting of an alkali-metal hydroxide, an alkali-metal carbonate, and an alkali-metal bicarbonate at substantially 100° C. for a relatively long period of time, acidulating the resulting mass with a dilute solution of a mineral acid, treating said acidulated mass with an alkali-metal nitrite, thereby producing 4-nitroso-1-phenyl-2,3-dimethyl-5-pyrazolone, washing said 4-nitroso compound with alcohol, adding to said washed compound sodium bisulphite, ice and zinc dust, thereby causing a reaction to take place which first proceeds at a relatively low temperature, which temperature, as the reaction continues, is raised automatically as a result of the heat developed by said reaction until a temperature of 30° C. is obtained, thereby resulting in a mixture comprising zinc sulphite-containing slurry, heating said mixture, filtering to remove said slurry, and heating the filtered solution with formaldehyde and formic acid in order to convert it into the desired product.

2,005,507
ANTISLIPPING CANE
William E. Russell and Etta R. Lyon, Cumberland, Md.
Application January 11, 1935, Serial No. 1,404
8 Claims. (Cl. 135—54)



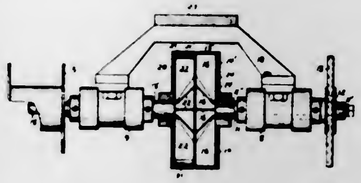
1. A cane comprising a body, means extending from said body and cooperating therewith to provide dual ground engaging means for succes-

sive engagement with the ground to produce an



equalized continuous supporting means for the user when walking.

2,005,508
SCREEDING MACHINE
Robert D. Shaw, Hartford, Conn., assignor to Pratt & Whitney Company, Hartford, Conn., a corporation of New Jersey
Application July 3, 1933, Serial No. 678,756
5 Claims. (Cl. 90—13.4)



1. A copying machine comprising in combination, a base, a table movable thereon, a pair of work supporting and rotating members thereon, means to simultaneously rotate said members upon parallel axes in the same direction and at the same speed, means to traverse said table on said base parallel to the axes of rotation of said members, a carriage having a tracer adapted to contact with a model mounted in one of said members and a cutting tool mounted for engagement with a work piece mounted in the other of said members, a saddle on said base on which said carriage is mounted, means to adjust the position of said saddle laterally of said members, means to manually adjust said carriage on said saddle toward and from said members, and a single manually operated member for controlling movements of said carriage and saddle.

2,005,509
ELECTRICALLY OPERATED LATHE
Robert D. Shaw, Hartford, Conn., assignor to Pratt & Whitney Company, Hartford, Conn., a corporation of New Jersey
Application December 1, 1933, Serial No. 700,519
12 Claims. (Cl. 82—2)

1. An automatic lathe comprising in combination a rotatable work spindle, a clutch magnet for effecting rotation thereof, a tool supporting carriage, a tool thereon movable longitudinally and transversely relative to the spindle, clutch magnets for effecting forward and return movements of said carriage, circuits for energizing the respective clutch magnets, a manually operated switch controlling said energizing circuits for starting rotation of the spindle and movements of the tool, switches in said circuits arranged to be operated by movement of said tool to control the movements of the latter and for deenergizing the spindle clutch magnet and a magnetic brake arranged to be energized to stop rotation of said spindle when said spindle rotating magnet is deenergized.

2,005,510
POWER TRANSMITTING MECHANISM
Edward Snyder, Fort Wayne, Ind., assignor to General Cable Corporation, New York, N. Y., a corporation of New Jersey
Application June 13, 1930, Serial No. 460,805
5 Claims. (Cl. 192—58)

1. In apparatus of the class described, a base having spaced bearings; a rotatable drive-shaft in one of said bearings having means for actuating it; a rotatable driven shaft in the other of said bearings; a head on said drive-shaft closed at one end and open at its other end and having an annular series of cells therein, there being fluid passageways in said head affording communication between said cells; and a cylindrical head on said driven shaft having radially disposed blades exposed to the open end of the head on said drive-shaft whereby said driven shaft is actuated by fluid set in motion and imparted to said blades by the head on said drive-shaft.

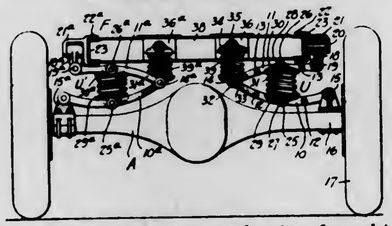
2,005,511
BASIC DERIVATIVES OF PORPHINS AND METALLOPORPHINS AND PROCESS FOR THEIR MANUFACTURE
Arthur Stoll and Erwin Wiedemann, Basel, Switzerland, assignors to Chemical Works formerly Sandoz, Basel, Switzerland
No Drawing. Application December 15, 1932, Serial No. 647,490. In Switzerland December 22, 1931
6 Claims. (Cl. 260—46)

1. A process for the manufacture of strong basic porphins, characterized in that porphins are heated with compounds of the general formula

$$A{-}N{=}(R)_2$$

in which A represents ethylol or beta-aminoethyl and R represents hydrogen, ethyl or ethylol.

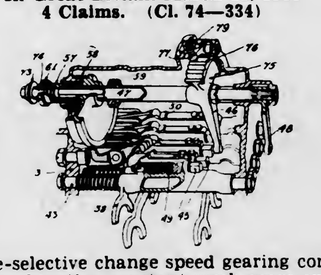
5. The strong basic porphins of the general formula



$$X\beta{-}CH_2{-}CH_2{-}N(R)_2$$

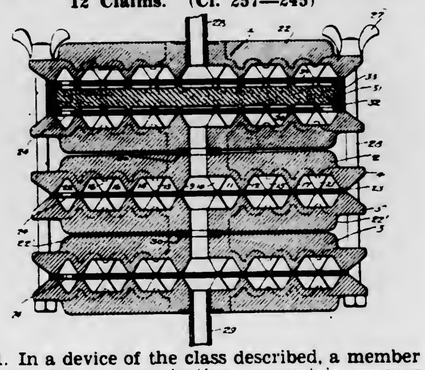
wherein X represents a porphin molecule and β means that the amine is linked to a β-carbon of the porphin molecule, and wherein R represents hydrogen, ethyl or ethylol, which compounds are in form of their free bases soluble in organic solvents with a red-brown, blue to green-blue coloration and that yield with strong acids water-soluble salts, yielding brown to green-blue neutral solutions, which aqueous solutions show the neutral spectrum of the porphins.

2,005,512
OIL TREATMENT OF COAL
Alfred O. Vinz, Beaver Dam, Wis.
No Drawing. Application January 18, 1934, Serial No. 707,108
7 Claims. (Cl. 44—9)



1. The process of treating solid lump fuel to render the same dustless, consisting of heating oil having a gravity of 19° to 30° Baumé at 60° F. and a Saybolt viscosity of 100 to 1200 at 100° F. to a spraying temperature of 100° to 250° F., and spraying the heated oil in finely atomized state on the fuel in quantities sufficient to deposit on said fuel a thin enveloping film of said oil.

2,005,513
SPRING SUSPENSION MECHANISM FOR VEHICLES
Harry C. Weaver, San Gabriel, Calif., assignor of one-half to David Grattan, Los Angeles, Calif.
Application April 21, 1934, Serial No. 721,775
6 Claims. (Cl. 267—20)



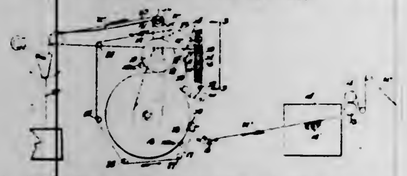
1. A spring suspension mechanism for vehicles comprising two units, each composed of a pair of pivotally connected levers; means for pivotally connecting free portions of the levers of each unit respectively to the chassis frame and axle of a vehicle, so that the levers will be transversely disposed relatively to the frame, and the pivotally connected portions of the pairs of levers will be arranged in confronting relationship; a main spring for each unit operatively interposed between the levers thereof, to urge the chassis frame and axle away from each other; and an auxiliary spring for each unit operatively interposed between the levers thereof and the chassis frame at the point of connection of said portions with each other to urge the levers and frame relatively away from each other for coaction with the main spring in yieldingly supporting the frame from the axle.

2,005,514
CHANGE SPEED GEARING
Reginald Wood Whittle, Urmston, and Edwin Twemlow, Sandbach, England
Application March 16, 1934, Serial No. 715,986
In Great Britain March 18, 1933
4 Claims. (Cl. 74—334)

1. Pre-selective change speed gearing comprising in combination constant mesh gears on main and lay shafts adapted to be rendered operable by claw clutches, having inclined teeth, claw clutches slidably mounted on guides parallel to and co-axial with a draw bar, a draw bar interconnected with the clutch pedal so as to be reciprocated thereby, a tappet on the draw bar adapted to engage a member slidably mounted on each dog, a sliding member and a spring on each dog, hand operated means to turn the tappet into engagement selectively with the sliding members, means to positively retain the sliding member in the spring loaded position independently of the tappet and means interconnected with the draw bar to release all the retaining means except that for the selected dog prior to the actuation of the latter and spring means to move the dogs to the inoperative position, substantially as described.

2,005,515
FLUID CONDITIONING DEVICE
Joseph F. Winkler, Philadelphia, Pa.
Application November 1, 1933, Serial No. 696,292
12 Claims. (Cl. 257—245)

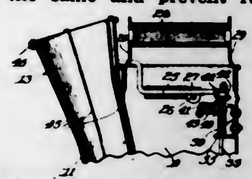
1. In a device of the class described, a member having intercommunicating concentric grooves



formed on a face thereof to provide a circuitous path for fluid, and a non-porous member adjacent said face and closing said path.

2,005,516
RHEOSTAT
Henry J. Bertram, Kansas City, Mo.
Application April 21, 1932, Serial No. 606,587
1 Claim. (Cl. 201—51)

A rheostat of the character described comprising a body having a cavity formed therein; internal threads formed in the body wall adjacent one end thereof; an externally and internally threaded portion of reduced diameter at the other end of said body whereby to form an annular shoulder on the body; a manually operable control knob having a threaded shank in engagement with the internal threads of the portion of reduced diameter; a threaded collar of insulating material having a screw adjustably carried thereby closing one end of said body in opposed relation to the said threaded shank; a plurality of superimposed plates of different electrical conductive properties positioned in a pile in said cavity between the said manually operable control knob shank and the said screw; and a compression spring between two of said disks of the pile, the said reduced portion of said body having a nut in screwthreaded engagement therewith for movement toward and from the said annular shoulder whereby to secure a support therebetween to hold the rheostat in operative position.



2,005,517
CLOTH FINISHING
Sanford L. Cluett, Troy, N. Y., assignor to Cluett, Peabody & Co., Inc., Troy, N. Y., a corporation of New York
Application June 22, 1931, Serial No. 546,668
11 Claims. (Cl. 26—42)

1. A cloth finishing machine having therein a pair of ironing drums and a flexible endless belt running thereon in combination with means operable on a cloth web leaving the first ironing drum to reverse the said web with relation to the belt for subsequent ironing of the reverse side of the web by the second drum.

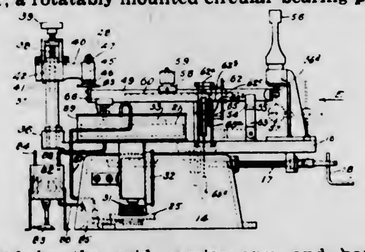
2,005,518
PLANTING IMPLEMENT
Joseph A. De Wasme, Chicago, Ill.
Application May 19, 1934, Serial No. 726,559
7 Claims. (Cl. 111—4)

1. In a planting implement, a tank for liquid, a valve therein, a longitudinally movable rod to open said valve, a manually movable lever, a beveled member on said rod yieldingly engaged by said lever whereby, when said lever is actuated, said rod is moved to open said valve, a fixed stop to be engaged by said beveled member to obstruct the same and prevent further valve

opening movement of said rod, whereby additional movement of said lever causes it to slip off said beveled member, thereby causing said valve to deliver a limited amount of liquid.

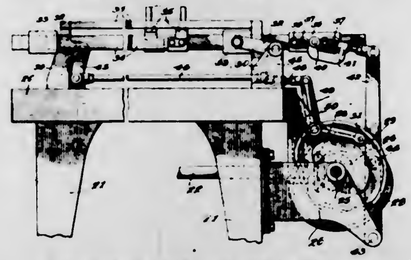
2,005,519
METHOD AND APPARATUS FOR MAKING GLASS ARTICLES
Henry A. Fisher and James Presly Lindsay, Parkersburg, W. Va.
Application July 6, 1933, Serial No. 679,224
27 Claims. (Cl. 49—82)

1. The method of producing variegated glass articles which consists in separately melting glasses of different color, severing the glass of each color into gobs, and combining the gobs while in a plastic state to form a solid multicolored article.



2,005,520
CLEANING ATTACHMENT FOR COMBS
Otto Friedmann, Vienna, Austria
Application February 23, 1934, Serial No. 712,668
In Austria May 5, 1933
6 Claims. (Cl. 132—28)

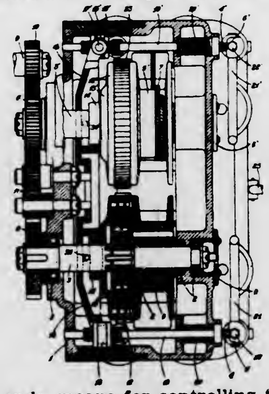
1. A cleaning device for attachment to a comb, comprising side members of relatively frictionless material adapted to slide against the side surfaces of the comb, elastic filaments tensioned between the said members substantially at right angles thereto and adapted to engage frictionally between the teeth of the comb, and coupling means between the said members to facilitate the concurrent sliding thereof.



2,005,521
MEANS FOR DETERMINING WEARING QUALITIES OF MATERIALS
William Alfred Harrington, Leichhardt, near Sydney, New South Wales, Australia
Application March 9, 1932, Serial No. 597,835
In Australia March 12, 1931
7 Claims. (Cl. 73—51)

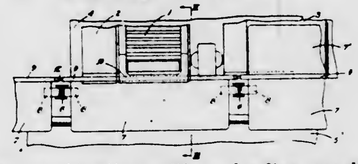
1. A mechanism for the purpose described comprising a base, a detachable boss mounted within the said base, a vertical spindle rotatable within the said boss, a horizontally disposed rotatable face-plate supported on the spindle, a ring-shaped track detachably mounted upon the said face-plate, a screw-operated slide member horizontally mounted in the said base and supporting at one of its ends an upright pillar, a horizontally disposed carrier arm adjustable as to its height and carried by the said upright pillar, a rotatably mounted circular bearing plate

carried by the said carrier arm and having formed diametrically across and from its under surface a V-shaped groove, a graduated test beam fitted with a slidable variable weight and having at one of its ends a knife-edged plate to engage with the said V-shaped groove, a forked test clamp associated with the said test beam, and a test-piece holder between the said test clamp and the said rotatable face-plate.



2,005,522
BOTTLE CONVEYING MECHANISM
Carl Holm, Worcester, Mass., assignor to Economic Machinery Company, Worcester, Mass., a corporation of Massachusetts
Application June 15, 1931, Serial No. 544,601
23 Claims. (Cl. 198—218)

1. An article transferring mechanism comprising an article support, a pair of reciprocably mounted bars arranged side by side and each provided with a series of rigidly attached fingers, the fingers of one bar being oppositely disposed with respect to the fingers of the other bar to constitute gripping members to advance the article along the support and means for lowering the bars when in advanced position and raising the bars when in retracted position.

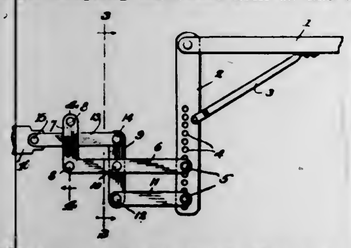


2,005,523
HAULAGE GEAR FOR MINING MACHINES
Matthew Smith Moore, Malvern, England, assignor of one-half to The Mining Engineering Company Limited, Meco Works, Worcester, England, a British company
Application August 26, 1933, Serial No. 686,983
In Great Britain September 8, 1932
11 Claims. (Cl. 254—185)

9. In a haulage gear for use in mining machines and the like, the combination of two drums, mounted side by side, a driving shaft, and means for selectively connecting said driving shaft with either of said drums, comprising a member pivoted

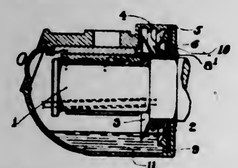
at both ends, means for controlling the position of each pivoted end of said member and clutch means controlled from intermediate points of said member.

2,005,524
LOADING MACHINE
Matthew Smith Moore, Malvern, England, assignor of one-half to The Mining Engineering Company Limited, Worcester, England, a British company
Application August 13, 1934, Serial No. 739,699
In Great Britain September 16, 1933
10 Claims. (Cl. 198—7)



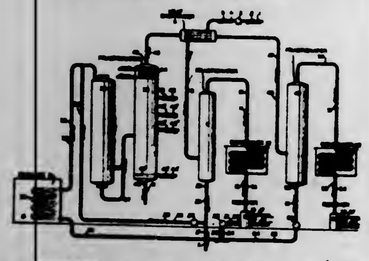
1. In combination with a loading machine, means for transferring material from said machine to a stationary conveyor beyond mine props, comprising stationary plates adapted to be interposed between mine props, said plates extending to said conveyor, said plates having a sliding engagement with the machine and forming a continuous connection across the gap between said machine and conveyor as the machine advances.

2,005,525
DRAFT EQUALIZER
Vencel J. Tichota, Dodge, Nebr.
Application June 13, 1934, Serial No. 730,506
1 Claim. (Cl. 280—33.44)



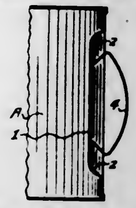
A draft equalizer for transmitting forward motion to a plow or the like from a tractor or other draft means spaced laterally from the path of movement of the plow and without shifting the plow out of its predetermined path of movement, which includes an arm rigidly connected to and extending laterally from the plow beam, a link pivotally connected to and extending forwardly from the arm, a lever pivotally connected to and extending forwardly from the arm and beyond the link, a transverse lever fulcrumed to the forwardly extending lever and having one arm pivotally connected to the link, guide means extending laterally from the

front end of the forwardly extending lever, and a link for coupling the other arm of the trans-



verse lever to a draft device, said link being movable freely within the guide means.

2,005,526
SEAL FOR AXLE BOXES
Albert Albeck, Augsburg, Germany, assignor to Hauser & Co., G. m. b. H., Augsburg, Germany
Original application October 12, 1932, Serial No. 637,537. Divided and this application July 8, 1933, Serial No. 679,560. In Germany May 7, 1932
3 Claims. (Cl. 286—5)



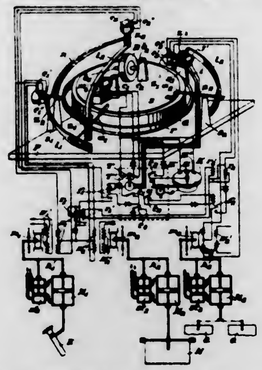
1. In an axle box having an opening for entrance of the axle two flanges around said opening, projecting on the inside from the box wall, and spaced from the rim of said opening, both having at the part above said opening a downward inclination with a narrow inverted channel between them, one of said flanges having also a downward inclination below said opening whereby it forms a pendant lip for the purpose set forth.

2,005,527
TREATMENT OF HYDROCARBON OILS
Joseph G. Aither, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a corporation of South Dakota
Application December 19, 1931, Serial No. 582,020
5 Claims. (Cl. 196—48)

1. A process for treating crude petroleum oil containing natural gasoline which comprises topping the crude and separating therefrom a distillate containing a substantial quantity of the natural gasoline hydrocarbons, combining said distillate with a hydrocarbon distillate heavier than gasoline formed as hereinafter set forth, passing the resultant mixture through a heating zone and heating the same therein to cracking temperature under pressure, commingling the topped crude with the heated mixture discharging from the heating zone, separating the thus commingled oils into vapors and residue, fractionating the vapors and separating therefrom a reflux condensate heavier than gasoline, utilizing such reflux condensate as said hydrocarbon distillate heavier than gasoline, and condensing and collecting the fractionated vapors.

2,005,528
HANDLE ATTACHMENT FOR LIQUID OR POWDER-CONTAINING CANS
John A. Berchulc, Detroit, Mich.
Application July 18, 1934, Serial No. 735,737
3 Claims. (Cl. 220—96)

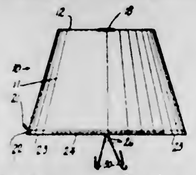
1. In combination with a can having an elongated groove formed in one wall thereof, a handle for the can comprising a strip of flexible material secured at its ends in the groove, the intermediate portion of the strip being foldable upon the respective end portions to entirely conceal the handle within the groove when not in use, said intermediate portion being pulled outwardly and extended beyond the adjacent wall of the can when ready for use.



2,005,529
ANTHRAQUINONE DERIVATIVE
Oakley M. Bishop and Alexander J. Wuertz, Wilmington, Del., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application May 2, 1930, Serial No. 449,355
11 Claims. (Cl. 260—61)

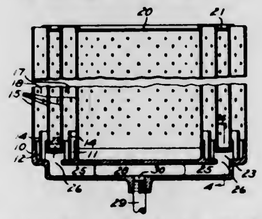
8. A beta-phenyl-benzanthrone having the phenyl group attached in a beta-position of the anthraquinone nucleus other than position 2, and being characterized by its ability to condense under the influence of alcoholic-potash to give a diphenyl dibenzanthrone.

2,005,530
AUTOMATIC CONTROL DEVICE FOR AIRCRAFT
Johann Maria Boykow, Berlin-Lichterfelde-West, Germany
Application October 25, 1924, Serial No. 749,911
In Germany November 10, 1933
4 Claims. (Cl. 244—29)



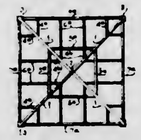
1. In an automatic control device of aircraft the combination with a vertical rudder and means for turning said vertical rudder, of an altitude rudder and further means for turning said altitude rudder, of a stabilizer universally mounted within the aircraft, of a controlling member mounted on said stabilizer, of means for rotating said member in a plane stabilized by said stabilizer and of two regulating devices

for said means for turning the vertical and the altitude rudder, said regulating devices being



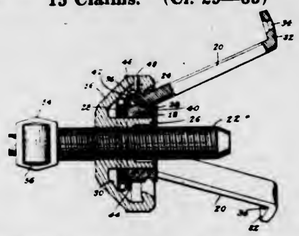
operatively connected to said controlling member.

2,005,531
ADJUSTABLE PROTECTIVE TRANSPARENT LAMPSHADE COVER
Samuel J. Brandstein, Brooklyn, N. Y.
Application March 8, 1935, Serial No. 9,941
13 Claims. (Cl. 150—52)



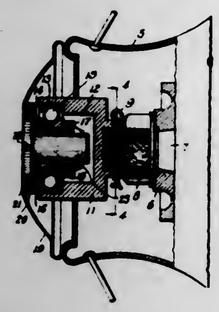
1. A lampshade cover having a side wall adapted to continuously embrace a lampshade, a strip of elastic material longitudinally folded over the lower edge of said wall and extending therealong and providing portions lying on opposite faces of said wall, said strip being elastically extended relative to said wall so as to contract the lower edge thereof, and means flexibly connecting the portions of said strip to the edge portion of said wall, whereby a double strength elastic control for securing the cover on a lampshade is provided.

2,005,532
OIL BURNER
George O. Brumm, Worcester, Mass.
Application June 28, 1933, Serial No. 677,977
3 Claims. (Cl. 158—87)



1. An oil burner comprising means forming a pair of spaced concentric annular fuel grooves, walls certain of which are perforated forming annular combustion chambers above an in communication with the grooves, substantially radial passages connecting the grooves, each passage having a bottom wall provided with an opening therethrough located between the fuel grooves, a central vaporizing means, fuel delivery passages extending substantially radially outward from the vaporizing means, the fuel delivery passages being located beneath the first mentioned passages and having their outer ends connected to the openings, and means to deliver oil to the vaporizing means.

2,005,533
ROOF CONSTRUCTION
Paul Chapman, New York, N. Y.
Application September 12, 1931, Serial No. 562,535
10 Claims. (Cl. 108—1)

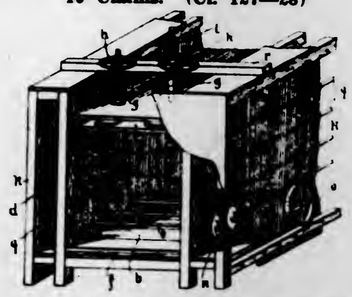


1. In roof construction, a peaked four-sided framework supporting a roof, four hip-rafters extending from the peak to the eave-corners of the said framework, four eave-members forming the perimeter of the said framework, four compression struts with their ends rigidly attached to the said hip-rafters and forming a compression quadrilateral between the eaves and peak of the said framework, a peak member connecting the four said hip-rafters together.

2,005,534
WHEEL PULLER
Arthur L. Cornwell, Wellsville, N. Y.
Application January 31, 1934, Serial No. 709,160
15 Claims. (Cl. 29—85)

1. A puller for a wheel or the like, comprising a body portion having a circumferential channel therein, a plurality of arms mounted in said channel for radial pivotal movement and having their outer ends projecting beyond the body portion and constructed to engage the member to be pulled, power means carried by the body portion for engaging the end of an axle on which the wheel is mounted and forcing the wheel from the axle, means carried by the body portion for causing all the arms to move simultaneously and in equal degree upon pivotal movement of one of the arms whereby to keep the wheel-engaging outer ends thereof equal distances from the central longitudinal axis of the puller, and means including the last-named means normally and frictionally binding the arms against circumferential movement in said channel, certain of the arms being adjustable circumferentially along the channel when said binding engagement thereon is released by forcing other of the arms inwardly.

2,005,535
THEFT RESISTING HUB CAP AND WHEEL LOCK
John T. Duarte, Honolulu, Territory of Hawaii
Application February 9, 1935, Serial No. 5,770
2 Claims. (Cl. 70—90)



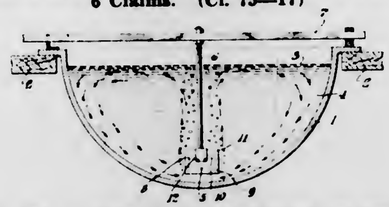
1. The combination with a wheel hub having an open outer end and an axial supporting member upon which said hub is mounted, of a holding member fixedly mounted on said axial supporting member, a ball bearing mounted in the outer end of said holding member, a cap to close the outer end of said hub, a key operated lock carried by said cap adapted to extend through said bearing, and locking lugs actuated by said lock to engage with the inner race of said ball bearing.

2,005,536
AUXILIARY AIR ARRANGEMENT FOR DIESEL LOCOMOTIVES
John Dickson, Swarthmore, Pa., assignor to Westinghouse Electric & Manufacturing Company, East Pittsburgh, Pa., a corporation of Pennsylvania
Application March 24, 1933, Serial No. 662,588
3 Claims. (Cl. 123—198)

1. The combination with a multiple cylinder Diesel engine provided with means for injecting fuel into the cylinders and a receptacle normally containing air under pressure, each of the engine cylinders having an air admission and exhaust valves, of means for utilizing at least one of the engine cylinders and its air admission valve as a compressor to supply air on compression strokes to said receptacle including a passage connected to the receptacle, a check valve in said passage preventing back-flow of air to the engine, a third valve for the compressor-acting engine cylinder which, when opened, affords communication between the cylinder and the passage and, when closed, interrupts such communication, means for rendering the fuel injection means ineffective to inject fuel into the compressor-acting cylinder, and controlling mechanism for opening said third valve and for operating the last-named means to interrupt the supply of fuel to the compressor-acting cylinder and vice versa.

2,005,537
APPARATUS FOR TREATING BINDING MATERIALS IN THE FORM OF POWDER OR GRIT, TO PRODUCE DEXTRINE AND OTHER ADHESIVES OF VEGETABLE ORIGIN, AS WELL AS FOR TREATING OTHER MATERIALS
Adolf Dreyer and Willy Kutzner, Potsdam, Germany; said Kutzner assignor to Fred Kutzner, Halensee, near Berlin, Germany
Application December 28, 1932, Serial No. 649,228
In Germany January 6, 1932
10 Claims. (Cl. 127—28)

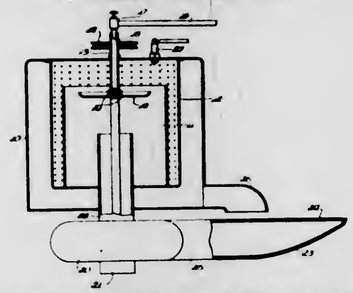
1. Apparatus for treating binding materials in the form of powder or grit to produce dextrine and other adhesives of vegetable origin as well as for treating other materials of similar form and for similar purposes, comprising the combination of a container of substantially rectangular form having a bottom formed into a plurality of successive and parallel troughs, a plurality of mixing means within said container, said means being rotatable about horizontal axes and disposed adjacent said troughs and cooperating therewith, exterior walls individually spaced a certain distance outside all of the walls of the container and together forming an insulating jacket surrounding said container, the insulating space thus formed within the jacket constituting an air buffer.



2,005,538
ALKOXY-PHENYL-IMIDAZOLES
Max Engelmann, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application August 27, 1932, Serial No. 630,699
9 Claims. (Cl. 260—44)

9. A process for producing an alkoxy-phenyl-imidazole which comprises boiling an alkoxy-phenyl-acetalyl-thiourea with aqueous sulfuric acid to form a 1-alkoxy-phenyl-2-mercapto-imidazole, heating the latter with aqueous nitric acid whereby to oxidize the sulfur atom and form the nitric acid salt of the corresponding alkoxy-phenyl-imidazole, and reacting upon the latter with alkali to liberate the free base.

2,005,539
YARN
Silas Kendrick Everett, Atlantic Beach, Long Island, N. Y.
No Drawing. Application May 1, 1933, Serial No. 668,816
1 Claim. (Cl. 117—52)

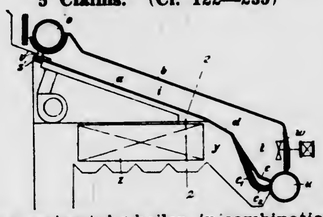


A yarn which is made entirely of one kind of artificial silk and comprises two strands doubled together, one of these strands being of spun fibres of a staple length ranging from about ½ to about 5 inches, this strand having a twist ranging from about 7 to about 40 turns per inch, the other strand being made of continuous filaments and having a twist ranging from about 2½ to about 40 turns per inch, the two strands being doubled together with a twist varying from about 7½ to about 25 turns per inch.

2,005,540
PROCESS OF TREATING MOLTEN METAL
Edward P. Fleming, Salt Lake City, Utah, and Sidney L. Palmer, San Francisco, Calif., assignors to American Smelting and Refining Company, New York, N. Y., a corporation of New Jersey
Application September 28, 1933, Serial No. 691,282
6 Claims. (Cl. 75—17)

1. The method of incorporating a reagent in a bath of molten metal which comprises confining the reagent in a wooden container in such manner that the reagent is partially exposed and submerging said container in the bath of molten metal in such manner that the exposed surface of the reagent faces downwardly in the metal bath.

2,005,541
FUEL VAPORIZER AND BURNER
Charles A. French, Riverside, Ill.
Application June 15, 1933, Serial No. 675,932
3 Claims. (Cl. 158—53)

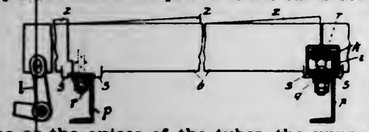


1. A burner comprising a casing, a vaporizing chamber in said casing and spaced from the walls thereof, means for delivering liquid fuel in finely divided form to said chamber, a pump, means for delivering gaseous products from said chamber to said pump, means for delivering air to said pump, a burner grating, means for supplying gases from the pump to said grating, means in the vicinity of the grating on the flame side for collecting burned gases, said means being in communication with the casing, and means for delivering the burned gases from the casing to the vaporizing chamber.

2,005,542
APPARATUS FOR COMPACTING POWDERS
Herman Jacob Glaxner, Monroe, La., assignor to Columbian Carbon Company, New York, N. Y., a corporation of Delaware
Application July 8, 1932, Serial No. 621,419
8 Claims. (Cl. 100—35)

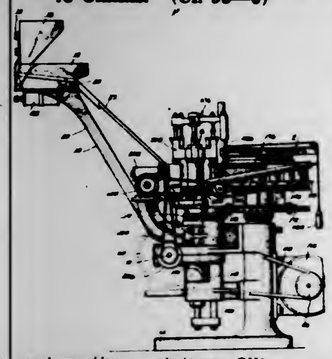
1. An apparatus for compressing light, dry, fine, fluffy powder, including a pair of spaced pulleys, having parallel axes disposed in a substantially horizontal plane, an endless imperforate conveyer belt tightly passing around said pair of pulleys and presenting substantially horizontal upper and lower runs, a third pulley disposed between said runs, and having its axis parallel to the axes of said first mentioned pulleys, said third pulley being spaced from said runs and having a diameter less than the distance between said runs in the vertical plane of the axis of said third pulley, a second imperforate conveyer belt passing tightly around said third pulley and one of said pair of pulleys, encircled by said first mentioned belt, and presenting upper and lower runs, the pair of upper and the pair of lower runs converging to the periphery of said last mentioned pulley, and means for delivering the powder to be compressed onto the lower run of one of said pairs, said third pulley being sufficiently close to one of the runs of said first mentioned belt so that the angle between the latter run and the adjacent run of the second mentioned belt is very small, whereby gas above said powder and gas occluded within said powder may escape at a sufficiently low velocity so as not to disturb the layer of powder as the latter is advanced to one of said pair of pulleys.

2,005,543
WATER TUBE BOILER
Ferdinand Graafen, Zwickau, Germany
Application July 27, 1932, Serial No. 624,948
In Germany August 30, 1929
5 Claims. (Cl. 122—235)



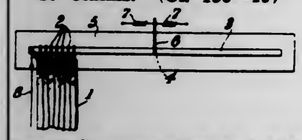
1. In a water-tube boiler, in combination with an automatic stoker grate, a channel-like furnace chamber of elongated substantially tubular shape formed of water-tubes extending in the longitudinal direction of the furnace and sloping downwards towards and beyond the rear end of said grate, partition walls in said furnace chamber dividing same into compartments and also formed of water-tubes, gaps being left above said partitions at certain intervals, so as to make said water-tubes readily accessible.

2,005,544
FURNACE GRATE
Ferdinand Graafen, Zwickau, Germany
Application February 23, 1934, Serial No. 712,529
In Germany December 24, 1932
6 Claims. (Cl. 122—376)



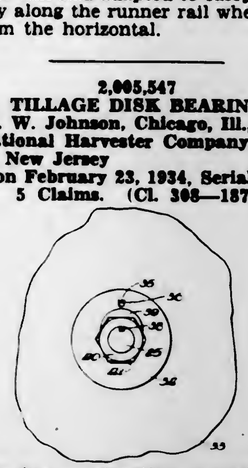
1. An automatic furnace grate comprising laterally spaced parallel tubes, the top portions of which are of substantially semi-cylindrical shape in cross section and disposed with their apices in a common plane, and solely longitudinally

movable grate members between said tubes, the tops of said grate members being formed of transversely substantially flat surfaces and having at least portions of their transversely substantially flat surfaces disposed in the same common



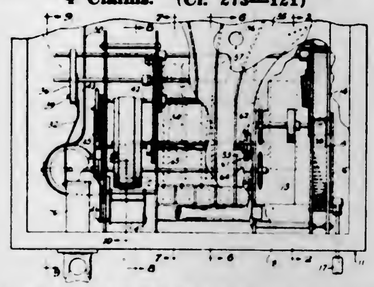
plane at the apices of the tubes, the upper portions of said grate members extending laterally outward into overlying relationship to adjacent side and top portions of the tubes, and said grate members being spaced at all points from said tubes.

2,005,545
AUTOMATIC CONTAINER FILLING DEVICE
Edwin F. Hulbert, Glenview, Ill., assignor to Anaconda Company, Chicago, Ill., a corporation of Delaware
Application October 26, 1931, Serial No. 571,131
78 Claims. (Cl. 93—6)



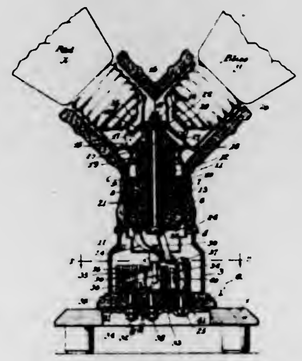
1. An automatic container filling machine, comprising means for conveying an open container to a given point to be filled, means for supplying material for said container, means for picking up said material, means for bringing a wrapping portion into association with said material, and means for depositing said material with a wrapping portion in association therewith in said container.

2,005,546
WINDOW CURTAIN SUPPORT
George Mark Omega Jenkins, Neasden, London, England
Application March 14, 1934, Serial No. 715,501
In Great Britain April 7, 1933
10 Claims. (Cl. 156—19)



1. In means for supporting and effecting adjustment of a curtain to and from the operative and the inoperative positions, a pivotally tiltably supported runner rail, and curtain supporting runner elements carried by and capable of running along said runner rail, said runner elements with the curtain supported thereby remaining stationary in the horizontal position of the runner rail and adapted to carry the curtain by gravity along the runner rail when the rail is tilted from the horizontal.

2,005,547
TILLAGE DISK BEARING
Arnold E. W. Johnson, Chicago, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application February 23, 1934, Serial No. 712,498
5 Claims. (Cl. 308—187)



1. A bearing construction comprising a stationary portion having a bearing surface formed therein and a shoulder concentric with the bearing surface and spaced from one end thereof, a bearing spindle rotatably mounted against axial movement in cooperation with the bearing surface, a sealing member rigidly mounted on said spindle, said member having an annular radially extending portion and a cylindrical flange extending axially from the periphery of the annular portion toward the shoulder on the stationary bearing portion, a resilient sealing member abutting the shoulder and both portions of the first named sealing member, and an L-shaped friction reducing element fitted over the resilient member and forming the engaging surface with the flanged sealing member.

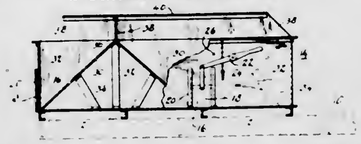
2,005,548
GAME APPARATUS
Claude R. Kirk, Oak Park, and Edward E. Collison, Chicago, Ill., assignors to Standard Ticket Games Corporation, Chicago, Ill., a corporation of Illinois
Application January 26, 1935, Serial No. 3,542
4 Claims. (Cl. 273—121)

1. In a game apparatus, the combination of: a cabinet including a member providing a playing surface having ball exit or scoring openings therein; a score recording or printing drum in the cabinet; means for elevating balls one at a time from a point below the playing surface up to the level of the same; an inscription-receiving web in the cabinet; means automatically urging the said web into printing engagement with the said printing drum after a predetermined number of balls have been elevated by said elevating means from a point below the said playing surface up to the level of the same; a member slidably mounted in a wall of said cabinet; means normally latching the said slidable member against operation until the score-printing operation takes place; and means for releasing the said latching means from latching engagement with the said slidable member when the score-printing operation takes place.

2,005,549
THERMOSTATICALLY OPERATED ELECTRICAL DEVICE
Emil Klahn, New Vernon, N. J.
Application July 26, 1926, Serial No. 124,917
Renewed November 15, 1934
4 Claims. (Cl. 200—122)

3. An electric light fixture having a multi-way socket, a snapping thermostatic switch associated with said socket, said switch including a bimetallic thermostatic element and a resistance-heating element, the latter being adapted to be periodically connected with the filament circuit of a lamp inserted in said socket in response to the snapping movements of said switch, means responsive to the movement of said switch for alternately opening and closing the circuit through different lamps mounted in said multi-way socket whereby a multi-colored flashing effect can be obtained.

2,005,550
TRACTOR WHEEL
William H. Ledbetter, Dallas, Tex.
Application April 27, 1929, Serial No. 358,509
12 Claims. (Cl. 301—41)



6. A unitary wheel construction comprising a rim formed of overlapping segments made of iron bar stock set edgewise, wheel spokes fixed thereto, free-end teeth outturned on both ends of the segments and set flush with the rim, and means to secure the segments together.

2,005,551
GRINDING DEVICE FOR REVOLVING CUTTERS
Raymore D. MacDonald, Western Springs, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application July 7, 1934, Serial No. 734,122
4 Claims. (Cl. 51—246)

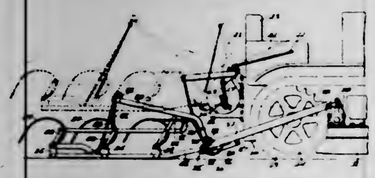
1. A sharpening device for a material reducing machine having a supporting structure, a rotor mounted for rotation thereon, and blades mounted on the rotor positioned with their cutting edges following a cylindrical path, and in combination therewith; a supporting frame pivotally mounted on the supporting structure on an axis parallel to the axis of the rotor, a support mounted for reciprocation on said frame, a grinding stone carried by said support, means for reciprocating the support whereby the stone is moved along the cylinder of revolution defined by the edges of the blades, and manually adjustable resilient means for holding the supporting frame in position and for urging the frame toward the cutting blades.

2,005,552
COAL DELIVERY TRUCK
Earl H. McAfee, Detroit, Mich.
Application April 6, 1934, Serial No. 719,317
2 Claims. (Cl. 298—24)

1. In a motor vehicle having a supporting frame, a coal box mounted on said frame having side walls and end walls, certain of said side walls each provided with a gate controlled discharge outlet adjacent the bottom thereof but above said supporting frame, one end wall provided with a pair of gate controlled discharge outlets adjacent the bottom thereof, the floor of said coal box provided with a plurality of inclined sections extending upwardly and away from each of said outlets, one of said inclined sections extending upwardly and away from one of said side outlets meeting with another inclined section extending likewise from the other side outlet substantially on the longitudinal median line of said coal box, another inclined section extending upwardly and away from each of said side outlets meeting with another inclined section extending likewise from one of said end outlets on a line transverse to said coal box, other inclined sections extending upwardly and away from said outlets to connect with adjacent walls of the coal box, all of said inclined bottom sections joining with one another and the walls of the coal box at a common height

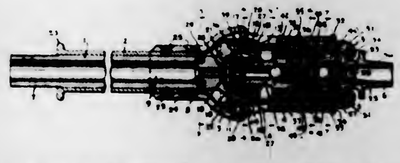
equal to the height of the walls of the coal box, said inclined sections arranged together to provide a plurality of pockets in said coal box of general funnel shape each adapted to cause the coal therein to completely flow out through an outlet.

2,005,553
SOLID LUBRICATING COMPOUND
Charles A. Miller and David A. Smith, Franklin, Pa., assignors to Valvoline Oil Company, a corporation of New Jersey
No Drawing. Application August 20, 1932, Serial No. 629,743
5 Claims. (Cl. 87—9)



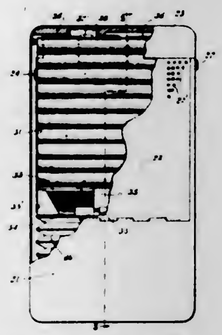
1. A solid driving-journal lubricant of acid reaction comprising a substantially dehydrated, boiled, hard grease, the aggregate parts of which are loosely bound together and composed of substantially equal parts of a viscous hydrocarbon mineral oil and a hard soap prepared from an alkali and a higher fatty acid in an amount sufficient to neutralize the alkali and to provide in said grease free fatty acid in a quantity amounting to approximately five (5%) percent of the lubricant.

2,005,554
ARTIFICIAL BAIT OR FISH LURE
Bertram Milner, St. Bernard, Ohio
Application November 2, 1933, Serial No. 696,345
10 Claims. (Cl. 43—42)



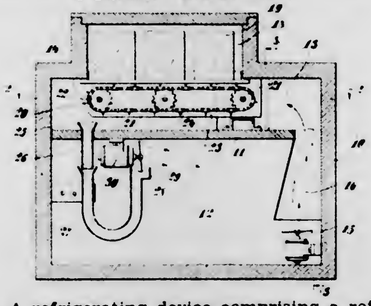
1. In a fish lure of the class described the combination of a body portion representing the head of a small water animal, the said body portion having formed therealong grooves representing the mouth thereof, a mouth piece projecting from the mouth and having a transverse curve, said mouth piece and mouth grooves cooperating with one another to effect lifelike darts of the lure through the water while being retrieved, and a hook projecting from the body portion at the rear thereof and having its barbed end disposed in a plane above said body portion.

2,005,555
LIFT MECHANISM FOR TRACTOR DRAWN IMPLEMENTS
James Markovski, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application December 23, 1933, Serial No. 703,781
16 Claims. (Cl. 97—47)



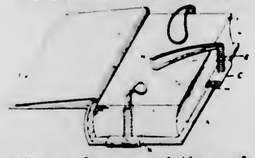
1. A tractor implement comprising, in combination with a tractor, a draft frame connected to the tractor and extending longitudinally therefrom, said frame being flexible for lateral movement, an implement frame hinged to the draft frame on a transverse axis, a lifting member connected to one of said frames adjacent the hinge axis, means for connecting said lifting member to each of the frames at points spaced from the hinge axis, and means for applying vertical lift adjacent the hinge axis of the frames.

2,005,556
COUPLING MEANS FOR LUBRICATING SYSTEMS
Clark W. Parker, Brewster, N. Y., assignor, by mesne assignments, to The Lubrication Corporation, South Bend, Ind., a corporation of Delaware
Application November 21, 1928, Serial No. 320,832
Renewed June 13, 1932
24 Claims. (Cl. 285—95)



1. A coupling member for high pressure grease guns comprising, a hose, a rotary sheath carried thereby having an actuator, a coupler, means connecting the coupler with the hose, means connecting the coupler with the actuator for shifting the coupler, and clamping members carried by the coupler and adapted to grip a fitting.

2,005,557
POCKET CIGARETTE CASE AND LIGHTER
Robert L. Penney, Brooklyn, N. Y.
Application February 6, 1934, Serial No. 709,932
19 Claims. (Cl. 206—41.4)

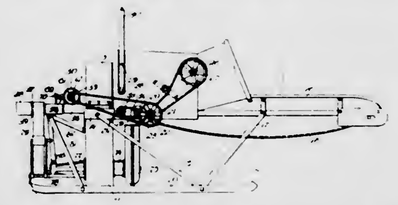


1. A device of the character described comprising a casing having a storage compartment for cigarettes and delivery holding means for the top cigarette, a lid normally closing the casing and spring pressed toward an open position, a manually releasable latch for holding the lid closed, a burner and igniter in the casing, a spring pressed actuator for the igniter movable against the spring by the closing of the lid, an air blast device delivering air to the burner at the end of the top cigarette, spring pressed means movable by the lid in closing for forcing air from said air blast device and an actuator for resetting said means.

2,005,558
APPARATUS FOR HYDRATING AIR IN REFRIGERATING MECHANISMS
Edwin M. Post, Jr., New York, N. Y., assignor to International Motor Company, New York, N. Y., a corporation of Delaware
Application November 15, 1932, Serial No. 642,724
4 Claims. (Cl. 62—140)

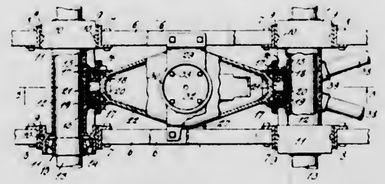
1. A refrigerating device comprising a refrigerating chamber, a refrigerating element associated therewith, a scraping mechanism to remove frost from the refrigerating element, means associated with the chamber to melt the frosting, and air circulating means in the chamber to vaporize the resulting liquid in the refrigerating air.

2,005,559
AUTOMATIC BOOKMARKER
Raleigh Raymond Roberts, Redlands, Calif.
Application May 1, 1933, Serial No. 668,822
4 Claims. (Cl. 281—42)



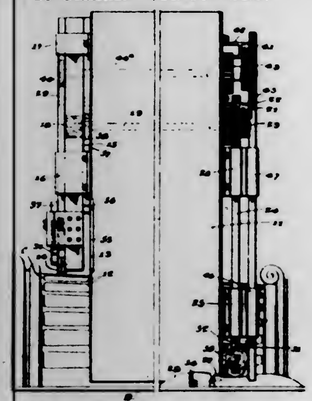
2. A book marker consisting of a base for attachment to a book cover, a coiled spring rising perpendicularly from said base and terminating in an uncoiled portion integral therewith and at approximate right angles thereto.

2,005,560
GAS BURNER
John C. Rogers, Cicero, Ill., assignor to Crown Stove Works, Cicero, Ill., a corporation of Illinois
Application July 2, 1934, Serial No. 733,439
3 Claims. (Cl. 158—116)



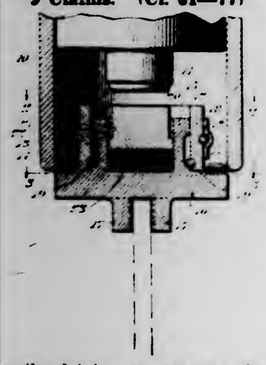
2. A gas burner, comprising a one-piece hollow ring having a continuous horizontal annular aperture between its top and outer peripheral walls, said outer peripheral wall formed on its outer side with a row of upwardly and outwardly inclined flutes meeting said aperture at an acute angle to the plane of the latter for the flow of secondary air.

2,005,561
FEED CONTROL FOR HAMMER MILLS
Merrill W. Roscoe, Batavia, and Charles F. Crumb, Chicago, Ill., assignors to International Harvester Company, a corporation of New Jersey
Application July 8, 1931, Serial No. 549,386
6 Claims. (Cl. 83—11)



1. A mill comprising a casing having a feed opening on one face, power driven feeding means adjacent said opening, a main drive shaft extending into the casing, reducing means mounted on said shaft within the casing, means for driving said shaft at a comparatively high rate of speed, a second shaft connected by means of a positive clutch and speed reduction means to the main shaft for operation thereby at a comparatively low rate of speed, means for connecting said second shaft to the feeding means, an actuating arm extending from the clutch, a governor mounted on the main shaft, and means connected to said governor operative to engage said actuating arm.

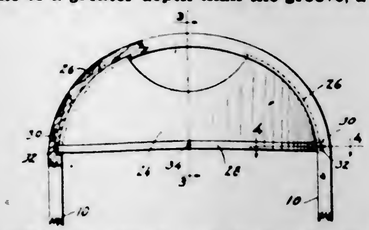
2,005,562
LOCOMOTIVE
Joseph P. Ruth, Denver, Colo., assignor to The Ruth Company, Denver, Colo., a corporation of Colorado
Application January 15, 1934, Serial No. 706,683
6 Claims. (Cl. 105—176)



1. A railway locomotive comprising, in combination, a rigid frame, two axle assemblies secured to the frame and extending transversely thereof, each assembly comprising an elongated housing, an axle extending through the housing and mounted for rotation therein, means for holding the axle from moving longitudinally relative to the housing, a wheel secured to each end of the shaft, means for holding the axle assemblies in parallel relation while permitting them to move transversely of the frame, a lever having its ends pivotally attached to the axle housings, a pivot rigidly connected with the frame and operatively connected with the lever at its center point whereby the axles and axle housings will be constrained to move simultaneously and equal distances in opposite directions, a pilot truck, and means, controlled by the position of the pilot truck for applying a yielding force to the lever to turn it about its center pivot.

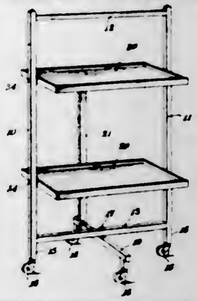
2,005,563
AUTOMATIC MACHINE TOOL ASSEMBLY
Richard F. Sanchez and Basil M. Zullo, Brooklyn, N. Y.
Application June 27, 1934, Serial No. 732,684
10 Claims. (Cl. 90—24.3)

1. A means for progressively increasing or decreasing architectural forms comprising a cutting means including a pair of pivoted cutters, supporting means for supporting said cutting means in operative position relative to an article to be worked upon, means for shifting said cutting means relative to the article simultaneous with the movement of the article relative to said cutting means, and means operable simultaneous with the shifting of said cutting means for adjusting said cutters relative to each other.



2,005,564
PILE DRIVING APPARATUS
Max Schalscha, Summit, N. J.
Application May 13, 1933, Serial No. 670,871
9 Claims. (Cl. 61—77)

1. In a pile driving apparatus, the combination of a supporting casing, a base supported from said casing, and means for supporting the base flexibly from the casing whereby it can move in a plurality of directions relative to the casing under the impact of a hammer.

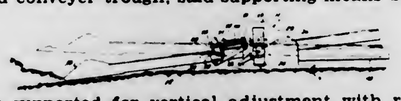


2,005,565
CHAIR CONSTRUCTION
George D. Schermerhorn, Reading, Mich.
Application October 30, 1933, Serial No. 695,727
1 Claim. (Cl. 155—142)

A chair structure comprising, in combination, a U-shaped chair frame provided with grooves formed on the inner faces of the two legs of the U-shaped frame adjacent to the closed end thereof, a bowed back rest panel extending across the closed end of the U-shaped frame between the legs thereof and having its ends freely seated within the grooves of the frame but not secured directly thereto, said frame provided with a recess in the lower end of each groove at the back thereof extending into the frame to a greater depth than the groove, a flex-

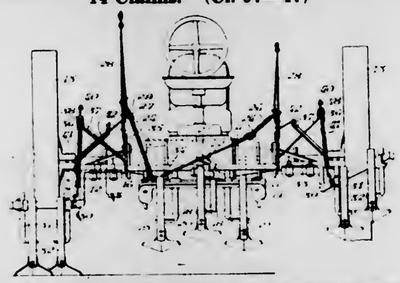
ible metal reinforcing strip extending along the back of the panel and bowed to conform therewith having its ends extending into said recesses beyond the ends of the panel and secured beyond the ends of the panel to the frame forming a tie rod between the two legs of the U-shaped frame preventing the spreading of said legs, said strip being secured to the panel intermediate its ends preventing flexing thereof sufficiently to withdraw the ends of the panel from the groove in the frame.

2,005,566
FOLDING CADDY WAGON
Edwin J. Schwabe, New York, N. Y.
Application October 18, 1934, Serial No. 748,822
4 Claims. (Cl. 211—149)



1. An article of furniture of the class described comprising a frame member adapted to be supported in upright position, a horizontally swinging foot pivotally mounted on one end of said frame member and adjustable to a position at an angle to the plane of said frame member to support the frame member in an upright position, a plurality of supporting shelves or trays pivotally mounted in said frame member and means carried by said shelves or trays for engagement with said swinging foot to maintain said swinging foot in adjusted position.

2,005,567
FEEDER HEAD FOR SHAKER OR JIGGING CONVEYERS
William W. Sloane, Chicago, Ill., assignor to Goodman Manufacturing Company, Chicago, Ill., a corporation of Illinois
Application March 7, 1934, Serial No. 714,427
20 Claims. (Cl. 198—220)



1. In a feeder head for a shaker conveyer, a shoe connectible to a conveyer trough section and

reciprocably driven thereby, an extensible trough, supporting means for supporting said extensible trough on said shoe independently of said conveyer trough for movement therewith and for extensible or retractible movement with respect to said conveyer trough, said supporting means be-

ing supported for vertical adjustment with respect to said shoe and having forwardly extending feeding means pivotally mounted thereon and bodily movable therewith for extending and retracting said extensible trough with respect to said conveyer trough.

2,005,568
TRACTOR MOUNTED CULTIVATOR
Hiram P. Smith, Canton, Ill., assignor to International Harvester Company, a corporation of New Jersey
Application March 30, 1934, Serial No. 718,115
14 Claims. (Cl. 97—47)

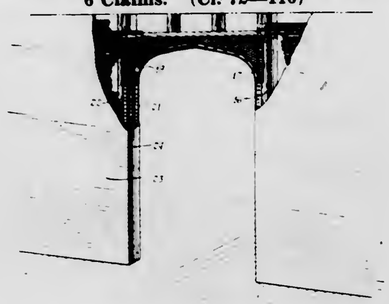
1. A cultivator comprising a supporting structure, an implement frame connected to the supporting structure for vertical movement, a horizontally disposed bar pivoted at its center on the implement frame and rocking in a plane extending across the frame, a lifting and lowering device mounted on the supporting structure above each end of the horizontally disposed bar, and a lift connection between each end of said bar and the lifting and lowering device thereabove.

2,005,569
SHOULDER STRAP HOLDER
William J. Smith, Ridgefield Park, N. J.
Application September 6, 1933, Serial No. 688,277
17 Claims. (Cl. 24—73)

1. In a shoulder strap holder having a flexible sheet material with adhesive on one side, a ring with separable ends, and a means upon the free side of said flexible sheet for detachably holding said ring.

2,005,570
SHOULDER STRAP HOLDER
William J. Smith, Ridgefield Park, N. J.
Application November 25, 1933, Serial No. 699,663
14 Claims. (Cl. 24—73)

1. A shoulder strap holder, comprising a top cloth having adhesive on the bottom side, a strap holding element mounted upon the top face of said top cloth and having a portion extending beneath said top cloth for being weakly adhesively held by said adhesive, a bottom cloth as a pad beneath said top cloth and at the area immediately below said strap holding element and attached by said adhesive and simultane-

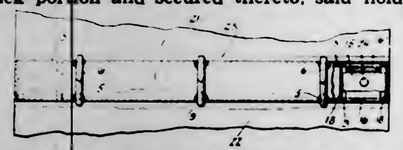


ously engaging the portion of said strap holding element beneath said top cloth, and removable straps adhesively engaged upon the bottom side of said top cloth and having overlapping ends extending over said bottom cloth.

2,005,571
N[PARA - (BETA - NAPHTHYL-AMINO) PHENYL] MORPHOLINE AND ITS PRODUCTION
George Clifford Strouse, Wilmington, Del., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware
No Drawing. Application June 25, 1932, Serial No. 619,279
7 Claims. (Cl. 260—28)

1. The method of preparing N[para(beta-naphthyl-amino) phenyl] morpholine which comprises condensing beta-naphthol with N(p-amino-phenyl) morpholine at reflux temperatures.

2,005,572
BUILDING ARCH CONSTRUCTION
Michael G. Vass, Maywood, Ill., assignor to United States Gypsum Company, Chicago, Ill., a corporation of Illinois
Application August 9, 1933, Serial No. 684,416
6 Claims. (Cl. 72—116)



5. In an arch construction, substantially parallel, expanded metal wings and an arch-shaped strip of expanded metal extending between said wings, and corner beads including wings at substantially right angles to each other having lugs formed on the wings thereof for engaging said expanded metal and securing the same together in a unitary arch construction.

2,005,573
LOOSE LEAF BINDER
Richard M. Watson, Detroit, Mich.
Application September 22, 1934, Serial No. 745,054
7 Claims. (Cl. 129—24)

2. A loose leaf binder structure comprising a sheet metal base member having curved side walls and end walls, ring structure comprising openable ring members and portions within the base rockable on said curved side walls, said

curved portions terminating short of the ends of the base, a binder covering having front and back covers and a back portion, a pair of holding devices positioned flush against the back portion of the binder covering near opposite ends of the back portion and secured thereto, said holding

devices being positioned within the base member and in the end portions thereof beyond said rockable portions of the ring structure, and said side walls fashioned over said holding devices, and said end walls lying in close proximity to the holding devices to secure the base and ring structure to the binder covering.

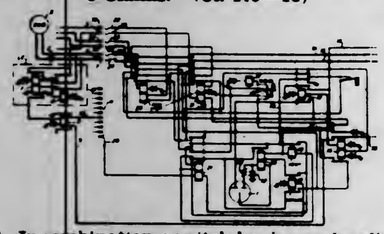
2,005,574
DYESTUFFS OF THE DIBENZANTHRONE SERIES

Alexander J. Wuerts, Carrollville, Wis., and Oakley M. Bishop, deceased, late of Wilmington, Del., by Eva P. Bishop, Wilmington, Del., and Wilmington Trust Co., Wilmington, Del., executors, assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a corporation of Delaware

No Drawing. Original application May 2, 1930, Serial No. 449,355. Divided and this application August 3, 1934, Serial No. 738,372

9 Claims. (Cl. 260—61)

1. A dyestuff of the general formula



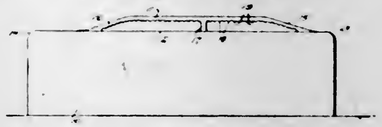
wherein J stands for hydrogen or a simple inert substituent, the phenyl nuclei being positioned in the anthrone portions of the molecule.

2,005,575
SELECTIVE SWITCH

Langford J. Bowne, Howard Beach, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application February 6, 1934, Serial No. 709,943

5 Claims. (Cl. 179—18)



1. In combination, a switch having a plurality of fixed circuit terminals and a movable contact for testing the condition of said terminals, means for placing potential of either polarity on said terminals, a stepping magnet for moving said contact over said terminals, a relay for controlling the stepping action of said magnet, a space-discharge device arranged to permit or prevent the flow of current between its electrodes according to the potential applied thereto, and means for including said device in circuit with said movable contact and said relay.

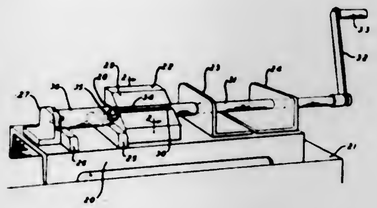
2,005,576
BATHTUB SAFETY GRIP

Oscar Buhl and Henry V. Jacobus, Belleville, N. J.

Application May 31, 1934, Serial No. 728,403

3 Claims. (Cl. 4—185)

1. In combination with a bathtub, a hand rail or grip secured to said bathtub along at least one edge thereof, said hand rail or grip extending above the top of the edge of the bathtub, said hand rail or grip having a smooth top surface and a serrated bottom surface affording finger gripping facilities, said hand rail or grip being an integral part of said tub.



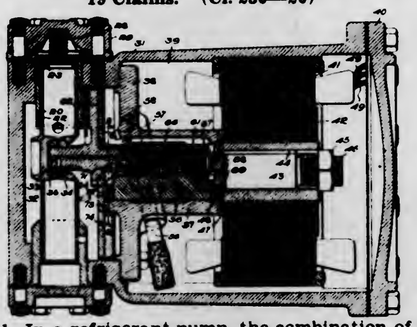
2,005,577
METHOD OF AND APPARATUS FOR POSITIONING LINERS

Archie J. Dowd, Plainfield, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York

Application January 10, 1934, Serial No. 706,003

11 Claims. (Cl. 153—42)

1. A method of forming a liner blank and positioning the same in a container which comprises the steps of detachably securing a liner blank to a mandrel within a coacting former, forming the blank upon the mandrel within the former, removing the mandrel and formed liner from the former, inserting the same into a container, and withdrawing the mandrel from the liner and container.



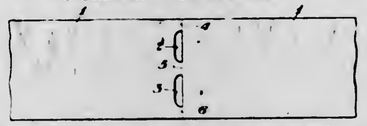
9. In an apparatus for forming a liner blank and positioning the same within a container, a first forming means, a second forming means coacting therewith and slidable into and out of operative relation thereto, means to effect relative rotation of the two forming means to form a liner blank, and means to support a container to receive the formed liner and the second forming means when the latter is out of operative relation to the first forming means.

2,005,578
COMPRESSING MACHINE

William D. Drysdale, Buffalo, N. Y., assignor to Walter J. Sugden, Boston, Mass.

Application August 6, 1932, Serial No. 627,736

19 Claims. (Cl. 230—20)



1. In a refrigerant pump, the combination of a cylinder having a lateral intake port, an outlet valve, a piston working in said cylinder and adapted to cover and uncover said port, and mechanism to impart to said piston a reciprocatory motion of variable amplitude varying from a zone within which said piston covers and uncovers said port and causes refrigerant to be admitted through said port and discharged past said outlet valve, to a zone within which said piston maintains said port closed.

2,005,579
ELECTRICALLY WELDING PIPE

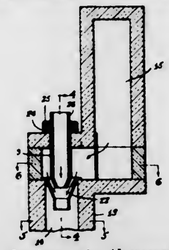
Wray Dudley, Mount Lebanon Borough, Pa., assignor to National Tube Company, a corporation of New Jersey

Application August 28, 1933, Serial No. 687,185

2 Claims. (Cl. 219—10)

1. A method of manufacturing pipe by continuous welding methods, including producing laterally slotted skelp having continuous side edge portions, shaping and welding said skelp so as to effect a continuous production of circumferentially slotted pipe and then cutting the portions of said pipe circumferentially separating its slots.

2,005,580
DRYING APPARATUS



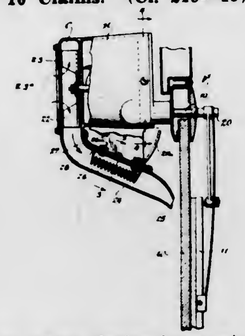
Albert W. Ferre, Wellesley, Mass., assignor to B. F. Sturtevant Company, Inc., Boston, Mass.

Application September 7, 1934, Serial No. 743,070

3 Claims. (Cl. 34—48)

1. Drying apparatus comprising a drying chamber, means for providing drying air under static pressure within said chamber, an opening in said chamber through which material under treatment passes, means utilizing drying air for inducing the flow inwardly through said opening of atmospheric air, and means for adjusting the effect of said last mentioned means to induce the flow of external air into said chamber or to produce a balance between the drying air in said chamber and atmospheric air external said chamber to prevent the flow of drying air through said opening and the flow of atmospheric air through said opening.

3. Drying apparatus comprising a drying chamber, means for providing drying air under static pressure within said chamber, an opening in said chamber through which material under treatment passes, a venturi within said opening, a nozzle within said opening for conducting atmospheric air outside said chamber to said venturi, means



for directing drying air through said venturi to induce the inward flow through said nozzle of atmospheric air, and means for varying the distance between the tip of said nozzle and said venturi to vary the inducing effect of said drying air upon atmospheric air external said opening.

2,005,581
COMBINATION WINDSHIELD WIPER AND HEATER

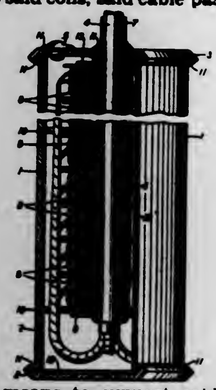
Edwin B. Gary and Edward A. Ebert, Buffalo, N. Y.

Application October 8, 1930, Serial No. 487,216

10 Claims. (Cl. 219—19)

1. A clear vision device for a windshield, including a windshield wiper, an electric motor for operating said wiper, a housing for said motor, a fan casing carried by said housing, a fan in said casing adapted to create a current of air, said casing being formed to direct the current of air directly against that portion of the said windshield which is traversed by the wiper, an electric resistance element in said casing for heating said current of air, means connecting said motor and said wiper whereby the latter is oscillated by said motor and connecting means between said motor and said fan whereby said fan is rotated continuously in the same direction during the oscillations of said wiper.

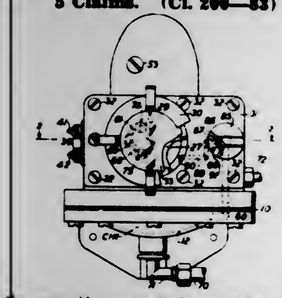
2,005,582
INDUCTIVE DEVICE



Frederick J. Given, East Orange, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York

Application March 6, 1934, Serial No. 714,341

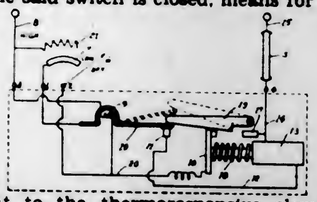
8 Claims. (Cl. 178—46)



1. A loading coil case, coils enclosed in said case, a stub cable leading into said case from one end

only, leads to said coils, said cable passing through

and having means to support said coils independently of said case.

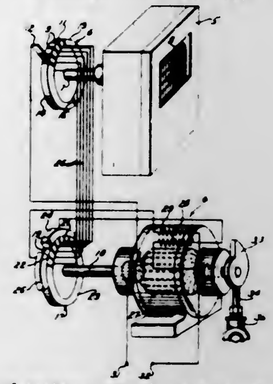


2,005,583
SIGNALING DEVICE
Leon N. Hampton, New York, N. Y., and Albert K. Smith, West Orange, N. J., assignors to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application January 20, 1934, Serial No. 707,490
5 Claims. (Cl. 200—83)

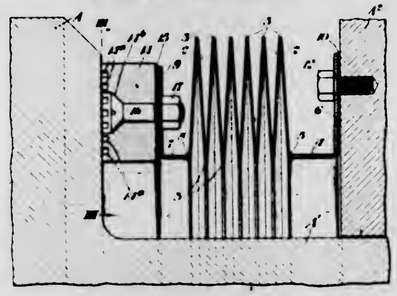
1. A pneumatic operated signaling device comprising a plurality of air chambers, a plurality of disengaged contacts in one of said chambers, a yieldable partition serving as a common wall between two of said chambers and operable upon a pressure difference in said chambers for engaging one of said contacts and means in said chamber actuated by the movement of said contact for indicating such pressure.

2,005,584
TEMPERATURE CONTROLLING DEVICE
Albert M. Heyroth, Niagara Falls, N. Y., assignor to Globar Corporation, Niagara Falls, N. Y.
Application January 27, 1932, Serial No. 589,177
6 Claims. (Cl. 175—375)

1. A system for varying the ratio of the on and off periods of an intermittently operated electrical device, comprising in combination an electromagnetic switch actuated in one direction by a solenoid and in the reverse direction by mechanical means, holding means for preventing the return movement of the switch after it has been actuated by the solenoid, a mechanical release means adapted to disengage the said holding means, a thermoresponsive element operating between two positions, the thermoresponsive element in one of the said positions making an electrical contact which closes the solenoid circuit and in the other of the said positions actuating the mechanical release to permit the automatic opening of the switch, a shunt circuit by-passing at least a portion of the current around the solenoid when the said switch is closed, means for applying heat to the thermoresponsive element in repetitive cycles dependent upon the on and off positions of the switch, and means for varying the rate of heat supply to the thermoresponsive element.

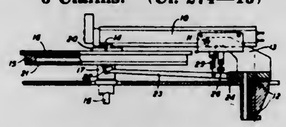


2,005,585
BOTTLE CROWNING MACHINE
James Kantor, Chicago, Ill., assignor to The Liquid Carbonic Corporation, Chicago, Ill., a corporation of Delaware
Application September 5, 1931, Serial No. 561,381
2 Claims. (Cl. 226—88.1)



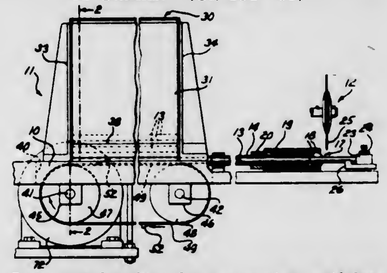
1. In a bottle crowning machine, a crown hopper, a crown throat, and a chute connecting said hopper with said throat, a portion of said chute being inclined slightly from the horizontal, positioned to support the crowns in a vertical plane upon their peripheral edges and being open at its lower edge, and a bar spaced from at least one side wall of said chute portion and disposed in said lower edge of said chute portion and engageable with the peripheral surfaces of crowns in said chute to hold said crowns in said chute while permitting foreign matter to fall from said chute.

2,005,586
CONTROL SYSTEM
Ludvik Joseph Koci, Berwyn, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application November 12, 1931, Serial No. 574,585
1 Claim. (Cl. 236—76)



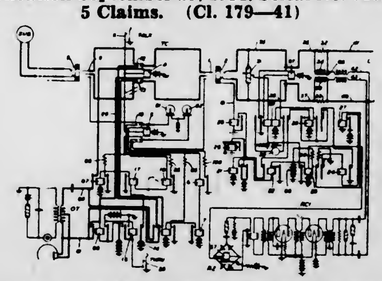
A control system comprising a temperature responsive means, a valve for adjusting the temperature, a cam for actuating said valve, a motor for actuating the cam, a contact member carried by said motor having a plurality of segments, a contact member actuated by said temperature responsive means having a plurality of segments, and circuit connections between segments of said contact members and the motor for causing the motor to directly position the cam in accordance with the position of the segments of the contact member actuated by the temperature responsive means.

2,005,587
OIL SEAL
Edwin T. Lorig, Gary, Ind., assignor to American Sheet and Tin Plate Company, a corporation of New Jersey
Application August 8, 1933, Serial No. 684,286
1 Claim. (Cl. 286—11)



In a rolling mill employing rolls which are supplied with different lubricants on their respective body and neck-end portions, the combination of a seal for preventing the intermingling of said lubricants, said seal comprising a resilient bellows having a central aperture through which the neck-end of the roll is adapted to extend, means for securing one end of said bellows to the bearing block of the mill, and a sealing ring secured to the outer end of said bellows and adapted to be resiliently held in contact with the adjacent side of the body of said roll irrespective of eccentric movement thereof, said sealing ring being composed of a fabric and a phenolic condensation product and having a plurality of annular grooves in its contact surface, whereby any lubricant tending to flow from the body of said roll to the neck-end thereof is entrapped and likewise any lubricant tending to flow out from the neck-end of said roll is entrapped, said entrapped lubricants serving to increase the sealing effect of said sealing ring.

2,005,588
STYLUS FEED MECHANISM FOR PHONOGRAPHS
Rudolph F. Mallina, New York, N. Y., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a corporation of New York
Application August 28, 1931, Serial No. 559,844
3 Claims. (Cl. 274—13)



3. In a phonographic recording machine a record blank, a turntable, a recording stylus cooperating with the record blank, and means for driving the stylus across the record blank, said means comprising a rotatable disc beneath the turntable and having formed in a surface thereof a spiral groove, a resilient follower for the groove contacting substantial adjacent sections of the groove, and means for securing the follower to the stylus.

ARTICLE CONVEYING MECHANISM
Clarence E. McCoy, Western Springs, Ill., assignor to Western Electric Company, Incorporated, New York, N. Y., a corporation of New York
Application April 14, 1933, Serial No. 666,071
11 Claims. (Cl. 164—61)

1. In a mechanism for conveying articles, an endless traveling member for receiving an article, means extending from the periphery of said member for engaging and advancing an article received on said member, tensioned elastic means operatively connected to said member for causing the same to travel, and means tending to continually tension said elastic means for continually urging said member to travel.
